See Table Group C of this Appendix for rationale. |

**B.13. Family Medicine**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Family Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Family Medicine specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

| 1<br>eCOM CBE #                                                     | N/A / 3749g        | TBD       | CM 511 75v1 | eCOM            | Intermediate Outcome | <p><b>Diagnostic Delay of Venous Thromboembolism in Primary Care:</b></p> <p>Percentage of episodes for patients 18 years of age and older with documented Venous Thromboembolism (VTE) symptoms in the primary care setting and who had a diagnosis of VTE that occurs &lt;24 hours and within 70 days following the index primary care visit where symptoms for the VTE were first present.</p> | Brigham and Women's Hospital | <p>We are proposing to include this measure in the Family Medicine specialty set as this measure is clinically relevant to this clinician type. Family physicians provide preventive care, diagnose and treat acute and chronic illness, and manage chronic diseases.<sup>19</sup> Venous thromboembolism (VTE) is a serious and preventable health problem that requires timely diagnosis and treatment in order to reduce morbidity and mortality.<sup>20</sup> Due to this specialist's broad scope of care, patients often present with non-specific symptoms prior to being diagnosed.<sup>21</sup> This measure is currently specified for primary care and intended to improve early recognition which can reduce adverse patient outcomes. The measure addresses a gap in MIPS for the treatment of patients with venous thromboembolism, specifically the commonly missed or delayed diagnosis in primary care requiring timely and adequate treatment. Including this measure in this specialty set can potentially improve diagnostic performance leading to a reduction in patient complications, decreased patient mortality and morbidity, and lowered health care costs.<sup>22</sup> Enhancing the family medicine related measure inventory could help to ensure broad specimen coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within their set and adding this measure to this specialty set would elevate the importance of VTE diagnosis and treatment. The measure being added to this specialty set would be contingent on the inclusion of applicable ending by the time of the CY 2026 PFS final rule. In the event appropriate ending is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.</p> |

|                                                                     | NA / NA          | FBD        | CMS eCQM ID 5411 | eCQM            | Process      | Screening for Abnormal Glucose Metabolism in Patients at Risk of Developing Diabetes:<br>Percentage of adult patients with risk factors for type 2 diabetes who are due for glycemic screening for whom the screening process was initiated during the measurement period | American Medical Association | We are proposing to include this measure in the Family Medicine specialty set as this measure is clinically relevant to this clinician type. Family Medicine clinicians are likely the most frequent point of contact for many patients as their scope of care is extensive and inclusive of many different patient populations and conditions. This measure focuses on patients with risk factors for developing type 2 diabetes and enhances early detection and prevention of diabetes. Regular glycemic screening is an important first step to identifying patients with prediabetes and help patients avoid the disability and the cost associated with progression to type 2 diabetes. <sup>21</sup> This measure aligns with national USPSTF guidelines and recommendations of screening for prediabetes and type 2 diabetes in adults aged 35 to 70 years who have overweight or obesity. <sup>22</sup> Nearly 48 million people have prediabetes, but more than 8 in 10 adults don't know they have it <sup>23</sup> reinforcing the importance of identifying patients with prediabetes and identifying patients with undiagnosed type 2 diabetes. Enhancing the family medicine related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within the set and adding this measure to this specialty set would elevate the importance of glucose screening in patients at risk for diabetes. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. |

| 1 Outcome 1                                                         | N/A / N/A          | TBD       | N/A         | MIPS eCOM       | Outcome      | <p><b>Hepatitis C Virus (HCV): Sustained Virological Response (SVR)</b></p> <p>Percentage of patients aged greater than or equal to 18 years with acute hepatitis C (HCV) with negative/undetectable HCV ribonucleic acid (RNA) in less than 30 weeks to 12 months after positive/detectable HCV RNA test result</p> | American Gastroenterological Association | <p>We are proposing to include this measure in the Family Medicine specialty set as this measure is clinically relevant to this clinician type. Family medicine clinicians are likely the most frequent point of contact for many patients as their scope of care is extensive and inclusive of many different patient populations. Family physicians diagnose and treat acute illness, provide preventive care, and manage chronic illness.<sup>16</sup> Due to their broad scope of care, this specialty may treat patients with acute hepatitis C (HCV) and assist in managing the disease. This quality measure aligns with clinical guidelines of the U.S. Preventive Services Task Force (USPSTF) and reducing Sustained Virological Response (SVR) is the first step toward reducing future HCV morbidity and mortality.<sup>24</sup> The American Academy of Family Physicians have advocated for increased management of HCV within primary care along with family medicine residency program directors working over the past 5 years to build capacity for HCV treatment within the specialty by training future generations of family medicine physicians.<sup>17</sup> Enhancing the family medicine related measure inventory could help to increase broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within their set and adding this measure to this specialty set would elevate the importance of proper management of patients with HCV. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.</p> |

## B.13. Family Medicine

| PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE FAMILY MEDICINE SPECIALTY SET                                                                                                                                                                                                                                    |           |             |                 |              |                                                                                                                                                                                                                                                                                                                                                                                                                   |                                          |                                                                                                                                                                    |

**B.14. Gastroenterology**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Gastroenterology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Gastroenterology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

| 1<br>Outcome<br>1                                                    | N/A /<br>N/A       | TOD       | N/A         | MRSA-QM         | Outcome      | Hepatitis C Virus (HCV): Sustained Virological Response (SVR): Percentage of patients aged greater than or equal to 18 years with active Hepatitis C (HCV) with negative/undetectable HCV ribonucleic acid (RNA) at least 20 weeks to 12 months after positive detection to HCV RNA test result |                 | We are proposing to include this measure in the Gastroenterology specialty set as we agree with interested parties this measure is clinically relevant to this specialty type. The measure is stewarded by the American Gastroenterological Association and its addition to this specialty set would be feasible given the high rates that this specialty assesses, treats, and manages diseases that affect the organs in the digestive system, including the liver. <sup>90</sup> Enhancing the gastroenterology related measure directory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within this specialty set and in addition would stress the importance of providing standard care to patients living with the hepatitis C (HCV) liver disease. <sup>91</sup> This measure is based on evidence-based guidance for HCV management and would help ensure patients with HCV are receiving the best possible care, thus improving patient safety, and reducing future HCV morbidity and mortality. <sup>92</sup> The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS calculation. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. |

See Table Group C of this Appendix for rationale. |
| N/A / N/A                                                                                                                                                                                                                                                                                                                  | 498       | N/A         | MIPS CQM        | Process      | Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (i.e., SPI) for at least one of their HRSNs within 60 days after screening. | ONHIN                                    | This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale. |

**B.05. General Surgery**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the General Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed General Surgery specialty set. We also request comment on the measures that have proposed substantive changes under Table Group B of this Appendix as indicated by an \* in the Indicator column.

See Table Group C of this Appendix for rationale. |

**B.16. Geriatrics**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Geriatrics specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Geriatrics specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix, as indicated by an \* in the Indicator column.

The measure assesses individuals on a 1–100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM6 performance measure (PAM6-PM) is the change in score on the PAM6 from baseline to follow-up measurement. | Insignia Health, LLC, a wholly owned subsidiary of Fluor    |

| 4                                                              | NA /<br>N/A            | 226       | CM<br>513<br>8714 | Medicare Part<br>B Measure,<br>eCQM, MIPS<br>QOM | Process         | Preventive Care<br>and Screening:<br>Tobacco Use<br>Screening and<br>Cessation<br>Intervention:<br>Percentage of<br>patients aged 12<br>years and older<br>who were<br>screened for<br>tobacco use one<br>or more times<br>during the<br>measurement<br>period AND who<br>received tobacco<br>cessation<br>intervention<br>during the<br>measurement<br>period or in the<br>six months prior<br>to the<br>measurement<br>period if<br>identified as a<br>tobacco user | National<br>Committee<br>for Quality<br>Assurance | We are proposing to include this measure in the Geriatrics specialty set as this measure is clinically relevant to this clinical type. Tobacco use is the leading preventable cause of disease, disability, and death in the U.S., cigarette smoking results in more than 480,000 premature deaths each year and accounts for approximately 1 in every five deaths. <sup>33</sup> There is an increase in smoking-related deaths in people over the age of 60 years, where this population's smoking-related mortality is largely caused by lung cancer. <sup>34</sup> Smoking can also reduce efficacy of vaccines and increase the risk for infections in the older patient population. <sup>35</sup> Older adults who quit smoking experience positive effects on their health such as reduced cognitive decline and better quality of life. <sup>36</sup> Due to the harmful effect tobacco use can have on patients' health, clinicians should engage with their patients to screen for tobacco use and, if positive, provide tobacco cessation counseling initially. <sup>37</sup> This measure was previously included in this specialty set and removed beginning with the CY 2024 performance period/2020 MIPS payment year due to being included as a component of the previously utilized MIPS quality measure #47, Preventive Care and Wellness Composites, making them duplicative. However, we agree with interested parties' feedback that all components of measure Q47 do not apply to the patient population, most |

|                                                                       |                                   |                      |                            |                            |                         |                                              |                            | specifically Body Mass Index (BMI). We are proposing to add this component measure to this specialty set due to the importance of the clinical concept to this specialty where the complete composite measure would not be applicable. Enhancing the geriatrics related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within the set and adding this measure to this specialty set would elevate the importance of preventive care and screening for tobacco use |

| NA / NA                                                                                                                                                                                                                                                                                                                       | 487       | NA            | MIPS-CQM        | Process      | Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.                                                                                                                                                                                                                                                                         | Centers for Medicare & Medicaid Services | This measure is being proposed for removal beginning with the CY 2026 performance period MIPS payment year. See Table Group C of this Appendix for rationale.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| NA / NA                                                                                                                                                                                                                                                                                                                       | 497       | NA            | MIPS-CQM        | Process      | Preventive Care and Wellness (Composite): Percentage of patients who received age- and sex-appropriate preventive screenings and wellness services. This measure is a composite of seven component measures that are based on recommendations for preventive care by the U.S. Preventive Services Task Force (USPSTF), Advisory Committee on Immunization Practices (ACIP), American Association of Clinical Endocrinology (AACE), and American College of Endocrinology (ACE). | Centers for Medicare & Medicaid Services | We are proposing to remove this measure from the Geriatrics specialty set as we agree with interested parties' feedback that the age and sex appropriate preventive screenings included in all the components of this composite measure are not applicable to this patient population. Specifically, we agree with their concern that the parameters within this composite measure's Body Mass Index (BMI) component may not be appropriate for use in older adults. <sup>549</sup> Observational studies suggest that older adults with BMI in the 25-32 range are at lowest risk of adverse outcomes. <sup>550</sup> Additionally, in older adults a higher BMI classification may be associated with lower mortality risks, demonstrating the potential need for age-specific BMI components in older adults. <sup>551</sup> |

**B.17. Hospitalists**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Hospitalists specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. We request comments on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

**B.17. Hospitalists**

The measure assesses individuals on a 4-level scale that converts to one of four levels of activation, from low to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement. | Insignia Health, LLC, a wholly owned subsidiary of Parexel |

| Outcome 1                                                              | N/A / N/A          | 1BD       | N/A          | MIPS CDM        | Outcome      | Hepatitis C Virus (HCV): Sustained Virological Response (SVR): Percentage of patients aged 18 years or older living with active hepatitis C (HCV) with detectable nucleic acid (RNA) at least 20 weeks to 42 months after positive detection of HCV RNA test result. | American Gastroenterological Association | We are proposing to include this measure in the Infectious Disease specialty set as this measure is clinically relevant to this specialty type. Clinicians in this specialty are skilled in the diagnosis, treatment, and management of acute and chronic infections. Enhancing the infectious disease-related measures inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within this specialty set and its addition would elevate the importance of providing standard care to patients living with hepatitis C (HCV) liver disease. <sup>311</sup> This measure is based on evidence-based guidance for HCV management and would help ensure patients with HCV are receiving the best possible care, thus improving patient safety, and reducing future HCV morbidity and mortality. <sup>312</sup> The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. |

See Table Group C of this Appendix for rationale. |

**B.19. Internal Medicine**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Internal Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Internal Medicine specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

|                                                                       | N/A / N/A          | 180       | CM 311 (4x1) | eCOM            | Process      | Screening for Abnormal Glucose Metabolism in Patients at Risk of Developing Diabetes: Percentage of adult patients with risk factors for type 2 diabetes who are due for glucose screening for whom the screening process was initiated during the measurement period | American Medical Association | We are proposing to include this measure in the Internal Medicine specialty set as this measure is clinically relevant to this clinician type. Internal medicine clinicians treat a broad and comprehensive scope of diseases affecting adults, specializing in health promotion, disease prevention, and diagnosis and treatment of chronic illness, including patients with diabetes. <sup>313</sup> Due to their broad scope of care, this specialty can be crucial in early detection of patients at risk for developing type 2 diabetes. <sup>314</sup> Regular glycemic screening and timely identification of prediabetics helps patients avoid the disability and the cost associated with progression to type 2 diabetes. <sup>315</sup> This measure aligns with national USPSTF evidence-based guidelines and recommendations of screening for prediabetes and type 2 diabetes in adults aged 35 to 70 years who have overweight or obesity. <sup>316</sup> Nearly 98 million people have prediabetes, but more than 8 in 10 adults don't know they have it, <sup>317</sup> reinforcing the importance of identifying patients with prediabetes and identifying patients with undiagnosed type 2 diabetes. Enhancing the internal medicine related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within their set and adding this measure to the specialty set would elevate the importance of glucose screening in patients at risk for diabetes. The measure being |

|                                                                       |                        |           |                   |                    |                 |                                                                                                                                                                                                                                                                                                                                                                   |                                                     | added to this specialty set would be contingent on the inclusion of appropriate coding by the time of the CY 2026 PFS Goal rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| 1<br>(Outcome)                                                        | N/A /<br>N/A           | TRD       | N/A               | MIPS eCQM          | Outcome         | Hepatitis C<br>Virus (HCV):<br>Sustained<br>Virological<br>Response (SVR):<br>Percentage of<br>patients aged<br>greater than or<br>equal to 18 years<br>with active<br>hepatitis C<br>(HCV) with<br>negative virologic<br>results (HCV<br>Hepatitis virus<br>RNA) at least<br>24 weeks to 12<br>months after<br>positive/undetect-<br>able HCV RNA<br>test result | American<br>Gastroenter-<br>ological<br>Association | We are proposing to include this measure in the Internal Medicine specialty set as this measure is clinically relevant to this clinician type. Internal medicine clinicians are likely the most frequent point of contact for many patients as their scope of care is extensive and inclusive of many different patient populations. Internal medicine clinicians diagnose and treat acute illness, provide preventive care, and manage chronic illness. <sup>548</sup> Due to their broad scope of care, this specialty may treat patients with active hepatitis C (HCV) and assist in managing the disease. This quality measure aligns with clinical guidelines of the USPSTF <sup>549</sup> and achieving Sustained Virological Response (SVR) is the first step toward reducing future HCV morbidity and mortality. <sup>550</sup> Including the internal medicine related measure mandatory could help to ensure broad specialty coverage by having measures |

See Table Group C of this Appendix for rationale. |

**B.20. Interventional Radiology**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Interventional Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding or the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measures in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Interventional Radiology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

| 1<br>(Care Coordination)                                                     | N/A / N/A   | 024       | N/A         | Medicare Part B Claims Measure MIPS QIN | Process      | Communication with the Physician or Other Clinician Managing On-Going Care Post-Procedure for Men and Women Aged 50 Years and Older: Percentage of patients aged 50 years and older treated for a fracture with documentation of communication between the physician treating the fracture and the physician or other clinician managing the patient's on-going care, after a fracture occurred and that the patient was or should be considered for osteoporosis treatment or testing. This measure is submitted by the physician who treats the fracture and when this care is held accountable for the communication. | Regional Committee for Quality Assurance | We are proposing to include this measure in the Interventional Radiology (IR) specialty set as this measure is clinically relevant to this specialty type. We agree with measure owners' feedback that this measure is highly relevant to this specialty as they often play a critical role in treating fractures, including vertebral compression fractures associated with osteoporosis. Effective communication with the physician managing ongoing care ensures a seamless transition from procedural intervention or long-term management, optimizing recovery and preventing complications. <sup>520</sup> Additionally, osteoporosis management is closely connected to many fracture conditions treated by interventional radiologists, ensuring appropriate post-fracture care, including evaluation and treatment for osteoporosis, helps reduce the risk of recurrent fractures. <sup>521</sup> This specialty has become increasingly involved in management of fractures, but rarely from benign conditions like osteoporosis by using minimally-invasive techniques, such as image-guided percutaneous and screw-mediated osteosynthesis. <sup>522</sup> Enriching the IR-related measure universe could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. |

| 3<br>Patient Safety                                                          | NCV, NSA           | 100       | 474, 568, 615 | eCQM, MIPS, QIPs | Process      | <b>Documentation of Current Medications in the Electronic Record:</b><br>Percentage of visits for which the eligible clinician assesses to documenting a list of current medications using all immediate resources available on the date of the encounter. | Centers for Medicare & Medicaid Services | We are proposing to include this measure in the Interventional Radiology (IR) specialty set as this measure is clinically relevant to this specialty type. We agree with interested parties' feedback that this quality measure is highly relevant to IR because accurate medication documentation is critical for ensuring patient safety during minimally invasive procedures. Many IR procedures, such as angiography, biopsies, or embolization, require careful consideration of a patient's current medications to assess risks like bleeding or contrast allergies. <sup>322</sup> This specialty also often admits patients and needs to ensure they receive their home medications while admitted. Enhancing the IR-related medication inventory could help to ensure broad specialty coverage by limiting measures available that are robust and clinically relevant to clinicians within this specialization. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 DFS rollout. |

| 3 - Outcome 1                                                                | N/A / N/A          | 355       | N/A         | MLIS CQM        | Outcome      | <b>Unplanned Reoperation within the 30-Day Postoperative Period:</b><br>Percentage of patients aged 18 years and older who had any unplanned reoperation within the 30-day postoperative period | American College of Surgeons | We are proposing to include this measure in the Interventional Radiology (IR) specialty set as this measure is clinically relevant to this specialty type. We agree with interested parties' feedback that this quality measure is highly relevant to IR as it reflects important facets of procedural success and patient safety. This measure directly addresses procedure-specific outcomes, particularly for complex interventions such as embolization or vascular access. Adding this measure to this specialty set can support positive outcomes for IR procedures. Enhancing the IR-related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within the specialization. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. |

## B.20. Interventional Radiology

| MEASURES PROPOSED FOR ADDITION TO THE INTERVENTIONAL RADIOLOGY SPECIALTY SET |                   |           |             |                 |              |                                                                      |                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Unplanned Hospital Readmission within 30 Days of Principal Procedure         | N/A / N/A         | 356       | N/A         | MIPS (CQM)      | Outcome      | Unplanned Hospital Readmission within 30 Days of Principal Procedure | American College of Surgeons | We are proposing to include this measure in the Interventional Radiology (IR) specialty set as this measure is clinically relevant to this specialty type. We agree with interested parties' feedback that interventional radiologists commonly complete surgical procedures where appropriate management through supportive care can help decrease avoidable 30-day reoperation due to surgical complications. This measure reflects important facets of procedural success and patient safety directly addressing procedure-specific outcomes, particularly for complex interventions such as embolization or vascular access. This measure would "help encourage appropriate management and avoidance of unnecessary and costly procedures." Enhancing the IR-related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. |

B.20: Interventional Radiology

| •<br>•<br>• Outcome 1                                                        | N/A / N/A          | 157       | N/A         | MLPS COM        | Outcome      | Surgical Site Infection (SSI): Percentage of patients aged 18 years and older who had a surgical site infection (SSI) | American College of Surgeons | We are proposing to include this measure in the Interventional Radiology (IR) specialty set as the measure is clinically relevant to this specialty type. We agree with interested parties' feedback that this quality measure is important for this specialty as it impacts patient safety and procedural success. This quality measure ensures proper precautions are taken to minimize infection risk, such as utilizing proper skin preparation, sterile techniques, and pre-procedural antibiotics, on top of the importance of these interventions. To help keep complications to a minimum, it's critical for all radiologists to understand and adhere to sterile techniques for better patient care. By following strict aseptic and sterile techniques, radiologists can minimize IR procedure complications. <sup>524</sup> Enhancing the IR-related measure industry could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. |

| * Patient Experience                                                         | N/A / N/A        | 158         | N/A         | HIPS CQM        | Process      | Patient-Centered Surgical Risk Assessment and Communication<br>Percentage of patients who underwent a non-emergency surgery who had their personalized risks of postoperative complications assessed by their surgical team prior to surgery using a clinical data-based, patient-specific risk calculator and who received personal discussion of these risks with the surgeon. | American College of Surgeons | We are proposing to include this measure in the Interventional Radiology (IR) specialty set as this measure is clinically relevant to this specialty type. We agree with interested parties' feedback that this quality measure is key to the specialty to ensure proper risk assessments and communications are prioritized prior to IR procedures. Patients undergoing IR procedures should receive a thorough preoperative evaluation. The addition of this measure to the specialty set helps ensure clinicians adhere to these practices to guide them in implement the most appropriate management plan, avoid unnecessary procedures, and prevent complications to achieve a successful outcome. <sup>522</sup> This would help ensure personalized risks of postoperative complications are appropriately assessed prior to procedures using a clinical data-based, patient-specific risk calculator and discussed with the patient. Enhancing the IR-related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. The measure being added to this specialty set would be consistent on the timeline of applicable ending by the time of the CY 2026 PFS final rule. In the event upsurprise coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. |

| 1                                                                            | 0053 / N/A         | 4-8       | N/A         | Medicare Part B Claims Measure, MIPS, CQM | Process      | <b>Uncompensated Management in Women Who Had a Fracture:</b><br>The percentage of women 50-84 years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis in the 180 days after the fracture. | National Committee for Quality Assurance | <p>We are proposing to include this measure in the Interventional Radiology (IR) specialty set as this measure is clinically relevant to this specialty type. We agree with interested parties' feedback that this measure is highly relevant to this specialty as they often play a critical role in treating fractures, including vertebral compression fractures associated with osteoporosis. Effective communication with the physician managing ongoing care ensures a seamless transition from procedural interventions to long-term management, optimizing recovery and preventing complications.<sup>161</sup></p> <p>Additionally, osteoporosis management is directly connected to some fracture conditions treated by interventional radiologists, ensuring appropriate post-fracture care, including evaluation and treatment for osteoporosis, helps reduce the risk of recurrent fractures.<sup>162</sup></p> <p>This specialty has become increasingly involved in management of fractures that result from benign conditions like osteoporosis by using interventional techniques, such as image-guided osteoplasty and screw-mediated osteosynthesis.<sup>163</sup> Enhancing the IR-related measures inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. The measure being added to this specialty set would be on target in the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set.</p> |

See Table Group C of this Appendix for rationale. |
| N/A / N/A                                                                                                                                                                                                                                                                                                                    | 494       | N/A         | MIPS QIM        | Process      | Connection to Community Service Provider:<br>Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of them HRSNs within 60 days after screening. | OCHIN                                    | This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale. |

**B.21. Mental/Behavioral Health and Psychiatry**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Mental/Behavioral Health and Psychiatry specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Mental/Behavioral Health and Psychiatry specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

See Table Group C of this Appendix for rationale. |

**B.22. Nephrology**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Nephrology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Nephrology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

**B.23. Nephrology**

The practitioner group is inclusive of physicians and advanced practice providers. The measure is the ratio-observed number of waitlist events in a practitioner group to its expected number of waitlist events. The measure uses the expected waitlist events calculated from a Cox model, which is adjusted for age, patient comorbidities, and other risk factors at the time of dialysis. | Centers for Medicare & Medicaid Services |
|                                                               | N/A / N/A          | 511       | N/A          | MIPS eCOM       | Process      | <b>Percentage of Prevalent Patients Waitlisted for Kidney Transplant (PPSW) and Percentage of Prevalent Patients Waitlisted for Kidney Transplant in Active Status (APPSW):</b><br>The measure tracks dialysis patients who are under the age of 75 in a practitioner group and on the kidney or kidney-pancreas transplant waitlist or all patients or patients in active status. This measure is a risk-adjusted percentage of waitlist events among dialysis patients.                                                                                                                                                                                                                                                                         | Centers for Medicare & Medicaid Services |

|                                                                |                         |           |                   |                    |                 | 75 and were listed on the kidney or kidney-pancreas transplant waitlist or received a living donor transplant. The practitioner group is composed of physicians and non-physician practice providers. The measure is the ratio observed number of waitlist events in a waitlist group to its expected number of waitlist events. The measure uses the expected waitlist events calculated from a Cox model, which is adjusted for age, patient comorbidities, and other risk factors at the time of dialysis |                   | transplantation. <sup>529</sup> This measure focuses specifically on the outcome of waitlisting for patients on dialysis and is appropriate to this specialty as nephrologists are at the forefront of caring for this patient population. Nephrologists exert substantial control over processes that result in waitlisting and optimizing the health of patients to promptly access to the waitlist, which has been demonstrated to be particularly beneficial. <sup>530</sup> These processes include proper education of dialysis patients on the option for transplant, referral of appropriate patients to a transplant center for evaluation, and managing patients with completion of the transplant evaluation process. <sup>531</sup> These activities address the specific healthcare needs of patients on dialysis and are directed by dialysis practitioners aiming to achieve suitability for kidney transplantation. <sup>532</sup> Enhancing the nephrology-related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within this set and adding this measure to this specialty set would underscore the importance of appropriate measurement for patients on dialysis. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. |

See Table Group C of this Appendix for rationale. |

**B.13. Neurology**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Neurology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Neurology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM performance measure (PAM-PM) is the change in score on the PAM from baseline to follow-up measurement. | Inspira Health, LLC, a wholly owned subsidiary of Philips |

| 4<br>Effectiveness | 2005<br>N/A | 491 | N/A | MIPS/CQM | Patient-Reported Outcome Measure | Amplifying Palliative Care Patients' Experiences of Feeling Heard and Understood: The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit | American Academy of Hospice and Palliative Medicine (AAHPM) | We are proposing to include this measure in the Neurology specialty set as we agree with interested parties' feedback that this measure is clinically relevant in this clinician type. Palliative care has expanded rapidly in recent years across inpatient, ambulatory, home-based, and facility settings. <sup>52</sup> Inclusion of this measure can help ensure that most specialists types are equipped to better manage seriously ill patients' access to high-quality palliative care. This patient-reported outcome measure would help to fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with his or her clinicians. Patients feeling heard and understood adds an important dimension to the care planning for this unique patient population continuously cared for by clinicians in this specialty. This measure is predicated on existing guidelines and conceptual models <sup>53,54</sup> and is specifically for non-palliative care specialists who treat patients with serious illness to report the measure and encourages more comprehensive care. Increasing the clinician's focus on managing the experiences of patients, families, and caregivers is critical to advancing person-centered care and would promote more universal adoption of best practices to support shared decision making. <sup>55</sup> Studies have shown that adding palliative care to the plan of care for patients with serious illness results in better symptom management and communication with health care providers, as well as decreased strain on family members or other caregivers. <sup>56</sup> The measure being added in this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, this measure would not be finalized for inclusion within this specialty measure set. |
| 5<br>Safety        | TBD         | TBD | N/A | MIPS/CQM | Process                          | Patient Reported Path and Plan of Care: Percentage of patients for caregiver as                                                                                                                                                                                                                                                                                | American Academy of Neurology                               | We are proposing to include this measure in the Neurology specialty set as this measure is clinically relevant to this clinician type. Neurologists are medical doctors who specialize in diagnosing and treating                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|                                                               |                    |           |             |                 |              | appropriate) with an active diagnosis of a movement disorder, multiple sclerosis, a neuromuscular disorder, dementia, or stroke who reported a fall occurred and those that fell had a plan of care for falls documented at every visit |                  | patients with neurologic disorders whose incidence of falls is reported as 2 to 4 times higher than in healthy subjects of similar age. <sup>533</sup> Several studies address the negative impact falls have on expediting neurologic morbidity and slowing progress toward recovery. <sup>534</sup> Falls can negatively impact quality of life. This stresses the importance of prioritizing falls assessment and promoting strategies that aim at preventing or reducing the incidence of falls in the neurologic patient population. <sup>535</sup> Enhancing the neurology-related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within the specialization. This measure complements other measures within their set and could elevate the importance of addressing a patient's increased falls risk when diagnosed with a neurologic condition. |

See Table Group C of this Appendix for rationale. |

**B.24. Neurosurgical**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Neurosurgical specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Neurosurgical specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

**B.24. Neurosurgical**

See Table Group C of this Appendix for rationale. |

**B.23. Nutrition/Dietician**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Nutrition/Dietician specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Nutrition/Dietician specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

| 9 (Care Continuation)                                                   | N/A / N/A            | 238       | N/A         | HIPSCOM         | Process      | <b>Dementia: Education and Support of Caregivers for Patients with Dementia:</b> Percentage of patients with dementia whose caregivers were provided with education on dementia disease management and health behavior changes AND were offered additional resources for support in the last 12 months. | American Academy of Neurology/<br>American Psychiatric Association | We are proposing to include this measure in the Nutrition/Dietician specialty set as this measure is clinically relevant to this clinician type. We agree with interested parties' feedback that Registered Dietitian Nutritionists (RDNs) are uniquely qualified to offer essential education and support to caregivers regarding feeding assistance, managing behavioral challenges related to food, and addressing palliative food and fluid needs especially with patients diagnosed with dementia. <sup>540</sup> RDNs can also help caregivers to recognize declines in a patient's physical capacity and advise them on identifying malnutrition risks, developing tailored interventions that support both the patient and caregiver, and make in planning appropriate adjustments to nutritional care plans and feeding techniques as the disease progresses. <sup>541</sup> This specialty is integral to the process of enhancing the quality of life and emotional states of older adults through individualized nutrition approaches. <sup>542</sup> Malnutrition is a critical problem in dementia care and has deleterious symptoms and increased mortality rates. <sup>543</sup> These efforts align with best practices in dementia care, ensuring comprehensive and compassionate management. <sup>544</sup> Given RDNs role in educating and supporting caregivers in dementia care, their involvement ensures a holistic approach to care by addressing both the nutritional and behavioral needs of patients, ultimately improving the quality of life for individuals. |

| Indicator                                                               | CDE # / eCQM CDE # | Qualif. # | CMS eCQM ID | Collection Type | Measure Type | Measure Title And Description | Measure Standard | Rationale for Inclusion                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|                                                                         |                    |           |             |                 |              |                               |                  | with dementia. <sup>54</sup> Enhancing the nutrition/dietician related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within their set and adding this measure to this specialty set would elevate the importance of assessing and addressing nutrition challenges experienced by patients with dementia. The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. |

See Table Group C of this Appendix for rationale. |
| N/A / N/A                                                                                                                                                                                                                                                                                                                    | 494       | N/A         | MIPS CQM        | Process      | Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of them HRSNs within 60 days after screening. | OCHIN                                    | This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale. |

**B.26. Obstetrics/Gynecology**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Obstetrics/Gynecology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant claimline types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Obstetrics/Gynecology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix, as indicated by an \* in the Indicator column.

See Table Group C of this Appendix for rationale. |

**B.27a. Oncology/Hematology**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Oncology/Hematology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Oncology/Hematology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

See Table Group C of this Appendix for rationale. |

**B.27b. Radiation Oncology**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Radiation Oncology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. We request comments on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

**B.30. Orthopedic Surgery**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Orthopedic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Orthopedic Surgery specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix, as indicated by an \* in the Indicator column.

This re-specified measure attributes outcomes to Merit-based Incentive Payment System participating clinicians and/or clinician groups ("provider") and assesses each provider's complication rate, defined as any one of the specified complications occurring from the date of index admission to up to 90 days post date of the index procedure. | Centers for Medicare & Medicaid Services |

## B-30. Orthopedic Surgery

| PREVIOUSLY FINALIZED MEASURES PROPOSED FOR REMOVAL FROM THE ORTHOPEDIC SURGERY SPECIALTY SET                                                                                                                                                                                                                                 |           |             |                 |              |                                                                                                                                                                                                                                                                                                                                                                                                               |                                          |                                                                                                                                                                    |

See Table Group C of this Appendix for rationale. |

## B.31. Otolaryngology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Otolaryngology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Otolaryngology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

See Table Group C of this Appendix for rationale. |

**B.32. Pathology**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set has no proposed changes.

**B.32. Pathology**

**B.33. Pediatrics**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Pediatrics specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Pediatrics specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

See Table Group C of this Appendix for rationale. |
| N/A / N/A                                                                                                                                                                                                                                                                                                                    | 493       | N/A         | MIPS QDM        | Process      | Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening. | ACHIN                                    | This measure is being proposed for removal beginning with the CY 2026 performance period 2028 MIPS payment year. See Table Group C of this Appendix for rationale. |

**B.34. Physical Medicine**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Physical Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Physical Medicine specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

See Table Group C of this Appendix for rationale. |
| N/A / N/A                                                                                                                                                                                                                                                                                                                            | 494       | N/A         | MIPS CQM        | Process      | Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of them HRSNs within 60 days after screening. | OCHIN                                    | This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale. |

**B.35. Physical Therapy/Occupational Therapy**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Physical Therapy/Occupational Therapy specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Physical Therapy/Occupational Therapy specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement. | Insignia Health, LLC, a wholly owned subsidiary of Phreesia |

|                                                                                           | N/A / N/A          | 317       | CM 522 v.14 | Medicare Part B Claims Measure, eCQM MIPS CQM | Process      | <b>Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:</b> Percentage of patient visits for patients aged 18 years and older seen during the measurement period who were screened for high blood pressure AND a recommended follow-up plan is documented as indicated, if blood pressure is elevated or hypertensive | Covers for Medicare & Medicaid Services | <p>We are proposing to include this measure in the Physical Therapy/Occupational Therapy specialty set as we agree with widespread parties' feedback that adding this measure to this specialty set would help to broaden the patient population being screened for high blood pressure. Hypertension (HTN) is among the leading global preventable risk factors for cardiovascular disease and premature mortality.<sup>546</sup> Early detection and effective management of HTN have demonstrated significant reductions in mortality, morbidity rate, and health care costs; improves detection rates and medical management.<sup>547</sup></p> <p>The physical therapist/occupational therapist specialists may serve as the first point of contact into the health care system, thereby necessitating a need for routine blood pressure (BP) monitoring.<sup>548</sup> Leading physical therapy professional organizations include statements in their guidelines that suggest that physical therapists have a duty to provide a standard of care that protects the safety and optimizes the overall health of patients under their care.<sup>549</sup> Interdisciplinary care is vital, and it should be the responsibility of all clinician types to address health promotion and wellness, and prevention delay or management of acute or chronic diseases and conditions. Enhancing the physical therapy/occupational therapy related measure monitoring could help to cross-brand specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. See Table Group C of this Appendix for rationale. |  |

**B.36. Plastic Surgery**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Plastic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Plastic Surgery specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

See Table Group C of this Appendix for rationale. |
| N/A / N/A                                                                                                                                                                                                                                                                                                                    | 494       | N/A         | MIPS CQM        | Process      | Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of these HRSNs within 60 days after screening. | OCHIN                                    | This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale. |

**B.37. Podiatry**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Podiatry specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Podiatry specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

The change in FS is assessed using the FOTLO Lower Extremity Physical Function (LEPF) PROM. The measure is adjusted to patient characteristics known to be associated with FS outcomes (risk-adjusted) and used as a performance measure at the patient, individual clinician, and clinic levels to assess quality. | Focus on Therapeutic Outcomes, Inc.      |

See Table Group C of this Appendix for rationale. |
| N/A / N/A                                                                                                                                                                                                                                                                                                                   | 494       | N/A         | MIPS COM        | Process      | Connection to Community Service Provider:<br>Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening. | OCHEM                                    | This measure is being proposed for removal beginning with the CY 2026 performance period 2028 MIPS payment year. See Table Group C of this Appendix for rationale. |

**B.38. Preventive Medicine**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Preventive Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Preventive Medicine specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM's performance measure (PAM6-Pk) is the change in score on the PAM6 from baseline to follow-up measurement. | Insignia Health, LLC, a wholly owned subsidiary of Phreesia |

See Table Group C of this Appendix for rationale. |

**B.39. Pulmonology**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Pulmonology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Pulmonology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

|                                                                 |                        |           |                   |                    |                 | that palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit. |                    | gap for patients receiving palliative care by capturing the patient's voice and experiences of care by addressing communication and shared decision-making within or between clinicians, patients, family, friend and understood adds an important dimension to the care planning for this unique patient population commonly cared for by clinicians in this specialty. This measure is predicated on existing guidelines and conceptual models <sup>541</sup> and is specified to allow non-palliative care specialists who treat patients with serious illness to report the measure and encourages more comprehensive care. Increasing the clinician's focus on integrating the experiences of patients, families, and caregivers is critical to advancing person-centered care and to build promote more universal adoption of best practices to support shared decision making. <sup>542</sup> Studies have shown that adding palliative care to the plan of care for patients with serious illness results in better symptom management and communication with health care providers, as well as decreased attrition from family members or other caregivers. <sup>543</sup> The measure being added to this specialty set would be contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding is not included in the final specification, the measure would not be finalized for inclusion within this specialty measure set. |

See Table Group C of this Appendix for rationale. |

**B.40. Rheumatology**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Rheumatology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Rheumatology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

## B-40. Rheumatology

The measure assesses individuals on a 0–100 scale that converts to one of four levels of activation, from low (1–16), high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement. | Insignia Health, LLC, a wholly owned subsidiary of Phreesha |

See Table Group C of this Appendix for rationale. |

**B.41. Skilled Nursing Facility**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Skilled Nursing Facility specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinical types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Skilled Nursing Facility specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

| 1<br>(Clinician)                                                             | 2065<br>N/A            | 493       | N/A               | MIPS/QIPMI         | Patient-<br>Reported<br>Outcome<br>(PRO)<br>Performance<br>Measure | Ambulatory<br>Palliative Care<br>Patients' Experience of<br>Feeling Heard and<br>Understood:<br>The percentage of ambulatory<br>patients aged 18 years and older<br>who had an ambulatory<br>palliative care visit and report<br>feeling heard and understood by<br>their palliative care clinician<br>and team within 2 months (or<br>day) of the ambulatory<br>palliative care visit. | American<br>Academy<br>of Hospice<br>and<br>Palliative<br>Medicine<br>(AAHPM) | We are proposing to include this measure in the Skilled Nursing Facility specialty set as we have with interested parties' feedback that this measure is clinically relevant to this clinician type. Palliative care has expanded rapidly in recent years across inpatient, ambulatory, home-based, and facility settings. <sup>554</sup> Inclusion of this measure can help ensure that more specialist types are equipped to better manage variously ill patients, access to high-quality palliative care. This patient-reported outcome measure would help to fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision-making with his or her clinician. Patients feeling heard and understood adds an important dimension to the care planning for this unique patient population commonly cared for by clinicians in this specialty. This measure is predicated on existing guidelines and conceptual models <sup>555</sup> and is expected to allow ambulatory care specialists who treat patients with serious illness to report the measure and encourages more comprehensive care. Increasing the clinician's focus on managing the experiences of patients, families, and caregivers is critical to advancing person-centered care and would promote more universal adoption of best practices to support shared decision-making. <sup>556</sup> Studies have shown that adding palliative care to the plan of care for patients with serious illness results in better symptom management and communication with health care providers, as well as decreased strain on family members or other caregivers. <sup>557</sup> |

See Table Group C of this Appendix for rationale. |

**B.42. Speech Language Pathology**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Speech Language Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Speech Language Pathology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

See Table Group C of this Appendix for rationale. |
| N/A / N/A                                                                                                                                                                                                                                                                                                                    | 494       | N/A         | MIPS CQM        | Process      | Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of them HRSNs within 60 days after screening. | OCHIN                                    | This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale. |

**B.43. Thoracic Surgery**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Thoracic Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may assess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Thoracic Surgery specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

**B.43. Thoracic Surgery**

See Table Group C of this Appendix for rationale. |
| N/A / N/A                                                                                                                                                                                                                                                                                                                    | 494       | N/A         | MIPS eCQM       | Process      | Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of them HRSNs within 60 days after screening. | OCHIN                                    | This measure is being proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale. |

**B.44. Urgent Care**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Urgent Care specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes or excludes clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Urgent Care specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

**B.44. Urgent Care**

See Table Group C of this Appendix for rationale. |
| N/A / N/A                                                                                                                                                                                                                                                                                                                   | 494       | N/A         | MIPS CQM        | Process      | <b>Connection to Community Service Provider:</b> Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening. | ONHHS                                    | This measure is being proposed for removal beginning with the CY 2026 performance period 2028 MIPS payment year. See Table Group C of this Appendix for rationale. |

**B.45. Urology**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Urology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Urology specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

**B.46. Vascular Surgery**

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this proposed rule, the Vascular Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable. We request comments on the measure changes available for the proposed Vascular Surgery specialty set. We also request comment on the measures that have proposed substantive changes under Table Group D of this Appendix as indicated by an \* in the Indicator column.

**Table Group C: Previously Finalized Quality Measures Proposed for Removal for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years**

In this proposed rule, we are proposing to remove 10 previously finalized MIPS quality measures for the CY 2026 performance period/2028 MIPS payment year and future years. These measures are discussed in detail in the removal tables below.

The CY 2019 PFS final rule (83 FR 59763 through 59765) and CY 2020 PFS final rule (84 FR 62957 through 62959) discuss our incremental approach to removing process measures. Further considerations are given in the evaluation of the measure's performance data to determine whether there is or no longer is variation in performance. As discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763), an additional criterion we use for the removal of measures includes extremely

topped-out measures, which refers to measures topped out with an average (mean) performance rate between 98–100 percent. For a measure proposed for removal due to criteria relating to the benchmark and performance data, further information regarding 2025 MIPS benchmarking data can be located at <https://qpp.cms.gov/benchmarks>.

As codified at 414.1330(c) in the CY 2024 PFS final rule (89 FR 98561), we list 12 criteria used to determine the removal of a quality measure.

(i) If the Secretary determines that the quality measure is no longer meaningful, such as measures that are topped out.

(ii) If a measure steward is no longer able to maintain the quality measure.

(iii) If the quality measure reached extremely topped out status.

(iv) If the quality measure does not meet case minimum and reporting volumes required for benchmarking

after being in the program for 2 consecutive CY performance periods.

(v) If the quality measure is duplicative.

(vi) If the quality measure is not updated to reflect current clinical guidelines, which are not reflective of a clinician's scope of practice.

(vii) If the quality measure is a process measure.

(viii) If the quality measure addresses a measurement gap.

(ix) If the quality measure is a patient-reported outcome.

(x) If the quality measure is not available for MIPS quality reporting by or on behalf of all MIPS eligible clinicians.

(xi) The robustness of the quality measure.

(xii) Consideration of the quality measure in developing MIPS Value Pathways (MVPs).

We request comments on these measure removals.

**C.1. Colonoscopy Interval for Patients with a History of Adenomatous Polyps – Avoidance of Inappropriate Use**

| Category                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Measure Type:                                 | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Rationale for Removal:                        | We are proposing the removal of this quality measure from MIPS (linelized in §1 FR 77558 through 77675) because this measure has reached the end of the topped-out lifecycle (§2 FR 53640) and has a limited opportunity to improve clinical outcomes. Topped-out process measures are those with a median performance rate of 95 percent or higher (§1 FR 77286). This measure's continued topped-out status is based on the current 2025 MIPS benchmarking data located at <a href="https://app.cms.gov/benchmarks">https://app.cms.gov/benchmarks</a> , in addition to previous years MIPS benchmarking data. For more information on benchmarks, see the MIPS 2025 Quality Benchmarks User Guide at <a href="https://app-cm-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf">https://app-cm-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf</a> . |
| In the Circumstance the Measure Was Returned: | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not linelized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously linelized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

**C.2. Sentinel Lymph Node Biopsy for Invasive Breast Cancer**

| Category                                      | Description                                                                                                                                                                                                                                                                                                                                                                      |

| Measure Description:                          | The percentage of clinically node negative (clinical stage T1N0M0 or T2N0M0) breast cancer patients before or after neoadjuvant systemic therapy, who undergo a sentinel lymph node (SLN) procedure.                                                                                                                                                                             |
| Measure Steward:                              | American Society of Breast Surgeons                                                                                                                                                                                                                                                                                                                                              |
| High Priority Measure:                        | No                                                                                                                                                                                                                                                                                                                                                                               |
| Measure Type:                                 | Process                                                                                                                                                                                                                                                                                                                                                                          |
| Rationale for Removal:                        | We are proposing the removal of this quality measure from MIPS (linelized in §1 FR 77558 through 77675) at the measure steward's request because it is not aligned with current clinical guidelines and would no longer be maintained for inclusion.                                                                                                                             |
| In the Circumstance the Measure Was Returned: | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not linelized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously linelized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix. |

**C.3. Assessment of Mood Disorders and Psychosis for Patients with Parkinson's Disease**

| Category                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Measure Description:                          | Percentage of all patients with a diagnosis of Parkinson's Disease (PD) who were assessed for depression, anxiety, apathy, AND psychosis once during the measurement period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Measure Steward:                              | American Academy of Neurology                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| High Priority Measure:                        | No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Measure Type:                                 | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Rationale for Removal:                        | We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77875) because the quality action being measured has become a standard of care, based upon MIPS performance data, and thus has limited opportunity to improve clinical outcomes. Performance on this measure is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (81 FR 59781 through 59783). The average performance for this measure is 98.31 percent and as such is considered extremely topped out. The average performance rate is based on the current 2025 MIPS benchmarking data located at <a href="https://apps.cms.gov/benchmarks">https://apps.cms.gov/benchmarks</a> . For more information on benchmarks, see the MIPS 2025 Quality Benchmarks User Guide at <a href="https://apps-cms-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf">https://apps-cms-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf</a> . |
| In the Circumstance the Measure Was Reverted: | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously finalized specialty sets under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

**C.4. Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Preoperative Evaluation in Low-Risk Surgery Patients**

| Category                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Measure Type:                                 | Efficiency                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Rationale for Removal:                        | We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77875) because the quality action being measured has become a standard of care, based upon MIPS performance data, and thus has limited opportunity to improve clinical outcomes. The average performance for this inverse measure, 0.03 percent, is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (81 FR 59781 through 59783). For an inverse measure, a lower calculated performance rate indicates better clinical care or control. The average performance rate is based on the current 2025 MIPS benchmarking data located at <a href="https://apps.cms.gov/benchmarks">https://apps.cms.gov/benchmarks</a> . For more information on benchmarks, see the MIPS 2025 Quality Benchmarks User Guide at <a href="https://apps-cms-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf">https://apps-cms-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf</a> . |
| In the Circumstance the Measure Was Reverted: | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously finalized specialty sets under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

**C.5. Overuse of Imaging for the Evaluation of Primary Headache**

| Category                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Measure Type:                                 | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Rationale for Removal:                        | We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because the quality action being measured has become a standard of care, based upon MIPS performance data, and thus has limited opportunity to improve clinical outcomes. The average performance for this inverse measure, 0.55 percent, is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). For an inverse measure, a lower calculated performance rate indicates better clinical care or control. The average performance rate is based on the current 2025 MIPS benchmarking data located at <a href="https://qpp.cms.gov/benchmarks">https://qpp.cms.gov/benchmarks</a> . For more information on benchmarks, see the MIPS 2025 Quality Benchmarks User Guide at <a href="https://qpp-cms-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf">https://qpp-cms-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf</a> . |
| In the Circumstance the Measure Was Retained: | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously finalized specialty sets) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

**C.6. Perioperative Temperature Management**

| Category                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Measure Description:                          | Percentage of patients, regardless of age, who undergo surgical or therapeutic procedures under general or neuraxial anesthesia of 60 minutes duration or longer for whom at least one body temperature greater than or equal to 35.5 degrees Celsius (or 95.9 degrees Fahrenheit) was achieved within the 30 minutes immediately before or 15 minutes immediately after surgical end time.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| High Priority Measure:                        | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Measure Type:                                 | Outcome                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Rationale for Removal:                        | We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because the quality action being measured has become a standard of care, based upon MIPS performance data, and thus has limited opportunity to improve clinical outcomes. The average performance on this measure, 96.55 percent, is extremely high and unvarying, making this measure extremely topped out as discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763). The average performance rate is based on the current 2025 MIPS benchmarking data located at <a href="https://qpp.cms.gov/benchmarks">https://qpp.cms.gov/benchmarks</a> . For more information on benchmarks, see the MIPS 2025 Quality Benchmarks User Guide at <a href="https://qpp-cms-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf">https://qpp-cms-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf</a> . |
| In the Circumstance the Measure Was Retained: | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously finalized specialty sets) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

**C.7. Non-Recommended Cervical Cancer Screening in Adolescent Females**

| Category                                      | Description                                                                                                                                                                                                                                                                                                                                                                      |

| Collection Type:                              | MIPS QCM                                                                                                                                                                                                                                                                                                                                                                         |
| Measure Description:                          | The percentage of adolescent females 15-20 years of age who were screened unnecessarily for cervical cancer.                                                                                                                                                                                                                                                                     |
| Measure Steward:                              | National Committee for Quality Assurance                                                                                                                                                                                                                                                                                                                                         |
| High Priority Measure:                        | Yes                                                                                                                                                                                                                                                                                                                                                                              |
| Measure Type:                                 | Process                                                                                                                                                                                                                                                                                                                                                                          |
| Rationale for Removal:                        | We are proposing the removal of this quality measure from MIPS (finalized in 81 FR 77558 through 77675) because the measure steward would no longer maintain the measure.                                                                                                                                                                                                        |
| In the Circumstance the Measure Was Retained: | There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix. |

## C.3. Screening for Social Drivers of Health

| Category                                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Measure Description:                           | Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and other personal safety.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Measure Steward:                               | Centers for Medicare & Medicaid Services                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| High Priority Measure:                         | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Measure Type:                                  | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Rationale for Removal:                         | <p>We are proposing the removal of this quality measure from MIPS finalized in 87 FR 70259 through 70259) because it is a process measure that no longer addresses a priority need and would no longer be considered a high priority measure.</p> <p>In the CY 2026 PFS final rule (84 FR 82967) and CY 2019 PFS final rule (83 FR 59783) through 59783) rule, we communicated to stakeholders our desire to reduce the number of process measures within the MIPS quality measure set. In the CY 2017 OPPS final rule (81 FR 77101), we explained that outcome measures are more valuable than clinical process measures and are instrumental to improving the quality of care patients receive. In the CY 2023 PFS final rule (89 FR 58581), we codified under 94.4a, 1330(c)(1)(vi) that CMS uses the following criteria to determine the removal of a quality measure: If the quality measure is a process measure.</p> <p>Additionally, we seek to align with other quality programs. As indicated in the Medicare Program, Hospital Inpatient Prospective Payment System for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2026 Rates; Requirements for Quality Programs, and Other Policy Changes proposed rule, the Screening for Social Drivers of Health (SQOH) measure is proposed for removal beginning with the CY 2024 reporting period (FY 2024 payment determination from the Hospital Inpatient Quality Reporting (IQR) (90 FR 18336) and PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Programs (90 FR 16345). Further alignment is also proposed for the Inpatient Rehabilitation Facility (IRF) and Long-Term Care Hospital (LTCH) settings through proposed removal of 50 related elements from standardized patient assessment reporting (90 FR 18530 through 18551).</p> <p>Therefore, proposing to remove this measure aligns with the CMS Quality Measure Development Plan<sup>332</sup> through maintaining a quality measure inventory that focuses on high-priority and outcome-based measures that align across programs and payers.</p> <p>There are no substantive changes or specialty set movement proposed for this measure. If the measure is not intended for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.</p> |

| High Priority Measure:                        | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Measure Type:                                 | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Rationale for Removal:                        | <p>We are proposing the removal of this quality measure from MIPS finalized in 88 FR 79574 through 79577 because it is a process measure that no longer addresses a priority area and would no longer be considered a high-priority measure.</p> <p>In the CY 2020 PFS final rule (84 FR 62957) and CY 2019 PFS final rule (83 FR 58763 through 58765), we communicated to stakeholders our desire to reduce the number of process measures within the MIPS quality measure set. In the CY 2017 QIP final rule (84 FR 77104), we explained that outcome measures are more valuable than a limited process measures and are instrumental to improving the quality-of-care patients receive. In the CY 2025 PFS final rule (90 FR 98561), we codified under § 414.1330(c)(1)(ii) that CMS uses the following criteria to determine the removal of a quality measure, if the quality measure is a process measure:</p> <p>Additionally, we seek to align with other quality programs, as indicated in the Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2026 Rates; Regulations for Quality Programs; and Other Policy Changes proposed rule, Use Screen Positive Rate for Social Drivers of Health (SDOH) measure is proposed for removal beginning with the CY 2024 reporting period/FY 2025 payment determination from the Hospital Inpatient Quality Reporting (IQR) (80 FR 18336) and PPS-Cancer Cancer Hospitals, Quality Reporting (IQR) Programs (80 FR 18345). Further alignment is also proposed for the Inpatient Rehabilitation Facility (IRF) and Long-Term Care Hospital (LTCH) settings through proposed removal of SDOH-related elements from standardized patient assessment requiring (80 FR 18550 through 18551).</p> <p>Therefore, proposing to remove this measure aligns with the CMS Quality Measure Development Plan<sup>354</sup> through maintaining a quality measure inventory that focuses on high-priority and outcome-based measures that align across programs and payers, and reduce clinician burden of data collection as feasible.</p> |
| In the Circumstance the Measure Was Retained: | There are no substantive changes or specialty self movement proposed for this measure. If the measure is not finalized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| High Priority Measure:                        | No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Measure Type:                                 | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Rationale for Removal:                        | <p>We are proposing the removal of this quality measure from MIPS (measures 89 FR 88608 through 88613) because it is a process measure, and we seek to align with other Medicare programs.</p> <p>In the CY 2020 PFS final rule (84 FR 62957) and CY 2019 PFS final rule (83 FR 56763 through 56765) rule, we communicated to stakeholders our desire to reduce the number of process measures within the MIPS quality measure set. In the CY 2017 QPP final rule (81 FR 77401), we explained that outcome measures are more valuable than clinical process measures and are instrumental to improving the quality-of-care patients receive. In the CY 2025 PFS final rule (89 FR 98561), we codified under § 414.1330(c)(1)(vi) that CMS uses the following criteria to determine the removal of a quality measure: if the quality measure is a process measure.</p> <p>Additionally, we seek to align with other quality programs. As indicated in the Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2026 Rates; Requirements for Quality Programs; and Other Policy Changes proposed rule, inpatient measure COVID-19 Vaccination Coverage Among Healthcare Personnel measure is being proposed for removal (89 FR 18336 through 18337). This measure is also being proposed for removal in the Medicare Program; Inpatient Rehabilitation Facility Prospective Payment System for Federal Fiscal Year 2026 and Updates to the IRF Quality Reporting Program Proposed Rule (90 FR 18549 through 18550). We seek to align with these proposals to streamline clinical topics assessed across Medicare quality reporting programs.</p> |
| In the Circumstance the Measure Was Retained: | <p>There are no substantive changes or specialty set movement proposed for this measure. If the measure is not finalized for removal in the CY 2026 PFS final rule, it would be added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would be addressed under Table Group C of this Appendix.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

**Table Group D: Proposed Substantive Changes to Previously Finalized MIPS Quality Measures for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years**

The D Tables within this proposed rule provide the substantive changes proposed for the MIPS quality measures in CY 2026. Three measures have proposed substantive changes that would result in a new benchmark. All measures with substantive changes are discussed in detail in the tables below.

We note that some MIPS quality measures available in traditional MIPS and MVPs are adopted by the Medicare Shared Savings Program for utilization in the Alternative Payment Model (APM) Performance Pathway (APP) and/or APP Plus, as finalized in the 2025 PFS final rule (89 FR 98363 through 98371). For such measures, the collection type applicable for purposes of the APP and/or APP Plus (Medicare

CQM for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQM)) is also specified as a collection type available for such measures described in Table Group D.

The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2026 may not be identified within this proposed rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2026 CPT and ICD-10 updates and assessment of these codes' inclusion by the Measure Steward, these changes may be postponed until CY 2027. The 2026

Quality Measure Release Notes provide a comprehensive, detailed reference of exact code changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types on the Quality Payment Program website at <https://qpp.cms.gov>. In addition, eCQMs that are endorsed by a CBE are shown in Table D of this Appendix as follows: CBE #/eCQM CBE #.

In addition to the proposed substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but they are important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes would expand or contract the measure's current eligible population. Therefore, please refer to the current year measure specification and the 2026

Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation. Language has been added to all 2026 quality measure specifications in the form of a revised 'Instructions Note' to clearly identify if telehealth encounters are allowed for denominator eligibility regardless of changes in coding or billing practices that may occur.

Eligibility of telehealth encounters would be based on the intent of the measure and those settings that are appropriate for inclusion.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the proposed substantive changes, there may be revisions within the logic that are not considered substantive in nature;

however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

We request comments on these substantive changes.

#### D.1 Primary Open-Angle Glaucoma (POAG): Optic Nerve Evaluation

|                            |                                                                                                                                                                                                                                                                                                                                                                                                                      |

|                                     |                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Measure Steward:</b>             | American Academy of Ophthalmology                                                                                                                                                                                                                                                                                                                                             |
| <b>High Priority Measure:</b>       | No                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Measure Type:</b>                | Process                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Rationale:</b>                   | We are proposing to revise the measure description and numerator by revising the language from "within 12 months" to "during the measurement period" to clarify the time frame during which an optic nerve head evaluation should be completed. This clarification would ensure the numerator's quality action is assessed consistently and during the appropriate timeframe. |

| <b>Rationale:</b>                   | We are proposing to remove the Medicare Part B Claims collection type as it has reached the end of the tipped-out lifecycle (82 FR 51649). The average performance rate, 100 percent, and tipped-out status is based on the current MIPS benchmarking data located at <a href="https://qry.cms.gov/benchmark">https://qry.cms.gov/benchmark</a> . However, the benchmarking data continues to show a gap for the MIPS CQM collection type and as such, we are proposing to retain that collection type. |

| Measure Type:                | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Rationale:                   | <p>We are proposing to remove the MIPS/CQM collection type as it has reached the end of the topped-out lifecycle (82 FR 53640). The average performance rate, 94.53 percent, and topped-out status is based on the current MIPS benchmarking data located at <a href="https://qips.cms.gov/benchmarking">https://qips.cms.gov/benchmarking</a>. However, the benchmarking data continues to show a gap for the eCQM collection type and as such, we are proposing to retain the collection type.</p> <p>Additionally, for the eCQM collection type, we are proposing to exclude patients who are missing both eyes as they would not qualify for an eye exam, and revising the numerator to allow for an autonomous eye exam to meet the minimum quality notion as this is an acceptable standard of care in diabetic patients and would meet measure intent.<sup>300</sup></p>                                                                                                                                                                                                                                                                 |

| <b>Current Measure Description:</b> | Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate standardized depression screening tool AND if positive a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Substantive Change:</b>          | <p><b>Updated guidance:</b> For the eCOM collection type: Revised: Pharmacological interventions (prescribed or active depression medication).</p> <p><b>Revised:</b><br/>Follow-Up Plan: While there are many validated depression screening tools, they are not necessarily diagnostic tools. Patients with elevated depression screening scores should be followed by a clinician to evaluate whether a depression diagnosis is appropriate. Not a medication and/or referral are not always indicated for a positive score. In these cases, a follow-up plan is appropriate.</p> <p><b>Added:</b><br/>The measure is not prescriptive in the specific screening tool being used and provides no hierarchy for acceptance of one tool over another. In the case where two screenings are documented on the same date with different results (one positive and one negative), the measure only assesses the most recent screening. Since both screenings are both considered the most recent, the patient will be captured in the numerator if the positive screening result also includes documentation of an intervention following the positive screen.</p> <p><b>Updated numerator:</b> For the eCOM collection type: Added: Or an active depression medication overlaps the date of the qualifying encounter.</p> |

| <b>Measure Type:</b>                | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Rationale:</b>                   | We are proposing to revise the guidance and numerator for the eCOM collection type to clarify that pharmacological interventions include prescribed or active depression medications. We are proposing to update the guidance for determining the appropriate plan of care in instances where the screening tool doesn't adequately establish a diagnosis of depression. Additionally, we are proposing to add guidance to clarify instances of multiple screenings which aligns with current measure logic. These clarifications would ensure the numerator action is appropriately and consistently assessed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

### D.6 Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 20% OR Documentation of a Plan of Care

|                              | Description                                                                                                                                                                                                                                                                                                                                                                                      |

| Current Measure Description: | Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) whose glaucoma treatment has not failed (the most recent IOP was reduced by at least 20% from the pre-intervention level) OR if the most recent IOP was not reduced by at least 20% from the pre-intervention level, a plan of care was documented within the 12-month performance period. |
| Substantive Change:          | Updated numerator definition: For all collection types: Added: timing for documenting the plan of care.                                                                                                                                                                                                                                                                                          |
| Measure Steward:             | American Academy of Ophthalmology                                                                                                                                                                                                                                                                                                                                                                |
| High Priority Measure:       | Yes                                                                                                                                                                                                                                                                                                                                                                                              |
| Measure Type:                | Outcome                                                                                                                                                                                                                                                                                                                                                                                          |
| Rationale:                   | We are proposing to update the numerator definition for all collection types to clarify the timing of when the care plan must be documented in the patient's medical record after the IOP is assessed. This would ensure timely and optimal patient care and consistent assessment across clinicians for measure performance.                                                                    |

### D.7 Oncology: Medical and Radiation – Pain Intensity Quantified

|                              | Description                                                                                                                                                                                                                                                                                                                                                                                                 |

| High Priority Measure:       | Yes                                                                                                                                                                                                                                                                |
| Measure Type:                | Process                                                                                                                                                                                                                                                            |
| Rationale:                   | We are proposing to add oral chemotherapy to the denominator criteria to align with the eCOM version of the measure that includes SNOMED codes for oral chemotherapy, ensuring that patients on oral chemotherapy are included in the eligible patient population. |

## D.9 Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy

|                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Current Measure Description: | If a patient has been newly prescribed a biologic and/or immune response modifier that includes a warning for potential reactivation of a latent infection, then the medical record should indicate TB testing in the preceding 12-month period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Substantive Change:          | <p>Updated denominator instructions: Added: new biologic and/or immune response modifiers.</p> <ul style="list-style-type: none"> <li>- Adalimumab-trysk (Simland),</li> <li>- Rituximab (Rituxan),</li> <li>- Tocilizumab-aazg (Tyeme),</li> <li>- Tocilizumab-bavi (Tofidence),</li> <li>- Ustekinumab (Pyzchna),</li> <li>- Ustekinumab (Selarsin),</li> <li>- Ustekinumab (Wezkanu)</li> </ul> <p>Revised:<br/>The list of biologic and/or immune response modifier therapies are subject to change as new therapies are approved by the FDA. Newly approved biologic and/or immune response modifier therapies requiring TB testing prior to the first course of therapy would be eligible for inclusion within the denominator even if not listed above.</p>         |

| Measure Type:                | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Rationale:                   | We are proposing to update the list of medications used in the measure to identify denominator eligible patients by adding new biologic and/or immune response modifiers to the existing list in the denominator instructions. This expansion would provide an up-to-date list of appropriate biologic and/or immune response modifiers that clinicians may have prescribed for their patients, thereby ensuring that as many of the appropriate patients are identified in the denominator of this measure as possible. Additionally, we are proposing to revise language within the denominator instructions that would clarify the medication list is not exhaustive and any medication that requires TB testing prior to treatment would be appropriate for inclusion. |

**D.14 Cataracts: 2040 or Better Visual Acuity within 90 Days Following Cataract Surgery**

|                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Current Collection Type:     | eCQM / MIPS eCQM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Current Measure Description: | Percentage of cataract surgeries for patients aged 18 years and older with a diagnosis of uncomplicated cataract and no significant ocular conditions impacting the visual outcome of surgery and had best-corrected visual acuity of 20/40 or better (distance or near) achieved in the operative eye within 90 days following the cataract surgery.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Substantive Change:          | Updated denominator exclusion: For the eCQM collection type: Significant ocular conditions include Amblyopia, Burn Confined to Eye and Adnexa, Cataract Secondary to Ocular Disorders, congenital cataract, mature or hypermature cataract, posterior polar cataract, corneal corneal ulcer, certain types of lenticularitis, cataract degeneration, cataract dislocation, cataract hemorrhage and rupture, vitreous clouded, corneal edema, disorders of cornea including corneal opacity, degeneration of macula and posterior pole, degenerative disorders of globe, diabetic macular edema, diabetic retinopathy, disorders of optic chiasm, disorders of neural retina, disseminated choroiditis and disseminated retinodermatitis, focal choroiditis and focal retinodermatitis, glaucoma, hereditary, choroiditis retinoid, corneal, retinitis, hypotony of eye, injury to optic nerve and pathways, macular scar of posterior pole, Morax-Johnson cataract, myasthenia and other irregular eye movements, open wound of eyelid, optic atrophy, optic neuritis, retinoidic atrophy, posterior lensitis, prior penetrating keratoplasty, previous endophthalmitis, vitreal detachment with vitreal debris, vitreal vascular occlusion, vitrealitis, vitreous, scleritis, separation of retinal tissue, traumatic cataract, uveitis, uveitis disorders of iris and ciliary body. |
| Measure Steward:             | American Academy of Ophthalmology                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| High Priority Measure:       | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Measure Type:                | Outcome                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Rationale:                   | We are proposing to update the denominator exclusion for the eCQM collection type to include the list of diagnoses that qualify as significant ocular conditions <sup>141, 142</sup> for the purposes of this measure. This clarification would ensure appropriate patients are consistently identified as denominator eligible and assessed for the numerator action across submitting clinicians for measure performance.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>Measure Type:</b>                | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Rationale:</b>                   | We are proposing to revise the measure description, guidance, and numerator agreement to clarify the timing of the routine assessment of cognition and review of the results to ensure that the patient had a diagnosis of dementia at the time of assessment. This revision better aligns with the intent of the measure and would ensure the numerator's quality action is attributable to the denominator eligible criteria.                                                                                                                                                                                                                                                                                                                  |

| <b>Current Measure Description:</b> | Percentage of patients aged 18 years and older who had a surgical site infection (SSI).                                                                                                                                                                                                                                                                                                            |
| <b>Substantive Change:</b>          | Updated instructions: Added: All sites of the primary procedure and integral procedures performed during (or up to) the operating room should be evaluated as part of this measure for possible wound occurrences. If more than one SSI is observed, assign the SSI at the deepest level (superficial, deep or organ/space) that occurs within a 30-day postoperative timeframe.                   |
| <b>Measure Steward:</b>             | American College of Surgeons                                                                                                                                                                                                                                                                                                                                                                       |
| <b>High Priority Measure:</b>       | Yes                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Measure Type:</b>                | Outcome                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Rationale:</b>                   | We are proposing to update the measure instructions to clarify how to handle multiple procedures during a single encounter. By assigning the SSI at the deepest level (superficial, deep or organ/space) in situations where more than one SSI is observed within a 30-day postoperative timeframe, the most adverse surgical outcome is captured as an indicator of the quality of care provided. |

**D.13 Closing the Referral Loop: Receipt of Specialist Report**

| Measure Type:                | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Rationale:                   | We are proposing to update the guidance and numerator for the eCQM collection type to align with current measure logic, which requires a report from the referral. These updates allow for improved electronic implementation of the measure.                                                                                                                                                                                                                                                                                                                                                                                                   |

**D.14 Functional Status Assessment for Total Hip Replacement**

|                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Current Measure Description: | Percentage of patients 19 years of age and older who received an elective primary total hip arthroplasty (THA) and completed a functional status assessment within 90 days prior to the surgery and in the 300 = 425 days after the surgery.                                                                                                                                                                                                                                                                                                                                 |
| Substantive Change:          | Updated denominator exclusions: Revised: Exclude patients with one or more specific lower body fractures indicating trauma in the 48 hours before or at the start of the total hip arthroplasty.                                                                                                                                                                                                                                                                                                                                                                             |
| Measure Steward:             | Centers for Medicare & Medicaid Services                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| High Priority Measure:       | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Measure Type:                | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Rationale:                   | We are proposing to update the denominator exclusions regarding one or more specific lower body fractures by increasing the timeframe to 48 hours prior to the start of THA. Trauma occurring in the 48 hours leading up to a total hip replacement can potentially affect the outcome of the surgery, depending on factors such as the severity of the trauma or the need to stabilize and/or adequately assess the condition of the patient. This extended timeframe would ensure patients undergoing THA are prepared for the procedure and not in an emergent situation. |

**D.15 Cataract Surgery: Difference Between Planned and Final Refraction**

|                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Current Measure Description: | Percentage of patients aged 18 years and older who had cataract surgery performed and who achieved a final refraction within +/- 1.0 diopters of their planned (target) refraction.                                                                                                                                                                                                                                                                                                                                                                                                            |
| Substantive Change:          | Updated numerator note. Added: It would be expected that the planned (target) refraction be assessed and documented within 90 days prior to the documented eligible procedure.                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Measure Type:                | Outcome                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Rationale:                   | We are proposing to add a denominator note to the measure, which would state that only those patients with recently obtained planned (target) refractions are considered for numerator compliance. As refractions may change over time, it is essential that patients undergoing cataract surgery have current and accurate results for appropriate ophthalmic evaluations, which would be used by the ophthalmologist to counsel the patient about target postoperative refractive options and formulation of a care plan that would achieve the documented target refraction. <sup>54)</sup> |

| Measure Type:                | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Rationale:                   | We are proposing to revise the measure description and numerator to add the pentavalent serogroup meningococcal vaccine as numerator compliant for patients for which it is suggested. This update reflects recommendations of the CDC Advisory Committee on Immunization Practices that children may receive pentavalent vaccine starting at age 10 ( <a href="https://www.cdc.gov/mmwr/volumes/73/wr/mm7315a1.htm">https://www.cdc.gov/mmwr/volumes/73/wr/mm7315a1.htm</a> ).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## D.17 Osteoporosis Management in Women Who Had a Fracture

|                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Current Measure Description: | The percentage of women 65+ years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis within 180 days after the fracture.                                                                                                                                                                                                                                                                          |
| Statistical Change:          | The measure numerator note is revised to read: For all collection types: For the purposes of submitting this measure, Central Dual Energy X-ray Absorptiometry (DXA), the most common measurement for measuring bone mineral density (BMD), spinal densitometry (DEXA), and Peripheral Densitometry (X-ray Absorptiometry (DXA)) would meet performance and the intent of the measure. Therefore, DEXA would be submitted in the instances these screening modalities are utilized. |

| High Priority Measure:       | No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Measure Type:                | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Rationale:                   | We are proposing to revise the list of tests for measuring BMD by adding CT bone density axial and ultrasonography for densitometry as meeting performance. These changes would ensure testing required for measure compliance is better aligned with guidelines and best practices. <sup>124</sup>                                                                                                                                                                                 |

| Measure Type:                      | Patient-Reported Outcome-Based Performance Measure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Rationale:                         | <p>We are proposing to update the measure's timeframe for assessing patient outcomes to anytime within 6 months following the treatment. While the ideal assessment time is 3–6 months following the treatment, results have shown improvement occurred fairly quickly before slowing and plateauing at about 5% months.<sup>543</sup> Therefore, it is reasonable a patient may show improved scores sooner than 3 months, and this revision would allow flexibility in workflow while ensuring quality outcomes are achieved.</p> <p>Additionally, we are also proposing to update the denominator options to ensure patients were not lost to follow-up without a reasonable attempt made. By replacing the exception for patient survey results not available, we would require documentation that the patient was actually sought for follow-up.</p>           |

| Current Measure Description: | <p>The IVD All-or-None Measure is one outcome measure (optimal control). The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include:</p> <ul style="list-style-type: none"> <li>• Most recent blood pressure (BP) measurement is less than or equal to 140/90 mm Hg -- AND</li> <li>• Most recent tobacco status is Tobacco-Free -- AND</li> <li>• Daily Aspirin or Other Antiplatelet Unless Contraindicated -- AND</li> <li>• Statin Use Unless Contraindicated</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Substantive Change:          | <p>The measure description is revised to read: The IVD All-or-None Measure is one outcome measure (optimal control). The measure contains four goals. All four goals within a measure must be reached in order to meet that measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) - Using the IVD denominator optimal results include:</p> <ul style="list-style-type: none"> <li>• Most recent blood pressure (BP) measurement is less than or equal to 130/80 mm Hg -- AND</li> <li>• Most recent tobacco status is Tobacco-Free -- AND</li> <li>• Daily Aspirin or Other Antiplatelet Unless Contraindicated -- AND</li> <li>• High Intensity Statin Use Unless Contraindicated</li> </ul> <p>Updated denominator criteria: Removed: coding for arterial embolism and thrombosis from CAD Risk-Equivalent Conditions.</p> <p>The measure numerator is revised to read: For all Submission Criteria:</p> <p>The number of IVD patients who meet ALL of the following targets:</p> <ul style="list-style-type: none"> <li>• Most recent BP is less than or equal to 130/80 mm Hg</li> <li>• Most recent tobacco status is Tobacco-Free (NOTE: If there is No Documentation of Tobacco Status the patient is not compliant for this measure)</li> <li>• Daily Aspirin or Other Antiplatelet Unless Contraindicated</li> <li>• High Intensity Statin Use Unless Contraindicated</li> </ul> <p>Updated numerator notes: Added: For all Submission Criteria: Component 4: Valid High Intensity statins include Atorvastatin 40-80 mg and Rosuvastatin 70-80 mg</p> <p>Updated numerator options: Revised: For all Submission Criteria:</p> <p>Component 1: require blood pressure to be less than or equal to 130/80 mm Hg.</p> <p>Component 4: require use of high intensity statin therapy</p> |

| High Priority Measure:       | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Measure Type:                | Intermediate Outcome                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Rationale:                   | <p>We are proposing to update multiple components of this measure to align with the AHA/ACC/AACCP/ASPC/NIH/AFPA Guidelines <a href="https://www.ahajournals.org/doi/10.1161/CIR.0000000000001168">https://www.ahajournals.org/doi/10.1161/CIR.0000000000001168</a>. We are proposing to revise normal blood pressure measurement from 140/90 to 130/80 and switch from Statin Use Unless Contraindicated to High Intensity Statin Use Unless Contraindicated. Given that the diagnoses included in the measure represent the highest level of cardiovascular risk, and given current guidelines, the measured population is best served by being held to a lower blood pressure measurement and by being on a high-intensity statin to reduce the risk of a major cardiac event.</p> <p>We are also proposing to remove coding for arterial embolism and thrombosis from the CAD Risk-Equivalent Conditions denominator criteria as these conditions do not share the same pathophysiology or treatment goals and therefore misalign with the intent of the measure.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## D-20 Appropriate Treatment for Patients with Stage I (T1c) - III HER2 Positive Breast Cancer

| CBE # / eCQM CBE #:          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Current Collection Type:     | MIPS eCQM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Current Measure Description: | Percentage of patients aged 18 to 70 with stage I (T1c) - III HER2 positive breast cancer for whom appropriate treatment is initiated                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Substance Change:            | <p>Updated denominator criteria: Revised: AJCC stage on breast cancer diagnosis = T1 (a, or b) and T1-stage or breast cancer diagnosis = T1c.</p> <p>Updated denominator numerator: Added: The patient must have two encounters (during the performance period). This is intended to reflect two separate encounters with the same treating provider/group during this timeframe. There is no specific timeframe for the requirement for the two encounters that occur during the performance period. For example, two encounters with the same provider/group could occur in the same week. However, two encounters should not be counted if they occur on the same day. For example, the patient has two encounters with a different provider on the same day.</p> |

| Current Collection Type:     | NMPS eCQM                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Current Measure Description: | Percentage of adult patients (aged 18 or over) with metastatic colorectal cancer who receive anti-epidermal growth factor receptor monoclonal antibody therapy for whom RAS (KRAS and NRAS) gene mutation testing was performed.                                                                                                                                                                                                                                                                                                                                                                                  |
| Substantive Change:          | Updated denominator note: Added: The patient must have two encounters during the performance period. This is intended to reflect two separate encounters with the same reporting provider/group during this timeframe. There is no specific timeframe for the requirement for the two encounters that occur during the performance period. For example, two encounters with the same provider/group could occur in the same week. However, two encounters should not be counted if they occur on the same day. For example, the patient has two encounters, and one is with a different provider on the same day. |
| Measure Steward:             | American Society of Clinical Oncology                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| High Priority Measure:       | No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Measure Type:                | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Rationale:                   | We are proposing to add a denominator note to clarify the encounter requirement to require and reflect two separate encounters occurring on different days with the same reporting provider or group.                                                                                                                                                                                                                                                                                                                                                                                                             |

**D.22 Percentage of Patients Who Died from Cancer Receiving Systemic Cancer-Directed Therapy in the Last 14 Days of Life (lower score – better)**

|                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Current Measure Description: | Percentage of patients who died from cancer receiving systemic cancer-directed therapy in the last 14 days of life.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Substantive Change:          | Updated denominator criteria: Added: coding to allow telehealth as denominator eligible<br><br>Updated denominator note: Added: The patient must have two encounters during the performance period. This is intended to reflect two separate encounters with the same reporting provider/group during this timeframe. There is no specific timeframe for the requirement for the two encounters that occur during the performance period. For example, two encounters with the same provider/group could occur in the same week. However, two encounters should not be counted if they occur on the same day. For example, the patient has two encounters and one is with a different provider on the same day. |

| Measure Type:                | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Rationale:                   | We are proposing to add telehealth coding as denominator eligible for this measure as it is appropriate for patients seen via telehealth to be included in the denominator for assessment of performance.<br><br>We are also proposing to add a denominator note to clarify implementation of the denominator criteria encounter requirement, which would ensure the denominator eligible patient population is appropriately identified and consistent across clinician submissions.                                                                                                                                                                                                                           |

**D.23 Percentage of Patients Who Died from Cancer Admitted to Hospice for Less than 3 days (lower score – better)**

|                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Current Measure Description: | Percentage of patients who died from cancer, and admitted to hospice and spent less than 3 days there.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Substantive Change:          | Updated denominator criteria: Added coding to allow telehealth as denominator eligible<br><br>Updated denominator note: Added: The patient must have two encounters during the performance period. This is intended to reflect two separate encounters with the same reporting provider/group during this timeframe. There is no specific timeframe for the requirement for the two encounters that occur during the performance period. For example, two encounters with the same provider/group could occur in the same week. However, two encounters should not be counted if they occur on the same day. For example, the patient has two encounters and one is with a different provider on the same day. |

| Measure Type:                | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Rationale:                   | We're proposing to add telehealth coding as denominator eligible for this measure as it is appropriate for patients seen via telehealth to be included in the denominator for assessment of performance.<br><br>We are also proposing to add a denominator note to clarify implementation of the denominator criteria encounter requirement, which would ensure the denominator eligible patient population is appropriately identified and consistent across clinician submissions.                                                                                                                                                                                                                           |

**Risk-standardized complication rate (RSCR) following elective primary total hip arthroplasty (THA) and/or total knee arthroplasty (TKA) for Merit-based Incentive Payment System (MIPS)****D.24**

|                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Current Measure Description: | This measure is a re-specified version of the measure, "Hospital-level Risk-standardized Complication rate (RSCR) following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA)" (National Quality Forum 1540), which was developed for patients 65 years and older using Medicare claims. This re-specified measure attributes outcomes to Merit-based Incentive Payment System participating clinicians and/or clinician groups ("providers") and measures each provider's complication rate, defined as any one of the specified complications occurring from the date of index admission to up to 90 days post date of the index procedure. |
| Substantive Change:          | Updated denominator exclusions: Removed: COVID-exclusion                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| High Priority Measure:       | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Measure Type:                | Outcome                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Rationale:                   | We are proposing to exclude admissions with either a principal or secondary diagnosis of COVID-19 present on admission from the measure denominator due to the end of the public health emergency (PHE). This proposed change aligns this measure with language proposed under the Medicare Program: Hospital Inpatient Prospective Payment System for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2026 Rates, Requirements for Quality Programs, and Other Policy Changes proposed rule (90 FR 18292).                                                                                                 |

**D.25 Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (MCC)**

|                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Current Measure Description: | The measure is a risk-standardized rate of acute, unplanned hospital admissions for the Merit-based Incentive Payment System (MIPS) among Medicare Fee-for-Service (FFS) patients aged 64 years and older with multiple chronic conditions (MCCs); i.e., two or more of nine qualifying chronic conditions. The measure is adjusted for age, chronic condition categories, and other clinical and frailty risk factors present at the start of the 12-month measurement period as well as social risk factors. The measure attributes admissions to MIPS participating clinicians and/or clinician groups, as identified by their National Provider Identifiers (NPIs) and/or Taxpayer Identification Number (TIN) and assesses each clinician's or clinician group's admission rate. |
| Substantive Change:          | Update denominator exclusions: Remove: Patients assigned to clinician who achieve Qualifying Advanced Alternative Payment Model Participation (QP) status and therefore do not participate in MIPS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Rationale:                   | We are proposing to revise the denominator eligible patient population by removing the denominator exclusion regarding QP status. When the MIPS MCC measure was proposed in the CY 2007 PFS proposed rule (68 FR 39370 through 39371) and finalized in the final rule (68 FR 65264 through 65265), there was a parallel proposal to remove the ACC MCC measure from the Medicare Shared Savings Plan (SSP) APM Performance Pathway (APP) measure set and replace it with the MIPS MCC measure. With a MIPS measure now in place, and consistent with the initial intent, we are proposing removing this exclusion to broaden the scope of the measure and account for all MIPS participants, particularly those in APM entities who may have QP status.                               |

| <b>Current Measure Description:</b> | Percentage of patients aged 18-85 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine Albumin-Creatinine Ratio (uACR) within the performance period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Substantive Change:</b>          | <p><b>Updated guidance:</b> For the eCOM collection type: Added: The Urine Albumin-Creatinine Ratio (uACR) requirement can be met with a documented Urine Albumin and Urine Creatinine less than or equal to four days apart. A calculation of uACR is not required to meet this measure, but it is intended to for the uACR to be calculated for the purposes of kidney health evaluation. If the Urine Albumin and Urine Creatinine tests have different units of measure, they should be converted to the same unit of measure for the purposes of calculating uACR.</p> <p>The Urine Albumin-Creatinine Ratio Test requirement can be met if the lab result is received as a quantitative value or as an undetectable result. Undetectable results can be coded using values in the "Undetectable Lab Result Value" value set.</p> <p>The measure numerator is revised to read: For the eCOM collection type: Patients who received a kidney health evaluation during the measurement period. Kidney health evaluation is defined by an eGFR AND uACR within the measurement period OR an eGFR and a Urine Albumin and Urine Creatinine result, documented less than or equal to four days apart.</p> |
| <b>Measure Steward:</b>             | National Kidney Foundation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>High Priority Measure:</b>       | No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Measure Type:</b>                | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Rationale:</b>                   | We are proposing to update the guidance and the numerator for the eCOM collection type to clarify how the uACR requirement may be met in instances where the lab results are non-quantitative, that is, undetectable, if the Urine Albumin and Urine Creatinine tests are run separately. This would ensure the measure logic is appropriately assessing clinicians as numerator compliant when the intent of the measure has been met.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## D.27 Adult Immunization Status

|                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Rationale: | <p>We are proposing to revise the measure to include the Hepatitis B vaccine in the list of routine vaccinations of adults aged 19 years and older based on updated recommendations of the Advisory Committee on Immunization Practices. The literature shows that approximately 50 percent of acute hepatitis B cases reported in 2019 occurred among persons aged 50–59 years due to low HepB vaccination coverage among adults aged greater than or equal to 19 years. Furthermore, an estimated 2 percent to 6 percent of acute hepatitis B viral infections have been found to lead to chronic hepatitis B among adults (<a href="https://www.cdc.gov/mmwr/preview/mmwrhtml/mm6813a1.htm">https://www.cdc.gov/mmwr/preview/mmwrhtml/mm6813a1.htm</a>).</p> <p>In the event the proposed substantive change(s) are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meet the criteria for creation of a performance period benchmark, a new benchmark would be used for scoring.</p> |

## D.28 Acute Posterior Vitreous Detachment Appropriate Examination and Follow-up

| Current Measure Description:       | Percentage of patients with a diagnosis of acute posterior vitreous detachment (PVD) in either eye who were appropriately evaluated during the initial exam and were re-evaluated no later than 8 weeks.                                                                                                                                                                                                                                                                                                                                                                                                  |
| Substantive Change:                | Updated Instructions: Revised: This measure is to be submitted once per performance period for acute PVD in either eye. For the purpose of submitting this measure, only unique occurrences with an onset of acute PVD diagnosed within the current performance period will be considered eligible, with the most recent occurrence (if there is more than one occurrence) being used for performance calculation.                                                                                                                                                                                        |

| High Priority Measure:             | No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Measure Type:                      | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Rationale:                         | <p>We are proposing to update the measure submission frequency to once per performance period as simultaneous or very close successive failures in PVDs are rare.<sup>54</sup></p> <p>In the event the proposed substantive changes are finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark would be used for scoring.</p> |

| Current Measure Description: | Percentage of patients with a diagnosis of acute posterior vitreous detachment (PVD) and acute vitreous hemorrhage in either eye who were appropriately evaluated during the initial exam, and were re-evaluated no later than 2 weeks.                                                                                                                                                                                                                                                                                                                                                        |
| Substantive Change:          | Updated Instructions: Revised. This measure is to be submitted once per performance period for acute PVD and acute vitreous hemorrhage in either eye. For the purpose of submitting this measure, only unique occurrences with an onset of acute PVD and acute vitreous hemorrhage diagnosed within the current performance period will be denominator eligible, with the most recent occurrence if there is more than one occurrence being used for performance calculation.                                                                                                                  |
| Measure Standard:            | American Society of Retina Specialists                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| High Priority Measure:       | No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Measure Type:                | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Rationale:                   | We are proposing to update the measure submission frequency to once per performance period as simultaneous or very close-in-time bilateral PVDs are rare. <sup>107</sup><br><br>In the event the proposed substantive changes have finalized, the substantive changes would not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for review of a performance period benchmark, a new benchmark would be used for scoring. |

<sup>107</sup> See footnote Retina Specialist, 2021.

**D.30 Gains in Patient Activation Measure (PAM®) Scores at 12 Months**

|                                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>Current Measure Description:</b> | The Patient Activation Measure® (PAM®) is a 10- or 13-item questionnaire that assesses an individual's knowledge, skills, and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.                                                                                                                                                                                                                                                                                                                             |

| <b>High Priority Measure:</b>       | Yes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Measure Type:</b>                | Patient-Reported Outcome-Based Performance Measure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Rationale:</b>                   | We are proposing to remove Performance Rate 5 that measures the average change between baseline PAM® score and the percentage of patients 14 years and older who achieved a net increase of 6 points in a 4 to 12 month period as it is not technologically feasible to calculate using the existing submission JavaScript Object Notation (JSON) structure. As a result, the submission of data for the Submission Criteria 4 would not be required when reporting this measure.<br><br>We are also proposing to exclude patients with a diagnosis of delirium and a psychoactive substance abuse from the denominator of submission criteria 1, 2 and 3. This exclusion would ensure appropriate patients would be included in the denominator of the measure. |

**Table Group DD: Proposed Substantive Changes to Previously Finalized MIPS Quality Measures Available Only for Use in Relevant MVPs for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years**

As finalized for the CY 2024 performance period/2026 MIPS payment year and future years, the following three MIPS quality measures were retained for utilization in MVPs only while removed from traditional MIPS: Q112: Breast Cancer Screening, Q113: Colorectal Cancer Screening, and Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (88 FR 79897 through 79902). We note that some MIPS quality measures available only in MVPs are adopted by the Medicare Shared Savings Program for utilization in the Alternative Payment Model (APM) Performance Pathway (APP) and/or APP Plus, as finalized in the 2025 PFS final rule (89 FR 98363 through 98371). For such measures, the collection type applicable for purposes of the APP and/or APP Plus (Medicare CQM for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQM) is also specified as a collection type available for such measures described in Table Group DD.

Table Group DD within this proposed rule provides substantive changes proposed for the CY 2026 performance period/2028 MIPS payment year for MIPS quality measures available only in a relevant MVP. One of the aforementioned MIPS quality measures, Q112, has substantive changes under Table Group DD. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2026 may not be identified within this proposed rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2026 CPT and ICD-10 updates and assessment of these codes' inclusion by the Measure Steward, these changes may be postponed until CY 2027. The 2026 Quality Measure Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program website at <https://qpp.cms.gov>.

Electronic clinical quality measures (eCQMs) that are endorsed by a CBE are shown in Table DD of this Appendix as follows: CBE #/eCQM CBE #.

In addition to the proposed substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but it is important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes would expand or contract the measure's current eligible patient population. Therefore, please refer to the current year measure specification and the 2026 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the proposed substantive changes, there may be revisions within the logic that are not considered substantive in nature; however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

We request comments on these substantive changes.

### DB.1. Breast Cancer Screening

|                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Current Measure Description: | Percentage of women 40 - 74 years of age who had a mammogram to screen for breast cancer in the 27 months prior to the end of the measurement period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Substantive Change:          | <p>Updated description: For the eCOM collection type: Revised: women 40-74 years of age.</p> <p>Updated stratification: For the eCOM collection type: Added: Report a total rate, and each of the following age strata:<br/> Stratum 1: Patients age 42-51 by the end of the measurement period<br/> Stratum 2: Patients age 52-74 by the end of the measurement period</p> <p>Updated definition: For the MIPS CQM, Medicare Part B Claims Measure, and Medicare CQM collection types: Added:<br/> Reviewed – to meet the quality action, there must be documentation in the medical record that the clinician reviewed the mammography report and discussed the findings with the patient. The mammography report may also be provided by the patient for the clinician's review / discussion during the visit and should be documented in the medical record.</p> |

| High Priority Measure:       | No                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Measure Type:                | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Rationale:                   | <p>We are proposing making these changes to align with the latest clinical guidelines. We are proposing adding a new rate to the measure to ensure continued benchmarking for the previously existing rate and to ensure continuous, ungrouped monitoring of performance across the specified age bands.</p> <p>Additionally, we are proposing to add a definition for reviewed to the MIPS CQM, Medicare Part B Claims Measure, and Medicare CQM collection types to clarify the requirement for meeting the quality action. This would ensure the intent of measure is being met and numerator compliance is consistently assessed across all submissions.</p>                                                                                                                                                                                                     |

| Measure Type:                | Process                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Rationale:                   | <p>We are proposing to add a definition for reviewed to the MIPS CQM, Medicare Part B Claims Measure, and Medicare CQM collection types to clarify the requirement for meeting the quality action. This would ensure the intent of measure is being met and numerator compliance is consistently assessed across all submissions.</p>                                                                                                                                                    |

## APPENDIX 2: IMPROVEMENT ACTIVITIES

In this proposed rule, beginning with the CY 2026 performance period/2028 MIPS payment year, we are proposing to add three new improvement activities (as specified in Table F-B1), modify seven previously finalized improvement activities (as specified in Table F-B2), and remove eight previously finalized improvement activities (as specified in Table F-B3). We are also proposing to add a new activity subcategory and remove a subcategory. These proposals are discussed in section IV.A.4.d of this proposed rule and in more detail below. We request comments on our proposals.

Except as otherwise noted in this proposed rule, previously finalized improvement activities will continue to apply for the CY 2026 performance period/2028 MIPS payment year and future years.

**TABLE F-B1: New Improvement Activities**  
**Proposed for Adoption Beginning with the CY 2026 Performance Period/2028 MIPS Payment Year**

| New Improvement Activity       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Proposed Activity ID:          | IA_PM_XX                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Proposed Subcategory:          | Population Management                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Proposed Activity Title:       | Improving Detection of Cognitive Impairment in Primary Care                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Proposed Activity Description: | <p>To increase the detection rate of cognitive impairment, particularly in early stages, the MIPS eligible primary care clinician must perform the following activities:</p> <ul style="list-style-type: none"> <li>• Determine his/her baseline detection rates for mild cognitive impairment (MCI), dementia, and cognitive impairment at either stage using the tool provided for this Improvement Activity</li> <li>• Many of the three rates are below 1.0: <ul style="list-style-type: none"> <li>+• Increase the uptake of the Annual Wellness Visit</li> <li>+• Ensure that each Annual Wellness Visit contains a structured cognitive assessment</li> <li>+• Include a question about subjective memory concerns to the collection of vital signs during intake for patients 65+, and conduct a structured cognitive assessment in those with concerns</li> </ul> </li> <li>• Remeasure detection rates for MCI, dementia, and cognitive impairment at either stage quarterly</li> </ul> <p>This Improvement Activity should only focus on Medicare patients aged 65 and older, given the strong correlation of cognitive impairment with age.</p>                                                               |
| Rationale:                     | <p>Recent publications of phase three trial results reported that two amyloid-targeting drugs were able to significantly reduce the speed of cognitive decline in patients with early-stage Alzheimer's disease, the most common cause of dementia. One drug, lecanemab, is now FDA-approved for treatment of mild cognitive impairment (MCI) and mild dementia due to Alzheimer's disease, and the other drug, donanemab, is awaiting the FDA's decision. These drugs are only indicated in early disease stages, lending renewed urgency to the problem of delayed and missed diagnosis of cognitive decline while, today, cognitive decline is usually detected in advanced stages.<sup>1,2</sup> For example, Thoits et al. found that about 79 percent of randomly selected patients, who were newly diagnosed at a memory clinic, had moderate or severe dementia.<sup>3</sup> Such delayed diagnoses have long taken away from patients and families the opportunity to adopt lifestyle changes to reduce the speed of decline,<sup>4</sup> start symptomatic medication treatment, and consider measures to increase physical and financial safety and security.<sup>5</sup> But now failing to detect early-</p> |

|                                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                       | <p>stage Alzheimer's disease will deprive patients of the prospect to alter the course of this devastating illness.</p> <p>Unfortunately, limited data exist for the degree of missed diagnoses of MCI, the stage at which Alzheimer's disease would ideally be treated.<sup>6</sup> White et al. used data from the Health and Retirement Study (HRS) to determine that 11.4 percent of subjects with incident MC reported receiving a timely diagnosis,<sup>7</sup> and Savva et al. analyzed neuropsychiatric testing data from the Aging, Demographics and Memory Study ADAMS data to conclude that 15 percent of participants with a Clinical Dementia Rating of 0.5, a score reflective of MCI, were aware of a diagnosis of cognitive impairment.<sup>8</sup> Only nine percent of expected MCI cases are diagnosed in the U.S. Medicare population.<sup>9</sup></p> <p>More research has been conducted on dementia detection rates. One study linked Medicare claims data to information on 417 patients with a clinical diagnosis of Alzheimer's disease in the Consortium to Establish a Registry for Alzheimer's Disease (CERAD) data and reported that only around 76 percent of patients had a corresponding diagnosis in claims data in the period from 1991 to 1999,<sup>10</sup> a number similar to the 86 percent reported by Lee et al. for the 2007 to 2012 period of the same data.<sup>11</sup> Zhu et al. published a dementia prevalence of 12.9 percent based on cognitive tests and of 12.4 percent based on diagnosis codes in the 20 percent Medicare sample in 2012.<sup>12</sup> Jutkowitz et al. found considerably lower dementia diagnosis rates of 5.6 percent and 6.5 percent in 2014 and 2016, respectively, in a convenience sample of three Medicare Advantage Plans.<sup>13</sup> Our own data suggest a slightly higher rate of dementia diagnoses than expected, although some of that could be in coding of MCI as dementia, and the overall detection rate of cognitive impairment remains far lower than expected, especially for minority and low SES patients.<sup>14</sup></p> <p>In summary, there is substantial evidence that cognitive impairment remains underdiagnosed, particularly in early stages. Measuring diagnosis rates in primary care and comparing those to expected rates given the demographic composition of a clinician's panel can identify gaps in diagnosis and point primary care clinicians toward efforts to proactively inquire about cognitive concerns and follow up on subjective memory complaints, particularly in high-risk and disadvantaged populations. The Medicare Annual Wellness Visit provides an opportunity to do so, but this benefit remains underutilized. A 2020 study found that only one-half of beneficiaries took advantage of it, and fewer than one-third reported having a structured cognitive assessment.<sup>15</sup> A recent expert group recommended several steps to routinely incorporate brief cognitive assessment into primary care workflows.<sup>16</sup> Thus, steps can be taken at both the individual clinician and the organizational level to detect cognitive impairment more frequently and earlier so that patients can potentially benefit from disease-modifying treatments.</p> |

| <b>Proposed Activity Title:</b>       | Integrating Oral Health Care in Primary Care                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Proposed Activity Description:</b> | MIPS eligible clinicians that practice primary care will include an oral health risk assessment and intraoral screening as part of a patient's primary care management. The MIPS eligible clinician will provide education and counseling to the patient to include the importance of oral health and the impact of oral health on systemic diseases. For patients without a dental home and/or those with oral health needs, a dental referral will be provided.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|            | <p>To receive credit for this activity, a MIPS-eligible clinician must complete two Smiles for Life (<a href="https://www.smilesforlifeoralhealth.org">https://www.smilesforlifeoralhealth.org</a>) trainings: ("The Oral Examination" and "Geriatric Oral Health"). These are one-time, free, online training 60-minute certification courses. Smiles for Life oral health education has been adopted by Medicaid in several states to improve oral health access, outcomes, and referrals for children through educating medical providers.</p> <p>The MIPS-eligible clinician must include one or more of the following activities in addition to completing the training:</p> <ul style="list-style-type: none"> <li>○ Create a dental referral network list by specialty and accepted insurances.</li> <li>○ Include applicable oral health screening questions in the patient health intake forms (dentist of record, date of the last dental exam, and personal oral hygiene routine).</li> <li>○ Identify an applicable caries risk assessment tool to be used.</li> <li>○ Include intraoral health screening and referral to dental provider as part of a patient's primary care management.</li> <li>○ Provide education and counseling to patients about the importance of oral health and impact on systemic disease.</li> <li>○ Refer patients without a dental home and/or those who have untreated dental disease indicated by health history, caries risk assessment, intraoral health screening, medications and/or concerns reported by patient.</li> <li>○ Include a description of the findings found in all dental referrals <ul style="list-style-type: none"> <li>➤ Documents with appropriate procedure and diagnostic codes to track services provided and referrals to validate performance of the improvement activity.</li> </ul> </li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Rationale. | <p>Oral health is closely related to overall health. According to the Centers for Disease Control and Prevention (CDC), approximately 35 percent of American adults did not see a dentist in the past year.<sup>17</sup> The Kaiser Family Foundation (KFF) identified nearly half of all people on Medicare have no dental coverage, and the CDC identified one out of six adults 65 or older are completely edentulous (have lost all their teeth), which can greatly impact nutrition.<sup>18,19</sup> Moreover, a significant portion of the Medicare population has or is at risk for chronic health conditions, which can be further complicated by poor oral health. Dental issues can be early indicators of systematic diseases, such as Alzheimer's, and may also lead to severe health complications such as diabetes and cardiovascular disease, all of which have a significant impact on the Medicare population. For example, researchers have concluded that periodontal disease "might be a modifiable risk factor" for Alzheimer's disease. Moreover, Medicare spends \$520 million annually on dental-related emergency department. If these issues were caught and managed early, many of those expenditures could be avoided.</p> <p>With nearly two-thirds of the older adult population in the United States experiencing periodontitis, the WHO has suggested that integrating age-appropriate oral health concerns into general medicine may lead to improvements in older adults' oral health conditions and improve quality of life.<sup>20</sup></p> <p>As patients visit their primary care office for medical treatment, there is an opportunity for primary care providers to address oral health by assessing oral health risk and reinforcing at-home care messaging, creating an access point for patients who might not otherwise seek dental care. By including quick oral evaluations during routine medical exams, medical providers can ensure comprehensive patient care and early interventions for potential health issues. There is growing evidence that health outcomes improve when dental assessments by medical professionals are integrated into care.<sup>21</sup> This medical-dental integration (MDI) activity can positively address the oral health needs of a high-risk and</p> |

|                                       | <p>medically complex population by increasing access, and promoting comprehensive, continuous patient care.</p> <p>Oral health assessment activities do not require extensive time, training, or resources to complete. An oral health assessment can be done in five minutes. Training through the Smiles for Life curriculum offers a course on oral health assessments (titled: "The Oral Examination") and is a one-time, free, online certification. Smiles for Life oral health education has been adopted by Medicaid programs in several states to improve oral health access, outcomes, and referrals for children through educating medical providers. Billable and diagnostic codes exist along with an American Dental Association CAMBRA risk assessment form readily available for adoption. Reporting is minimal and involves documentation of the codes indicated below and pulling a report on those codes from the EHR.</p> <p>Additional research about HEENT (head, eyes, ears, nose, and throat) assessment expanded to HEENOT (head, ears, eyes, nose, oral, and throat) through integration of an interprofessional educational (IPE) activity developed for University of Colorado NP and dental students has been published.<sup>22</sup></p> <p>Creating a referral network of dental providers and completing referrals to these providers will ensure that oral health assessments result in patients getting the additional care they need. To complete this activity, medical providers will be required to implement a process, contact local providers, and assess their capacity.</p> |

| <b>Proposed Activity Title:</b>       | Patient Safety in Use of Artificial Intelligence (AI)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Proposed Activity Description:</b> | Develop a new data-collection field within patient safety reporting systems for AI-attributable events, which would include both actual harm as well as near misses. When an event is identified, a process to identify the cause and plan for future mitigation is documented. AI-attributable events are defined broadly to include not only automated or semi-automated devices, but any electronic tool that is being used to support clinical decision making.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Rationale:</b>                     | AI is transforming healthcare and carries with it the promise of faster and potentially more accurate diagnoses and improved health outcomes, but also potential issues that could put individuals' safety at risk. Misdiagnosis and/or failure to properly treat illness as a result of AI errors may jeopardize the health and safety of patients. With broadly collected data on adverse patient outcomes (and near-misses) attributable to AI, MIPS eligible clinicians will be better equipped to identify patterns that can inform decisions to modify use of specific AI tools to optimize care for individual patient populations. This proposed new activity—with a focus on both data-collection and processes to identify causes of adverse events and near-misses to plan for future safety improvement—has a high potential to improve patient care. Defining AI-attributable events broadly to include not only automated or semi-automated devices, but any electronic tool that is being used to support clinical decision making, will likely lead to widely applicable improvements in patient safety, both in patients' experience of care and outcomes.                                                                                                                                                                                                                                                                                                                                                                                                                                            |

In this proposed rule, we propose to modify seven previously finalized improvement activities beginning with the CY 2026 performance period/2028 MIPS payment year as specified in Table F-B2 below.

Specifically, we propose to reassign five previously finalized improvement activities currently specified for the Achieving Health Equity subcategory to other subcategories that better fit their intended purpose. We also propose to reassign one previously finalized improvement activity to the proposed new subcategory Advancing Health and Wellness. Finally, we propose several modifications to one previously finalized improvement activity, IA\_BMH\_1.

We refer readers to our discussion in section IV.A.4.d.(3)(b)(vi) of this proposed rule and in more detail below.

**TABLE F-B2: Changes to Previously Finalized Improvement Activities for the CY 2026 Performance Period/2028 MIPS Payment Year and for Future Years**

| Current Improvement Activity   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Current Activity Title:        | Diabetes screening                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Current Activity Description:  | Diabetes screening for people with schizophrenia or bipolar disease who are using antipsychotic medication.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Proposed change and rationale: | <p>We propose to modify this activity to broaden the relevant patient population by requiring a comprehensive physical health screening on all patients taking antipsychotic medications. This proposed modification would encompass a broader range of health conditions that may be impacted by antipsychotic medications, beyond just diabetes. To better reflect the substantive modifications, we are proposing for this activity, we also propose to modify this activity's current title, "Diabetes screening" to change it to "Antipsychotic-Medication-Associated Physical Health Condition Assessment and Monitoring".</p> <p>Antipsychotic medications are an important tool for treating a wide range of mental health disorders including schizophrenia, bipolar disease, major depressive disorder, post-traumatic stress disorder, and for agitation associated with dementia due to Alzheimer's disease. In the U.S., approximately 3.8 million citizens reported taking antipsychotics in a 2013-2018 National Health and Nutrition Examination Survey (NHANES).<sup>1</sup></p> <p>Antipsychotic use is increasing – the Agency for Healthcare Research and Quality (AHRQ) found that 8.1 million people obtained at least one prescription for antipsychotics in 2018, a 22.3 percent increase from 2013.<sup>2</sup> A large percentage of this growth may be due to the substantial increase in the use of these medications for off-label conditions. Inappropriate use of antipsychotics in nursing homes and long-term care facilities is a public health concern. CMS' National Partnership to Improve Dementia Care in Nursing Homes recent antipsychotic medication use data report indicates 14.5 percent of residents who are not diagnosed with schizophrenia, Huntington's Disease, or Tourette's Syndrome were prescribed antipsychotics in 2021 Q4.<sup>3</sup> These patients should also be considered for routine monitoring and assessment for antipsychotic-associated physical health conditions.</p> <p>Antipsychotic medications are effective in managing symptoms of psychiatric conditions; however, adverse health effects such as obesity, diabetes, metabolic</p> |

syndrome, cardiovascular disease, and medication-induced movement disorders such as tardive dyskinesia (TD) may be induced or exacerbated by their use. Physical health conditions associated with antipsychotic medications may substantially impact healthcare system costs, and effective assessment and monitoring is important for achieving improved beneficiary health outcomes. Metabolic adverse conditions can significantly influence risk for morbidity and mortality with long-term use. TD diagnoses diminish physical wellness and social functioning, and adversely affect patients' health-related quality of life.<sup>2</sup> Cost analysis of treatment by the U.S. Department of Veterans Affairs (VA) for patients with schizophrenia who developed diabetes showed an average marginal cost of \$3,100. An evaluation of children and adolescents treated with antipsychotic medications through Medicaid showed that patients who experienced cardiometabolic adverse events incurred 34 percent higher total care costs over time. A Medicaid claims analysis for adults with schizophrenia found mean total care costs for patients with incident cardiometabolic conditions were about \$1,249 higher than costs incurred by those without these conditions.<sup>3</sup> A retrospective analysis demonstrated that patients with TD had more inpatient admissions (55.5 percent vs. 26.1 percent), emergency room visits (61.5 percent vs. 50.6 percent), and total healthcare costs (\$54,656 vs. \$28,777) than patients treated for schizophrenia, bipolar disorder, major depressive disorder, or other psychiatric disorders without a diagnosis of TD.<sup>4</sup>

The American Psychiatric Association, American Diabetes Association, American Association of Clinical Endocrinologists, and North American Association for the Study of Obesity have developed clinical guidelines recommending laboratory tests and physical examinations for initial evaluations and subsequent monitoring during treatment.<sup>5-9</sup>

Routine components of antipsychotic assessment and monitoring include:

- + Personal and family history of obesity, diabetes, dyslipidemia, hypertension, or cardiovascular disease;
- + Body Mass Index (BMI);
- + Waist circumference;
- + Blood pressure;
- + Fasting plasma glucose;
- + Fasting lipid profile; and
- + Clinical assessment of abnormal movements, such as through the Abnormal Involuntary Movement Scale (AIMS).

Additional monitoring is also indicated in specific situations, for example, electrocardiogram for patients with cardiac risk factors before treatment with specific antipsychotics or use of other medications that can affect QTc interval, or prolactin level if indicated on the basis of clinical history.<sup>10</sup>

While clinical examination and testing for physical health conditions associated with antipsychotic medications are recommended for baseline assessment and routine monitoring and are critical to reduce morbidity, mortality, and costs associated with these conditions, evidence demonstrates clinical gaps in care:

- In a quality improvement study, a random sample of 30 patient records of adult patients on antipsychotic medications from a psychiatry outpatient clinic between October 2016 and September 2017 found only one patient had documentation of an AIMS examination.<sup>11</sup>
- An analysis of more than 120,000 patient electronic medical records at a large public outpatient mental health center found that only half of the antipsychotic prescribed patients had AIMS information recorded, and only one percent of this

|  | <p>subset had an AIMS result identifying TD, far below the generally established prevalence estimates of seven percent exposed to second generation antipsychotics, 30 percent exposed to first generation antipsychotics, and 20 percent with unknown first- and second-generation antipsychotic exposure.<sup>12</sup></p> <ul style="list-style-type: none"> <li>• In a quality improvement study, analysis found only one (2.9 percent) study subject met standards for compliance with TD assessments.<sup>13</sup></li> <li>• A retrospective study of patients prescribed second generation antipsychotics in a Federally Qualified Health Center found baseline glucose and lipid monitoring rates of 50 percent and 23 percent, respectively; three month monitoring rates of 37 percent and 26 percent, respectively; and annual rates of 71 percent and 40 percent, respectively.<sup>14</sup></li> <li>• A survey-based study found metabolic monitoring rates for patients prescribed atypical antipsychotic medications was nine percent for youth in their first year of medication use and 58.9 percent in subsequent years on medication.<sup>15</sup></li> <li>• A study of 32 Veterans Affairs facilities found low rates of metabolic monitoring at baseline and follow up (67 percent versus 43 percent for weight, 48 percent versus 27 percent for glucose or hemoglobin A1c, and 32 percent versus 18 percent for LDL).<sup>16</sup></li> <li>• A retrospective cohort including over 23,000 patients on second-generation antipsychotics reported baseline lipid testing rates of 10.5 percent and glucose testing rates of 21.8 percent after the 2004 ADA consensus statement was issued.<sup>17</sup></li> <li>• Studies have shown less than 30 percent of patients receiving baseline glucose testing and less than 10 percent receiving baseline lipid testing.<sup>18</sup> Several quality improvement studies have demonstrated real-world implementation of interventions that go beyond common clinical practice. Specifically, evidence from these studies demonstrates that the implementation of quality improvement interventions described in this improvement activity have contributed to improvements in beneficiary care and health outcomes:</li> <li>• Quality improvement projects focused on the use of collaborative practice agreements or enhanced movement disorder screening services increased AIMS screening.<sup>19</sup> In addition, projects focused on improving metabolic monitoring through collaborative agreements increased overall referral rates,<sup>20</sup> improved compliance with monitoring,<sup>21</sup> and improved HbA1c.<sup>22</sup> Studies have also demonstrated pharmacist-physician collaborative care models for other clinical areas, such as hypertension, have resulted in lower downstream medical expenditures compared to standard of care.<sup>23</sup></li> <li>• AIMS education sessions demonstrated improved understanding of screening,<sup>24</sup> and rates of screening.<sup>25,26,27,28</sup></li> <li>• Implementation of EHR-integrated alerts demonstrated increased rates of cardiometabolic monitoring, documentation,<sup>29,30,31,32</sup> thyroid testing, and ECG testing.<sup>41</sup></li> <li>• Standardized data collection protocols increased cardiometabolic monitoring.<sup>34,35,36,37</sup> and AIMS screening rates.<sup>38,39,40</sup></li> </ul> <p>This improvement activity can be linked to existing and related MIPS measures across Performance Categories:</p> <ul style="list-style-type: none"> <li>• MIPS Quality measures: <ul style="list-style-type: none"> <li>○ Q001 Diabetes: HbA1c Poor Control (&gt;9%)</li> <li>○ Q317 Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented</li> <li>○ Q383 Adherence to Antipsychotic Medications for Individuals with Schizophrenia</li> <li>○ Q502 Improvement or Maintenance of Functioning for Individuals with a Mental and/or Substance Use Disorder</li> </ul> </li> <li>• MIPS Cost measures <ul style="list-style-type: none"> <li>○ Psychoses and Related Conditions</li> </ul> </li> </ul> |

|--|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|  | <p> <ul style="list-style-type: none"> <li>o Movement Disorders (currently under development)</li> <li>+ MIPS Value Pathways</li> <li>o Quality Care in Mental Health</li> <li>o Substance Use Disorders</li> </ul> </p> <p>Regarding CMS' optional Improvement Activity acceptance criteria, as listed in the CY 2024 Call for Improvement Activities (<a href="https://www.cms.gov/medicare/quality/rare/demos/2024/2024-improvement-activities">https://www.cms.gov/medicare/quality/rare/demos/2024/2024-improvement-activities</a>),<sup>41</sup> this Improvement Activity aligns in multiple areas:</p> <p><b>Alignment with Patient-Centered Medical Homes:</b> Components of this Improvement Activity align with the principles of the patient-centered medical home (PCMH). Collaborative practice agreements promote coordination between practitioners to provide whole-person care, and have supported achievement of PCMH objectives.<sup>42</sup></p> <p><b>Support for the patient's family or personal caregiver:</b> This Improvement Activity supports patients' families and caregivers. Studies have demonstrated that 23.6 percent of TD caregivers report severe impact of TD in their own lives, which includes activity and work impairment caused by TD-related caregiving.<sup>43</sup> A survey study found caregivers reported that TD impacted their ability to continue usual activities (50%), be productive (58.3%), socialize (55.6%), or take care of themselves (50%).<sup>44</sup> Caregivers for patients with schizophrenia have noted significant strains<sup>45</sup> and the need to fulfill a mediator role between the patient and the provider; improved assessment and monitoring could contribute to reductions in stress pertaining to the impact of physical health conditions associated with antipsychotic medications and burden of obesity, diabetes, and movement disorders.</p> <p><b>Responds to a Public Health Emergency as determined by the Secretary:</b> While this Improvement Activity does not respond to a current public health emergency, we believe improving assessment and monitoring of physical health conditions associated with antipsychotic medications aligns with Centers for Medicare &amp; Medicaid Services strategies to mitigate impacts of inappropriate antipsychotic use in nursing home settings and among patients with dementia.<sup>46</sup> Patients exposed to long-term use of inappropriate antipsychotics are at risk for cardiometabolic conditions and movement disorders and improved assessment and monitoring can mitigate the impact of these conditions on beneficiaries' overall health.</p> <p><b>Addresses improvements in practice to reduce health care disparities:</b> This Improvement Activity focuses on areas of healthcare inequity, and its implementation can support reduction of health disparities. African Americans are more often prescribed older medications that increase risk for TD and extrapyramidal physical health conditions.<sup>47</sup> <sup>48</sup> TD is also of particular concern for older adults treated with antipsychotics, where its prevalence is five to six times higher than that of younger patients due in part to off-label prescription of antipsychotics for dementia-related behavioral and psychological disorders. Older adults are at further risk as only one month of antipsychotic exposure is required to diagnose TD, compared with three months in younger adults.<sup>49</sup> Further, Medicaid members are disproportionately impacted by TD, and nearly one in eight Medicaid members receiving antipsychotics developed TD within a year of treatment.<sup>50</sup></p> <p>Focus on meaningful actions from the person and family's point of view: Improving assessments and monitoring for antipsychotic medication use is a meaningful person- and family-centered activity. Medication-induced movement disorders such as TD have a significant impact on patient wellbeing. Studies have demonstrated that 60 percent to 60 percent of TD patients believed self-</p> |

| Proposed Revised Activity Description:                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>MIPS eligible clinicians must implement at least one process improvement during treatment of patients taking anti-psychotic medication related to one or more component(s) of appropriate antipsychotic medication assessment and monitoring. Components include:</p> <ul style="list-style-type: none"> <li>• Personal and family history of obesity, diabetes, dyslipidemia, hypertension, or cardiovascular disease;</li> <li>• Body Mass Index (BMI);</li> <li>• Waist circumference;</li> <li>• Blood pressure;</li> <li>• Fasting plasma glucose;</li> <li>• Fasting lipid profile;</li> <li>• Clinical assessment of abnormal movements, such as through the Abnormal Involuntary Movement Scale (AIMS).</li> </ul> <p>Process improvements must include at least one of the following types of activities:</p> <ul style="list-style-type: none"> <li>• Establishing and disseminating educational materials (for example, online or in-person training sessions) to educate clinical teams about physical health monitoring and protocols for monitoring (for example, AIMS assessment for medication-induced movement disorders);</li> <li>• Creating and implementing monitoring templates and protocols (for example, EHR-integrated flags), to standardize collection and documentation of one or more components of physical health monitoring; or</li> <li>• Establishing collaborative service agreements with an enhanced monitoring service, (for example, pharmacist-led monitoring clinic) to monitor for antipsychotic associated physical health condition and either adjust medications (for example, diabetes medications) based on laboratory results or refer patients for further assessments (for example, AIMS)."</li> </ul> |
| <p>We propose modifying the following improvement activities by reassigning in which subcategory they are beginning with the CY 2026 performance period 2028 MIPS payment year.</p> <p>We are proposing to reassign the following five improvement activities to new subcategories: IA_AHE_1. Enhance Engagement of Medicaid and Other Underserved Populations; IA_AHE_3. Promote use of Patient-Reported Outcome Tools; IA_AHE_6. Provide Education Opportunities for New Clinicians; IA_AHE_7,</p> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

Comprehensive Eye Exams; and IA\_AHE\_10, Adopt Certified Health Information Technology for Security Tags for Electronic Health Record Data.

Specifically, we propose to reassign: IA\_AHE\_1 and IA\_AHE\_6 to the Expanded Practice Access subcategory; IA\_AHE\_2 and IA\_AHE\_7 to the Beneficiary Engagement subcategory; IA\_AHE\_10 to the Patient Safety and Practice Assessment subcategory.

We also propose to reassign the IA\_PM\_13, Chronic Care and Preventive Care Management for Empowered Patients, to the proposed new subcategory, Advancing Health and Wellness.

These activities are being proposed for reassignment to designated subcategories based on the description and rationale for each as well as based on which subcategory best fits the individual activity's purpose.

In this proposed rule, we are proposing to remove eight previously finalized improvement activities beginning with the CY 2026 performance period/2028 MIPS payment year. These changes are discussed in section IV.A.4.d.(3)(b)(viii) of this proposed rule and in more detail below. Specifically, as we propose to remove each of these eight improvement activities in accordance with our policy at § 414.1355(d), specifically under Factor 7 (Activity is obsolete) (§ 414.1355(d)(7)).

**TABLE F-B3: Improvement Activities Being Removed  
for the CY 2026 Performance Period/2028 MIPS Payment Year and for Future Years**

| Current Improvement Activity  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Current Activity Description: | Lead clinical trials, research alliances, or community-based participatory research (CBPR) that identify tools, research, or processes that focus on minimizing disparities in healthcare access, care quality, affordability, or outcomes. Research could include addressing health-related social needs like food insecurity, housing insecurity, transportation barriers, utility needs, and interpersonal safety.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Removal Rationale:            | We are proposing the removal of this activity in the context of our regular review of the Improvement Activities Inventory. CMS is evolving the improvement activities inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Current Improvement Activity  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Current Activity Title:       | Create and Implement an Anti-Racism Plan                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Current Activity Description: | <p>Create and implement an anti-racism plan using the CMS Disparities Impact Statement or other anti-racism planning tools. The plan should include a clinic-wide review of existing tools and policies, such as value statements or clinical practice guidelines, to ensure that they include and are aligned with a commitment to anti-racism and an understanding of race as a political and social construct, not a physiological one.</p> <p>The plan should also identify ways in which issues and gaps identified in the review can be addressed and should include target goals and milestones for addressing prioritized issues and gaps. This may also include an assessment and drafting of an organization's plan to prevent and address racism and/or improve language access and accessibility to ensure services are accessible and understandable for those seeking care. The MIPS eligible clinician or practice can also consider including in their plan ongoing training on anti-racism and/or other processes to support identifying explicit and implicit biases in patient care and addressing historic health inequities experienced by people of color. More information about elements of the CMS Disparities Impact Statement is detailed in the template and action plan document at <a href="https://www.cms.gov/About-CMS/Agency-Information/OMH/Downloads/Disparities-Impact-Statement-508-rev102018.pdf">https://www.cms.gov/About-CMS/Agency-Information/OMH/Downloads/Disparities-Impact-Statement-508-rev102018.pdf</a>.</p> |

|                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>Removal Rationale:</b>            | We are proposing the removal of this activity in the context of our regular review of the Improvement Activities Inventory. CMS is evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Current Improvement Activity:</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Current Activity ID:</b>          | IA_AHE_9                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>Current Activity Title:</b>       | Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Current Activity Description:</b> | <p>Creates or improves, and then implements, protocols for identifying and providing appropriate support for: (a) patients with or at risk for food insecurity, and (b) patients with or at risk for poor nutritional status. (Poor nutritional status is sometimes referred to as clinical malnutrition or undernutrition and applies to people who are overweight and underweight.) Actions to implement this improvement activity may include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>● Use Malnutrition Quality Improvement Initiative (MQII) or other quality improvement resources and standardized screening tools to assess and improve current food insecurity and nutritional screening and care practices.</li> <li>● Update and use clinical decision support tools within the MIPS eligible clinician's electronic medical record to align with the new food insecurity and nutrition risk protocols.</li> <li>● Update and apply requirements for staff training on food security and nutrition.</li> <li>● Update and provide resources and referral lists, and/or engage with community partners to facilitate referrals for patients who are identified as at risk for food insecurity or poor nutritional status during screening.</li> </ul> <p>Activities must be focused on patients at greatest risk for food insecurity and/or malnutrition—for example patients with low income who live in areas with limited access to affordable fresh food, or who are isolated or have limited mobility.</p> |
| <b>Removal Rationale:</b>            | We are proposing the removal of this activity in the context of our regular review of the Improvement Activities Inventory. CMS is evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <b>Current Activity Description:</b> | Create and implement a plan to improve care for lesbian, gay, bisexual, transgender, and queer (LGBTQ+) patients by understanding and addressing health disparities for this population. The plan may include an analysis of sexual orientation and gender identity (SOGI) data to identify disparities in care for LGBTQ+ patients. Actions to implement this activity may also include identifying focused goals for addressing disparities in care, collecting and using patients' pronouns and chosen names, training clinicians and staff on                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|                                     | <p>SO/GI terminology (including as supported by certified health IT and the Office of the National Coordinator for Health Information Technology US Core Data for Interoperability [USCDI]), identifying risk factors or behaviors specific to LGBTQ+ individuals, communicating SO/GI data security and privacy practices with patients, and/or utilizing anatomical inventories when documenting patient health histories.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Removal Rationale:                  | <p>We are proposing the removal of this activity in the context of our regular review of the Improvement Activities Inventory. CMS is evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Current Improvement Activity</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Current Activity Title:             | Practice Improvements that Engage Community Resources to Address Drivers of Health                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Current Activity Description:       | <p>Select and screen for drivers of health that are relevant for the eligible clinician's population using evidence-based tools. If possible, use a screening tool that is health IT-enabled and includes standards-based, coded questionnaires for the capture of data. After screening, address identified drivers of health through at least one of the following:</p> <ul style="list-style-type: none"> <li>● Develop and maintain formal relationships with community-based organizations to strengthen the community service referral process, implementing closed-loop referrals where feasible; or</li> <li>● Work with community partners to provide and/or update a community resource guide for to patients who are found to have and/or be at risk in one or more areas of drivers of health; or</li> <li>● Record findings of screening and follow up within the electronic health record (EHR); identify screened patients with one or more needs associated with drivers of health and implement approaches to better serve their holistic needs through meaningful linkages to community resources.</li> </ul> <p>Drivers of health (also referred to as social determinants of health [SDOH] or health-related social needs [HSRN]) prioritized by the practice might include, but are not limited to, the following: food security; housing stability; transportation accessibility; interpersonal safety; legal challenges; and environmental exposures.</p> |
| Removal Rationale:                  | <p>We are proposing the removal of this activity in the context of our regular review of the Improvement Activities Inventory. CMS is evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Current Activity Description:       | Demonstrate that the MIPS eligible clinician's practice has achieved and/or maintained a vaccination rate of 80 percent of clinical practice staff for COVID-19, and 80 percent for influenza. Demonstrate vaccination, immunity, or non-responder status to hepatitis B for 95 percent of clinical practice staff. Vaccination recommendations are from Centers for Disease Control and Prevention; staff with contraindications to the vaccinations, as determined by the CDC, are excluded from the requirements. Vaccines and Immunizations   CDC.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Removal Rationale:                  | We are proposing the removal of this activity in the context of our regular review of the Improvement Activities Inventory. CMS is evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being. Additionally, we are proposing to remove this activity to align with recent FDA and CDC guidance, updating vaccination recommendations since the expiration of the COVID-19 Public Health Emergency (PHE). <sup>1,2</sup>                                                                                                                                                                                                                                                                                                                                                                      |

| Current Activity Title:             | Use of Toolsets or Other Resources to Close Health and Health Care Inequities Across Communities                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Current Activity Description:       | Address inequities in health outcomes by using population health data analysis tools to identify health inequities in the community and practice and assess options for effective and relevant interventions such as Population Health Toolkit or other resources identified by the clinician, practice, or by CMS. Based on this information, create, refine, and implement an action plan to address and close inequities in health outcomes and/or health care access, quality, and safety.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Removal Rationale:                  | We are proposing the removal of this activity in the context of our regular review of the Improvement Activities Inventory. CMS is evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Current Improvement Activity</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Current Activity ID:                | IA_ERP_2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Current Activity Title:             | COVID-19 Clinical Data Reporting with or without Clinical Trial                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Current Activity Description:       | To receive credit for this improvement activity, a MIPS eligible clinician or group must: (1) participate in a COVID-19 clinical trial utilizing a drug or biological product to treat a patient with a COVID-19 infection and report their findings through a clinical data repository or clinical data registry for the duration of their study; or (2) participate in the care of patients diagnosed with COVID-19 and simultaneously submit relevant clinical data to a clinical data registry for ongoing or future COVID-19 research. Data would be submitted to the extent permitted by applicable privacy and security laws. Examples of COVID-19 clinical trials may be found on the U. S. National Library of Medicine website at <a href="https://clinicaltrials.gov/ct2/results?cond=COVID-19">https://clinicaltrials.gov/ct2/results?cond=COVID-19</a> . In addition, examples of COVID-19 clinical data registries may be found on the National Institute of Health website at <a href="https://search.nih.gov/search?utf8=%E2%9C%93&amp;affiliate=nih&amp;query=COVID-19+registra">https://search.nih.gov/search?utf8=%E2%9C%93&amp;affiliate=nih&amp;query=COVID-19+registra</a> |

|                    | <p>s&amp;commit=Search.</p> <p>For purposes of this improvement activity, clinical data registries must meet the following requirements: (1) the receiving entity must declare that they are ready to accept data as a clinical registry; and (2) be using the data to improve population health outcomes. Most public health agencies and clinical data registries declare readiness to accept data from clinicians via a public online posting. Clinical data registries should make publicly available specific information on what data the registry gathers, technical requirements or specifications for how the registry can receive the data, and how the registry may use, re-use, or disclose individually identifiable data it receives. For purposes of credit toward this improvement activity, any data should be sent to the clinical data registry in a structured format, which the registry is capable of receiving. A MIPS-eligible clinician may submit the data using any standard or format that is supported by the clinician's health IT systems, including but not limited to, certified functions within those systems. Such methods may include, but are not limited to, a secure upload function on a web portal, or submission via an intermediary, such as a health information exchange. To ensure interoperability and versatility of the data submitted, any electronic data should be submitted to the clinical data registry using appropriate vocabulary standards for the specific data elements, such as those identified in the United States Core Data for Interoperability (USCDI) standard adopted in 45 CFR 170.213.</p> |
| Removal Rationale: | <p>We are proposing the removal of this activity in the context of our regular review of the Improvement Activities Inventory. CMS is evolving the improvement activities inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being. Additionally, we are proposing to remove this activity to align with recent FDA and CDC guidance, updating vaccination recommendations since the expiration of the COVID-19 Public Health Emergency (PHE).<sup>1,2</sup></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

### Appendix 3: MVP Inventory

#### MVP Development: Background

In the CY 2021 PFS final rule (85 FR 84849 through 84854), the CY 2022 PFS final rule (86 FR 65998 through 66031), and the CY 2023 PFS final rule (87 FR 70210 through 70211) we finalized a set of criteria to use in the development of MVPs, including MVP reporting requirements, MVP maintenance, and the selection of measures and activities within an MVP.

This appendix contains two groups of proposed MVP tables: Group A: proposed new MVPs and Group B: proposed modifications to previously finalized MVPs. Group A includes six newly proposed MVPs. Group B includes 21 previously finalized MVPs with proposed modifications.

Each MVP includes measures and activities from the quality performance category, improvement activities performance category, and the cost performance category relevant to the clinical specialty of the MVP. In addition, each MVP includes a foundational layer comprised of population health measures and Promoting Interoperability performance category objectives and measures. The foundational layer is the same for all MVPs.

We inadvertently omitted the Promoting Interoperability performance category

optional ONC-ACB Surveillance Attestation from the MVP foundational layer in previous PFS final rule tables in Appendix 3. The ONC-ACB Surveillance Attestation has been an optional attestation for the Promoting Interoperability performance category since the first MIPS performance period in CY 2017 (81 FR 77019 through 77028). In the CY 2021 PFS final rule (85 FR 84849 through 84850), as a part of the MVP development criteria, we finalized that MVPs must include the full set of Promoting Interoperability performance category measures. In the CY 2022 PFS final rule (86 FR 65413), we stated that we do not intend to establish different reporting requirements for Promoting Interoperability measures in MVPs from what is established under traditional MIPS. As described at § 414.1365(c)(4)(i), an MVP Participant is required to meet the Promoting Interoperability performance category reporting requirements described under § 414.1375(b). For these reasons, we have added the optional ONC-ACB Surveillance Attestation described under § 414.1375(b)(3) to the foundational layer for all MVPs.

#### MVP Development: Performance Category Sources

The MVP tables contain a set of MIPS quality measures, QCDR measures (as applicable), improvement activities, cost

measures, and foundational measures based on clinical topics. For further reference, the sources of the measures and activities included in the MVP tables are located on the Quality Payment Program (QPP) website and are as follows:

- Existing MIPS quality measures are in the 2025 MIPS Quality Measures List.<sup>570</sup> See Appendix 1: MIPS Quality Measures of this proposed rule for any proposed additions (Table Group A), proposed removals (Table Group C), or proposed modifications to existing quality measures (Table Groups D and DD).
- Existing QCDR measures are based on the most recent publication of the 2025 QCDR Measure Specification file.<sup>571</sup> We plan to modify the list of 2026 QCDR measures around December 2025.
- Existing improvement activities are in the 2025 Improvement Activities Inventory and the 2025 MIPS Data Validation

<sup>570</sup> See the 2025 MIPS Quality Measures List: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3125/2025-MIPS-Quality-Measures-List.xlsx>.

<sup>571</sup> See the 2025 QCDR Measure Specification file: [https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3108/2025-QCDR-Measure-Specifications\\_PUB.xlsx](https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3108/2025-QCDR-Measure-Specifications_PUB.xlsx) for QCDR measures.

Criteria.<sup>572</sup> See Appendix 2: Improvement Activities of this proposed rule for any proposed additions (Table Group A), proposed modifications to existing improvement activities (Table Group B), or proposed removals (Table Group C).

- Existing cost measures are in the 2025 Cost Measures Inventory.<sup>573</sup> See Appendix 4: MIPS Cost Measures of this proposed rule for any proposed modifications to existing cost measures (Group A).

- Existing Promoting Interoperability measures adopted in prior rulemaking and included in the foundational layer are located on the Quality Payment Program website.<sup>574</sup> See section IV.A.4.d.(4) of this proposed rule for any proposed new or modifications to existing Promoting Interoperability measures.

- For further details on the population health measures (attributed to the quality performance category) included in the foundational layer, see the CY 2022 PFS final rule (86 FR 65408 through 65409).

#### *MVP Development: Measure and Improvement Activities Updates and MVP Format Update*

- We have reformatted the MVP tables to stratify quality measures by clinical conditions and/or episodes of care for each MVP identified as “Clinical Groupings.” When applicable, an “Advancing Health and Wellness” and/or “Experience of Care” clinical grouping is included for cross-cutting quality measures. This new stratified format offers a streamlined set of quality measures to aid clinicians in selecting the most clinically relevant measures applicable to their clinical area and identifies when quality and cost measures are linked.

- See Appendix 1: MIPS Quality Measures (Table Group C) of this proposed rule for proposed removals of MIPS quality measures. The following MIPS quality measures were included in previously finalized MVPs and are being proposed for removal from MIPS: Q185: Colonoscopy Interval for Patients with a History of Adenomatous Polyps—Avoidance of Inappropriate Use, Q264: Sentinel Lymph Node Biopsy for Invasive

Breast Cancer, Q290: Assessment of Mood Disorders and Psychosis for Patients with Parkinson’s Disease, Q322: Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Preoperative Evaluation in Low-Risk Surgery Patients, Q419: Overuse of Imaging for the Evaluation of Primary Headache, Q424: Perioperative Temperature Management, Q443: Non-Recommended Cervical Cancer Screening in Adolescent Females, Q487: Screening for Social Drivers of Health, Q498: Connection to Community Service Provider, and Q508: Adult COVID–19 Vaccination Status.

- See Appendix 2: *Improvement Activities* (Table Group C) of this proposed rule for proposed removals of improvement activities. The following improvement activities were included in previously finalized MVPs and are being proposed for removal from MIPS: IA\_AHE\_5: MIPS Eligible Clinician Leadership in Clinical Trials or CBPR, IA\_AHE\_8—Create and Implement an Anti-Racism Plan, IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, IA\_AHE\_11—Create and Implement a Plan to Improve Care for Lesbian, Gay, Bisexual, Transgender, and Queer Patients, IA\_AHE\_12: Practice Improvements that Engage Community Resources to Address Drivers of Health, IA\_ERP\_3: COVID–19 Clinical Data Reporting with or without Clinical Trial IA\_PM\_6: Use of Toolsets or Other Resources to Close Health and Health Care Inequities Across Communities (Use of toolset or other resources to close healthcare disparities across communities), and IA\_PM\_26: Vaccine Achievement for Practice Staff: COVID–19, Influenza, and Hepatitis B.

- The following improvement activities are being removed from previously finalized MVPs as finalized in the CY 2025 PFS rule (89 FR 98411) beginning with the CY 2026 performance period/2028 MIPS payment year: IA\_BMH\_8: Electronic Health Record Enhancements for BH data capture, IA\_CC\_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop, IA\_CC\_2: Implementation of improvements that contribute to more timely communication of test results, and IA\_PM\_12: Population empanelment.

- The following improvement activity is being modified as finalized in the CY 2025 PFS rule (89 FR 98411) beginning with the CY 2026 performance period/2028 MIPS payment year: IA\_BE\_4: Engagement of Patients through Implementation of New Patient Portal.

- The Achieving Health Equity (AHE) improvement activities subcategory is being proposed for removal from MIPS. See Appendix 2: *Improvement Activities* (Table Groups B and C) of this proposed rule for any proposed modifications or removals to existing AHE subcategorized improvement activities.

- We propose to no longer list IA\_PCMH: Electronic submission of Patient Centered Medical Home Accreditation in each newly proposed or previously finalized MVP table. However, in accordance with § 414.1380(b)(3)(ii), MIPS eligible clinicians in a practice that are certified or recognized as a patient-centered medical home or comparable specialty practice, as determined by the Secretary, may attest to this activity and receive an improvement activities performance category score of 100 percent (81 FR 77179 through 77180).

- We have updated this appendix to include QCDR measures undergoing modifications planned by the QCDR measure stewards. When applicable and substantive in nature, we provide a brief overview of the planned modifications within applicable MVPs. Since QCDR measures are exempt from public notice and comment, this overview allows for transparency with interested parties and an opportunity to comment on all aspects of each MVP prior to finalization. Final decisions to modify QCDR measure specifications are determined by QCDR measure stewards, separate from rulemaking, but may impact decisions as finalized in the final rule.

#### *MVP Symbol Information and Definitions*

Please note the following symbols and definitions used within the MVP tables (Group A and Group B) below:

- Quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP are identified with a plus sign (+) within the Group B MVP tables in this appendix.

- New proposed MIPS quality and Promoting Interoperability measures proposed for inclusion in an MVP beginning with the CY 2026 performance period/2028 MIPS payment year and future years are identified with a caret symbol (–). See Appendix 1: MIPS Quality Measures: Table Group A of this proposed rule for further information regarding new MIPS quality measures. See section IV.A.4.d.(4) of this proposed rule for further information regarding new MIPS Promoting Interoperability performance category measures.

- Existing measures and improvement activities with proposed revisions are identified with a single asterisk (\*). See Appendix 1:

MIPS Quality Measures: Tables Group D and DD of this proposed rule for further information regarding proposed revisions to MIPS quality measures. See Appendix 2: Improvement Activities: Table Group B of this proposed rule for further information regarding proposed revisions to improvement activities. See Appendix 4:

<sup>572</sup> See the 2025 Improvement Activities Inventory: [https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3131\\_duplicate/2025-Improvement-Activities-Inventory.zip](https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3131_duplicate/2025-Improvement-Activities-Inventory.zip) and 2025 MIPS Data Validation Criteria: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3203/2025-MIPS-Data-Validation-Criteria.zip>. for improvement activity details.

<sup>573</sup> See the 2025 Cost Measures Inventory: <https://qpp.cms.gov/mips/explore-measures?tab=costMeasures&py=2025>.

<sup>574</sup> See the 2025 Promoting Interoperability Measure Specifications: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3122/2025-MIPS-Promoting-Interoperability-Measure-Specifications.zip>. for Promoting Interoperability measure details.

**MIPS Cost Measures:** Group A of this proposed rule for further information regarding proposed revisions to cost measures. See section IV.A.4.d.(4) of this proposed rule for further information regarding proposed revisions to Promoting Interoperability measures. We intend to include existing measures or activities with proposed revisions in MVPs (as applicable) regardless of whether the proposed revisions are finalized beginning with the CY 2026 performance period/2028 MIPS payment year, unless changes were required to continue to meet programmatic standards for inclusion.

- ◆ Quality measures and improvement activities identified with a double asterisk (\*\*) can only be submitted when included in an MVP.

- ◆ Improvement activities that include an advancing health and wellness component are identified with an exclamation point (!) preceding the improvement activity ID.

- ◆ Quality measures considered high priority and/or outcome measures (as defined in § 414.1305) are identified in the Quality section of the new MVP table format. Further details of these types of measures are in the CMS Measures Management System Hub.<sup>523</sup> See section IV.A.4.d.(1)(b) of this proposed rule for further information regarding proposed revisions to the definition of a high priority measure.

- ◆ Quality measure collection types are identified in parentheses after each quality measure title.

#### **Foundational Layer**

Each MVP contains a foundational layer, which includes the entire set of Promoting Interoperability measures and two population health measures. The two population health measures are considered outcome measures as identified with a double exclamation mark (!!). The foundational layer is the same for all MVPs as listed in Table 1.

#### **Symbol Key:**

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Caret symbol (^): new proposed MIPS quality and Promoting Interoperability measures.

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP.

**Table 1: MVP Foundational Layer**

| Population Health Measures                                                                                                                                                          | Promoting Interoperability                                                                                                                                                                                                                                                                                                                                          |

|                                                                                                                                                                                     | PI_EP_2: Query of Prescription Drug Monitoring Program (PDMP)                                                                                                                                                                                                                                                                                                       |
|                                                                                                                                                                                     | PI_PEA_1: Provide Patients Electronic Access to Their Health Information                                                                                                                                                                                                                                                                                            |
|                                                                                                                                                                                     | PI_HIE_1: Support Electronic Referral Loops By Sending Health Information<br>AND<br>PI_HIE_4: Support Electronic Referral Loops By Receiving and Reconciling Health Information<br>OR<br>PI_HIE_5: Health Information Exchange (HIE) Bi-Directional Exchange<br>OR<br>PI_HIE_6: Enabling Exchange Under the Trusted Exchange Framework and Common Agreement (TEFCA) |
|                                                                                                                                                                                     | PI_PHCDRR_1: Immunization Registry Reporting                                                                                                                                                                                                                                                                                                                        |
|                                                                                                                                                                                     | PI_PHCDRR_2: Syndromic Surveillance Reporting (Optional)                                                                                                                                                                                                                                                                                                            |
|                                                                                                                                                                                     | PI_PHCDRR_3: Electronic Case Reporting                                                                                                                                                                                                                                                                                                                              |
|                                                                                                                                                                                     | PI_PHCDRR_4: Public Health Registry Reporting (Optional)                                                                                                                                                                                                                                                                                                            |
|                                                                                                                                                                                     | PI_PHCDRR_5: Clinical Data Registry Reporting (Optional)                                                                                                                                                                                                                                                                                                            |
|                                                                                                                                                                                     | (*)(H) PI_PHCDRR_X: Public Health Reporting Under TEFCA (Optional)                                                                                                                                                                                                                                                                                                  |
|                                                                                                                                                                                     | PI_ONCACB_1: ONC-ACB Surveillance Attestation (Optional)                                                                                                                                                                                                                                                                                                            |
|                                                                                                                                                                                     | PI_INFBLD_1: Actions to Limit or Restrict Compatibility or Interoperability of CEHRT Attestation                                                                                                                                                                                                                                                                    |
|                                                                                                                                                                                     | PI_ONCDR_1: ONC Direct Review Attestation                                                                                                                                                                                                                                                                                                                           |

**Group A: New MVPs Proposed for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years**

**A.1 Diagnostic Radiology MVP**

The proposed Diagnostic Radiology MVP assesses meaningful outcomes in diagnostic radiology. This MVP would be most applicable to clinicians who treat patients within the practice of diagnostic radiology.

*Quality Measures*

We are proposing to include six MIPS quality measures and three QCDR measures within the quality performance category of this MVP, which are specific to the clinical topic of diagnostic radiology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment

of the clinical care for clinicians who specialize in diagnostic radiology:

- Q145: Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy: This MIPS quality measure focuses on increasing clinician awareness of patient exposure to radiation in an effort to reduce potential harmful effects by requiring radiation exposure indices to be documented in all final reports.
- Q360: Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed

Tomography (CT) and Cardiac Nuclear Medicine Studies : This MIPS quality measure focuses on reducing the rate of unnecessary or repeat imaging studies by requiring clinicians to review and document a count of known CT and cardiac nuclear medicine studies the patient received within a 12-month period prior to the current study.

- Q364: Optimizing Patient Exposure to Ionizing Radiation: Appropriateness: Follow-up CT Imaging for Incidentally Detected Pulmonary Nodules According to Recommended Guidelines: This MIPS quality measure ensures appropriate follow-up recommendations are documented for patients who have incidental pulmonary nodules found during CT imaging to either avoid unnecessary follow-up scans or identify early malignancies.

- Q405: Appropriate Follow-up Imaging for Incidental Abdominal Lesions: This MIPS quality measure ensures appropriate follow-up recommendations are documented for patients for whom incidental abdominal lesions are found during imaging studies to avoid unnecessary and costly follow-up procedures.

- Q406: Appropriate Follow-up Imaging for Incidental Thyroid Nodules in Patients: This MIPS quality measure ensures appropriate follow-up recommendations are documented for patients for whom incidental thyroid nodules are found during imaging studies to avoid unnecessary and costly follow-up procedures.

- Q494: Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level): This MIPS quality measure provides a method for monitoring and assessing appropriate radiation dose thresholds encouraging overall reductions in radiation dosage, an intermediate outcome directly and proportionally related to cancer prevention.

- QMM17: Appropriate Follow-up Recommendations for Ovarian-Adnexal Lesions using the Ovarian-Adnexal Reporting and Data System (O-RADS): This QCDR measure assesses for the use of standardized

reporting of findings leading to more consistent treatment recommendations, while also decreasing cost and inappropriate resource consumption.

- QMM18: Use of Breast Cancer Risk Score on Mammography: This QCDR measure ensures final reports for screening mammograms accurately include the breast cancer risk score and appropriate follow-up recommendations. This can be utilized to guide subsequent testing and treatment recommendations improving overall health outcomes.

- QMM26: Screening Abdominal Aortic Aneurysm Reporting with Recommendations: This QCDR measure ensures appropriate follow-up for an abdominal aortic aneurysm is documented in the final report by requiring radiologists to report recommendations consistently and in accordance with current guidelines, with direct communication as required. This QCDR measure has planned modifications including updates to the Society of Vascular Surgery guidelines referenced in the specification and modifications to denominator exceptions to address when screening is negative for abdominal aortic aneurysm (AAA), however, significant risk factors are present warranting future screening.

#### *Improvement Activities*

We reviewed the improvement activities inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We are proposing to include 11 improvement activities that reflect actions and processes undertaken by clinicians who specialize in diagnostic radiology, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA\_BMH\_12: Promoting Clinician Well-Being
- IA\_CC\_7: Regular training in care coordination
- IA\_CC\_8: Implementation of documentation improvements for practice/ process improvements
- IA\_CC\_12: Care coordination agreements that promote improvements in patient tracking across settings
- IA\_CC\_19: Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA\_PSPA\_1: Participation in an AHRQ-listed patient safety organization
- IA\_PSPA\_2: Participation in MOC Part IV
- IA\_PSPA\_7: Use of QCDR data for ongoing practice assessment and improvements
- IA\_PSPA\_12: Participation in private payer CPIA

#### *Cost Measures*

We are proposing to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of diagnostic radiology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in diagnostic radiology and aligns with other measures and activities within this MVP:

- MSPB\_1: Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing diagnostic radiology care in inpatient hospitals.

We request comment on the measures and activities included in this MVP.

**Diagnostic Radiology Improvement Activities**

- IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- (3) IA\_BMH\_12: Promoting Clinician Well-Being
- IA\_CC\_7: Regular training in care coordination

- **IA\_CC\_8:** Implementation of documentation improvements for practice/process improvements
- **IA\_CC\_12:** Care coordination agreements that promote improvements in patient tracking across settings
- **IA\_CC\_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **(\*\*) IA\_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA\_PSPA\_1:** Participation in an AHRQ-listed patient safety organization
- **IA\_PSPA\_2:** Participation in MOC Part IV
- **IA\_PSPA\_7:** Use of QCDR data for ongoing practice assessment and improvements
- **IA\_PSPA\_12:** Participation in private payer CPIA

## **A.2 Interventional Radiology MVP**

The proposed Interventional Radiology MVP assesses meaningful outcomes in interventional radiology. This MVP would be most applicable to clinicians who treat patients within the practice of interventional radiology.

### **Quality Measures**

We are proposing to include six MIPS quality measures and four QCDR measures within the quality performance category of this MVP, which are specific to the clinical topic of interventional radiology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in interventional radiology:

- **Q145: Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy:** This MIPS quality measure focuses on increasing clinician awareness of patient exposure to radiation in an effort to reduce potential harmful effects by requiring radiation exposure indices to be documented in all final reports.
- **Q374: Closing the Referral Loop: Receipt of Specialist Report:** This MIPS quality measure is attributable to the clinician referring the patient and ensures report receipt from the referred clinician, closing the communication loop.
- **Q413: Door to Puncture Time for Endovascular Stroke Treatment:** This MIPS quality measure assesses for timely endovascular stroke treatment in ischemic stroke patients. Ensuring a door to puncture time of 90 minutes or less, gives stroke patients the best chance at functional recovery and improved health outcomes.
- **Q420: Varicose Vein Treatment with Saphenous Ablation: Outcome Survey:** This MIPS quality measure motivates clinicians to objectively quantify changes in quality of life after an ablation, the ultimate way to assess success of saphenous ablation for varicose veins.
- **Q421: Appropriate Assessment of Retrievable Inferior Vena Cava (IVC) Filters for Removal:** This MIPS quality measure focuses on clinicians providing timely follow-up for patients with retrievable IVC filters to increase awareness of the potential harms of inappropriate continued inferior vena cava filtration in patients with retrievable filters.
- **Q465: Uterine Artery Embolization Technique: Documentation of Angiographic Endpoints and Interrogation of Ovarian Arteries:** This MIPS quality measure promotes successful treatment by ensuring documentation of delineation of all uterine arterial supply with

embolization where possible, and appropriate embolization endpoints achieved which are indications of treatment efficacy.

- **RCOIR12: Tunneled Hemodialysis Catheter Clinical Success Rate:** This QCDR measure evaluates whether a tunneled central venous catheter has been successfully placed (or replaced) and ready for use within 72 hours after placement. This would ensure the catheter is operational and functional as quickly as possible and is tunneled to reduce complications.

- **RCOIR13: Percutaneous Arteriovenous Fistula for Dialysis - Clinical Success Rate:** This QCDR measure evaluates success of percutaneous fistula creation for patients on maintenance hemodialysis, promoting the use of new technology with the potential to yield positive results such as fewer procedural complications.

- **RPAQIR14: Arteriovenous Graft Thrombectomy Clinical Success Rate:** This QCDR measure assesses clinical success of arteriovenous graft thrombectomy. Successful removal of a thrombosis supports continued use of the arteriovenous graft, reducing the need for additional vascular access procedures and allowing adequate dialysis to be performed.

- **RPAQIR15: Arteriovenous Fistulae Thrombectomy Clinical Success Rate:** This QCDR measure assesses clinical success of arteriovenous fistula thrombectomy. Arteriovenous fistulas can provide rapid extracorporeal blood flow that is necessary for hemodialysis and when feasible, are the preferred type of vascular access for chronic hemodialysis.

#### **Improvement Activities**

We reviewed the improvement activities inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We are proposing to include 19 improvement activities that reflect actions and processes undertaken by clinicians who specialize in interventional radiology, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision making, and care coordination. The following improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care within interventional radiology and are proposed for inclusion in this MVP.

- **IA\_BE\_1:** Use of certified EHR to capture patient reported outcomes
- **IA\_BE\_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA\_BE\_12:** Use evidence-based decision aids to support shared decision-making
  - **IA\_BE\_X:** Promote Use of Patient-Reported Outcome Tools
- **IA\_BMH\_12:** Promoting Clinician Well-Being
- **IA\_CC\_7:** Regular training in care coordination
- **IA\_CC\_8:** Implementation of documentation improvements for practice/process improvements
- **IA\_CC\_9:** Implementation of practices/processes for developing regular individual care plans
- **IA\_CC\_15:** PSH Care Coordination
- **IA\_CC\_17:** Patient Navigator Program
- **IA\_CC\_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes

- **IA\_EPA\_2:** Use of telehealth services that expand practice access
- **IA\_EPA\_3:** Collection and use of patient experience and satisfaction data on access
- **IA\_EPA\_X:** Provide Education Opportunities for New Clinicians
- **IA\_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA\_PM\_17:** Participation in Population Health Research
- **IA\_PSPA\_1:** Participation in an AHRQ-listed patient safety organization.
- **IA\_PSPA\_18:** Measurement and improvement at the practice and panel level
- **IA\_PSPA\_25:** Cost Display for Laboratory and Radiographic Orders

### **Cost Measures**

We are proposing to include three MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of interventional radiology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in interventional radiology and aligns with other measures and activities within this MVP:

- **MSPB\_1:** Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing interventional radiology care in inpatient hospitals.
- **COST\_HAC\_1:** Hemodialysis Access Creation: This MIPS episode-based cost measure assesses costs associated with the creation of graft or fistula access for long-term hemodialysis.
- **COST\_IHCL\_1:** Intracranial Hemorrhage or Cerebral Infarction: This MIPS episode-based cost measure assesses costs associated with the inpatient treatment for cerebral infarction or intracranial hemorrhage.

We request comment on the measures and activities included in this MVP.

### **Symbol Key:**

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

**Table A.2: Interventional Radiology MVP Clinical Groupings**

| Interventional Radiology MVP     |                                                                                                                                                        |         |               |                                                                                                                              |

#### Interventional Radiology Improvement Activities

- IA\_BE\_1: Use of certified EHR to capture patient reported outcomes
- IA\_BE\_4: Engagement of Patients through Implementation of New Patient Portal
- IA\_BE\_12: Use evidence-based decision aids to support shared decision-making
- (\*) (f) IA\_BE\_X: Promote Use of Patient-Reported Outcome Tools
- (f) IA\_BMH\_12: Promoting Clinician Well-Being
- IA\_CC\_7: Regular training in care coordination
- IA\_CC\_8: Implementation of documentation improvements for practice/process improvements

- (!) **IA\_CC\_9:** Implementation of practices/processes for developing regular individual care plans
- **IA\_CC\_15:** PSH Care Coordination
- **IA\_CC\_17:** Patient Navigator Program
- **IA\_CC\_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **IA\_EPA\_2:** Use of telehealth services that expand practice access
- **IA\_EPA\_3:** Collection and use of patient experience and satisfaction data on access
- (\*)(!) **IA\_EPA\_X:** Provide Education Opportunities for New Clinicians
- (\*\*\*) **IA\_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA\_PM\_17:** Participation in Population Health Research
- **IA\_PSPA\_1:** Participation in an AHRQ-listed patient safety organization.
- **IA\_PSPA\_18:** Measurement and improvement at the practice and panel level
- **IA\_PSPA\_25:** Cost Display for Laboratory and Radiographic Orders

### **A.3 Neuropsychology MVP**

The proposed Neuropsychology MVP focuses on the clinical specialty of providing treatment and management of neuropsychological care. This MVP would be most applicable to clinicians who treat patients within the practice of neuropsychology, including nonphysician practitioners (NPPs) such as nurse practitioners and physician assistants.

#### **Quality Measures**

We are proposing to include six MIPS quality measures and three QCDR measures within the quality performance category of this MVP, which are specific to the clinical topic of neuropsychology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in neuropsychology:

- **Q282: Dementia: Functional Status Assessment:** This MIPS quality measure evaluates for the performance of a functional status assessment for patients diagnosed with dementia.
- **Q286: Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia:** This MIPS quality measure assesses for the discussion of safety concerns with either the patients diagnosed with dementia or their caregivers. There are two domains of safety that should be addressed to meet performance of the measure which include dangerousness to self or others and environmental risks. If a risk is discovered, it is anticipated that the clinician would document mitigation recommendations to promote safety outcomes for these patients.
- **Q288: Dementia: Education and Support of Caregivers for Patients with Dementia:** This MIPS quality measure ensures clinician communication of education on dementia disease management and health behavior with the added support of referrals to additional support resources for patients diagnosed with dementia and their caregivers.
- **MBEIR13: Social Role Functioning Assessment utilizing PROMIS Adult Ability to Participate in Social Roles and Activities:** This QCDR measure ensures patients who report concerns related to their psychosocial function are assessed, and a follow-up plan is documented for those patients who may have difficulty with social role function and their ability to effectively participate in one's usual role.

• **MBHR15: Consideration of Cultural-Linguistic and Demographic Factors in Cognitive Assessment:** This QCDR measure ensures patients are referred for evaluation due to concerns for cognitive changes or difficulties receive a standardized valid assessment of cognition with results documented, including documentation of provider's consideration of relevant cultural-linguistic and demographic factors that may have affected assessment and resulting assessment.

• **MBHR18: Provision of Feedback Following a Cognitive or Mental Status Assessment with Documentation of Understanding of Test Results and Subsequent Healthcare Plan with Timely Transmission of Results:** This QCDR measure ensures patients who receive a standardized cognitive or mental status assessment engage in a post-evaluation feedback session(s) so they may better understand their medical condition and prognosis. This drives improved health outcomes through improved patient participation in treatment planning and assists them with making necessary lifestyle adjustments.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in neuropsychology. The quality measures below assess for age-specific screenings and follow-up actions for select measures:

- **Q130: Documentation of Current Medications in the Medical Record:** This MIPS quality measure bases performance on clinicians documenting the list of current medications using all immediate resources for capture of this important clinical topic.
- **Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan :** This MIPS quality measure ensures all patients are screened for depression with a follow-up plan documented for those patients who screen positive.
- **Q181: Elder Maltreatment Screen and Follow-up Plan:** This MIPS quality measure ensures routine screening for potential elder maltreatment and is an essential strategy for guarding older adults from abuse and neglect.

#### **Improvement Activities**

We reviewed the improvement activities inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We are proposing to include 10 improvement activities that reflect actions and processes undertaken by clinicians who specialize in neuropsychology, as well as activities that promote advancing health and wellness, engagement and patient-centeredness, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- **IA\_BE\_4: Engagement of Patients through Implementation of New Patient Portal**
- **IA\_BE\_14: Engage Patients and Families to Guide Improvement in the System of Care**
- **IA\_BE\_15: Engagement of Patients, Family, and Caregivers in Developing a Plan of Care**
- **IA\_BE\_16: Promote Self-management in Usual Care**
- **IA\_BE\_22: Improved Practices that Engage Patients Pre-Visit**
- **IA\_BMH\_7: Implementation of Integrated Patient Centered Behavioral Health Model**
- **IA\_CC\_9: Implementation of practices/processes for developing regular individual care plans**
- **IA\_EPA\_X: Enhance Engagement of Medicaid and Other Underserved Populations**
- **IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways**
- **IA\_PM\_21: Advance Care Planning**

#### **Cost Measures**

We are proposing to include two MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of neuropsychology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in neuropsychology, including:

- ◆ **MSPB\_1: Medicare Spending Per Beneficiary (MSPB) Clinician:** This MIPS cost measure applies to clinicians providing care in neuropsychology care in inpatient hospitals.
- ◆ **TPCC\_1: Total Per Capita Cost (TPCC):** This MIPS cost measure assesses the overall cost of care delivered to a Medicare patient with a focus on the primary care the patient receives from their providers. Neuropsychologists are included in attribution for the TPCC measure as they may provide broad, ongoing care to their patients, which is in line with the intent of the TPCC measure.

We request comment on the measures and activities included in this MVP.

**Symbol Key:**

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

**Neuropsychology Improvement Activities**

- IA\_BE\_4: Engagement of Patients through Implementation of New Patient Portal
- IA\_BE\_14: Engage Patients and Families to Guide Improvement in the System of Care
- IA\_BE\_15: Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- (\*) IA\_BE\_16: Promote Self-management in Usual Care

- IA\_BE\_22: Improved Practices that Engage Patients Pre-Visit
- IA\_BMH\_7: Implementation of Integrated Patient Centered Behavioral Health Model
- (!) IA\_CC\_9: Implementation of practices/processes for developing regular individual care plans
- (\*) IA\_EPA\_X: Enhance Engagement of Medicaid and Other Underserved Populations
- (\*\*) IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA\_PM\_21: Advance Care Planning

#### A.4 Pathology MVP

The proposed Pathology MVP focuses on assessing meaningful outcomes in pathology. This MVP would be most applicable to pathology clinicians.

##### Quality Measures

We are proposing to include seven MIPS quality measures and seven QCDR measures within the quality performance category of this MVP, which are specific to the clinical topic of pathology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in pathology:

- Q249: Barretts Esophagus: This MIPS quality measure assesses appropriate and complete final report documentation to ensure accurate diagnoses.
- Q250: Radical Prostatectomy Pathology Reporting: This MIPS quality measure ensures that pathology reports include all appropriate information as having a complete set of pathology descriptors is crucial for staging and subsequent therapeutic decisions.
- Q395: Lung Cancer Reporting (Biopsy/Cytology Specimens): This MIPS quality measure encourages pathologists to further classify tumors into a more specific histologic subtype thereby reducing the use of the term non-small-cell lung cancer not otherwise specified (NSCLC-NOS) and furnishing uniform terminology and diagnostic criteria based on an integrated multidisciplinary platform.
- Q396: Lung Cancer Reporting (Resection Specimens): This MIPS quality measure assesses for standardized final reports for lung biopsy and cytology specimens with a diagnosis of primary non-small cell lung cancer allowing for classification to be based on an integrated multidisciplinary platform.

- Q397: Melanoma Reporting: This MIPS quality measure assesses final reports to ensure alignment with guidelines and inclusion of all appropriate tumor characteristics for more precise staging, improving treatment outcomes.

- Q440: Skin Cancer: Biopsy Reporting Time—Pathologist to Clinician: This MIPS quality measure ensures timely reporting of pathology results to mitigate delays in treatment.

- Q491: Mismatch Repair (MMR) or Microsatellite Instability (MSI) Biomarker Testing Status: This MIPS quality measure assesses for guideline recommended MMR/MSI testing for patients considering checkpoint inhibitor therapy, which aims to improve health outcomes by making care more targeted.

- CAP30: Urinary Bladder Cancer: Complete Analysis and Timely Reporting: This QCDR measure assesses all pathology cancer reports to ensure they are complete, contain all necessary data elements and are returned within a maximum of two business days. By mandating a thorough report in a timely fashion, this measure encourages appropriate and quick treatment.

- CAP34: Molecular Assessment: Biomarkers in Non-Small Cell Lung Cancer: This QCDR measure ensures pathology reports for non-small cell lung cancer (NSCLC) contain impression or recommendation for biomarker mutation testing. Accurate reporting allows patients to receive matched targeted therapy.

- CAP40: Squamous Cell Skin Cancer: Complete Reporting: This QCDR measure assesses pathology reports for completeness of histologic findings, including margin status degree of differentiation/histologic grade, depth or level of invasion, presence of perineural invasion, tumor diameter, and presence of lymphovascular invasion which are vital in creating treatment and follow-up plans.

- QMM21: Incorporating results of concurrent studies into Final Reports for Bone Marrow Aspirate of patients with Leukemia, Myelodysplastic syndrome, or Chronic Anemia: This QCDR measure ensures that all final bone marrow reports contain results of concurrent studies performed as well as an interpretation of those results, thereby improving patient outcomes and continuity of care.

- QMM25: Use of Structured Reporting for Urine Cytology Specimens: This QCDR measure ensures uniformity and reproducibility in the reporting of urine cytology through standardization by requiring use of The Paris System.

- QMM29: Use of Appropriate Classification System for Lymphoma Specimen: This QCDR measure encourages precise classification of lymphoma by ensuring results are accurately and effectively interpreted by the treating clinician.

- QMM30: Appropriate Use of Bethesda System for Reporting Thyroid Cytopathology on Fine Needle Aspirations (FNA) of Thyroid Nodule(s): This QCDR measure encourages results from FNA of thyroid nodules are properly and uniformly categorized by using the Bethesda System for Reporting Thyroid Cytopathology.

##### Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We are proposing to include 13 improvement activities that reflect actions and processes undertaken by clinicians who specialize in pathology, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA\_BE\_15: Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- IA\_BE\_X: Promote Use of Patient-Reported Outcome Tools
- IA\_BMH\_12: Promoting Clinician Well-Being
- IA\_CC\_9: Implementation of practices/processes for developing regular individual care plans
- IA\_CC\_12: Care coordination agreements that promote improvements in patient tracking across settings
- IA\_CC\_19: Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA\_PSPA\_1: Participation in an AHRQ-listed patient safety organization
- IA\_PSPA\_2: Participation in MOC Part IV

- **1A\_PSPA\_12:** Participation in private payer CPIA
- **1A\_PSPA\_13:** Participation in Joint Commission Evaluation Initiative
- **1A\_PSPA\_X:** Adopt Certified Health Information Technology for Security Tags for Electronic Health Record Data

**Cost Measures**

We are proposing to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of pathology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in pathology and align with other measures and activities within this MVP:

- **MSPB\_1:** Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing pathology care in inpatient hospitals.

We request comment on the measures and activities included in this MVP.

**Symbol Key:**

- Single asterisk (\*): existing measures and improvement activities with proposed revisions.
- Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.
- Single exclamation point (!): improvement activities with an advancing health and wellness component

| QMM30: Appropriate Use of Bethesda System for Reporting Thyroid Cytopathology on Fine Needle Aspirations (FNA) of Thyroid Nodule(s)<br>(Collection Type: QCDR) | No                                                                                                                                                                                               | Yes     |               |      |

#### **Pathology Improvement Activities**

- **IA\_BE\_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA\_BE\_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- **(\*H) IA\_BE\_X:** Promote Use of Patient-Reported Outcome Tools
- **(I) IA\_BMH\_12:** Promoting Clinician Well-Being
- **(I) IA\_CC\_9:** Implementation of practices/processes for developing regular individual care plans
- **IA\_CC\_11:** Care coordination agreements that promote improvements in patient tracking across settings
- **IA\_CC\_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **(\*\*\*) IA\_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways

- **IA\_PSPA\_1:** Participation in an AHRQ-listed patient safety organization
- **IA\_PSPA\_2:** Participation in MOC Part IV
- **IA\_PSPA\_12:** Participation in private payer CPIA
- **IA\_PSPA\_13:** Participation in Joint Commission Evaluation Initiative
- **(\*) IA\_PSPA\_X:** Adopt Certified Health Information Technology for Security Tags for Electronic Health Record Data

### **A.5 Podiatry MVP**

The proposed Podiatry MVP focuses on assessing meaningful outcomes in foot and ankle care for patients with chronic conditions, wound/ulcers, and general care for the podiatry patient. This MVP would be most applicable to podiatry clinicians, including NPPs such as nurse practitioners and physician assistants.

#### **Quality Measures**

We are proposing to include 7 MIPS quality measures and 10 QCDR measures within the quality performance category of this MVP, which are specific to the clinical topic of podiatry. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in podiatry:

- **Q126:** Diabetes Mellitus: Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation: This MIPS quality measure ensures patients diagnosed with diabetes mellitus have a lower extremity neurological exam performed at least once every 12 months.
- **Q127:** Diabetes Mellitus: Diabetic Foot and Ankle Care, Ulcer Prevention – Evaluation of Footwear: This MIPS quality measure ensures patients diagnosed with diabetes mellitus are evaluated for proper footwear and sizing at least once every 12 months.
- **Q374:** Closing the Referral Loop: Receipt of Specialist Report: This MIPS quality measure is attributable to the clinician referring the patient and ensures report receipt from the referred to clinician, closing the communication loop.
- **REGCLR5:** Offloading with Remote Monitoring: This QCDR measure evaluates patient compliance with prescribed off-loading via remote monitoring and compliance being demonstrated as complete healing of the ulcer within 10 weeks. The monitoring of patient adherence enables the clinician to intervene when a patient is non-adherent.
- **REGCLR8:** Monitor and Improve Treatment Outcomes in Chronic Wound Healing: This QCDR measure ensures patients with chronic non-healing wounds are re-assessed and experience an improved healing rate after a change in treatment plan based upon information learned from the re-assessment. Improved wound healing rates may reduce spending on advanced treatments.
- **USWR22:** Nutritional Assessment and Intervention Plan in patients with Wounds and Ulcers: This QCDR measure ensures patients with wounds and/or ulcers complete a validated nutritional assessment and receive an appropriate intervention plan based on the results. Evidence suggests that oral nutritional supplements, particularly with high protein content, can reduce the risk of developing pressure ulcers.
- **USWR32:** Adequate Compression at each visit for Patients with Venous Leg Ulcers (VLUs) appropriate to arterial supply: This QCDR measure assesses for adequate

compression at each visit for treating patients with venous leg ulcers. This measure establishes the requirement of safe, effective, and consistent compression treatment of VLUs

- **USWR33: Diabetic Foot Ulcer (DFU) Healing or Closure:** This QCDR measure evaluates achieved healing or closure of diabetic foot ulcers within 6 months stratified by the Wound Healing Index (WHI). Reporting of healing rates stratified by the WHI makes it possible to see individual variations in quality between clinicians and compare performance based on similar wound severity.

- **USWR34: Venous Leg Ulcer (VLU) Healing or Closure:** This QCDR measure evaluates achieved healing or closure of venous leg ulcers (VLU) within 12 months stratified by the Wound Healing Index (WHI). Reporting VLU healing stratified by the WHI enables honest reporting of VLU healing rates and fair comparison of clinician performance.

- **USWR35: Adequate Off-loading of Diabetic Foot Ulcers performed at each visit appropriate to location of ulcer:** This QCDR measure assesses for adequate off-loading for diabetic foot ulcers during patient visits. Adequate off-loading increases the likelihood of DFU healing.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in podiatry care. The measures assess for age-specific screenings and follow-up actions for select measures:

- **Q155: Falls: Plan of Care:** This MIPS quality measure ensures adult patients, with a history of falls, have a plan of care for falls.

- **Q226: Preventive Care and Screening: Tobacco Use, Screening and Cessation Intervention.** This MIPS quality measure screens patients for tobacco use. Any patients that are found to be tobacco users should receive tobacco cessation intervention.

- **Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented.** This MIPS quality measure ensures all adult patients are screened for high blood pressure and have a recommended follow-up plan if blood pressure is elevated or hypertensive.

- **Q358: Patient-Centered Surgical Risk Assessment and Communication:** This MIPS quality measure ensures patients receive a personalized surgical risk assessment completed using a validated risk calculator or multi-institutional clinical data prior to the surgery with discussion of the identified risks with the surgeon

- **MEX5: Hammer Toe Outcome:** This QCDR measure addresses pain caused by toe deformity and ensures appropriate intervention for pain reduction. Lesser toe deformities are common and can have a significant impact on the function of the foot and quality of life. Appropriate intervention can result in improvements in activities of daily living and quality of life.

- **REGCLR1: Heel Pain Treatment Outcomes for Adults:** This QCDR measure addresses heel pain and ensures appropriate intervention for pain reduction. Clinical practice guideline suggests that treatment needs to be properly tailored to the patient based upon the cause of the pain.

- **REGCLR3: Bunion Outcome - Adult and Adolescent:** This QCDR measure addresses bunion pain and ensures appropriate intervention for pain reduction. Alleviation of bunion pain can result in improvement in activities of daily living and quality of life.

### **Improvement Activities**

We reviewed the improvement activities inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We are proposing to include 10 improvement activities that reflect actions and

processes undertaken by clinicians who specialize in podiatry care, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- **IA\_BE\_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA\_BMH\_12:** Promoting Clinician Well-Being
- **IA\_CC\_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **IA\_FPA\_X:** Enhance Engagement of Medicaid and Other Underserved Populations
- **IA\_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA\_PM\_14:** Implementation of methodologies for improvements in longitudinal care management for high risk patients
- **IA\_PSPA\_7:** Use of QCDR data for ongoing practice assessment and improvements
- **IA\_PSPA\_18:** Measurement and improvement at the practice and panel level
- **IA\_PSPA\_22:** CDC Training on CDC's Guideline for Prescribing Opioids for Chronic Pain
- **IA\_PSPA\_23:** Completion of CDC Training on Antibiotic Stewardship

**Cost Measures**

We are proposing to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of podiatry care. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in podiatry and align with other measures and activities within this MVP.

- **MSPB\_1:** Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing podiatry care in inpatient hospitals.

We request comment on the measures and activities included in this MVP.

**Symbol Key:**

Single asterisk (\*): existing measures and improvement activities with proposed revisions.  
Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.  
Single exclamation point (!): improvement activities with an advancing health and wellness component.

**Table A.5: Podiatry MVP Clinical Groupings**

| Podiatry MVP       |                                                                                                                                    |         |               |                                                            |

#### **Podiatry Improvement Activities**

- **IA\_BE\_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(!) IA\_BMH\_12:** Promoting Clinician Well-Being
- **IA\_CC\_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **(\*) IA\_EPA\_X:** Enhance Engagement of Medicaid and Other Underserved Populations
- **(\*\*) IA\_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA\_PM\_14:** Implementation of methodologies for improvements in longitudinal care management for high risk patients
- **IA\_PSPA\_7:** Use of QCDR data for ongoing practice assessment and improvements
- **IA\_PSPA\_18:** Measurement and improvement at the practice and panel level
- **IA\_PSPA\_22:** CDC Training on CDC's Guideline for Prescribing Opioids for Chronic Pain
- **IA\_PSPA\_23:** Completion of CDC Training on Antibiotic Stewardship

#### **A.6 Vascular Surgery MVP**

The proposed Vascular Surgery MVP focuses on the clinical specialty of surgery. This MVP would be most applicable to clinicians who treat patients within the surgical settings of vascular surgery, including NPPs such as nurse practitioners, and physician assistants.

#### **Quality Measures**

We are proposing to include 13 MIPS quality measures and 4 QCDR measures within the quality performance category of this MVP, which are specific to the clinical specialty of surgery. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care provided by clinicians who specialize in surgery:

- **Q259:** Rate of Endovascular Aneurysm Repair (EVAR) of Small or Moderate Non-Ruptured Infrarenal Abdominal Aortic Aneurysms (AAA) without Major Complications (Discharged to Home by Post- Operative Day #2): This MIPS quality measure ensures patients are selected appropriately for these procedures to limit experience of major complications, evidenced by discharge home no later than post-operative day number 2.
- **Q344:** Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post- Operative Day #2): This MIPS quality measure ensures patients are selected appropriately for these procedures to limit experience of major complications, evidenced by discharge home no later than post-operative day number 2.

• Q355: Unplanned Reoperation within the 30-Day Postoperative Period: This MIPS

quality measure evaluates for an unplanned

reoperation within 30 days of a denominator eligible procedure.

- Q356: Unplanned Hospital Readmission within 30 Days of Principal Procedure: This MIPS quality measure ensures evaluation of any unexpected surgical complications or adverse outcomes evidenced by unplanned hospital re-admission within 30 days of the principal surgical procedure.

- Q357: Surgical Site Infection (SSI): This MIPS quality measure evaluates for SSI within 30 days of a denominator eligible procedure.

- Q374: Closing the Referral Loop: Receipt of Specialist Report: This MIPS quality measure is attributable to the clinician referring the patient and ensures report receipt from the referred to clinician, closing the communication loop.

- RCOIR12: Tunneled Hemodialysis Catheter Clinical Success Rate: This QCDR measure ensures patients with tunneled central venous access catheter insertions or replacements for ESRD on maintenance dialysis receive full dialysis treatment as prescribed within 72 hours of catheter placement or exchange.

- RCOIR13: Percutaneous Arteriovenous Fistula for Dialysis—Clinical Success Rate: This QCDR measure ensures percutaneous created arteriovenous fistulas for patients on dialysis are deemed ready for use with at least 2 16-gauge needles for 3 consecutive dialysis treatments at prescribed blood flow rates.

- RPAQIR14: Arteriovenous Graft Thrombectomy Clinical Success Rate: This QCDR measure ensures clinical success of arteriovenous graft (AVG) thrombectomies for patients on maintenance dialysis evidenced by successful first dialysis treatment following the thrombectomy with needles using that access.

- RPAQIR15: Arteriovenous Fistulae Thrombectomy Clinical Success Rate: This QCDR measure ensures clinical success of arteriovenous fistulae (AVF) thrombectomies for patients on maintenance dialysis evidenced by successful first dialysis treatment following the thrombectomy with needles using that access.

The following broadly applicable MIPS quality measures are relevant to clinicians who treat patients in surgical settings. The measures assess for age-specific screenings and follow-up actions for select measures:

- Q001: Diabetes: Glycemic Status Assessment Greater Than 9%: This inverse outcome MIPS quality measure assesses diabetic patients for poor control of their HbA1c.

- Q047: Advance Care Plan: This MIPS quality measure assesses for medical record

documentation of an advance care plan or surrogate decisions maker.

- Q130: Documentation of Current Medications in the Medical Record: This MIPS quality measure bases performance on clinicians documenting the list of current medications using all immediate resources for capture of this important clinical topic.

- Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: This MIPS quality measure screens patients for tobacco use. Any patients that are found to be tobacco users should receive tobacco cessation intervention.

- Q321: CAHPS for MIPS Clinician/Group Survey: This survey would provide direct input from patients and their experience regarding timely care, effective communication, shared decision making, care coordination, promotion of health and education, completion of health status/ functionality, and courtesy of office staff.

- Q358: Patient-Centered Surgical Risk Assessment and Communication: This MIPS quality measure ensures patients receive a personalized surgical risk assessment completed using a validated risk calculator or multi-institutional clinical data prior to the surgery with discussion of the identified risks with the surgeon.

- Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease: This MIPS quality measure identifies patients at high risk of cardiovascular events and ensures they are prescribed or currently on a statin therapy.

#### *Improvement Activities*

We reviewed the improvement activities inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We are proposing to include 16 improvement activities that reflect actions and processes undertaken by surgical care clinicians, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities are proposed for inclusion in this MVP:

- IA\_BE\_1: Use of certified EHR to capture patient reported outcomes
- IA\_BE\_4: Engagement of Patients through Implementation of New Patient Portal

- IA\_BE\_12: Use evidence-based decision aids to support shared decision-making.
- IA\_BE\_X: Promote Use of Patient-Reported Outcome Tools
- IA\_CC\_15: PSH Care Coordination
- IA\_EPA\_2: Use of telehealth services that expand practice access
- IA\_EPA\_3: Collection and use of patient experience and satisfaction data on access
- IA\_EPA\_X: Provide Education Opportunities for New Clinicians
- IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA\_PM\_2: Anticoagulant Management Improvements
- IA\_PM\_5: Engagement of community for health status improvement
- IA\_PM\_11: Regular Review Practices in Place on Targeted Patient Population Needs
- IA\_PM\_15: Implementation of episodic care management practice improvements
- IA\_PM\_16: Implementation of medication management practice improvements
- IA\_PM\_21: Advance Care Planning
- IA\_PSPA\_1: Participation in an AHRQ-listed patient safety organization.

#### *Cost Measures*

We are proposing to include three MIPS cost measures within the cost performance category of this MVP, which apply to the clinical specialty of surgical care. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in surgical care and align with other measures and activities within this MVP:

- COST\_CCLI\_1: Revascularization For Lower Extremity Chronic Critical Limb Ischemia: This MIPS episode-based cost measure assesses costs associated with elective revascularization surgery for lower extremity chronic critical limb ischemia.

- COST\_HAC\_1: Hemodialysis Access Creation: This MIPS episode-based cost measure assesses costs associated with the creation of graft or fistula access for long-term hemodialysis.

- MSPB\_1: Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing care in inpatient hospitals, including those who treat patients within vascular surgery.

We request comment on the measures and activities included in this MVP.

**Symbol Key:**

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

#### Vascular Surgery Improvement Activities

- IA\_BE\_1: Use of certified EHR to capture patient reported outcomes
- IA\_BE\_4: Engagement of Patients through Implementation of New Patient Portal
- IA\_BE\_12: Use evidence-based decision aids to support shared decision-making
- (\*) IA\_BE\_X: Promote Use of Patient-Reported Outcome Tools
- IA\_CC\_15: PSH Care Coordination
- IA\_EPA\_2: Use of telehealth services that expand practice access
- IA\_EPA\_3: Collection and use of patient experience and satisfaction data on access
- (\*) IA\_EPA\_X: Provide Education Opportunities for New Clinicians
- (\*) IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways

- |                                                                                                                                                                               |                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                      |

**Group B: Modifications to Previously Finalized MVPs for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years**

**B.1: Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP**

The B.1 table, followed by a list of improvement activities, represents the measures and activities finalized within the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP (89 FR 99006 through 99009) with modifications proposed for the CY 2026 performance period/2028 MIPS payment year and future years. The Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP focuses on important assessors of the care emergency clinicians provide to patients. By focusing on these specific measures and activities, emergency clinicians can reduce clinical variability, improve the quality of emergency care and potentially lower costs. This MVP would be most applicable to clinicians who treat patients within the practice of emergency medicine, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

**Quality Measures**

For the reasons stated in the introduction of this appendix<sup>576</sup>, we propose removing one MIPS quality measure: **Q487: Screening for Social Drivers of Health**.

Modifications are being considered for the following QCDR measure<sup>577</sup>:

- **HCPR24: Appropriate Utilization of Vancomycin for Cellulitis:** This QCDR measure is undergoing modifications to clarify the numerator and add definitions for patients with known Methicillin-resistant *Staphylococcus aureus* (MRSA) infection or risks for MRSA infection.

**Improvement Activities**

- For the reasons stated in the introduction of this appendix<sup>578</sup>, we propose removing three improvement activities: **IA\_AIE\_12: Practice Improvements that Engage Community Resources to Address Drivers of Health**, **IA\_CC\_2: Implementation of Improvements that contribute to more timely communication of test results**, and **IA\_PM\_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B**.

**Symbol Key:**

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

**TABLE B.1: Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP Clinical Groupings**

**Adopting Best Practices and Promoting Patient Safety within Emergency Medicine Improvement Activities**

- IA\_BE\_4: Engagement of Patients through Implementation of New Patient Portal
- IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- (C) IA\_BMH\_12: Promoting Clinician Wellbeing
- (\*\*) IA\_MVP: Practice-Wide Quality Improvement in the MIPS Value Pathways Program
- IA\_PSPA\_1: Participation in an AHRQ-listed patient safety organization
- IA\_PSPA\_7: Use of QCDR data for ongoing practice assessment and improvements
- (C) IA\_PSPA\_15: Implementation of an ASP

**B.2: Advancing Cancer Care MVP**

The B.2 table, followed by a list of improvement activities, represents the measures and activities finalized within the Advancing Cancer Care MVP (§9 FR 99009 through 99015) with

modifications proposed for the CY 2026 performance period/2028 MIPS payment year and future years. The Advancing Cancer Care MVP focuses on the clinical specialty of providing fundamental treatment and management of cancer care. This MVP would be most applicable to clinicians who treat patients within the practice of oncology and hematology, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

#### **Quality Measures**

We propose adding two QCDR measures:

- **PIMSH15: Antiemetic Therapy for Low- and Minimal-Emetic-Risk Antineoplastic Agents in the Infusion Center - Avoidance of Overuse (Lower Score = Better):** This QCDR measure is an inverse measure (lower score is better) that ensures clinicians follow clinical guidelines for patients treated with low- or minimal-emetic-risk antineoplastic agents by assessing for inappropriate pre-treatment antiemetic therapy.
- **PIMSH16: Appropriate Antiemetic Therapy for High- and Moderate-Emetic-Risk Antineoplastic Agents in the Infusion Center:** This QCDR measure ensures clinicians follow clinical guidelines for patients treated with high- or moderate-emetic-risk antineoplastic agents by assessing for appropriate pre-treatment antiemetic therapy, which could result in improved control of nausea and vomiting in patients.

For the reasons stated in the introduction of this appendix<sup>579</sup>, we propose removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

Modifications are being considered for the following QCDR measure<sup>580</sup>:

- **PIMSH13: Oncology: Mutation Testing for Stage IV Lung Cancer Completed Prior to the Start of Targeted Therapy:** This QCDR measure is undergoing modifications to add a denominator note to clarify the appropriate timeframe for the denominator eligible diagnosis ensuring consistent denominator eligible identification.

#### **Improvement Activities**

- For the reasons stated in the introduction of this appendix<sup>581</sup>, we propose removing three improvement activities: IA\_AHF\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, IA\_CC\_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop, and IA\_PM\_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

#### **Symbol Key:**

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP.

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures/improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

- IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA\_BE\_15: Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- IA\_BE\_24: Financial Navigation Program
- (!) IA\_BMH\_12: Promoting Clinician Well-Being
- IA\_CC\_13: Practice Improvements to Align with OpenNotes Principles
- IA\_CC\_17: Patient Navigator Program
- IA\_EPA\_2: Use of telehealth services that expand practice access
- (\*) IA\_MVP: Practice-Wide Quality Improvement in the MIPS Value Pathways Program
- IA\_PM\_14: Implementation of methodologies for improvements in longitudinal care management for high-risk patients
- IA\_PM\_15: Implementation of episodic care management practice improvements
- IA\_PM\_16: Implementation of medication management practice improvements
- IA\_PM\_21: Advance Care Planning
- IA\_PSPA\_13: Participation in Joint Commission Evaluation Initiative
- IA\_PSPA\_16: Use of decision support —ideally platform-agnostic, interoperable clinical decision support (CDS) tools —and standardized treatment protocols to manage workflow on the care team to meet patient needs
- IA\_PSPA\_28: Completion of an Accredited Safety or Quality Improvement Program

#### **B.3: Advancing Care for Heart Disease MVP**

The B.3 table, followed by a list of improvement activities, represents the measures and activities finalized within the Advancing Care for Heart Disease MVP (89 FR 99015 through 99019) with modifications proposed for the CY 2026 performance period/2028 MIPS payment year and future years. The Advancing Care for Heart Disease MVP focuses on the clinical theme of providing fundamental treatment and management of costly clinical conditions that contribute to, or may result from, heart disease. This MVP would be most applicable to clinicians who treat patients within the practice cardiology, internal medicine and family medicine, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

**Quality Measures**

For the reasons stated in the introduction of this appendix<sup>562</sup>, we propose removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

**Improvement Activities**

For the reasons stated in the introduction of this appendix<sup>563</sup>, we propose removing three improvement activities: IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, IA\_AHE\_12: Practice Improvements that Engage Community Resources to Address Drivers of Health, and IA\_PM\_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

**Symbol Key:**

- Single asterisk (\*): existing measures and improvement activities with proposed revisions.
- Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.
- Single exclamation point (!): improvement activities with an advancing health and wellness component.

#### Advancing Care for Heart Disease Improvement Activities

- (\*) IA\_AHW\_X: Chronic Care and Preventative Care Management for Enpaneled Patients
- IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA\_BE\_12: Use evidence-based decision aids to support shared decision-making
- IA\_BE\_15: Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- IA\_BE\_24: Financial Navigation Program
- IA\_BE\_25: Drug Cost Transparency
- (2) IA\_CC\_9: Implementation of practices/processes for developing regular individual care plans
- (\*\*) IA\_MVP: Practice-Wide Quality Improvement in the MIPS Value Pathways Program
- IA\_PM\_14: Implementation of methodologies for improvements in longitudinal care management for high risk patients
- IA\_PSPA\_4: Administration of the AHRQ Survey of Patient Safety Culture
- IA\_PSPA\_7: Use of QCDR data for ongoing practice assessment and improvements

**B.4: Advancing Rheumatology Patient Care MVP**

The B.4 table, followed by a list of improvement activities, represents the measures and activities finalized within the Advancing Rheumatology Patient Care MVP (89 FR 99019 through 99023) with modifications proposed for the CY 2026 performance period/2028 MIPS payment year and future years. The Advancing Rheumatology Patient Care MVP focuses on the clinical theme of providing fundamental treatment and management of rheumatological conditions. This MVP would be most applicable to clinicians who treat patients within the practice rheumatology, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

**Quality Measures**

We propose adding two QCDR measures:

- ACR10: Hepatitis B Safety Screening: This QCDR measure improves patient safety

by ensuring that a hepatitis B screening is documented in the medical record for all patients newly initiating a biologic or new synthetic immunosuppressive drug.

- ACR16: Rheumatoid Arthritis Patients with Low Disease Activity or Remission: This QCDR measure assesses clinician performance based on the risk-adjusted proportion of patients with rheumatoid arthritis who have low disease activity or are in remission based on the last recorded disease activity score as assessed using an ACR-preferred tool.

- For the reasons stated in the introduction of this appendix,<sup>584</sup> we propose removing Q487: Screening for Social Drivers of Health. We also propose removing one QCDR measure as this measure is proposed for removal from MIPS:

- UREQA2: Ankylosing Spondylitis: Appropriate Pharmacologic Therapy Modifications are being considered for the following QCDR measure:<sup>585</sup>
- ACR12: Disease Activity Measurement for Patients with PsA: This QCDR measure is

<sup>584</sup> See *MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update*.

<sup>585</sup> Ibid.

undergoing modifications to modify the denominator adding telehealth as denominator eligible.

**Improvement Activities**

For the reasons stated in the introduction of this appendix,<sup>586</sup> we propose removing one improvement activity: IA\_PM\_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

**Symbol Key**

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP.

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

<sup>586</sup> Ibid.

#### **Advancing Rheumatology Improvement Activities**

- IA\_BE\_1: Use of certified FHR to capture patient reported outcomes
- IA\_BE\_4: Engagement of Patients through Implementation of New Patient Portal
- IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA\_BE\_15: Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- IA\_BE\_24: Financial Navigation Program
- IA\_BE\_25: Drug Cost Transparency
- (\*) IA\_BE\_X: Promote Use of Patient-Reported Outcome Tools
- (\*) IA\_BMH\_2: Tobacco use
- IA\_EPA\_2: Use of telehealth services that expand practice access
- (\*\*) IA\_MVP: Practice-Wide Quality Improvement in the MIPS Value Pathways Program
- IA\_PM\_16: Implementation of medication management practice improvements
- IA\_PSPA\_28: Completion of an Accredited Safety or Quality Improvement Program

### **B.5 Complete Ophthalmologic Care MVP**

The B.5 table, followed by a list of improvement activities, represents the measures and activities finalized within the Complete Ophthalmologic Care MVP (89 FR 98974 through 98979) with modifications proposed for the CY 2026 performance period/2028 MIPS payment year and future years. This MVP would be most applicable to clinicians who treat patients within the practice of ophthalmology and optometry, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

#### **Quality Measures**

For the reasons stated in the introduction of this appendix<sup>587</sup>, we propose removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

Modifications are being considered for the following QCDR measures<sup>588</sup>:

- **IRIS2: Glaucoma – Intraocular Pressure Reduction:** This QCDR measure is undergoing modifications to revise the denominator by removing the requirement for “documentation of the severity of their glaucoma” to determine denominator eligibility.
- **IRIS13: Diabetic Macular Edema - Loss of Visual Acuity:** This QCDR measure is undergoing modifications to revise the denominator by removing the requirement for “2 visual acuity values with at least one on or after date of treatment” to determine denominator eligibility.

#### **Improvement Activities**

<sup>587</sup> See MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update.

<sup>588</sup> *Id.*

For the reasons stated in the introduction of this appendix<sup>389</sup>, we propose removing two improvement activities. **IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols** and **IA\_PM\_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B**.

**Symbol Key:**

Single asterisk (\*): existing measures and improvement activities with proposed revisions

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

**B.6: Coordinating Stroke Care To Promote Prevention and Cultivate Positive Outcomes MVP**

The B.6 table, followed by a list of improvement activities, represents the measures and activities finalized within the

Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP (89 FR 99023 through 99025) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP focuses on the clinical theme of providing fundamental prevention and treatment of those patients at risk for or that have had a stroke. This MVP would be most applicable to clinicians who treat patients within the practice of neurology, neurosurgical, and vascular surgery, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

*Quality Measures*

For the reasons stated in the introduction of this appendix,<sup>590</sup> we propose removing

<sup>590</sup> See *MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update*.

one MIPS quality measure: Q487: Screening for Social Drivers of Health.

*Improvement Activities*

For the reasons stated in the introduction of this appendix,<sup>591</sup> we propose removing three improvement activities: IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, IA\_CC\_2: Implementation of improvements that contribute to more timely communication of test results, and IA\_PM\_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

**Symbol Key:**

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

<sup>591</sup> Ibid.

- IA\_PSPA\_7: Use of QCDR data for ongoing practice assessment and improvements

### **B.7: Dermatological Care MVP**

The B.7 table, followed by a list of improvement activities, represents the measures and activities finalized within the Dermatological MVP (89 FR 98979 through 98984) with modifications proposed for the CY 2026 performance period/2028 MIPS payment year and future years. The Dermatological Care MVP focuses on the clinical theme of providing treatment and management of dermatologic care. This MVP would be most applicable to clinicians who treat patients within the practice of dermatology, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

#### **Quality Measures**

We propose adding two MIPS quality measures:

- **Q447: Advance Care Plan**: This MIPS quality measure provides a meaningful assessment for patients undergoing dermatological care.
- **Q238: Use of High-Risk Medications in Older Adults**: This MIPS quality measure supports patient safety by assessing for the use of high-risk medications.
- For the reasons stated in the introduction of this appendix<sup>592</sup>, we propose removing **Q487: Screening for Social Drivers of Health**. We also propose removing one MIPS quality measure and two QCDR measures.
- **Q130: Documentation of Current Medications in the Medical Record**.
- **AAD17: Continuation of Anticoagulation Therapy in the Office-based Setting for Closure and Reconstruction After Skin Cancer Resection Procedures**.
- **AAD18: Avoidance of Opioid Prescriptions for Closure and Reconstruction After Skin Cancer Resection**.

#### **Improvement Activities**

For the reasons stated in the introduction of this appendix<sup>593</sup>, we propose removing one improvement activity: **IA\_PM\_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B**.

#### **Symbol Key:**

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP.

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

**Dermatological Care Improvement Activities**

- ◆ **IA\_BE\_4:** Engagement of Patients through Implementation of New Patient Portal
- ◆ **IA\_BE\_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- ◆ **IA\_BE\_15:** Engagement of Patients, Family and Caregivers in Developing a Plan of Care
- ◆ **IA\_EPA\_2:** Use of telehealth services that expand practice access
- ◆ **(\*) IA\_EPA\_X:** Enhance Engagement of Medicaid and Other Underserved Populations
- ◆ **(\*)(!) IA\_EPA\_X:** Provide Education Opportunities for New Clinicians
- ◆ **(\*\*) IA\_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- ◆ **IA\_PM\_16:** Implementation of medication management practice improvements
- ◆ **IA\_PSPA\_8:** Use of Patient Safety Tools

**B.8: Focusing on Women’s Health MVP**

The B.8 table, followed by a list of improvement activities, represents the measures and activities finalized within the Women’s Health MVP (89 FR 99025 through 99029) with modifications proposed for the CY 2026 performance period/2028 MIPS payment year and future years. The Focusing on Women’s Health MVP focuses on the clinical specialty of providing treatment and management of women’s health. This MVP would be most applicable to clinicians who treat patients within the practice of gynecology, obstetrics, and urogynecology, including nonphysician practitioners (NPPs) such as certified nurse-midwives, nurse practitioners, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

**Quality Measures**

For the reasons stated in the introduction of this appendix<sup>59a</sup>, we propose removing one MIPS quality measure: Q487: Screening for Social Drivers of Health

**Improvement Activities**

For the reasons stated in the introduction of this appendix<sup>59a</sup>, we propose removing four improvement activities: IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, IA\_AHE\_12: Practice Improvements that Engage Community Resources to Address Drivers of Health, IA\_PM\_6: Use of toolsets or other resources to close healthcare disparities across communities, and IA\_PM\_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

**Symbol Key:**

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

#### **Focusing on Women's Health Improvement Activities**

- IA\_BE\_4: Engagement of Patients through Implementation of New Patient Portal
- (!) IA\_BE\_16: Promote Self-management in Usual Care
- (\*) (!) IA\_BE\_X: Promote Use of Patient-Reported Outcome Tools
- IA\_BMH\_11: Implementation of a Trauma-Informed Care (TIC) Approach to Clinical Practice
- (!) IA\_BMH\_14: Behavioral/Mental Health and Substance Use Screening and Referral for Pregnant and Postpartum Women
- (!) IA\_CC\_9: Implementation of practices/processes for developing regular individual care plans
- IA\_EPA\_2: Use of telehealth services that expand practice access
- (\*) IA\_EPA\_X: Enhance Engagement of Medicaid and Other Underserved Populations
- (\*) IA\_MVP: Practice-Wide Quality Improvement in the MIPS Value Pathways Program
- (!) IA\_PM\_23: Use of Computable Guidelines and Clinical Decision Support to Improve Adherence for Cervical Cancer Screening and Management Guidelines

#### **B.9: Gastroenterology Care MVP**

The B.9 table, followed by a list of improvement activities, represents the measures and activities finalized within the Gastroenterology Care MVP (89 FR 98984 through 98989) with modifications proposed for the CY 2026 performance period/2028 MIPS payment year and future years. The Gastroenterology Care MVP focuses on the clinical theme of providing treatment and management of the digestive system and the liver. This MVP would be most applicable to clinicians who treat patients within the practice of gastroenterology, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality and

cost measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

#### **Quality Measures**

We propose adding one new MIPS quality measure.

- **TBD: Hepatitis C Virus (HCV): Sustained Virological Response (SVR):** This proposed MIPS quality measure captures an important outcome for this patient population.
- For the reasons stated in the introduction of this appendix<sup>596</sup>, we propose removing two MIPS quality measures: **Q185: Colonoscopy Interval for Patients with a History of Adenomatous Polyps - Avoidance of Inappropriate Use** and **Q487: Screening for Social Drivers of Health**.

Modifications are being considered for the following QCDR measures<sup>597</sup>:

- **GIQIC26: Screening Colonoscopy Adenoma Detection Rate:** This QCDR measure is undergoing modifications to update the denominator exclusions to reflect any non-colonoscopy colorectal cancer screening test.
- **NHCR4: Repeat screening or surveillance colonoscopy recommended within one year due to inadequate bowel preparation:** This QCDR measure is undergoing modifications to update the numerator to reflect numerator compliance for the clinical scenario of a patient referred for polyp or mass removal.

#### **Improvement Activities**

For the reasons stated in the introduction of this appendix<sup>598</sup>, we propose removing two improvement activities: **IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols** and **IA\_PM\_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B**.

#### **Cost Measures**

We propose adding one MIPS cost measure:

- **COST\_LGH\_1: Lower Gastrointestinal Hemorrhage:** This MIPS episode-based cost measure assesses costs associated with inpatient non-surgical treatment for acute bleeding in the lower gastrointestinal tract.

#### **Symbol Key:**

Caret symbol (^): new proposed MIPS quality and Promoting Interoperability measures.

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP.

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

#### **Gastroenterology Care Improvement Activities**

- IA\_BE\_4: Engagement of Patients through Implementation of New Patient Portal
- (\*) IA\_BE\_X: Promote Use of Patient-Reported Outcome Tools
- IA\_CC\_7: Regular training in care coordination
- (I) IA\_CC\_9: Implementation of practices/processes for developing regular individual care plans
- IA\_CC\_10: Care transition documentation practice improvements
- IA\_CC\_13: Practice improvements to align with OpenNotes principles
- (\*) IA\_EPA\_X: Provide Education Opportunities for New Clinicians
- (\*\*) IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways

#### **B.10: Improving Care for Lower Extremity Joint Repair MVP**

The B.10 table, followed by a list of improvement activities, represents the measures and activities finalized within the Improving Care for Lower Extremity Joint Repair MVP (89 FR 99029 through 99031) with modifications proposed for the CY 2026 performance period/2028 MIPS payment year and future years. The Improving Care for Lower Extremity Joint Repair MVP focuses on the clinical theme of providing fundamental treatment and management of patients with osteoarthritis and lower extremity surgical repair, such as fracture and total joint replacement, to ensure appropriate care and reduce costs. This MVP would be most applicable to clinicians who treat patients within the practice of orthopedic surgery, including NPIs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

**Quality Measures**  
For the reasons stated in the introduction of this appendix<sup>399</sup>, we propose removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

**Improvement Activities**  
For the reasons stated in the introduction of this appendix<sup>400</sup>, we propose removing two improvement activities: IA\_AHF\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols and IA\_PM\_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

**Symbol Key:**  
Single asterisk (\*): existing measures and improvement activities with proposed revisions.  
Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.  
Single exclamation point (!): improvement activities with an advancing health and wellness component.

#### **Improving Care for Lower Extremity Joint Repair Improvement Activities**

- IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA\_BE\_12: Use evidence-based decision aids to support shared decision-making
- (\*) IA\_BE\_X: Promote Use of Patient-Reported Outcome Tools
- IA\_CC\_7: Regular training in care coordination
- (I) IA\_CC\_9: Implementation of practices/processes for developing regular individual care plans
- IA\_CC\_13: Practice Improvements to Align with OpenNotes Principles
- IA\_CC\_15: PSII Care Coordination
- (\*\*) IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA\_PSPA\_7: Use of QCDR data for ongoing practice assessment and improvements
- IA\_PSPA\_18: Measurement and improvement at the practice and panel level

### **B.11: Optimal Care for Kidney Health MVP**

The B.11 table, followed by a list of improvement activities, represents the measures and activities finalized within the Optimal Care for Kidney Health MVP (89 FR 99031 through 99035) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Optimal Care for Kidney Health MVP focuses on the clinical specialty of providing fundamental treatment and management of costly clinical conditions that contribute to, or may result from, kidney disease. This MVP would be most applicable to clinicians who treat patients within the practice of nephrology. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

#### **Quality Measures**

We propose adding one new MIPS quality measure:

- **TBD: Prevalent Standardized Kidney Transplant Waitlist Ratio (PSWR):** This proposed MIPS quality measure captures an additional population of patients on transplant list beyond their first year of dialysis.
- For the reasons stated in the introduction of this appendix<sup>601</sup>, we propose removing one MIPS quality measure, Q487, Screening for Social Drivers of Health.

#### **Improvement Activities**

For the reasons stated in the introduction of this appendix<sup>602</sup>, we propose removing three improvement activities: IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk

<sup>601</sup> See MVP Development: Quality Measures and Improvement Activities Updates and MVP Format Update.

<sup>602</sup> Ibid.

Identification and Treatment Protocols, IA\_CC\_2: Implementation of improvements that contribute to more timely communication of test results, and IA\_PM\_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

**Symbol Key:**

Caret symbol (^): new proposed MIPS quality and Promoting Interoperability measures.

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP.

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

**TABLE B.11: Optimal Care for Kidney Health MVP Clinical Groupings**

#### **B.12: Optimal Care for Patients With Urologic Conditions MVP**

The B.12 table, followed by a list of improvement activities, represents the measures and activities finalized within the Optimal Care for Urologic Conditions MVP (89 FR 98989 through 98994) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Optimal Care for Patients with Urologic Conditions MVP focuses on assessing optimal care for patients treated for a broad range of urologic conditions, including kidney stones, urinary incontinence, bladder cancer, and prostate cancer. This MVP would be most applicable to clinicians who treat patients within the practices of urology, general urologists, urology oncologists, and urology care for women, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

#### *Quality Measures*

- For the reasons stated in the introduction of this appendix,<sup>603</sup> we propose removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

#### *Improvement Activities*

- For the reasons stated in the introduction of this appendix,<sup>604</sup> we propose removing three improvement activities: IA\_AHE\_12: Practice Improvements that Engage Community Resources to Address Drivers of Health, IA\_PM\_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B, and IA\_PSPA\_19: Implementation of formal quality improvement methods, practice changes, or other practice improvement processes.

#### *Symbol Key:*

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

- 1A\_PSPA\_21: Implementation of fall screening and assessment programs

#### **B.13: Patient Safety and Support of Positive Experiences with Anesthesia MVP**

The B.13 table, followed by a list of improvement activities, represents the measures and activities finalized within the Patient Safety and Support of Positive Experiences with Anesthesia MVP (89 FR 99035 through 99037) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Patient Safety and Support of Positive Experiences with Anesthesia MVP focuses on increasing the quality of anesthesia care, improving postoperative outcomes, promoting patient safety, and enhancing satisfaction for patients receiving anesthesia. The measures are used for a variety of surgical procedures that anesthesiologists deliver care for, and are broadly applicable to anesthesiologists practicing within ambulatory, outpatient, and inpatient hospital settings, including NPPs such as certified registered nurse anesthetists (CRNAs) and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

#### **Quality Measures**

- For the reasons stated in the introduction of this appendix<sup>601</sup>, we propose removing two MIPS quality measures: Q424: Perioperative Temperature Management and Q487: Screening for Social Drivers of Health.

#### **Improvement Activities**

<sup>601</sup> See MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update.

For the reasons stated in the introduction of this appendix<sup>666</sup>, we propose removing two improvement activities: **IA\_CC\_2: Implementation of improvements that contribute to more timely communication of test results** and **IA\_PM\_26: Vaccine Achievement for Practice Staff COVID-19, Influenza, and Hepatitis B**.

**Symbol Key:**

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

- IA\_PSPA\_1: Participation in an AHRQ-listed patient safety organization
- IA\_PSPA\_7: Use of QCDR data for ongoing practice assessment and improvements
- IA\_PSPA\_16: Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools—and standardized treatment protocols to manage workflow on the care team to meet patient needs

#### **B.14: Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP**

The B.14 table, followed by a list of improvement activities, represents the measures and activities finalized within the Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP (89 FR 99038 through 99040) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP focuses on the clinical specialty of promoting quality care for patients suffering from infectious disorders. This MVP would be most applicable to clinicians who treat patients

within the practices of infectious disease and immunology, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality and cost measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

#### **Quality Measures**

We propose adding one new MIPS quality measure:

- TBD: Hepatitis C Virus (HCV): Sustained Virological Response (SVR): This proposed MIPS quality measure that captures important outcome for this patient population.

For the reasons stated in the introduction of this appendix,<sup>607</sup> we propose removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

#### **Improvement Activities**

- For the reasons stated in the introduction of this appendix,<sup>608</sup> we propose removing

<sup>607</sup> See *MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update*.

<sup>608</sup> Ibid.

four improvement activities: IA\_AHE\_5: MIPS Eligible Clinician Leadership in Clinical Trials or CBPR, IA\_AHE\_12: Practice Improvements that Engage Community Resources to Address Drivers of Health, IA\_PM\_6: Use of toolsets or other resources to close healthcare disparities across communities, and IA\_PM\_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis.

#### **Cost Measures**

We propose adding three additional MIPS cost measures:

- COST\_RIH\_1: Respiratory Infection Hospitalization: This MIPS episode-based cost measure assesses costs associated with inpatient treatment for a respiratory infection.
- COST\_S\_1: Sepsis: This MIPS episode-based cost measure assesses costs associated with inpatient medical treatment for sepsis.
- MSPB\_1: Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing care for acute infections in inpatient hospitals.

#### **Symbol Key:**

Caret symbol (^): new proposed MIPS quality and Promoting Interoperability measures.

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP.  
 Single asterisk (\*): existing measures and improvement activities with proposed revisions.  
 Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.  
 Single exclamation point (!): improvement activities with an advancing health and wellness component.

  - (!) IA\_PSPA\_32: Use of CDC Guideline for Clinical Decision Support to Prescribe Opioids for Chronic Pain via Clinical Decision Support

**B.15: Pulmonology Care MVP**

The B.15 table, followed by a list of improvement activities, represents the measures and activities finalized within the Pulmonology Care MVP (89 FR 98994 through 98998) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Pulmonology Care MVP focuses on assessing optimal care for patients treated for a broad range of pulmonology conditions including COPD, asthma, sleep apnea, and general pulmonology. This MVP would be most applicable to clinicians who specialize in pulmonology and sleep medicine, including NPPs such as nurse practitioners and physician assistants. We

reviewed the improvement activities inventory and considered feedback received

during the 2026 MVP maintenance period to determine which measures and activities to

include in this MVP. We request comment on

the proposed modifications included in this MVP.

#### *Quality Measures*

For the reasons stated in the introduction of this appendix,<sup>609</sup> we propose removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

---

<sup>609</sup> See *MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update*.

#### *Improvement Activities*

For the reasons stated in the introduction of this appendix,<sup>610</sup> we propose removing three improvement activities: IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, IA\_AHE\_12: Practice Improvements that Engage Community Resources to Address Drivers of Health, and IA\_PM\_26: Vaccine

---

<sup>610</sup> *Ibid*.

Achievement for Practice Staff: COVID–19, Influenza, and Hepatitis B.

#### *Symbol Key:*

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

**Pulmonology Care Improvement Activities**

- (\*) IA\_AHW\_X: Chronic Care and Preventative Care Management for Enpaneled Patients
- IA\_BE\_23: Integration of patient coaching practices between visits
- (\*) IA\_BE\_X: Promote Use of Patient-Reported Outcome Tools
- IA\_CC\_9: Implementation of practices/processes for developing regular individual care plans
- IA\_EPA\_2: Use of telehealth services that expand practice access
- (\*\*) IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA\_PM\_16: Implementation of medication management practice improvements

**B.16: Quality Care for Patients With Neurological Conditions MVP**

The B.16 table, followed by a list of improvement activities, represents the measures and activities finalized within the Quality Care for Patients with Neurological Conditions MVP (89 FR 99040 through 99044) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Quality Care for Patients with Neurological Conditions MVP focuses on the clinical theme of promoting quality care for patients suffering from neurological conditions. This MVP would be most applicable to clinicians who specialize in neurology care, including NPPs such as nurse practitioners and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

*Quality Measures*

We propose adding one new MIPS quality measure:

- TBD: Patient reported falls and plan of care: This proposed MIPS quality measure captures falls assessment and care plan specific to patients with neurological conditions.

For the reasons stated in the introduction of this appendix<sup>611</sup>, we propose removing Q487: Screening for Social Drivers of Health. We also propose removing three additional MIPS quality measures:

- Q155: Falls: Plan of Care
- Q290: Assessment of Mood Disorders and Psychosis for Patients with Parkinson's Disease
- Q419: Overuse of Imaging for the Evaluation of Primary Headache

*Improvement Activities*

- For the reasons stated in the introduction of this appendix<sup>612</sup>, we propose removing

<sup>611</sup> See *MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update*.

<sup>612</sup> Ibid.

three improvement activities: IA\_BMH\_8: Electronic Health Record Enhancements for BH data capture, IA\_CC\_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop, and IA\_PM\_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

*Symbol Key:*

Caret symbol (^): new proposed MIPS quality and Promoting Interoperability measures.

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP.

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

#### **Quality Care for Patients with Neurological Conditions Improvement Activities**

- IA\_BE\_4: Engagement of Patients through Implementation of New Patient Portal
- IA\_BE\_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- (!) IA\_BE\_16: Promote Self-management in Usual Care
- IA\_BE\_24: Financial Navigation Program
- (\*)(!) IA\_BE\_X: Promote Use of Patient-Reported Outcome Tools
- (!) IA\_BMH\_4: Depression screening
- IA\_EPA\_2: Use of telehealth services that expand practice access
- (\*\*) IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA\_PM\_11: Regular review practices in place on targeted patient population needs
- IA\_PM\_16: Implementation of medication management practice improvements
- IA\_PM\_21: Advance Care Planning
- IA\_PSPA\_21: Implementation of fall screening and assessment programs

#### **B.17: Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP**

The B.17 table, followed by a list of improvement activities, represents the measures and activities finalized within the Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP (89 FR 99044 through 99047) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP focuses on the clinical specialty of providing care for patients experiencing some of the most common otolaryngology conditions such as, but not limited to: otologic conditions, chronic rhinosinusitis (CRS), age-related hearing loss (ARHL) and otitis media. This MVP would be most applicable to clinicians who treat patients within the practice of otolaryngology, including NPPs such as audiologists, nurse practitioners, and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

#### **Quality Measures**

We propose adding one additional QCDR measure:

- AA016: Age-Related Hearing Loss: Audiometric Evaluation: This QCDR measure ensures patients who failed a hearing screening and/or who report suspected hearing loss receive, are ordered, or are referred for a comprehensive audiometric evaluation in a timely fashion.

For the reasons stated in the introduction of this appendix<sup>613</sup>, we propose removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

Improvement Activities

- For the reasons stated in the introduction of this appendix<sup>614</sup>, we propose removing

<sup>613</sup> See *MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update*.

<sup>614</sup> Ibid.

three improvement activities: IA\_AHE\_5: MIPS Eligible Clinician Leadership in Clinical Trials or CBPR, IA\_CC\_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop, and IA\_PM\_26: Vaccine Achievement for Practice Staff: COVID–19, Influenza, and Hepatitis B.

Symbol Key:

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures

proposed for addition to a previously finalized MVP.

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

**Quality Care for the Treatment of Ear, Nose, and Throat Disorders Improvement Activities**

- **IA\_BE\_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA\_BE\_15:** Engagement of Patients, Family and Caregivers in Developing a Plan of Care
- **(\*)(!) IA\_BE\_X:** Promote Use of Patient-Reported Outcome Tools
- **IA\_CC\_13:** Practice improvements to align with OpenNotes principles
- **(\*\*) IA\_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA\_PM\_16:** Implementation of medication management practice improvements
- **IA\_PSPA\_7:** Use of QCDR data for ongoing practice assessment and improvements

#### **B.18: Quality Care in Mental Health and Substance Use Disorders MVP**

The B.18 table, followed by a list of improvement activities, represents the measures and activities finalized within the Quality Care in Mental Health and Substance Use Disorders MVP (89 FR 99047 through 99049) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Quality Care in Mental Health and Substance Use Disorders MVP focuses on the clinical specialty of promoting prevention of and quality care in behavioral health, including mental health and substance use disorders (SUD). This MVP would be most applicable to clinicians who treat patients with mental health and substance use disorders within the practices of mental/behavioral health and psychiatry, including NPPs such as clinical social workers, nurse practitioners, and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

#### **Quality Measures**

- For the reasons stated in the introduction of this appendix<sup>615</sup>, we propose removing one MIPS quality measure: **Q487: Screening for Social Drivers of Health**

#### **Improvement Activities**

For the reasons stated in the introduction of this appendix<sup>616</sup>, we propose removing five improvement activities: **IA\_AHE\_5:** MIPS Eligible Clinician Leadership in Clinical Trials or CBPR, **IA\_AHE\_9:** Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, **IA\_AHE\_12:** Practice Improvements that Engage Community Resources to Address Drivers of Health, **IA\_PM\_6:** Use of toolsets or other resources to close healthcare disparities across communities, and **IA\_PM\_26:** Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

#### **Symbol Key:**

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

**TABLE B.18: Quality Care in Mental Health and Substance Use Disorders MVP Clinical Groupings**

#### **Mental Health and Substance Use Improvement Activities**

- IA\_BE\_12: Use evidence-based decision aids to support shared decision-making
- (!) IA\_BE\_16: Promote Self-management in Usual Care
- IA\_BE\_23: Integration of patient coaching practices between visits
- (\*!) IA\_BE\_X: Promote Use of Patient-Reported Outcome Tools
- (!) IA\_BMH\_2: Tobacco use
- (!) IA\_BMH\_5: MDD prevention and treatment interventions
- IA\_BMH\_7: Implementation of Integrated Patient Centered Behavioral Health Model
- (!) IA\_BMH\_14: Behavioral/Mental Health and Substance Use Screening and Referral for Pregnant and Postpartum Women
- (!) IA\_BMH\_15: Behavioral/Mental Health and Substance Use Screening and Referral for Older Adults
- IA\_EPA\_2: Use of telehealth services that expand practice access
- (\*) IA\_EPA\_X: Enhance Engagement of Medicaid and Other Underserved Populations
- (\*\*) IA\_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- (!) IA\_PSPA\_32: Use of CDC Guideline for Clinical Decision Support to Prescribe Opioids for Chronic Pain via Clinical Decision Support

#### **B.19: Rehabilitative Support for Musculoskeletal Care MVP**

The B.19 table, followed by a list of improvement activities, represents the measures and activities finalized within the Rehabilitative Support for Musculoskeletal Care MVP (§9 FR 99049 through 99054) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Rehabilitative Support for Musculoskeletal Care MVP focuses on the clinical specialty of promoting quality care for patients. This MVP would be most applicable to clinicians and NPPs who specialize in providing rehabilitative support for musculoskeletal care such as chiropractic, physiatry, physical therapy and occupational therapy, as well as nurse practitioners and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

#### **Quality Measures**

We propose adding two additional MIPS quality measures based on maintenance requests and providing meaningful and comprehensive assessment of the clinical care for clinicians providing musculoskeletal care to patients:

- Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan
- Q182: Functional Outcome Assessment

For the reasons stated in the introduction of this appendix<sup>617</sup>, we propose removing one MIPS quality measure: **Q487: Screening for Social Drivers of Health**.

Modifications are being considered for the following QCDR measures<sup>618</sup>:

- **MSK6: Patients Suffering From a Neck Injury who Improve Pain:** This QCDR measure is undergoing modifications to update the denominator exclusions for this QCDR measure to remove "patients that are non-English speaking and translation services are unavailable."
- **MSK7: Patients Suffering From an Upper Extremity Injury who Improve Pain:** This QCDR measure is undergoing modifications to update the denominator exclusions for this QCDR measure to remove "patients that are non-English speaking and translation services are unavailable."
- **MSK8: Patients Suffering From a Back Injury who Improve Pain:** This QCDR measure is undergoing modifications to update the denominator exclusions for this QCDR measure to remove "patients that are non-English speaking and translation services are unavailable."
- **MSK9: Patients Suffering From a Lower Extremity Injury who Improve Pain:** This QCDR measure is undergoing modifications to update the denominator exclusions for this QCDR measure to remove "patients that are non-English speaking and translation services are unavailable."

#### **Improvement Activities**

We propose adding three additional improvement activities that address maintenance requests from the public, as well as address the priority area of advancing health and wellness:

- **IA\_BE\_15: Engagement of Patients, Family and Caregivers in Developing a Plan of Care**
- **IA\_BE\_16: Evidenced-based techniques to promote self-management into usual care**
- **IA\_AHW\_X: Chronic Care and Preventative Care Management for Empowered Patients**
- For the reasons stated in the introduction of this appendix<sup>619</sup>, we propose removing four improvement activities: **IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols**, **IA\_AHE\_12: Practice Improvements that Engage Community Resources to Address Drivers of Health**, **IA\_CC\_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop**, and **IA\_PM\_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B**.

#### **Symbol Key:**

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures proposed for addition to a previously finalized MVP.

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

- IA\_PSPA\_21: Implementation of fall screening and assessment programs

#### **B.20: Surgical Care MVP**

The B.20 table, followed by a list of improvement activities, represents the measures and activities finalized within the Surgical Care MVP (89 FR 98998 through 99005) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Surgical Care MVP focuses on the clinical theme of surgery. This MVP would be most applicable to clinicians who specialize in general surgery, neurosurgery, and cardiothoracic surgery, including NPPs such as nurse practitioners and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

#### **Quality Measures**

For the reasons stated in the introduction of this appendix<sup>620</sup>, we propose removing two MIPS quality measures: **Q264: Sentinel Lymph Node Biopsy for Invasive Breast Cancer** and **Q487: Screening for Social Drivers of Health**.

**Improvement Activities**

For the reasons stated in the introduction of this appendix<sup>621</sup>, we propose removing two improvement activities: **IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols** and **IA\_PM\_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B**.

**Symbol Key:**

- Single asterisk (\*): existing measures and improvement activities with proposed revisions.
- Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.
- Single exclamation point (!): improvement activities with an advancing health and wellness component.

#### **Surgical Care Improvement Activities**

- **IA\_BE\_12:** Use evidence-based decision aids to support shared decision-making
- **(\*) IA\_BE\_X:** Promote Use of Patient-Reported Outcome Tools
- **IA\_CC\_15:** PSI Care Coordination
- **IA\_CC\_17:** Patient Navigator Program
- **IA\_CC\_18:** Relationship-Centered Communication
- **(\*\*) IA\_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA\_PM\_11:** Regular review practices in place on targeted patient population needs
- **IA\_PSPA\_7:** Use of QCDR data for ongoing practice assessment and improvements
- **IA\_PSPA\_8:** Use of Patient Safety Tools

#### **B.21: Value in Primary Care MVP**

The B.21 table, followed by a list of improvement activities, represents the measures and activities finalized within the Value in Primary Care MVP (89 FR 99054 through 99057) with modifications proposed for the CY 2025 performance period/2027 MIPS payment year and future years. The Value in Primary Care MVP focuses on the clinical theme of promoting quality care for patients to reduce the risk of diseases, disabilities, and death. This MVP would be most applicable to clinicians who specialize in preventive medicine, internal medicine, family medicine and geriatrics, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. We request comment on the proposed modifications included in this MVP.

#### Quality Measures

For the reasons stated in the introduction of this appendix,<sup>622</sup> we propose removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

---

<sup>622</sup> See *MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update*.

#### Improvement Activities

For the reasons stated in the introduction of this appendix,<sup>623</sup> we propose removing four improvement activities: IA\_AHE\_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, IA\_AHE\_12: Practice Improvements that Engage Community Resources to Address Drivers of Health, IA\_CC\_2: Implementation of improvements that contribute to more timely communication of test results, and IA\_

---

<sup>623</sup> Ibid.

PM\_26: Vaccine Achievement for Practices Staff: COVID–19, Influenza, and Hepatitis B.

#### Symbol Key

Single asterisk (\*): existing measures and improvement activities with proposed revisions.

Double asterisk (\*\*): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with advancing health and wellness component.

- ♦ (I) IA\_PM\_23: Use of Computable Guidelines and Clinical Decision Support to Improve Adherence for Cervical Cancer Screening and Management Guidelines
- ♦ (I) IA\_PM\_25: Save a Million Hearts: Standardization of Approach to Screening and Treatment for Cardiovascular Disease Risk

APPENDIX 4: MEASURES FOR MIPS COST PERFORMANCE CATEGORY

We refer readers to section IV. A.4.d.(2).(a). and (b). of this proposed rule for more information regarding the statutory authority for and existing policies pertaining to the specification of measures for the cost performance category.

Except as otherwise noted in this proposed rule, previously finalized cost measures will continue to apply for the CY 2026 performance period/2028 MIPS payment year and future years. Previously finalized measures and specialty sets are set forth in Table 75 in the CY 2025 PFS final rule (89 FR 98406).

The Group A Table(s) within this proposed rule set forth our proposals to modify one or more measures specified for the MIPS cost performance category beginning with the CY 2026 performance period/ 2028 MIPS payment year.

We are proposing modification(s) to the cost measure(s) set forth in the Group A Table(s) consistent with the criteria we established in the CY 2022 PFS final rule for determining whether a proposed change to a cost measure would be substantive (86 FR 65459 and 65460).

Group A: Proposal(s) to Modify MIPS Cost Measures Beginning with the CY 2026 Performance Period/ 2028 MIPS Payment Year

A.1. Total Per Capita Cost (TPCC)

| MIPS # :                     | TPCC_1                                                                                                                                                                                                          |
| Current Measure Description: | TPCC assesses the overall cost of care delivered to a patient with a focus on the primary care they receive from their provider(s). The measure is payment-standardized, risk-adjusted, and specialty-adjusted. |
| Measure Case Minimum         | 20 beneficiaries as set forth in § 414.1350(c)(1)                                                                                                                                                               |
| Measure Steward:             | Centers for Medicare & Medicaid Services (CMS)                                                                                                                                                                  |
| Measure Type:                | Population-based cost measure                                                                                                                                                                                   |

| Category                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Proposed Substantive Change(s): | <p>Initiating a candidate event would be modified as follows:</p> <ul style="list-style-type: none"> <li>◆ <u>Proposed Modifications to Measure Specifications for Triggering a Candidate Event.</u> <ul style="list-style-type: none"> <li>→ A candidate event would be initiated by two claims for outpatient evaluation and management (E/M) services indicative of primary care. The second service used to initiate a candidate event would have to be another E/M primary care service or another general primary care service from the same clinician group (TIN) within 90 days.</li> <li>→ Both the first and second service would have to be provided by a clinician (TIN-NPI) that has not been excluded from the measure based on specialty exclusion criteria.</li> </ul> </li> <li>◆ <u>How Proposed Modifications Would Substantively Change Current Measure Specifications:</u> <ul style="list-style-type: none"> <li>→ The current methodology requires that, in addition to the initial outpatient E/M service, at least one of the following services should be billed to confirm the candidate event: (1) another primary care service from any clinician group within 3 days, or (2) a second E/M primary care service OR another primary care service from the same clinician group within 90 days. This proposed modification would revise the current methodology to remove the option for the second candidate event service to be provided by a different clinician group.</li> <li>→ The current methodology only requires the first service be provided by a clinician that has not been excluded attribution based on the specialty exclusion criteria. This proposed modification would revise the current methodology to require both the first and second service be provided by a clinician that is not excluded by the specialty exclusion criteria.</li> </ul> </li> </ul> <p>Criteria for removing a clinician and their candidate events from attribution would be modified as follows:</p> <ul style="list-style-type: none"> <li>◆ <u>Proposed Modification for Exclusion.</u> We propose to remove clinicians and their candidate events from attribution for the TPCC measure if a clinician is: (1) an advanced care practitioner (that is, Nurse Practitioner, Physician Assistant, Certified Clinical Nurse Specialist), and (2) part of a clinician group where all other non-advanced care practitioners are excluded based on specialty criteria.</li> <li>◆ <u>How Proposed Modifications Would Substantively Change Current Measure Specifications:</u> The current methodology only excludes clinicians and their candidate events if a clinician meets service category thresholds for billing certain services (that is, global surgery, anesthesia, therapeutic radiation, or chemotherapy services) or if the specialty code on a clinician's Medicare Part B claims is one of the specialties excluded from TPCC attribution. The current methodology does not exclude advanced care practitioners from attribution based on their specialty, which is identified by the specialty code on their Medicare Part B claims. This proposed modification would exclude advanced care practitioners from attribution if all other non-advanced care practitioners in their TIN are excluded based on the specialty exclusion criteria.</li> </ul> <p>Except as noted herein, we propose to retain all remaining specifications for the TPCC measure without modification.</p> <p>These proposed modifications are also available for review in the revised TPCC measure specifications available for download here:<br/> <a href="https://www.cms.gov/medicare/quality/value-based-programs/cost-measures">https://www.cms.gov/medicare/quality/value-based-programs/cost-measures</a></p> |

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Rationale</b></p> | <p>The TPCC measure assesses the overall cost of care provided to a Medicare beneficiary, focusing on MIPS eligible clinicians, subgroups, and clinician groups who provide primary care-type services. Given its broad scope, it includes all Medicare Parts A and B costs that occur during the time period attributed to the clinician or clinician group within the performance period. The measure assesses primary care, internal medicine, and other physicians, who frequently manage patients with chronic or ongoing care needs, and non-physician clinicians (such as, Physician Assistants, Nurse Practitioners, and Certified Clinician Nurse Specialists) who provide primary care and related services.</p> <p>We are proposing to modify the TPCC measure's candidate event logic to require that both services in a candidate event are provided by the same clinician group and by a clinician with a specialty included in measure attribution. This modification would result in MIPS eligible clinicians only being attributed the costs of care for beneficiaries that have had at least two qualifying services from their clinician group, and where both services were provided by a clinician that would not be excluded from measure attribution due to the specialty exclusion. The proposed modification would more strongly demonstrate that there is an ongoing care relationship. With this proposed modification, a MIPS eligible clinician would only be attributed beneficiaries that they or their clinician group have seen at least twice, and when both candidate event services are provided by clinicians who are not excluded from TPCC based on the specialty exclusion criteria.</p> <p>We are also proposing to modify the TPCC measure's specifications to exclude certain clinicians and clinician groups from attribution. Currently, the measure does not exclude advanced care practitioners (that is, Physician Assistants, Nurse Practitioners, and Certified Clinician Nurse Specialists) from measure attribution based on their specialty. Advanced care practitioners often provide primary care and ongoing care management services. However, some advanced care practitioners participate in MIPS through clinician groups that provide specialty care that would otherwise be excluded from the measure. In these instances, an advanced care practitioner may bill services (such as, office visits) to support specialized care that are unlikely to be indicative of primary care or ongoing care management relationships. Since specialty codes on Medicare Part B claims do not include information about sub-specialization for advanced care practitioners, we would use information about their clinician group to exclude certain advanced care practitioners in specialty settings (that is, clinician groups where all physicians are excluded based on the specialty exclusion criteria). This proposed modification would limit instances in which the TPCC measure would be used to assess or evaluate costs potentially associated with highly specialized clinician groups solely due to the billing patterns of advanced care practitioners within the clinician group.</p> <p>Additionally, we are not proposing any modifications to the TPCC case minimum of 20 beneficiaries, as set forth in § 414.1350(c)(1). This case minimum was originally established in the CY 2017 OPP final rule (81 FR 77170) and maintained in the CY 2020 PFS final rule (84 FR 62978). We based this case minimum on our interest to ensure that the majority of TINs and TIN-NPIs that were measured met a threshold of 0.4 reliability and to balance our interest in ensuring moderate reliability without limiting participation. The relationship between reliability thresholds and case minimums was further discussed in the CY 2022 PFS Final rule (86 FR 65453 through 65455), establishing again that a mean reliability of 0.4 for the majority of TIN and TIN-NPIs would be used as a sufficient threshold to ensure a measure is performing as intended. We tested the reliability of the TPCC measure with the proposed modifications applied. Our testing demonstrated that</p> |

| Category | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|          | <p>mean reliability would remain high at approximately 0.9 for TINs and TIN-NPIs at the 20 beneficiary case minimum. Additionally, 100% of TINs and TIN-NPIs would exceed the 0.4 mean reliability threshold. Therefore, we would maintain the existing case minimum of 20 cases as set forth in § 414.1350(c)(1).</p> <p>Prior to proposing modifications to a cost measure through the notice-and-comment rulemaking process, we have historically subjected existing cost measures for which we are considering substantive changes to the pre-rulemaking process outlined by section 1890A of the Act. Section 1848(r)(10) provides that the pre-rulemaking requirements in 1890A of the Act are not required to apply to the selection of MIPS cost measures; however, we have found that the pre-rulemaking process provides a comprehensive review of measures from multi-stakeholder workgroups and have accordingly elected for such measures to be reviewed utilizing this process, as detailed in the Measure Management System (MMS) Blueprint: <a href="https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/overview">https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/overview</a>. For TPCC, we comprehensively reevaluated the measure in use in MIPS in accordance with the process outlined in the MMS Blueprint: <a href="https://mmshub.cms.gov/measure-lifecycle/measure-use/maintenance/comprehensive-reevaluation">https://mmshub.cms.gov/measure-lifecycle/measure-use/maintenance/comprehensive-reevaluation</a>. During this process, we held two public comment periods and convened a Technical Expert Panel (TEP) twice to discuss modifications. We have received robust feedback from the public about the potential modifications during this comprehensive reevaluation process and through other cost measure public comment opportunities, such as the CY 2025 PFS rule. Following the completion of the comprehensive reevaluation process, we opted not to subject the TPCC measure with these proposed modifications to the pre-rulemaking process. We considered (i) the high volume of feedback received to date on the modifications; (ii) that the scope of the modifications does not impact the intent of the measure or negatively impact measure testing results; and (iii) that there is a tradeoff in delaying updates by a year to submit the measure to the pre-rulemaking process. Based on these considerations, we are proposing modifications to the TPCC measure through notice-and-comment rulemaking without having subjected the measure to the pre-rulemaking process.</p> <p>More information about the feedback we received from interested parties and technical expert panel(s) on the TPCC measure, and analyses that contributed to identifying the TPCC modifications, is available in the Cost measure comprehensive reevaluation (2023-2024) section of the QPP Cost Measures Information Page: <a href="https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/current">https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/current</a>.</p> |
