Response: We note that the factors we would consider in determining whether or not to suppress a measure would include circumstances affecting the measure such that calculating the measure score would lead to misleading or inaccurate results, which may include performance or compliance. In regard to the comment requesting that CMS require MIPS eligible clinicians, eligible hospitals, and CAHs to submit a rationale for not being able to meet the requirements of measure prior to a measure being suppressed, we note that the suppression of a measure applies to all MIPS eligible clinicians meeting the requirements of the MIPS Promoting Interoperability performance category,

and eligible clinicians and CAHs participating in the Medicare Promoting Interoperability Program. We would utilize the measure suppression policy when we are aware of a circumstance affecting all or a significant portion of MIPS eligible clinicians, eligible hospitals, or CAHs. As a result, it would be burdensome and unnecessary to require each MIPS eligible clinician, eligible hospital, or CAH to individually provide a rationale for their inability to meet a measure’s requirements.

Moreover, we do not intend for the measure suppression policy to be a means for individual MIPS eligible clinicians, eligible hospitals, and CAHs to request for a measure to be suppressed due to the MIPS eligible clinician’s, eligible hospital’s, or CAH’s particular circumstances or inability to meet the requirements of a measure. We anticipate communicating with MIPS eligible clinicians, eligible hospitals, and CAHs in advance of the data submission period regarding the identification of a suppressed measure. Additionally, we anticipate that such rare circumstances in which we would utilize the measure suppression policy should require minimal to no additional action on the part MIPS eligible clinicians, eligible hospitals, and CAHs submitting data.

In regard to the comment requesting that CMS publish an RFI requesting feedback from healthcare organizations regarding which measures are burdensome or difficult to fulfill due to the measure suppression factors, we disagree that such RFIs are necessary or practical. Publishing RFIs each time CMS considers utilizing the measure suppression policy would likely be impractical, particularly due to changing conditions that may arise at any point during a given performance period or EHR reporting period, including outside of rulemaking. The measure suppression policy is intended to allow CMS to more timely address circumstances affecting MIPS eligible clinicians, eligible hospitals, and CAHs to meet the requirements of a measure due to external factors outside of their control. MIPS eligible clinicians, eligible hospitals, and CAHs are encouraged to contact CMS ⁴⁶² regarding any feedback or issues that they may be encountering as it pertains

⁴⁶² For the MIPS Promoting Interoperability performance category, contact the Quality Payment Program Service Center by sending an email to QPP@cms.hhs.gov or creating a ticket at: https://cmsqualitysupport.servicenow.com/cscq_support_central.

⁴⁶³ For the Medicare Promoting Interoperability Program, send an email to piprogramsupport@hsag.com or qnetssupport@cms.hhs.gov.

to the requirements of the MIPS Promoting Interoperability performance category or the Medicare Promoting Interoperability Program. A suppressed measure is required to be reported, but is not assessed for performance under the MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program.

In the event that CMS decides to suppress a measure, we will notify MIPS eligible clinicians, eligible hospitals, and CAHs of the measure's suppression via existing communication channels, including the dissemination of a listserv announcement (MIPS Promoting Interoperability performance category and Medicare Promoting Interoperability Program) and posting on a CMS website (MIPS Promoting Interoperability performance category) identifying suppressed measures for an applicable CY performance period/MIPS payment year and EHR reporting period in an applicable CY, no later than the beginning of the applicable data submission period when technically feasible, which starts in January of the CY following the applicable performance period/EHR reporting period.

After consideration of public comments, we are finalizing with modification the proposal to adopt a measure suppression policy that will not assess the performance of a suppressed measure and will allow MIPS eligible clinicians meeting the reporting requirements of the MIPS Promoting Interoperability performance category and eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program to receive the maximum available points for a measure or full credit for a measure that is part of a cohort of required measures to report under an objective as long as the identified suppressed measure is reported. The activation of the measure suppression policy does not change the data reporting requirements of the MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program when a measure is identified as being suppressed for an applicable performance period/MIPS payment year and EHR reporting period. We recognize that some measures within the MIPS Promoting Interoperability performance category and Medicare Promoting Interoperability Program have specific points allocated to a measure, such as an attestation-based measure, or a range of points that could be earned for a measure, such as performance-based measures with a numerator and denominator structure; or specific

points allocated to an objective in which a cohort of measures are required for reporting to meet the requirements of the objective. As such, we are modifying the measure suppression policy as proposed in § 414.1380(b)(4)(iii) for the MIPS Promoting Interoperability performance category and § 495.24(f)(3) for the Medicare Promoting Interoperability Program to reflect the following: A suppressed measure that is reported will receive the total number of allocated points for an attestation-based measure, the maximum number of points that could be received for a performance-based measure, or full credit for a measure within an objective in which such measure is part of a cohort of required measures to report. We are adopting and codifying a measure suppression policy for the MIPS Promoting Interoperability performance category beginning with the CY 2026 performance period/2028 MIPS payment year at § 414.1380(b)(4)(iii), and the Medicare Promoting Interoperability Program beginning with the EHR reporting period in CY 2026 at § 495.24(f)(3).

Specifically, we are codifying at § 414.1380(b)(4)(iii) that, beginning with the CY 2026 performance period/2028 MIPS payment year, if certain circumstances occur that impact CMS' assessment of the performance of MIPS eligible clinicians on a measure selected for the MIPS Promoting Interoperability performance category at § 414.1375, CMS may, in its sole discretion, suppress the affected measure by excluding it from CMS' assessment of performance while allocating the maximum points available or providing full credit for the affected measure as long as the affected measure is reported, resulting in a suppressed measure contributing to the MIPS Promoting Interoperability performance category objective score at § 414.1380(b)(4); or excluding it from the determination of a meaningful EHR user if the affected measure is not scored.

In addition, we are codifying at § 495.24(f)(3) that, beginning with the EHR reporting period in CY 2026, if certain circumstances occur that impact CMS' assessment of the performance of eligible hospitals and CAHs on a measure selected for the Medicare Promoting Interoperability Program, CMS may, in its sole discretion, suppress the affected measure by excluding it from CMS' assessment of performance while allocating the maximum points available or providing full credit for the affected measure as long as the affected measure is reported, resulting in the suppressed measure contributing to the Medicare Promoting

Interoperability Program objective score at § 495.24(f)(1)(i)(D); or excluding it from the determination of a meaningful EHR user if the affected measure is not scored. Also, we are codifying at both §§ 414.1380(b)(4)(iii) and 495.24(f)(3) that CMS determines whether certain circumstances exist warranting suppression of a measure based on CMS' consideration of one or more of the following factors:

- The nature, breadth, and duration of the circumstance's effect on MIPS eligible clinicians', eligible hospitals', and CAHs' ability to fulfill the measure requirement.
- The availability of certified health IT modules to fulfill the measure.
- The circumstance affects the measure such that calculating the measure score would lead to misleading or inaccurate results, which may include performance or compliance.
- Out-of-date or conflicting technical standards.
- Technical and operational capacity of required partners.
- Other factors as determined by CMS.

(g) Suppression of the Electronic Case Reporting Measure by Excluding the Measure From Scoring for the MIPS Promoting Interoperability Performance Category for the CY 2025 Performance Period/2027 MIPS Payment Year and the Medicare Promoting Interoperability Program for the EHR Reporting Period in CY 2025

(i) Background: Public Health and Clinical Data Exchange Objective

The Public Health and Clinical Data Exchange objective of the MIPS Promoting Interoperability performance category for MIPS eligible clinicians and the Medicare Promoting Interoperability Program for eligible hospitals and CAHs has been an important mechanism for encouraging healthcare data exchange for public health purposes. Effective responses to public health events require fast, accurate exchange of data between health care providers and Federal, State, and local public health agencies (PHAs). MIPS eligible clinicians, eligible hospitals, and CAHs collect these data for patient care, and PHAs need them to protect the public, whether to track an outbreak, initiate contact tracing, find gaps in vaccine coverage, or pinpoint the source of a foodborne outbreak.

For the MIPS Promoting Interoperability performance category, there have been two required measures and three optional bonus measures under the Public Health and Clinical Data Exchange objective through the CY

2025 performance period/2027 MIPS payment year: Immunization Registry Reporting (required); Electronic Case Reporting (required); Syndromic Surveillance Reporting (optional); Public Health Registry Reporting (optional); and Clinical Data Registry Reporting (optional). For background on this objective and its associated measures, we refer readers to the CY 2019 PFS final rule (83 FR 59815 through 59817). In the CY 2022 PFS final rule, we finalized the requirement for MIPS eligible clinicians to report 2 of the 5 measures associated with the Public Health and Clinical Data Exchange objective, beginning with the CY 2022 performance period/2024 MIPS payment year: Immunization Registry Reporting and Electronic Case Reporting (86 FR 65469 through 65475). For background on this objective and its associated measures, we refer readers to the CY 2023 PFS final rule (87 FR 70071 through 70074). In section XX of this final rule, we are adopting a sixth measure as an optional bonus measure: Public Health Reporting Using TEFCA measure as an optional bonus measure under the Public Health and Clinical Data Exchange objective. Thus, beginning with the CY 2026 performance period/2028 MIPS payment year, there will be 2 required measures and four optional bonus measures under the Public Health and Clinical Data Exchange objective for the MIPS Promoting Interoperability performance category: Immunization Registry Reporting (required); Electronic Case Reporting (required); Syndromic Surveillance Reporting (optional); Public Health Registry Reporting (optional); Clinical Data Registry Reporting (optional); and Public Health Reporting Using TEFCA (optional).

For the Medicare Promoting Interoperability Program for eligible hospitals and CAHs, there have been 8 measures under the Public Health and Clinical Data Exchange objective through the EHR reporting period in CY 2025: Immunization Registry Reporting (required); Electronic Case Reporting (required); Syndromic Surveillance Reporting (required); Electronic Laboratory Reporting (required); Antimicrobial Use Surveillance (required); Antimicrobial Resistance Surveillance (required); Public Health Registry Reporting (optional); and Clinical Data Registry Reporting (optional). In the FY 2026 IPPS/LTCH PPS final rule (90 FR 37056), we adopted a ninth measure as an optional bonus measure: Public Health Reporting Using TEFCA. In the FY 2022 IPPS/LTCH PPS final rule (86 FR 45470

through 45478), we finalized the requirement for eligible hospitals and CAHs to report four measures associated with the Public Health and Clinical Data Exchange objective, beginning with the EHR reporting period in CY 2022: Immunization Registry Reporting; Electronic Case Reporting; Syndromic Surveillance Reporting; Electronic Laboratory Reporting. We subsequently finalized the requirement for eligible hospitals and CAHs to also report Antimicrobial Use Surveillance and Antimicrobial Resistance Surveillance in the FY 2024 IPPS/LTCH PPS final rule (87 FR 49335 through 49337). Thus, beginning with the EHR reporting period in CY 2026, there will be 6 required measures and 3 optional bonus measures under the Public Health and Clinical Data Exchange objective for the Medicare Promoting Interoperability Program: Immunization Registry Reporting (required); Electronic Case Reporting (required); Syndromic Surveillance Reporting (required); Electronic Laboratory Reporting (required); Antimicrobial Use Surveillance (required); Antimicrobial Resistance Surveillance (required); Public Health Registry Reporting (optional); Clinical Data Registry Reporting (optional); and Public Health Reporting Using TEFCA (optional).

The Public Health and Clinical Data Exchange objective of the MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program has been an important mechanism for encouraging data exchange between MIPS eligible clinicians, eligible hospitals, CAHs, and PHAs. Requiring MIPS eligible clinicians, eligible hospitals, and CAHs to report on required measures provides an ongoing incentive for EHR vendors to implement the necessary capabilities in their products and encourages MIPS eligible clinicians, eligible hospitals, and CAHs to engage in the reporting activities described in the measures.

As noted previously, MIPS eligible clinicians, eligible hospitals, and CAHs are required to report the Electronic Case Reporting measure for the Public Health and Clinical Data Exchange objective as specified for the MIPS Promoting Interoperability performance category and Medicare Promoting Interoperability Program, respectively. The Electronic Case Reporting measure currently requires that the MIPS eligible clinician, eligible hospital, or CAH be in active engagement with a PHA to submit electronic case reporting of reportable conditions. A MIPS eligible clinician, eligible hospital, or CAH is required to report their level of active engagement as either Option 1 (Pre-production and

Validation) or Option 2 (Validated Data Production).

As described in the CY 2023 PFS final rule (87 FR 70072) and the FY 2023 IPPS/LTCH PPS final rule (87 FR 49338), we currently define “active engagement” as when the MIPS eligible clinician, eligible hospital, or CAH is in the process of moving towards sending “production data” to a PHA or clinical data registry (CDR), or is sending production data to a PHA or CDR. We further noted that the term “production data” refers to data generated through clinical processes involving patient care; the term is used to distinguish between this data and “test data” which may be submitted for the purposes of enrolling in and testing electronic data transfers (87 FR 70072; 87 FR 49337 through 49340).

In the CY 2023 PFS final rule (70071 through 70074) and the FY 2023 IPPS/LTCH PPS final rule (87 FR 49337 through 49340), we finalized that, beginning with the CY 2023 performance period/2025 MIPS payment year and the EHR reporting period in CY 2023, respectively, a MIPS eligible clinician, eligible hospital, or CAH must indicate its level of active engagement at either Option 1 (Pre-production and Validation) or Option 2 (Validated Data Production) to fulfill the Electronic Case Reporting measure and other measures specified for the Public Health and Clinical Data Exchange objective. We further finalized that generally, beginning with the CY 2024 performance period/2026 MIPS payment year and the EHR reporting period in CY 2024, MIPS eligible clinicians, eligible hospitals, and CAHs may spend only one performance period at the Option 1 (Pre-production and Validation) level of active engagement for the Electronic Case Reporting measure and other measures specified for the Public Health and Clinical Data Exchange objective, and MIPS eligible clinicians, eligible hospitals and CAHs must progress to the Option 2 (Validated Data Production) level of active engagement in the next EHR reporting period for which they report the measure (87 FR 70071 through 70074; 87 FR 49340 through 49342). The only exception to this requirement that we finalized is that, in the event a MIPS eligible clinician, eligible hospital, or CAH chooses to switch between one or more PHAs or CDRs, they will be permitted to spend on additional performance period at Option 1 (Pre-production and Validation) to assist with onboarding to the new CDR or PHA (87 FR 70071 through 70074; 87 FR 49340 through 49342).

Additional information on the history of the Electronic Case Reporting measure can be found in prior rulemakings for the predecessor Medicare EHR Incentive Programs for Eligible Professionals and for Eligible Hospitals and Critical Access Hospitals,⁴⁶⁴ the MIPS Promoting Interoperability performance category,⁴⁶⁵ and the Medicare Promoting Interoperability Program.⁴⁶⁶

For both the MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program, the Electronic Case Reporting measure also includes three exclusions. A MIPS eligible clinician, eligible hospital, or CAH meeting one or more of the three established criteria may claim an exclusion from performing and reporting the Electronic Case Reporting measure for the MIPS Promoting Interoperability performance category and Medicare Promoting Interoperability Program, respectively. The first exclusion criterion specifies that the MIPS eligible clinician, eligible hospital, or CAH does not treat or diagnose any reportable diseases for which data are collected by its jurisdiction's reportable disease system during the performance period or EHR reporting period (Exclusion 1). The second exclusion criterion specifies that the MIPS eligible clinician, eligible hospital, or CAH operates in a jurisdiction for which no PHA is capable of receiving electronic case reporting data in the specific standards required to meet the CEHRT definition at the start of the performance period (Exclusion 2). The third exclusion criterion specifies that the MIPS eligible clinician, eligible hospital, or CAH operates in a jurisdiction where no PHA has declared readiness to receive electronic case reporting data as of six months prior to the start of the performance period (Exclusion 3). We interpret "capable of receiving electronic case reporting data in the specific standards required" in Exclusion 2 to mean that there is not a PHA in a MIPS eligible clinician's, eligible hospital's, or CAH's jurisdiction that has the ability to advance, and has advanced, a MIPS eligible clinician,

eligible hospital, or CAH registered with the PHA to Active Engagement Option 2: Validated Data Production in the timeframe required for the MIPS eligible clinician, eligible hospital, or CAH to achieve Validated Data Production under the MIPS Promoting Interoperability performance category or the Medicare Promoting Interoperability Program. For information regarding the 2025 measure specifications for the Electronic Case Reporting measure for the MIPS Promoting Interoperability performance category and Medicare Promoting Interoperability Program, we refer readers to: https://qpp.cms.gov/docs/pi_specifications/Measure%20Specifications/2025-MIPS-Promoting-Interoperability-Measure-Electronic-Case-Reporting-Updated-April-2025.pdf and <https://www.cms.gov/files/document/cms-specifications-manual-ehr-period-cy-2025.pdf>.

(ii) Suppression of the Electronic Case Reporting Measure for the CY 2025 Performance Period and the EHR Reporting Period in CY 2025

As discussed in the CY 2026 PFS proposed rule (90 FR 32735), MIPS eligible clinicians, eligible hospitals, and CAHs have been required to register with a PHA and send testing files (Pre-production and Data Validation files) to report the Electronic Case Reporting measure at the Option 1 level of active engagement (87 FR 70071 through 70074; 87 FR 49338 through 87 FR 49342). Beginning with the CY 2024 performance period/2026 MIPS payment system and the EHR reporting period in CY 2024, MIPS eligible clinicians, eligible hospitals, and CAHs may spend only one performance period at the Option 1 (Pre-production and Validation) level of active engagement for the Electronic Case Reporting measure, and they must progress to the Option 2 (Validated Data Production) level of active engagement in the next performance period or EHR reporting period for which they report the measure (87 FR 70071 through 70074; 87 FR 49338 through 87 FR 49342). Therefore, beginning with the CY 2025 performance period and EHR reporting period in CY 2025, many MIPS eligible clinicians, eligible hospitals, and CAHs may need to submit case files (that is, production data) using CEHRT to their PHA to report that they have progressed to the Option 2 level of active engagement for the Electronic Case Reporting measure.

In regard to the level of engagement pertaining to Option 1 and Option 2 for the CY 2025 performance period and EHR reporting period in CY 2025, we

noted in the CY 2026 PFS proposed rule that the CDC temporarily paused its electronic case reporting registration and onboarding of new health care organizations (HCOs) in order to establish a more efficient and automated process (90 FR 32735 and 32736). During such time, the CDC has been evaluating the onboarding process for HCOs and their EHR vendors to establish a more sustainable long-term path for broadscale adoption and integration of healthcare and electronic case reporting data. On June 6, 2025, we shared this information through the Quality Payment Program (QPP) and Medicare Promoting Interoperability Program listserv announcements and published this information on the QPP Resource Library web page (located at: <https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3268/2025-MIPS-Promoting-Interoperability-CDC-Pause-In-eCR-Onboarding.pdf>) and CMS QualityNet Hospital Inpatient Notifications web page (located at: <https://qualitynet.cms.gov/files/68437ab1416b533f04e5f5f0?filename=2025-59-IP.pdf>). Due to this temporary pause, some MIPS eligible clinicians, eligible hospitals, and CAHs may not meet the electronic case reporting registration and onboarding requirements by the end of the CY 2025 performance period and EHR reporting period in CY 2025. The onboarding process includes a timeframe that accounts for connecting to intermediaries to send electronic case reporting data to PHAs with HCOs and EHR vendors. This temporary pause is enabling the CDC to evaluate the onboarding process for HCOs and their EHR vendors. The CDC is enhancing its electronic case reporting modernization initiatives and creating a sustainable long-term strategy for the widespread adoption and integration of healthcare and electronic case reporting data.

To avoid undue adverse consequences for MIPS eligible clinicians, eligible hospitals, and CAHs as a result of such circumstances, which are outside of their control, we proposed to suppress the Electronic Case Reporting measure (90 FR 32735 and 32736). Specifically, we proposed to exclude the Electronic Case Reporting measure from scoring under the MIPS Promoting Interoperability performance category for the CY 2025 performance period and the Medicare Promoting Interoperability Program for the EHR reporting period in CY 2025.

We proposed that we would suppress the Electronic Case Reporting measure by excluding it from calculations for scoring purposes, but MIPS eligible clinicians, eligible hospitals, and CAHs

⁴⁶⁴ We refer readers to Stage 1 final rule (75 FR 1844), Stage 2 final rule (77 FR 13698), and Stage 3 final rule (80 FR 62762).

⁴⁶⁵ We refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77008), CY 2018 Quality Payment Program final rule (82 FR 53568), the CY 2019 PFS final rule (83 FR 59815), the CY 2022 PFS final rule (86 FR 65469 through 65475), and the CY 2023 PFS final rule (87 FR 70071 through 70082).

⁴⁶⁶ We refer readers to the FY 2022 IPPS/LTCH PPS final rule (86 FR 45470 through 45478).

would continue to be required to report the measure, in which they would either attest “Yes” or “No” to meeting the requirements pertaining to Option 1 and Option 2, or claim an applicable exclusion. We noted that as long as MIPS eligible clinicians, eligible hospitals, and CAHs report responses, their score for the Public Health and Clinical Data Exchange objective of the MIPS Promoting Interoperability performance category or the Medicare Promoting Interoperability Program, as applicable, would not be adversely affected irrespective of the responses reported for this measure.

We proposed to suppress the Electronic Case Reporting measure through rulemaking in order to notify MIPS eligible clinicians, eligible hospitals, and CAHs of how we intend to address the issues related to CDC’s pause on onboarding, which may affect MIPS eligible clinicians’, eligible hospitals’, and CAHs’ ability to meet requirements of the Electronic Case Reporting measure for the MIPS Promoting Interoperability performance category for the CY 2025 performance period and the Medicare Promoting Interoperability Program for the EHR reporting period in CY 2025. In the absence of a measure suppression policy currently for the CY 2025 performance period and the EHR reporting period in CY 2025, we noted that we would utilize the CY 2026 PFS proposed rule to seek public comment regarding the proposal to suppress the Electronic Case Reporting measure due to the CDC’s pause on onboarding and subsequently, and this final rule to communicate the official suppression status of the Electronic Case Reporting measure and address the scoring of the Electronic Case Reporting measure.

In the CY 2026 PFS proposed rule, we noted that the Public Health and Clinical Data Exchange objective requirements and the 25 points attributed to the objective under the MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program would remain the same (90 FR 32736). The Electronic Case Reporting measure would continue to be a required measure even though we proposed to suppress it by excluding it from our scoring calculations. The 25 points attributed to the Public Health and Clinical Data Exchange objective under the MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program would apply to the measure(s) in the objective that are required and not suppressed. Moreover, we noted that the proposal does not affect the measure

specifications nor the required reporting of the measure, but merely affects whether the measure is scored for purposes of the applicable objective.

We solicited public comment on the proposal to suppress the Electronic Case Reporting measure by excluding the measure from scoring for MIPS eligible clinicians meeting the requirements of the MIPS Promoting Interoperability performance category, and eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program for the CY 2025 performance period and the EHR reporting period in CY 2025.

The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposal to suppress the scoring of the Electronic Case Reporting measure for the CY 2025 performance period/EHR reporting period in CY 2025, citing the pause in PHA onboarding of new health care organizations for reporting these data.

Response: We appreciate the support from commenters regarding the proposal to suppress the Electronic Case Reporting measure for the CY 2025 performance period/EHR reporting period in CY 2025.

Comment: A few commenters noted that vendor and PHA onboarding issues could persist beyond CY 2026, preventing MIPS eligible clinicians, eligible hospitals, and CAHs from advancing to Option 2 of active engagement in a timely manner and requested that CMS suppress the requirement that MIPS eligible clinicians, eligible hospitals, and CAHs may only spend one performance period in Option 1 (Pre-Production and Validation) before progressing to Option 2 (Validated Data Production). A few commenters recommended that CMS extend the suppression of the Electronic Case Reporting measure through the CY 2026 performance period/EHR reporting period in CY 2026 to align with the enforcement discretion recently issued by ASTP/ONC regarding the electronic case reporting certification updates.

Response: During the CY 2026 performance period/EHR reporting period in CY 2026, we will continue to work with the CDC to assess whether the Electronic Case Reporting measure warrants suppression for the CY 2026 performance period/EHR reporting period in CY 2026. However, at this juncture, we decline to suppress the Electronic Case Reporting measure beyond the CY 2025 performance period and the EHR reporting period in CY 2025 without more specific information regarding the extent of the effect, if any,

the existing circumstance will have on the CY 2026 performance period/EHR reporting period in CY 2026.

In regard to the comment requesting that CMS suspend its requirement to only allow MIPS eligible clinicians, eligible hospitals, and CAHs to spend one performance period in Option 1 (Pre-Production and Validation) before progressing to Option 2 (Validated Data Production), we do not believe that a change to the requirement is necessary given that a significant portion of MIPS eligible clinicians, eligible hospitals, and CAHs attested “Yes” to Option 1 for the CY 2024 performance period/EHR reporting period in CY 2024 and the Electronic Case Reporting measure is suppressed for the CY 2025 performance period/EHR reporting period in CY 2025, which provides additional time for MIPS eligible clinicians, eligible hospitals, and CAHs to progress from Option 1 (Pre-Production and Validation) to Option 2 (Validated Data Production).

On July 31, 2025, ASTP/ONC issued a notice of enforcement discretion regarding the electronic case reporting certification criteria under the ONC Health IT Certification Program.⁴⁶⁷ We note that the enforcement discretion takes effect immediately and will remain in place until December 31, 2026, or until the U.S. Department of Health and Human Services completes a deregulatory action revising the electronic case reporting certification criterion, whichever comes first. The enforcement discretion announces that ASTP/ONC will not exercise its direct review authority under 45 CFR 170.580 for any non-conformity, potential or actual, that arises solely from certified health IT not complying with the adopted standards finalized in 45 CFR 170.315(f)(5) so long as the health IT remains conformant with either 45 CFR 170.315(f)(5)(i) or the requirements in (f)(5)(ii). The enforcement discretion notices also states that ASTP/ONC will not take any enforcement action under 45 CFR 170.565 against an ONC-ACB based on non-compliance with 45 CFR 170.550 for certifying a Health IT Module that is presented for certification to the “transmission to public health agencies—electronic case reporting” certification criterion (45 CFR 170.315(f)(5)), where the Health IT Module demonstrates and maintains conformance with paragraph (f)(5)(i) or certain functional requirements of

⁴⁶⁷ Office of the National Coordinator for Health IT, Electronic Case Reporting Certification Criterion Enforcement Discretion Notice located at: <https://www.healthit.gov/topic/electronic-case-reporting-certification-criterion-enforcement-discretion-notice>.

paragraph (f)(5)(ii). The enforcement discretion announced by ASTP/ONC would reduce certification criteria compliance requirements and provides developers flexibility to align with the evolving HL7 standards. Developers are encouraged to continue preparing for broader adoption of modern electronic case reporting standards. This enforcement discretion permits developers to focus on meeting the functional capabilities of the certification criterion rather than specific technical standards. At this juncture, we do not believe that the enforcement discretion that reduces the certification compliance burden for health IT developers warrants suppressing the Electronic Case Reporting measure for the CY 2026 performance period/EHR reporting period in CY 2026 for MIPS eligible clinicians, eligible hospitals, and CAHs given that enforcement discretion does not change the functionality of electronic case reporting.

Comment: A few commenters did not support the proposal to suppress the Electronic Case Reporting measure because they believe that the MIPS eligible clinicians, eligible hospitals, and CAHs that can successfully report on the measure will be detrimentally impacted by a blanket suppression policy by being unable to receive credit for their work. A few commenters did not support the proposal because they believed it would remove the incentive to perform electronic case reporting. A commenter recommended that CMS only provide an exclusion from reporting to any MIPS eligible clinician, eligible hospital, or CAH that was unable to register for electronic case reporting during the CY 2025 performance period/EHR reporting period in CY 2025. A few commenters recommended that, rather than suppression, MIPS eligible clinicians, eligible hospitals, and CAHs claim an exclusion following existing policies, while a commenter recommended that CMS consider introducing a fourth exclusion option that MIPS eligible clinicians, eligible hospitals, and CAHs could claim if they provide documentation of attempted onboarding, but could not complete onboarding during the CY 2025 performance period/EHR reporting period in CY 2025. Another commenter suggested that CMS consider offering bonus points to MIPS eligible clinicians, eligible hospitals, and CAHs that can attest to meeting the requirements of the Electronic Case Reporting measure rather than suppress the scoring of the Electronic Case Reporting measure. A

commenter recommended that CMS suppress the Electronic Case Reporting measure for only MIPS eligible clinicians, eligible hospitals, and CAHs that are not able to meet the requirements of the measure and redistribute the points to another objective. Another commenter recommended the removal of the points value from the Electronic Case Reporting measure entirely rather than redistributing the points to another objective and inflating the weight of another measure or objective.

Response: In this final rule, we are finalizing with modification the proposal to suppress the Electronic Case Reporting measure for the CY 2025 performance period/EHR reporting period in CY 2025. Based on public comments, we acknowledge that the proposal to suppress the Electronic Case Reporting measure by excluding the measure from scoring could potentially impede and hinder a MIPS eligible clinician's, eligible hospital's, or CAH's ability to achieve that maximum points available under the MIPS Promoting Interoperability performance category or the Medicare Promoting Interoperability Program. We did not intend for the proposal to have such a potential consequence. The proposal to suppress the Electronic Case Reporting measure was merely intended to prevent negative implications for MIPS eligible clinicians, eligible hospitals, and CAHs that are not able to meet the measure requirements resulting from circumstances outside of their control, specifically arising from CDC's temporary pause in its electronic case reporting registration and onboarding of new HCOs (90 FR 32735 and 32736).

Thus, we believe that it would be in the best interest of MIPS eligible clinicians, eligible hospitals, and CAHs to receive full credit for reporting the suppressed Electronic Case Reporting measure, which is a measure that is part of a cohort of required measures to report under the Public Health and Clinical Data Exchange objective. While the suppressed Electronic Case Reporting measure will not be assessed for performance, MIPS eligible clinicians, eligible hospitals, and CAHs reporting the suppressed Electronic Case Reporting measure will receive full credit as long as they report the measure. If the suppressed Electronic Case Reporting measure is not reported, a MIPS eligible clinician, eligible hospital, and CAH would fail the reporting requirements under the Public Health and Clinical Data Exchange objective (receive zero points). We believe that such an approach would not cause confusion or create

complexities in understanding the implementation of measure suppression.

We believe the most appropriate approach to ensure that MIPS eligible clinicians, eligible hospitals, and CAHs do not experience an increase in burden or negative effects resulting from circumstances outside of their control is to allow MIPS eligible clinicians, eligible hospitals, and CAHs reporting the suppressed Electronic Case Reporting measure to receive full credit. Also, we believe that such an approach is operationally feasible to implement prior to the opening of the submission period for reporting data pertaining to the requirements for the MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program without delaying the opening of the submission period and disrupting the reporting of non-suppressed measures. Thus, we disagree with commenters recommending alternative options such as the following: CMS establishing an exclusion from reporting the Electronic Case Reporting measure if a MIPS eligible clinician, eligible hospital, CAH was unable to register for electronic case reporting during the CY 2025 performance period/EHR reporting period in CY 2025 and CMS requesting that an affected MIPS eligible clinician, eligible hospital, and CAH submit supporting documentation; CMS providing bonus points to MIPS eligible clinicians, eligible hospitals, and CAHs that are able to meet the measure requirements; CMS suppressing the Electronic Case Reporting measure for only MIPS eligible clinicians, eligible hospitals, and CAHs that are not able to meet the requirements of the measure and redistribute the points to another objective; and CMS removing the points value of the Electronic Case Reporting measure entirely rather than redistributing the points to another objective and inflating the weight of another measure or objective. Such alternative options as recommended by commenters would not be technically and operationally feasible to implement prior to the opening of the submission period.

To report the suppressed Electronic Case Reporting measure, MIPS eligible clinicians, eligible hospitals, and CAHs will either attest "Yes" or "No" to meeting the requirements pertaining to Option 1 and Option 2, or claim an applicable exclusion. As long as MIPS eligible clinicians, eligible hospitals, and CAHs report responses, they will receive full credit for reporting the suppressed Electronic Case Reporting measure, which will contribute to

meeting the cohort of required measures under the Public Health and Clinical Data Exchange objective of the MIPS Promoting Interoperability performance category or the Medicare Promoting Interoperability Program, as applicable. We note that a MIPS eligible clinician's, eligible hospital's, and CAH's score for the Public Health and Clinical Data Exchange objective would not be adversely affected irrespective of the responses reported for such measure. We note that if an applicable exclusion is claimed, the suppressed Electronic Case Reporting measure will receive full credit, which will contribute to meeting the cohort of required measures under the Public Health and Clinical Data Exchange objective.

The Electronic Case Reporting measure is included in the Public Health and Clinical Data Exchange objective. The Public Health and Clinical Data Exchange objective includes a cohort of two required measures for the MIPS Promoting Interoperability performance category and a cohort of six required measures for the Medicare Promoting Interoperability Program. In the event that a MIPS eligible clinician, eligible hospital, or CAH claims an exclusion for the suppressed Electronic Case Reporting measure and claims exclusions for the other required measures within the Public Health and Clinical Data Exchange objective, they will receive full credit for reporting the suppressed Electronic Case Reporting measure and consequently, will receive the total available points (25) for the Public Health and Clinical Data Exchange objective. In the absence of any measure suppression, if an exclusion is claimed for each required measure under the Public Health and Clinical Data Exchange objective, the total points allocated to such objective would be redistributed to another objective. Such redistribution will not occur when the Electronic Case Reporting measure is suppressed and all other required measure(s) under such objective have an exclusion claimed because in the case of reporting the suppressed Electronic Case Reporting measure, such measure will receive full credit even when an exclusion is claimed, which will contribute to meeting the cohort of required measures under the Public Health and Clinical Data Exchange objective.

Comment: A few commenters requested clarification regarding the relationship between measure suppression and the currently available measure exclusions and the hardship policy.

Response: As discussed in more detail in section XX of this final rule regarding the adoption of a measure suppression policy, we note that the suppression of the Electronic Case Reporting measure merely excludes a measure from being assessed for performance. The suppressed Electronic Case Reporting measure is required to be reported, which means MIPS eligible clinicians, eligible hospitals, and CAHs will either attest "Yes" or "No" to meeting the requirements pertaining to Option 1 and Option 2 or claim an applicable exclusion. As long as MIPS eligible clinicians, eligible hospitals, and CAHs report responses, they will receive full credit for reporting the suppressed Electronic Case Reporting measure, which will contribute to meeting the cohort of required measures under the Public Health and Clinical Data Exchange objective. We note that a MIPS eligible clinician's, eligible hospital's, and CAH's score for the Public Health and Clinical Data Exchange objective of the MIPS Promoting Interoperability performance category or the Medicare Promoting Interoperability Program, as applicable, would not be adversely affected irrespective of the responses reported for such measure. The hardship exception policy remains in place as an option for MIPS eligible clinicians, eligible hospitals, and CAHs with individual specified circumstances that prevent reporting of other required measures, but it would not be necessary to apply for a hardship exception if the sole circumstance for applying is related to the suppressed measure because measure suppression would already prevent negative effects from attesting "No" to the measure. While three exclusions are available for the Electronic Case Reporting measure and MIPS eligible clinicians, eligible hospitals, and CAHs may submit an applicable exclusion as their response to the measure if applicable, such available exclusions may not address every situation where a MIPS eligible clinician, eligible hospital, and CAH has been negatively impacted by the CDC's onboarding pause during the CY 2025 performance period/EHR reporting period in CY 2025.

Comment: A few commenters encouraged CMS and CDC to provide clear communication and give timely updates about the resumption of electronic case reporting onboarding. A commenter requested that CMS encourage CDC to reopen registration and onboarding for electronic case reporting and cautioned that measure suppression would have an impact on

the ability of PHAs to monitor disease trends and efficiently manage outbreaks.

Response: We will share the public comments received with the CDC given that the CDC is responsible for the resumption of electronic case reporting onboarding. We note that all States and the District of Columbia continue to have statutory or regulatory requirements for case reporting and they allow several reporting methods even if an automated electronic method is not yet available.⁴⁶⁸

Comment: A few commenters recommended that CMS not require MIPS eligible clinicians, eligible hospitals, and CAHs to report on a suppressed measure.

Response: We disagree with commenters regarding the recommendation for MIPS eligible clinicians, eligible hospitals, and CAHs to not be required to report on a suppressed measure. As discussed in the CY 2026 PFS proposed rule (90 FR 32733) and section XX of this final rule regarding the adoption of a measure suppression policy, we note that we do not have any intention of removing or modifying reporting requirements. We reiterate that in the event a measure suppression becomes necessary, as with the Electronic Case Reporting measure for the CY 2025 performance period/EHR reporting period in CY 2025, suppression would not remove the measure from the MIPS Promoting Interoperability performance category or the Medicare Promoting Interoperability Program, nor change the requirement to report on the measure for the respective program. In regard to the technical and operational dynamics, it is not operationally feasible to modify CMS systems to remove the Electronic Case Reporting measure prior to the opening of the submission period without risking delay in the opening of the submission period for the MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program or disrupting the reporting of non-suppressed measures. However, we have determined that it is operationally feasible to update the CMS systems prior to the opening of the submission period. In addition to the technical and operational impact to CMS systems, we believe that removing the reporting requirement for a suppressed measure may cause confusion among eligible clinicians, hospitals, and CAHs as to their reporting responsibilities, as participants may be in different phases

⁴⁶⁸ <https://www.pew.org/en/research-and-analysis/reports/2024/12/state-public-health-data-reporting-policies-and-practices-vary-widely>.

of measure implementation and reporting. Also, we want to continue gathering available data on the Electronic Case Reporting measure to help us better understand the impacts of the circumstance that led to suppression. For the aforementioned reasons, we believe that it is appropriate to continue requiring the reporting of the suppressed Electronic Case Reporting measure.

Comment: A few commenters requested that CMS clarify its expectations regarding the level of active engagement for the CY 2026 performance period/EHR reporting period in CY 2026 in terms of the expectations for MIPS eligible clinicians, eligible hospitals, and CAHs impacted by onboarding difficulties during the CY 2025 performance period/EHR reporting period in CY 2025. A commenter requested clarification regarding how to manage active engagement attestations subsequent to EHR transitions. Commenters gave the example of a MIPS eligible clinician who is in active engagement Option 2, but replacing the EHR forces the MIPS eligible clinician to re-establish a new public health reporting interface. Commenters requested guidance regarding which active engagement option would be most appropriate for attestation in that circumstance.

Response: Regarding the required level of active engagement, there is no change to the previously finalized policy (87 FR 70074) that MIPS eligible clinicians, eligible hospitals, and CAHs may only spend one MIPS performance period/EHR reporting period in Option 1 (Pre-Production and Validation) before progressing to Option 2 (Validated Data Production). Therefore, if a MIPS eligible clinician, eligible hospital, or CAH attested to spending a prior MIPS performance period/EHR reporting period in Option 1, they would be required to progress to Option 2 in the next MIPS performance period/EHR reporting period in which the

suppressed measure is no longer suppressed. Similarly, if an EHR replacement forces a MIPS eligible clinician, eligible hospital, or CAH to re-establish a new public health reporting interface and re-register with their PHA, current policy requires them to attest to Option 2 (Validated Data Production) that year if they have already spent one EHR reporting period or performance period in Option 1 (Pre-Production and Validation) (87 FR 70074).

After consideration of public comments, we are finalizing with modification the proposal to suppress the Electronic Case Reporting measure. In suppressing the Electronic Case Reporting measure, we will not assess the Electronic Case Reporting measure for performance for MIPS eligible clinicians meeting the requirements of the MIPS Promoting Interoperability performance category for the CY 2025 performance period, and eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program for the EHR reporting period in CY 2025. While the Electronic Case Reporting measure is identified as being suppressed for the purposes of assessing performance, the measure continues to be a required measure for reporting data under the MIPS Promoting Interoperability performance category and Medicare Promoting Interoperability Program. MIPS eligible clinicians, eligible hospitals, and CAHs reporting the suppressed Electronic Case Reporting measure (attest “Yes” or “No” to meeting the requirements pertaining to Option 1 and Option 2, or claim an applicable exclusion) will be able to receive full credit for the measure under the Public Health and Clinical Data Exchange objective. A MIPS eligible clinician’s, eligible hospital’s, and CAH’s score for the Public Health and Clinical Data Exchange objective would not be adversely affected irrespective of the responses reported for the suppressed

Electronic Case Reporting measure. If the suppressed Electronic Case Reporting measure is not reported, a MIPS eligible clinician, eligible hospital, and CAH would fail to meet the requirements under the Public Health and Clinical Data Exchange objective (receive zero points). In the event that a MIPS eligible clinician, eligible hospital, or CAH claims an exclusion for the suppressed Electronic Case Reporting measure and claims exclusions for the other required measures within the Public Health and Clinical Data Exchange objective, the available points for the Public Health and Clinical Data Exchange objective would not be redistributed to another objective (point redistribution for cases when an exclusion is claimed for all of the measures within the Public Health and Clinical Data Exchange objective) because in the case of reporting the suppressed Electronic Case Reporting measure, such measure will receive full credit resulting in meeting the requirements of the Public Health and Clinical Data Exchange objective and thus, will receive the maximum available points within the objective even when an exclusion is claimed.

(h) Requirements for the MIPS Promoting Interoperability Performance Category for the CY 2026 Performance Period/2028 MIPS Payment Year

(i) Objectives and Measures for the CY 2026 Performance Period/2028 MIPS Payment Year

For reference, Table C–G2 sets forth the objectives and measures for the MIPS Promoting Interoperability performance category that would be required for the CY 2026 performance period/2028 MIPS payment year. Table C–G2 reflects finalized modifications to previously established objectives and measures, including the establishment a new optional bonus measure, under the MIPS Promoting Interoperability performance category.

**TABLE C-G2: OBJECTIVES AND MEASURES FOR THE MIPS PROMOTING
INTEROPERABILITY PERFORMANCE CATEGORY BEGINNING WITH THE CY 2026
PERFORMANCE PERIOD/2028 MIPS PAYMENT YEAR**

Objective	Measure	Numerator	Denominator	Exclusion
Electronic Prescribing: Generate and transmit permissible prescriptions electronically	e-Prescribing: At least one permissible prescription written by the MIPS eligible clinician is transmitted electronically using CEHRT.	Number of prescriptions in the denominator generated and transmitted electronically using CEHRT.	Number of prescriptions written for drugs requiring a prescription to be dispensed other than controlled substances during the performance period, or number of prescriptions written for drugs requiring a prescription to be dispensed during the performance period	Any MIPS eligible clinician who writes fewer than 100 permissible prescriptions during the performance period
Electronic Prescribing	Query of Prescription Drug Monitoring Program (PDMP): For at least one Schedule II opioid or Schedule III or IV drug electronically prescribed using CEHRT during the performance period, the MIPS eligible clinician uses data from CEHRT to conduct a query of a PDMP for prescription drug history.	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	Any MIPS eligible clinician who: 1. is unable to electronically prescribe Schedule II opioids and Schedule III and IV drugs in accordance with applicable law during the performance period; or 2. does not electronically prescribe any Schedule II opioids or Schedule III or IV drugs during the performance period.
Health Information Exchange: The MIPS eligible clinician provides a summary of care record when transitioning or referring their patient to another setting of care, receives or retrieves a summary of care record upon the receipt of a transition or referral or upon the first patient encounter with a new patient, and reconciles summary of care information from other healthcare providers into their EHR using the functions of CEHRT	Support Electronic Referral Loops by Sending Health Information: For at least one transition of care or referral, the MIPS eligible clinician that transitions or refers their patient to another setting of care or healthcare provider (1) creates a summary of care using CEHRT; and (2) electronically exchanges the summary of care record.	Number of transitions of care and referrals in the denominator where the summary of care record was created using CEHRT and exchanged electronically	Number of transitions of care and referrals during the performance period for which the MIPS eligible clinician was the transferring or referring clinician	Any MIPS eligible clinician who transfers a patient to another setting or refers a patient fewer than 100 times during the performance period
Health Information Exchange (HIE)	Support Electronic Referral Loops by	Number of electronic summary	Number of electronic summary of care	Any MIPS eligible clinician who receives transitions of

Objective	Measure	Numerator	Denominator	Exclusion
Health Information Exchange	Receiving and Reconciling Health Information: I or at least one electronic summary of care record received for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, or for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient, the MIPS eligible clinician conducts clinical information reconciliation for medication, medication allergy, and current problem list.	of care records in the denominator for which clinical information reconciliation is completed using CEHRT for the following three clinical information sets: (1) Medication – Review of the patient's medication, including the name, dosage, frequency and route of each medication; (2) Medication allergy – Review of the patient's known medication allergies; and (3) Current Problem List – Review of the patient's current and active diagnoses.	records received using CEHRT for patient encounters during the performance period for which a MIPS eligible clinician was the receiving party of a transition of care or referral, and for patient encounters during the performance period in which the MIPS eligible clinician has never before encountered the patient.	care or referrals or has patient encounters in which the MIPS eligible clinician has never before encountered the patient fewer than 100 times during the performance period
	HIE Bi-Directional Exchange: Statement 1: I participate in an HIE to enable secure, bi-directional exchange to occur for every patient encounter, transition or referral and record stored or maintained in the EHR during the performance period in accordance with applicable law and policy. Statement 2: The HIE that I participate in is capable of exchanging information across a broad network of unaffiliated exchange partners including those using disparate EHRs and not engaging in exclusionary behavior when determining exchange partners.	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A

Objective	Measure	Numerator	Denominator	Exclusion
	Statement 3: Use the functions of CEHRT to support bi-directional exchange with an IIE.			
Health Information Exchange	Enabling Exchange Under TEFCA MIPS eligible clinicians would attest to the following: • Participating as a signatory to a Framework Agreement (as that term is defined by the Common Agreement for Nationwide Health Information Interoperability as published in the Federal Register and on ASTP/ONC website) in good standing (that is, not suspended) and enabling secure, bi-directional exchange of information to occur, in production, for every patient encounter, transaction or referral, and record stored or maintained in the EHR during the performance period, in accordance with applicable law and policy. • Using the functions of CEHRT to support bi-directional exchange of patient information, in production, under this Framework Agreement.	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A
Provider to Patient Exchange: The MIPS eligible clinician provides patients (or patient-authorized representative) with timely electronic access to their health information	Provide Patients Electronic Access to Their Health Information: For at least one unique patient seen by the MIPS eligible clinician: 1. The patient (or the patient-authorized representative) is provided timely access to view online;	Number of patients in the denominator (or patient-authorized representative who are provided timely access to health information to view online, download, and transmit to a third party and to access using an application of their	Number of unique patients seen by the MIPS eligible clinician during the performance period.	N/A

Objective	Measure	Numerator	Denominator	Exclusion
	download, and transmit his or her health information; and 2. The MIPS eligible clinician ensures the patient's health information is available for the patient (or patient-authorized representative) to access using any application of their choice that is configured to meet the technical specifications of the Application Programming Interface (API) in the MIPS eligible clinician's CEHRT.	choice that is configured meet the technical specifications of the API in the MIPS eligible clinician's CEHRT.		
Public Health and Clinical Data Exchange. The MIPS eligible clinician is in active engagement with a public health agency or clinical data registry to submit electronic public health data in a meaningful way using CEHRT, except where prohibited, and in accordance with applicable law and practice.	Immunization Registry Reporting. The MIPS eligible clinician is in active engagement with a public health agency to submit immunization data and receive immunization forecasts and histories from the public health immunization registry/immunization information system (IIS).	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	The MIPS eligible clinician: 1. Does not administer any immunizations to any of the populations for which data is collected by its jurisdiction's immunization registry or immunization information system during the performance period; OR 2. Operates in a jurisdiction for which no immunization registry or immunization information system is capable of accepting the specific standards required to meet the CEHRT definition at the start of the performance period; OR 3. Operates in a jurisdiction where no immunization registry or immunization information system has declared readiness to receive immunization data as of 6 months prior to the start of the performance period.
Public Health and Clinical Data Exchange	Electronic Case Reporting. The MIPS eligible clinician is in active engagement with a PHA to electronically submit case reporting of reportable conditions	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	The MIPS eligible clinician: 1. Does not treat or diagnose any reportable diseases for which data is collected by their jurisdiction's reportable disease system during the performance period; OR 2. Operates in a jurisdiction for which no PHA is capable of receiving

Objective	Measure	Numerator	Denominator	Exclusion
				electronic case reporting data in the specific standards required to meet the CEHRT definition at the start of the performance period; OR 3. Operates in a jurisdiction where no PHA has declared readiness to receive electronic case reporting data as of 6 months prior to the start of the performance period
Public Health and Clinical Data Exchange	Public Health Registry Reporting (Optional Bonus): The MIPS eligible clinician is in active engagement with a PHA to submit data to public health registry	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	None
Public Health and Clinical Data Exchange	Clinical Data Registry Reporting (Optional Bonus): The MIPS eligible clinician is in active engagement to submit data to a clinical data registry	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	None
Public Health and Clinical Data Exchange	Syndromic Surveillance Reporting (Optional Bonus): The MIPS eligible clinician is in active engagement with a PHA to submit syndromic surveillance data from an urgent care setting	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	None
Public Health and Clinical Data Exchange	Public Health Reporting Using TEHCA (Optional Bonus): * The MIPS eligible clinician is (1) participating as a signatory to a Framework Agreement for that term is defined by the Common Agreement for Nationwide Health Information Interoperability as published in the Federal Register and on the ASTP/ONC website; (2) is not suspended from participating in TEHCA exchange; (3)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	None

Objective	Measure	Numerator	Denominator	Exclusion
	submits health information using TEFCAs to a PH4 consistent with one or more of the measures under the Public Health and Clinical Data Exchange objective; (4) is in active engagement Option 2 (validated data production) with a PH4 to transfer health information for one or more of the measures under the Public Health and Clinical Data Exchange objective; and (5) uses the functions of CEHRT to exchange with the PH4.			
Protect Patient Health Information; Protect electronic protected health information (ePHI) created or maintained by the CEHRT through the implementation of appropriate technical, administrative, and physical safeguards.	Security Risk Analysis.² First, conduct or review a security risk analysis; and second, conduct security risk management activities, in accordance with the requirements under 45 CFR 164.308(a)(1)(ii), A) and (B). Security risk analysis and management activities include addressing the security of data created or maintained by CEHRT (to include encryption), in accordance with 45 CFR 164.312(a)(2)(v) and 45 CFR 164.306(d)(5). The encryption implementation specified in 45 CFR 164.312(a)(2)(v) must be implemented if it is reasonable and appropriate, if encryption is not reasonable and appropriate, then the MIPS eligible clinician would adopt an equivalent	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	None

Objective	Measure	Numerator	Denominator	Exclusion
Protect Patient Health Information	alternative measure if it is reasonable and appropriate to do so: High Priority Practices SAFER Guide.* Beginning with the 2026 MIPS payment year, submit an affirmative attestation regarding the MIPS eligible clinician's completion of the annual self-assessment under the High Priority Practices SAFER Guide measure using the 2025 High Priority Practices SAFER Guide during the year in which the performance period occurs.	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	N/A (measure is Yes/No and requires an affirmative attestation to meet requirement)	None

* Changes made to a measure in this final rule that are effective beginning with the CY 2026 performance period/2028 MIPS payment year.

(ii) Scoring Methodology for the CY 2026 Performance Period/2028 MIPS Payment Year

For reference, Table C–G3 sets forth the finalized scoring methodology for

the MIPS Promoting Interoperability performance category for the CY 2026 performance period/2028 MIPS payment year, which includes the new optional bonus measure, Public Health

Reporting Using TEFCA. When earning bonus points, a MIPS eligible clinician can receive a maximum of 5 points regardless of the number of bonus measures reported.

TABLE C-G3: SCORING METHODOLOGY FOR THE CY 2026 PERFORMANCE PERIOD/2028 MIPS PAYMENT YEAR

Objective	Measure	Maximum Points	Required/Optional
Electronic Prescribing	e-Prescribing	10 points	Required
	Query of PDMP	10 points	Required
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	15 points	Required (MIPS eligible clinician's choice of one of the three reporting options)
	Support Electronic Referral Loops by Receiving and Recoupling Health Information	15 points	
	-OR-		
	Health Information Exchange Bi-Directional Exchange	30 points	
	-OR-		
	Enabling Exchange under TEFCA	30 points	
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	25 points	Required
Public Health and Clinical Data Exchange	Report the following two measures: • Immunization Registry Reporting • Electronic Case Reporting***	25 points	Required
	Report one or more of the following measures: • Public Health Registry Reporting • Clinical Data Registry Reporting • Syndromic Surveillance Reporting • Public Health Reporting Using TEFCA*	5 points (bonus)	Optional
Protect Patient Health Information	Security Risk Analysis*	Not scored**	Required
	High Priority Practices SAFER Guide*	Not scored**	Required
No Associated Objective Attestation Requirements***	ONC Direct Review Attestation	Not scored	Required
	Actions to Limit or Restrict the Compatibility of CEHRT	Not scored	Required
	ONC-ACB Surveillance Attestation	Not scored	Optional

*The addition of the optional bonus measure, Public Health Reporting Using TEFCA, and the modifications to the Security Risk Analysis measure and the High Priority Practices SAFER Guide measure will be effective beginning with the CY 2026 performance period.

**MIPS eligible clinicians must submit an affirmative attestation regarding the Security Risk Analysis measure and the High Priority Practices SAFER Guide measure. Failure to submit an affirmative ("Yes") attestation to fulfill such requirements will result in a zero score for the MIPS Promoting Interoperability performance category.

***Attestation Requirements: MIPS eligible clinicians must submit an attestation regarding the ONC Direct Review and that they did not knowingly and willfully take action to limit or restrict the compatibility or interoperability of CEHRT, as required by § 414.1375(b)(3). Failure to submit an attestation or an affirmative ("Yes") attestation to fulfill such requirements will result in a zero score for the MIPS Promoting Interoperability performance category.

****NOTE: The suppression of the Electronic Case Reporting measure only applies to the CY 2024 performance period/2027 MIPS payment year as discussed in section XX.X.x.g.i. of this final rule and thus, it is not reflected in Table C-G3 as such table pertains to the CY 2026 performance period/2028 MIPS payment year and future years.

(iii) Point Redistribution

Many required measures have exclusions associated with them as set forth in Table C-G2 in this final rule. If a MIPS eligible clinician believes that an exclusion for a particular measure applies to them, they may claim it when

they submit their data. The maximum points available for each objective as displayed in Table C-G3 in this final rule do not include the points that would be redistributed if a MIPS eligible clinician claims an exclusion for a specific measure. Table C-G4 in this

final rule sets forth how points would be redistributed among the objectives and measures specified for the MIPS Promoting Interoperability performance category for the CY 2026 performance period/2028 MIPS payment year in the

event a MIPS eligible clinician claims an exclusion for a given measure.

TABLE C-G4: POINT REDISTRIBUTION FOR THE CY 2026 PERFORMANCE PERIOD/2028 MIPS PAYMENT YEAR

Objective	Measures	Redistribution if exclusion is claimed
Electronic Prescribing	e Prescribing	10 points to HIE objective
	Query of PDMP	10 points to e-Prescribing measure
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information	15 points to Provide Patients Electronic Access to Their Health Information measure
	Support Electronic Referral Loops by Receiving and Reconciling Health Information	15 points to Support Electronic Referral Loops by Sending Health Information measure
	-OR-	
	Health Information Exchange Bi-Directional Exchange	No exclusion
	-OR-	
	Enabling Exchange Under HIECA	No exclusion
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information	No exclusion
Public Health and Clinical Data Exchange	Report the following two measures: - Electronic Case Reporting - Immunization Registry Reporting	If an exclusion is claimed for both measures, 25 points are redistributed to the Provide Patients Electronic Access to their Health Information measure.

(iv) **ONC Health IT Certification Criteria**

Table C-G5 outlines the objectives and measures for the MIPS Promoting Interoperability performance category

for the CY 2026 performance period/ 2028 MIPS payment year and the associated ONC health IT certification criteria at 45 CFR 170.315 that are applicable for the CY 2026 performance

period/2028 MIPS payment year. We refer readers to the CY 2024 PFS final rule (88 FR 79307 through 79312) for discussion of and amendments to the definition of CEHRT at § 414.1305.

**TABLE C-G5: MIPS PROMOTING INTEROPERABILITY PERFORMANCE
CATEGORY OBJECTIVES AND MEASURES AND ONC HEALTH IT CERTIFICATION
CRITERIA**

Objective		Measure	Certification Criterion (CY 2026 Performance Period 2026 MIPS Payment Year) in Title 45 of the CFR
Electronic Prescribing	et/prescribing		§ 170.315(b)(3) Electronic prescribing
	Query of PDMP		§ 170.315(g)(5) Electronic prescribing
Health Information Exchange	Support Electronic Referral Loops by Sending Health Information		§ 170.315(h)(1) Transitions of care
	Support Electronic Referral Loops by Receiving and Reconciling Health Information		§ 170.315(h)(1) Transitions of care § 170.315(h)(2) Clinical information reconciliation and incorporation
Health Information Exchange (alternative)	Health Information Exchange (HIE Bi-Directional Exchange)		Examples of certified health IT capabilities to support the actions of this measure may include, but are <u>not</u> limited to technology certified to the following criteria:
			§ 170.315(h)(1) Transitions of care
			§ 170.315(h)(2) Clinical information reconciliation and incorporation
			§ 170.315(g)(2) Application access — patient selection
			§ 170.315(g)(9) Application access — all data request
Health Information Exchange (alternative)	Enabling Exchange Under TEFCA		§ 170.315(g)(10) Standardized API for patient and population services
			Examples of certified health IT capabilities to support the actions of this measure may include, but are <u>not</u> limited to technology certified to the following criteria:
			§ 170.315(h)(1) Transitions of care
			§ 170.315(h)(2) Clinical information reconciliation and incorporation
			§ 170.315(g)(2) Application access — patient selection
Provider to Patient Exchange	Provide Patients Electronic Access to Their Health Information		§ 170.315(g)(9) Application access — all data request
			§ 170.315(g)(10) Standardized API for patient and population services
			§ 170.315(c)(1) View, download, and transmit to 3rd party
			§ 170.315(g)(2) Application access — patient selection
			§ 170.315(g)(9) Application access — all data request
Public Health and Clinical Data Exchange	Immunization Registry Reporting		§ 170.315(f)(1) Transmission to immunization registries
	Syndromic Surveillance Reporting (Optional)		§ 170.315(f)(2) Transmission to public health agencies — syndromic surveillance
	Electronic Case Reporting		§ 170.315(f)(5) Transmission to public health agencies — electronic case reporting
	Public Health Registry Reporting (Optional)		§ 170.315(f)(6)* Transmission to cancer registries
			§ 170.315(f)(7) Transmission to public health agencies health care surveys
	Clinical Data Registry Reporting (Optional) Public Health Reporting Using TEFCA (Optional)		No health IT certification criteria at this time. Examples of certified health IT capabilities to support the actions of this measure may include, but are <u>not</u> limited to technology certified to the following criteria: § 170.315(f)(5) Transmission to public health agencies — electronic case reporting
Protect Patient Health Information	Security Risk Assessment		The requirements are a part of CPHRT specific to each certification criterion
	High Priority Practices SAFER Guide		No health IT certification criteria at this time.

*In the CY 2026 PFS proposed rule, we inadvertently listed § 170.315(f)(6) “Transmission to public health agencies — cancer health care and resistance reporting” rather than § 170.315(f)(4) “Transmission to cancer registries” as the ONC Health IT certification criterion. Table C-G5 reflects the correct ONC Health IT certification criteria.

B. Additional CY 2026 Modifications to the Quality Payment Program

1. MIPS Final Score Methodology

a. Performance Category Scores

(1) Background

Sections 1848(q)(1)(A)(i) and (ii) and (5)(A) of the Act provide, in relevant part, that the Secretary shall develop a methodology for assessing the total performance of each MIPS eligible clinician according to certain specified performance standards and, using such methodology, provide for a final score for each MIPS eligible clinician. Section 1848(q)(6)(A) of the Act specifies that, to then determine a MIPS payment adjustment factor for each MIPS eligible clinician for an applicable MIPS payment year, we must compare the MIPS eligible clinician's final score for the given year to the performance threshold we established for that same year in accordance with section 1848(q)(6)(D) of the Act. We refer readers to section IV.B.2. of this final rule for further discussion of the performance threshold, and our calculation of MIPS payment adjustment factors, and our proposals with respect thereto.

Section 1848(q)(2)(A) of the Act provides that the Secretary must assess each MIPS eligible clinician with respect to four performance categories in determining each MIPS eligible clinician's final score: quality, resource use (referred to as "cost"), clinical practice improvement activities (referred to as "improvement activities"), and meaningful use of certified EHR technology (referred to as "Promoting Interoperability"). Section 1848(q)(2)(B) of the Act describes the measures and activities that must be specified under each performance category. Section 1848(q)(3) of the Act provides that we must establish performance standards with respect to the measures and activities specified under the four performance categories for a performance period, considering historical performance standards, improvement, and the opportunity for continued improvement. To calculate a final score for each MIPS eligible clinician for the performance period of an applicable MIPS payment year, section 1848(q)(5)(A) of the Act provides that we must develop a methodology for assessing the total performance of each MIPS eligible clinician according to the performance standards we have established with respect to applicable measures and activities specified for each performance category, using a scoring scale of 0 to 100.

In calculating the final score, we must apply different weights for the four performance categories, subject to certain exceptions, as set forth in section 1848(q)(5) of the Act and at § 414.1380. Unless we assign a different scoring weight pursuant to these exceptions, for the CY 2026 performance period/2028 MIPS payment year, the scoring weights for each performance category are as follows: 30 percent for the quality performance category; 30 percent for the cost performance category; 15 percent for the improvement activities performance category; and 25 percent for the Promoting Interoperability performance category.

For the CY 2026 performance period/2028 MIPS payment year, we proposed to update our scoring methodologies to respond to statutory requirements and impacts observed in performance data (90 FR 32754 through 32762). Specifically, we proposed to—

- Modify the existing approach for identifying measures impacted by limited measure choice and subject to topped-out measure benchmarks by applying the existing analysis to MVPs;
- Apply defined topped out benchmarks for certain topped-out measures for clinicians impacted by limited measure choice; and
- Modify the benchmarking methodology for scoring administrative claims-based measures in the quality performance category.

The policies in this section of the final rule for scoring the quality performance category within traditional MIPS would apply to MVP scoring under § 414.1365(d)(3)(i) since a quality performance category score for MVP Participants is calculated in accordance with § 414.1380(b)(1) based on measures included in the MVP.

We did not propose any changes to our scoring policies for the cost, improvement activities, or Promoting Interoperability performance categories.

(2) Scoring the Quality Performance Category for the Following Collection Types: Medicare Part B Claims Measures, eCQMs, MIPS CQMs, QCDR Measures, the CAHPS for MIPS Survey Measure, and Administrative Claims Measures

We refer readers to the CY 2017, CY 2018, and CY 2019 Quality Payment Program final rules, the CY 2020, CY 2021, CY 2022, CY 2023, and CY 2024 PFS final rules, and § 414.1380(b)(1) for our current policies regarding, among other things, quality measure benchmarks, calculating total measure achievement points, calculating the quality performance category score,

including achievement and improvement points, the small practice bonus, and scoring flexibilities (81 FR 77276 through 77308, 82 FR 53716 through 53748, 83 FR 59841 through 59855, 84 FR 63011 through 63018, 85 FR 84898 through 84913, 86 FR 65490 through 65509, 87 FR 70088 through 70091, and 88 FR 79368 and 79369). In the CY 2025 PFS final rule (89 FR 98427 through 98439), we finalized policies for scoring topped-out measures in specialty measure sets with limited measure choice at § 414.1380(b)(1)(iv)(C) and (b)(1)(ii)(E) and a Complex Organization Adjustment for virtual groups and APM Entities at § 414.1380(b)(1)(vii)(C).

(a) Scoring for Topped-Out Measures With Limited Measure Choice

(i) Background on Scoring Topped-Out Measures

We refer readers to the CY 2017, CY 2018, and CY 2019 Quality Payment Program final rules, the CY 2023 and 2025 PFS final rules (81 FR 77282 through 77287, 82 FR 53721 through 53727, 83 FR 59761 through 59765, 88 FR 70090 and 70091, and 89 FR 98429 through 98435), and § 414.1380(b)(1)(iv) for established topped out measure scoring policies.

Topped out measures are measures for which measure performance is considered so high and unvarying that meaningful distinctions and improvements in performance can no longer be made (81 FR 77136). Section 1848(q)(3)(B) of the Act requires that in establishing performance standards with respect to measures and activities, we consider, among other things, the opportunity for continued improvement. Topped out measures do not provide an opportunity for continued improvement, nor do payment adjustments based on topped out measures incentivize clinicians to improve their care. As a result, we finalized policies in the CY 2018 Quality Payment Program final rule (82 FR 53723 through 53727) to identify and cap the scoring potential of such measures. Additionally, we established practices for the removal of such measures, such as establishing the topped-out measure lifecycle, to continue to drive quality improvement in areas where such improvement is possible and necessary. The topped-out measure lifecycle is described in the CY 2018 Quality Payment Program final rule (82 FR 53721 and 53727). We established at § 414.1380(b)(1)(iv)(B) that we will cap scoring for topped-out measures at 7 measure achievement points in the second consecutive year

that the measure benchmark is identified as topped out. If a measure has been identified as topped out for 3 consecutive years after being originally identified through the benchmarks, such measure may then be proposed for removal through notice-and-comment rulemaking (83 FR 59761). This timeline, however, is not fixed. We noted our concern that removal of topped-out measures may leave clinicians with fewer than 6 applicable measures to report and that such removal in those instances will impact some specialties more than others (82 FR 53721). We stated that consideration for ensuring available applicable measures would be made when considering measure removals (83 FR 59763).

In the CY 2018 Quality Payment Program final rule (82 FR 53727), we established the topped-out scoring cap to encourage MIPS eligible clinicians to submit measures that are not topped out. However, we created an exemption to this policy in the CY 2025 PFS final rule (89 FR 98430) for certain measures, which are frequently used by certain specialties impacted by limited measure choice. To address scoring scenarios in which limited measure choice compels clinicians to report topped-out measures with scoring caps, we finalized in the CY 2025 PFS final rule (89 FR 98429 through 98432) at § 414.1380(b)(1)(iv)(C) that beginning with the CY 2025 performance period/2027 MIPS payment year, topped-out measures frequently used by certain specialties reporting specialty measure sets that are impacted by limited measure choice (specified in accordance with § 414.1380(b)(1)(ii)(E)) are not subject to the 7-point scoring cap. As part of the CY 2025 PFS final rule, we finalized at § 414.1380(b)(1)(ii)(E) that beginning with the CY 2025 performance period/2027 MIPS payment year, we will annually publish a list in the **Federal Register** of topped-out measures determined to be impacted by limited measure choice (89 FR 98432). Measures included in the list are scored from 1 to 10 measure achievement points according to defined topped-out measure benchmarks calculated from performance data in the baseline period, in which a performance rate of 97 percent corresponds to 10 percent of the performance threshold for the corresponding performance year.

In the CY 2025 PFS final rule (89 FR 98432 through 98435), we also finalized our approach for identifying the list of measures impacted by limited measure choice and subject to defined topped-out measure benchmarks. Specifically, we finalized that each specialty measure

set is reviewed by collection type to identify if the prevalence of topped-out measures within such a set hinders a clinician's ability to successfully participate in the MIPS quality performance category. To make such a determination, we finalized that we analyze the ability of clinicians reporting the specialty measure sets under review to reasonably achieve 75 percent of available quality achievement points based upon the measures available to them and program requirements. Specifically, at the collection type level, each measure is assigned points based upon the current benchmarking data: new measures receive 7 or 5 points based on year in the program, measures with benchmarks are given points based upon the highest decile achievable with a less than perfect score (less than 100 percent or greater than 0 percent for inverse measures), and measures with no available historic benchmark are given 0 points. All measure set points are added together to get an output of scoring potential; the Medicare Part B claims collection type measure sets have an additional 6 points added to the output to account for the small practice bonus. The sum of quality achievement points for each measure set are then compared to the analysis threshold, which is currently 75 percent of available quality achievement points, based upon the number of available measures. Any measure sets that are not able to meet or exceed the threshold are flagged as 'at-risk.' Additional factors that we take into consideration include whether the topped-out measure within the specialty measure set under review is considered a cross-cutting measure or is a broadly applicable measure, which we consider to be a measure included in three or more specialty sets. We also consider in reviewing topped-out measures within a specialty measure set whether the specialty measure set contains more than ten measures, by collection type (89 FR 98432 through 98435).

(ii) Measures To Be Subject to the Defined Topped-Out Measure Benchmark for the CY 2026 Performance Period/2028 MIPS Payment Year

In the CY 2026 PFS proposed rule (90 FR 32754 through 32756), beginning with the CY 2026 performance period/2028 MIPS payment year, we proposed to modify the previously finalized approach for identifying measures impacted by limited measure choice (89 FR 98432 through 98435) by applying the analysis and criteria to MVPs, in addition to the analysis of specialty measure sets. For the CY 2026

performance period/2028 MIPS payment year, we also proposed in the CY 2026 PFS proposed rule (90 FR 32754 through 32756) to continue to use an analysis threshold of 75 percent of available quality achievement points in our determination of which measures would not be subject to the 7-measure achievement point cap, reflecting the MIPS payment adjustment performance threshold of 75 points. We refer readers to section IV.B.2.b.(2) of this final rule where we finalize a performance threshold of 75 points for the CY 2026 through CY 2028 performance periods/2028 through 2030 MIPS payment years.

MVPs, like specialty measure sets, contain a limited set of quality measures for a clinician to choose from. We have received feedback from interested parties and independently verified that clinicians reporting MVPs in which there is high presence of topped-out measures receiving the 7-point cap are often facing both limited measure choice and limited scoring opportunities. Given the limited number of available measures, the prevalence of topped-out measures within an MVP may similarly hinder a clinician's ability to successfully participate in the MIPS quality performance category. Using the same methodology applicable to topped-out measures within specialty measure sets, we proposed to conduct an analysis of each MVP to identify if the prevalence of topped-out measures within such MVP hinders a clinician's ability to successfully participate in the MIPS quality performance category. According to the approach finalized in the CY 2025 PFS final rule for specialty measure sets (89 FR 98432 through 98435), at the collection type level, each quality measure in an MVP would be assigned points based upon the current benchmarking data: new measures would receive 7 or 5 points based on year in the program, measures with benchmarks would be given points based upon the highest decile achievable with a less than perfect score (less than 100 percent or greater than 0 percent for inverse measures), and measures with no available historic benchmark would be given 0 points. All points would be added together to get an output of scoring potential; the Medicare Part B claims collection type measures would have an additional 6 points added to the output to account for the small practice bonus. The sum of quality achievement points for each MVP would be compared to the analysis threshold, which is currently 75 percent of available quality achievement points, based upon the number of available measures. Any MVPs that are not able

to meet or exceed the threshold would be flagged as 'at-risk.' Additional factors that we would take into consideration would include whether the topped-out measure within the MVP under review is considered a cross-cutting measure or is a broadly applicable measure, which we would consider to be a measure included in three or more MVPs or specialty sets. We would also consider when reviewing topped-out measures within an MVP whether the MVP contains more than ten measures, by collection type.

Table C–I1 contains the list of measures that meet the criteria for

topped-out measures impacted by limited measure choice in specialty measure sets and MVPs, and for which we proposed in the CY 2026 PFS proposed rule (90 FR 32756 and 32757) to apply the defined topped-out measure benchmark for the CY 2026 performance period/2028 MIPS payment year. We had considered proposing MIPS CQM 424: Perioperative Temperature Management to be subject to the defined topped-out measure benchmark for the CY 2026 performance period/2028 MIPS payment year since it met the criteria for topped-out measures in specialty measure sets impacted by

limited measure choice, according to the methodology finalized in the CY 2025 PFS final rule (89 FR 98432 through 98435). However, we did not propose that measure for the defined topped-out measure benchmark for the CY 2026 performance period/2028 MIPS payment year because it was proposed for removal for the CY 2026 performance period/2028 MIPS payment year in the CY 2026 PFS proposed rule (90 FR 32717). We refer readers to section IV.A.4.d.(1)(c)(ii) of this final rule for discussion of the quality performance category measure inventory.

TABLE C-II: TOPPED-OUT MEASURES IMPACTED BY LIMITED MEASURE CHOICE AND SUBJECT TO DEFINED TOPPED-OUT MEASURE BENCHMARKS FOR THE CY 2026 PERFORMANCE PERIOD/2028 MIPS PAYMENT YEAR

Measure ID	Collection Type	Measure Title
141	Medicare Part B Claims	Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 20% OR Documentation of a Plan of Care
143	eCQM, MIPS CQM	Oncology: Medical and Radiation - Pain Intensity Quantified
144	MIPS CQM	Oncology: Medical and Radiation - Plan of Care for Pain
249	Medicare Part B Claims, MIPS CQM	Barrett's Esophagus
250	Medicare Part B Claims, MIPS CQM	Radical Prostatectomy Pathology Reporting
320	Medicare Part B Claims	Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients
350	MIPS CQM	Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy
351	MIPS CQM	Total Knee or Hip Replacement: Venous Thromboembolic and Cardiovascular Risk Evaluation
360	MIPS CQM	Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed Tomography (CT) and Cardiac Nuclear Medicine Studies
364	MIPS CQM	Optimizing Patient Exposure to Ionizing Radiation: Appropriateness: Follow-up CT Imaging for Incidentally Detected Pulmonary Nodules According to Recommended Guidelines
395	Medicare Part B Claims, MIPS CQM	Lung Cancer Reporting (Biopsy/Cytology Specimens)
396	MIPS CQM	Lung Cancer Reporting (Resection Specimens)
397	Medicare Part B Claims, MIPS CQM	Melanoma Reporting
405	MIPS CQM	Appropriate Follow-up Imaging for Incidental Abdominal Lesions
406	Medicare Part B Claims, MIPS CQM	Appropriate Follow-up Imaging for Incidental Thyroid Nodules in Patients
430	MIPS CQM	Prevention of Post-Operative Nausea and Vomiting (PONV) - Combination Therapy
440	MIPS CQM	Skin Cancer: Biopsy Reporting Time - Pathologist to Clinician
463	MIPS CQM	Prevention of Post-Operative Vomiting (POV) - Combination Therapy (Pediatrics)
477	MIPS CQM	Multimodal Pain Management

We solicited comments on the following proposals beginning with the CY 2026 performance period/2028 MIPS payment year: (1) include MVPs in the

analysis used to identify the list of topped-out measures impacted by limited measure choice ; (2) continue using an analysis threshold of 75

percent of available quality achievement points in our determination of which measures would be subject to the defined topped-out measure benchmark;

and (3) list of topped-out measures impacted by limited measure choice and subject to the defined topped-out measure benchmark.

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposal to identify topped-out measures impacted by limited measure choice in specialty measure sets and MVPs. Several commenters supported the proposed list of measures subject to the defined topped-out measure benchmark for the CY 2026 performance period/2028 MIPS payment year.

Response: We thank commenters for their support.

Comment: Several commenters expressed concerns with the methodology CMS uses to identify topped-out measures in specialty measure sets and MVPs as “at risk” and, therefore, eligible for the defined topped-out measure benchmark. A few commenters urged CMS to assess the issue of limited measure choice at the subspecialty level, citing concern that assessing only at the specialty level does not address scenarios where subspecialists may have a limited number of clinically relevant, non-topped-out measures available to them. A commenter recommended that CMS apply a subspecialty analysis to MVPs as well as to specialty sets to evaluate whether all types of clinicians who could report a specific MVP could succeed based on the available measures in the MVP. A commenter urged CMS to incorporate additional factors into the decision, including clinical relevance, patient impact, and alignment with value-based care principles. A commenter recommended that CMS set a 2-year timeframe for reevaluating measures selected for the list of topped-out measures impacted by limited measure choice.

Response: The defined topped-out measure benchmark policy seeks to provide scoring relief for clinicians whose MIPS performances are most impacted by limited measure choice and who would otherwise be unable to avoid a negative payment adjustment due to limited measure choice and the topped-out measure scoring cap. The policy evaluates specialty measure sets and MVPs because these are defined measure sets that may contain fewer measures for certain clinicians to choose from. We do not conduct analysis at the subspecialty level because subspecialties do not have a defined set of measures in the Quality Payment Program. While this policy focuses on

addressing measures with topped out status for specialties with limited measure choice, we consider clinical relevance, patient impact, and value-based care principles in our maintenance of the quality measure inventory. We will continue to monitor the impacts of this policy on clinicians’ ability to meaningfully participate in MIPS.

We do not apply the defined topped-out measure benchmarks for a 2-year timeframe because measure performance varies each year, and thus a measure’s topped out status may change each year.

Comment: A few commenters recommended that the defined topped-out measure benchmark apply to all topped-out measures, stating their belief that limiting the policy to selected measures is arbitrary, adds complexity, and favors some specialties over others. Several commenters specifically requested that CMS apply the defined topped-out measure benchmark to additional measures. Several commenters requested that the hospitalist measure set be added to the defined topped-out measure benchmark policy, stating that all four measures in the specialty set are topped out which places hospitalist clinicians at a disadvantage in the MIPS program, as they also may have the Promoting Interoperability and cost performance categories reweighted. A few commenters recommended that QCDR measures should be included in the defined topped-out measure benchmark policy. A commenter requested that several podiatry measures be scored according to defined topped-out measure benchmarks.

Response: As discussed in section XX of this final rule, topped-out measures are measures with performance so high and unvarying that meaningful distinctions and improvements in performance can no longer be made, the measures do not provide an opportunity for continued improvement, and payment adjustments based on topped-out measures do not incentivize clinicians to improve their care. We cap scoring for topped-out measures at 7 measure achievement points in the second consecutive year that the measure benchmark is identified as topped out to incentivize clinicians to report measures for which continued improvement is still possible. The topped-out measure scoring cap is a useful tool for communicating that there is limited opportunity for continued quality improvement. Clinicians without limited measure availability can choose to report measures that are not topped out and for which they can

receive up to 10 measure achievement points.

This policy aims to identify measures impacted by limited measure choice and apply defined topped-out measure benchmarks to only those measures, while retaining the 7-point scoring cap for topped-out measures that are not impacted by limited measure choice.

Topped-out measures in the hospitalist specialty measure set were not proposed to be scored according to the defined topped-out measure benchmark because the measures are cross-cutting or broadly applicable. In accordance with CMS’ established methodology, as stated in the CY 2025 PFS final rule (89 FR 98432 through 98435), additional factors CMS takes into consideration in determining which measures may be subject to defined topped-out measure benchmarks include whether the topped out measure within the specialty measure set is considered a cross-cutting measure or is a broadly applicable measure. Cross-cutting quality measures are broadly applicable to all clinicians regardless of their specialty; broadly applicable measures are those included in three or more specialty sets. We do not include such measures in the defined topped-out measure benchmark policy in order to retain the 7-point topped-out measure scoring cap for clinicians who do not experience limited measure choice. Measures in the podiatry specialty measure set were not proposed to be scored according to the defined topped-out measure benchmark because the specialty measure set did not meet the criteria for being ‘at risk’ of not meeting the performance threshold of 75 due to limited measure choice and the topped-out measure scoring cap. We will continue to monitor the topped-out status of measures in the podiatry specialty measure set to determine if proposed inclusion in the defined topped-out measure benchmark policy is warranted in future years.

QCDR measures were not included in the scope of this policy because they are governed by another policy at § 414.1400(b)(4)(iii)(C) stating that CMS may revoke a measure’s second year approval if identified as topped out.

Comment: Several commenters expressed concerns about the overall impact of the scoring cap for topped-out measures, especially for specialties with a limited number of available measures such as physical therapy, physical medicine and rehabilitation, and gastroenterology. A few commenters recommended that CMS comprehensively reevaluate the scoring methodology for topped-out measures.

Response: The 7-point scoring cap for topped-out measures seeks to incentivize clinicians to report measures for which meaningful distinctions in performance can be made and continued improvement is still possible. We did not propose measures in the physical therapy or physical medicine specialty measure sets to be scored according to defined topped-out measure benchmarks because the “at-risk” topped-out measures are either cross-cutting or in three or more specialty measure sets. In Table C–I1 we proposed one measure in the gastroenterology specialty measure set to be scored according to the defined topped-out measure benchmark (Medicare Part B Claims Measure 320: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients), however we did not propose additional topped-out gastroenterology measures because the “at-risk” measures are cross-cutting. We will evaluate the impact of our scoring policies and consider scoring alternatives for topped-out measures.

Comment: A few commenters recommended that CMS refine the defined topped-out measure benchmark by removing the lowest decile instead of the ninth because they believe it will result in more consistent and fair scoring.

Response: We clarify that the defined topped-out measure benchmark does not remove any decile and contains 10 deciles. In the CY 2025 PFS final rule (89 FR 98429 through 98432), we discussed that we proposed to remove the ninth decile for the defined topped-out measure benchmark, however, that policy was not finalized. We finalized the defined topped-out measure benchmark to include the 9th decile, which corresponds to a performance rate from 99 to 99.9 percent.

Comment: A commenter opposed allowing selected specialties to earn full quality measure achievement points when reporting topped-out measures, expressing skepticism that the MIPS quality measure inventory does not include measures that could apply to specialists. The commenter believes that this policy sends a mixed message about the importance of meeting high quality standards.

Response: To identify measures for the defined topped-out measure benchmark policy, we evaluate the ability of clinicians reporting specialty measure sets and MVPs to achieve the performance threshold because clinicians reporting specialty measure sets and MVPs have fewer measures from which to choose. The policy seeks to limit the scoring relief to only those

who would otherwise receive a negative payment adjustment only due to limited measure choice and the topped-out scoring cap. The defined topped-out measure benchmark distribution is intended to encourage high performance and clinical quality improvement by having a performance rate of 97 percent correspond to 7.5 achievement points for the CY 2026 performance period/2028 MIPS payment year.

Comment: A commenter expressed concern that two oncology quality measures, Quality ID 143: Oncology: Medical and Radiation—Pain Intensity Quantified (eCQM, MIPS CQM) and Quality ID 144: Oncology: Medical and Radiation—Plan of Care for Pain (MIPS CQM) were proposed to receive topped-out measure benchmarks for the 2026 MIPS performance period. The comment stated that the measures continue to be meaningful and should be reported and expressed the concern that without these two measures, radiation oncologists would only have two reportable measures in the specialty set.

Response: We clarify that measures included in this proposal would not be removed from the specialty measure set and would be available for clinicians to report. Topped-out measures included in this proposal would have the 7-point scoring cap removed and be scored according to the defined topped-out measure benchmark.

After consideration of public comments, we are finalizing as proposed to include MVPs in the analysis used to identify the list of topped-out measures impacted by limited measure choice beginning with the CY 2026 performance period/2028 MIPS payment year. We are also finalizing as proposed to continue using an analysis threshold of 75 percent of available quality achievement points in our determination of which measures would be subject to the defined topped-out measure benchmark for the CY 2026 performance period/2028 MIPS payment year.

We are also finalizing as proposed the list of topped-out measures impacted by limited measure choice and subject to the defined topped-out measure benchmark for the CY 2026 performance period/2028 MIPS payment year.

(b) Benchmark Methodology for Scoring Administrative Claims-Based Quality Measures in the Quality Performance Category

(i) Background on Scoring Administrative Claims Measures in the Quality Performance Category

At § 414.1325, we specify that there is no data submission requirement for cost measures or administrative claims measures in the quality performance category as these measures are calculated on behalf of participants by CMS using administrative claims data. CMS calculates MIPS eligible clinicians' performance on these measures using administrative claims data, which includes claims submitted with dates of service during the applicable performance period that are processed no later than 60 days following the close of the applicable performance period. In the CY 2017 Quality Payment Program final rule (81 FR 77130), we finalized a policy that clinicians would be scored on applicable administrative claims-based global or population health (henceforth referred to only as population health measures) in addition to the six required submitted quality measures. We refer readers to the CY 2017 Quality Payment Program final rule and the CY 2021 PFS final rule (81 FR 77130 through 77136 and 85 FR 84871 through 84873, respectively) and § 414.1325(a)(2)(i) for our previously established policies regarding administrative claims measures in the quality performance category.

We have codified our quality performance category scoring policies at § 414.1380(b)(1). Under § 414.1380(b)(1)(i), except as provided under paragraph (b)(1)(i)(C) beginning with the CY 2023 performance period/2025 MIPS payment year, MIPS eligible clinicians receive between 1 and 10 measure achievement points (including partial points) based on their performance on each measure. At § 414.1380(b)(1)(i)(A)(2)(ii), each administrative claims-based measure that does not have a benchmark or meet the case minimum requirement is excluded from a MIPS eligible clinician's total measure achievement points and total available measure achievement points.

We also refer readers to the CY 2017, CY 2018, CY 2019 Quality Payment Program final rules (81 FR 77277 through 77282, 82 FR 53699 through 53718, and 83 FR 59841 through 59842, respectively) and CY 2020, CY 2021, and CY 2023 PFS final rules (84 FR 63014 through 63016, 85 FR 84901 through 84904, and 87 FR 70088 through 70090, respectively) for our

previously established benchmarking policies.

In the CY 2017 Quality Payment Program final rule (81 FR 77276 through 77282), we finalized that we will use MIPS eligible clinicians' performance in the baseline period to set benchmarks for the quality performance category, with the exception of new quality measures, quality measures that lack historical data, or quality measures where we do not have comparable data from the baseline period. In these cases, we will calculate benchmarks using data submitted during the applicable performance period. We defined the baseline period to be the 12-month Calendar Year that is 2 years prior to the performance period for the MIPS payment year.

Moreover, in the CY 2023 PFS final rule (87 FR 70088 through 70090), we finalized beginning with the CY 2023 performance period/2025 MIPS

payment year, that we would score administrative claims measures using performance period benchmarks (§ 414.1380(b)(1)(ii)(D)). We stated that we believe that using a performance period benchmark to score these measures would allow for scores that are more reflective of current performance, while adding no additional burden to clinicians.

As discussed in the CY 2017 Quality Payment Program final rule (81 FR 77277 through 77282), we establish benchmarks as a standardized method to evaluate and compare the performance of quality measures relative to the performance of peers. We use a decile-based approach to create benchmarks, which is done by dividing measure performance rates into deciles, with each decile containing a range of performance rates. CMS assigns measure achievement points based on which benchmark decile range the measure

performance rate falls between. CMS assigns partial points to prevent performance cliffs for performance rates near the decile breaks. Additionally, the four administrative claims-based quality measures currently available to MIPS eligible clinicians are inverse measures, meaning the lower the measure performance rate, the higher the measure achievement points. Therefore, lower benchmark deciles are associated with higher performance rates. MIPS eligible clinicians with higher performance rates of administrative claims-based measures (for example, the number of acute unplanned cardiovascular-related admissions per 100 person-years at risk for admission during the measurement period) will have rates that fall into lower benchmark deciles and will score fewer measure points than MIPS eligible clinicians with lower measure performance rates.

TABLE C-I2: EXAMPLE OF USING DECILE-BASED BENCHMARK AND PARTIAL POINTS TO ASSIGN ACHIEVEMENT POINTS FOR PERFORMANCE ON THE RISK-STANDARDIZED ACUTE CARDIOVASCULAR-RATED HOSPITAL ADMISSION RATES FOR PATIENTS WITH HEART FAILURE UNDER THE MERIT-BASED INCENTIVE PAYMENT SYSTEM ADMINISTRATIVE CLAIMS-BASED QUALITY MEASURE

Benchmark Decile	Example Benchmark Ranges (Performance Rate)	Possible Points
Benchmark Decile 1	81.68-75.77	1 (1-1.9)
Benchmark Decile 2	75.76-73.44	2 (1-2.9)
Benchmark Decile 3	73.43-71.92	3 (1-3.9)
Benchmark Decile 4	71.91-70.81	4 (1-4.9)
Benchmark Decile 5	70.80-69.72	5 (1-5.9)
Benchmark Decile 6	69.71-68.79	6 (1-6.9)
Benchmark Decile 7	68.78-67.72	7 (1-7.9)
Benchmark Decile 8	67.71-66.51	8 (1-8.9)
Benchmark Decile 9	66.50-64.97	9 (1-9.9)
Benchmark Decile 10	64.96 and below	10

Table C-I2 provides an example of using benchmark deciles along with partial achievement points to assign achievement points for the Risk-standardized Acute Cardiovascular-rated Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System administrative claims-based quality measure under our current methodology. For this measure, that outcome is the number of acute unplanned cardiovascular-related admissions per 100 person-years at risk for admission during the measurement period. Additionally, this measure is an inverse measure. The following formula

is used to determine the number of partial points awarded to the MIPS eligible clinician:

Benchmark Decile # + [(performance rate – bottom of benchmark decile range)/(top of benchmark decile range – bottom of benchmark decile range)] = Quality Measure Achievement Points.

For the example measure presented in Table C-I2, the median performance rate is 69.71, which falls within Benchmark Decile 6. If a MIPS eligible clinician's performance rate for the measure is 73.82, the MIPS eligible clinician's performance rate falls within Benchmark Decile 2, for which the

MIPS eligible clinician may receive between 2.0 and 2.9 achievement points. Based on the partial points calculation formula, the clinician would receive 0.83 partial points, resulting in a quality measure score of 2.83 out of 10 achievement points for the administrative claims-based quality measure under this example.

Based on our analysis of quality measure scores for the CY 2022 performance period/2024 MIPS payment year, we observed lower scores for the administrative claims-based quality measures than for the non-administrative claims-based quality measures. Means for administrative

claims-based quality measure achievement scores tend to be around 5 to 6 points out of 10, whereas means for non-administrative claims-based measures tend to be around 7 to 9 points out of 10.

There are key factors that may contribute to lower measure scores for the administrative claims-based measures, compared to the other quality measures. First, administrative claims-based quality measures are scored against a performance period benchmark, rather than a benchmark determined based on historical data, which is used, wherever possible, for non-administrative claims-based quality measures. Benchmarks established based on historical data provide MIPS eligible clinicians with helpful performance targets in advance of or during the performance period. Meanwhile, the performance period benchmarks for the administrative claims-based quality measures do not provide information about performance targets before or during the performance period. However, since these measures require no data submission, using performance period benchmarks allows for the calculation of more current and representative measure scores that better track clinician performance and progress over time. We are concerned that the current decile-based, performance period benchmark is a key contributor to lower scores for the administrative claims-based quality measures. Specifically, the current quality benchmark methodology uses a decile range based on linear percentile distributions and assigns 5.0 to 6.9 achievement points to clinicians with measure performance rates within the 50th to 60th percentiles. As a result,

clinicians who perform around the median on administrative claims-based measures will receive achievement points below 7.5 points, the equivalent of the performance threshold.

Second, in traditional MIPS, MIPS eligible clinicians are scored on each administrative claims-based quality measure for which the established case minimum is met, and a benchmark can be calculated. Further, not all MIPS eligible clinicians are scored on administrative claims-based quality measures. Therefore, if a clinician is scored on one or multiple administrative claims-based quality measures with measure achievement scores around 5 to 6 points out of 10, these measure scores may have the effect of lowering the MIPS eligible clinician's quality performance category score, especially in comparison to a clinician who is not scored on any administrative claims-based quality measure.

(ii) Background on Scoring Measures in the Cost Performance Category

In the CY 2025 PFS final rule (89 FR 98438 through 98446), we addressed concerns raised by MIPS eligible clinicians about cost performance category scoring having a negative impact on their final MIPS score. We noted how, under the cost scoring methodology for the CY 2017 performance period/2019 MIPS payment year through the CY 2023 performance period/2025 MIPS payment year, a MIPS eligible clinician scoring near the median on a cost measure would need to score perfectly (or nearly perfectly) within the other three performance categories to receive a final score slightly above the

performance threshold and to avoid a negative payment adjustment (89 FR 98439 through 98442). To address this concern, we modified the methodology for scoring the cost performance category, as set forth at § 414.1380(b)(2), beginning with the CY 2024 performance period/2026 MIPS payment year (89 FR 98441 through 98446; 89 FR 98563).

The cost scoring methodology we finalized at § 414.1380(b)(2) is now based on standard deviation, median, and an achievement point value that is derived from the performance threshold. Specifically, for a MIPS eligible clinician whose average costs attributed under a cost measure is equal to the median cost for all MIPS eligible clinicians that had the measure attributed them, we assign an achievement point value equal to 10 percent of the performance threshold. For example, for the CY 2024 performance period/2026 MIPS payment year, if a MIPS eligible clinician's average costs under the measure is equal to the median costs of all MIPS eligible clinicians attributed the same measure, then we assign the MIPS eligible clinician 7.5 achievement points, based on a performance threshold of 75 as finalized at § 414.1405(b)(9)(iii). For each cost measure, the cut-offs for benchmark ranges are calculated based on standard deviations, expressed in dollars, from the median. We refer readers to Table C–I3 for an example of how the cost scoring methodology could be implemented for a specific cost measure when the performance threshold is set to 75 points, which is the same example we provided in the CY 2025 PFS final rule (89 FR 98441 and 98442).

TABLE C-I3: EXAMPLE OF IMPLEMENTATION OF THE PROPOSED COST SCORING METHODOLOGY FOR ASSIGNMENT OF ACHIEVEMENT POINTS FOR PERFORMANCE ON THE SCREENING/SURVEILLANCE COLONOSCOPY COST MEASURE

Benchmark Range	Points	Proposed Methodology for Bottom of Benchmark Range (\$)	Example Benchmark Ranges
Benchmark Range 1	1 - 1.9	Median cost - (2.75 x standard deviation)	\$1,341.93 - \$1,308.10
Benchmark Range 2	2 - 2.9	Median cost - (2.5 x standard deviation)	\$1,308.09 - \$1,274.26
Benchmark Range 3	3 - 3.9	Median cost - (2.25 x standard deviation)	\$1,274.25 - \$1,240.43
Benchmark Range 4	4 - 4.9	Median cost - (2 x standard deviation)	\$1,240.42 - \$1,172.75
Benchmark Range 5	5 - 5.9	Median cost - (1.5 x standard deviation)	\$1,172.74 - \$1,105.08
Benchmark Range 6	6 - 6.9	Median cost - (1 standard deviation)	\$1,105.07 - \$1,037.40
Benchmark Range 7	7 - 7.9	Median cost - (0.5 x standard deviation)	\$1,037.39 - \$902.05
Benchmark Range 8	8 - 8.9	Median cost - (0.5 x standard deviation)	\$902.04 - \$834.38
Benchmark Range 9	9 - 9.9	Median cost - (1 x standard deviation)	\$834.37 - \$766.70
Benchmark Range 10	10	Median cost - (1.5 x standard deviation)	\$766.69 and below

This modification in our scoring methodology for cost measures aligns the assignment of achievement points for cost measures so that clinicians with costs near the measure's 50th percentile (median) do not receive a disproportionately low score. Our intended goal for this modification to the scoring methodology was to ensure that MIPS eligible clinicians who deliver care at an average cost near the median costs for all MIPS eligible clinicians attributed the measure receive scores at, or very close to, the performance threshold-derived score (89 FR 98442 and 98443). Additionally, this modification addressed MIPS eligible clinicians' concerns that cost measure scoring negatively impacts their final scores more than other performance categories, including disparate negative effects for MIPS eligible clinicians who are scored on the cost performance category compared to clinicians not scored on the cost performance category (89 FR 98443).

(iii) Modification to Scoring Methodology for Administrative Claims-Based Quality Measures in the Quality Performance Category Beginning With CY 2025 Performance Period/2027 MIPS Payment Year

Given the similarities between scoring cost measures and administrative claims-based quality measures, we proposed to modify the methodology for

scoring the administrative claims-based measures within the quality performance category beginning with the CY 2025 performance period/2027 MIPS payment year (90 FR 32762). The proposed administrative claims-based quality measure scoring methodology would be based on standard deviation, median, and an achievement point value that is derived from the performance threshold. Specifically, for a MIPS eligible clinician whose performance rate under an administrative claims-based measure would be equal to the median performance rate for all MIPS eligible clinicians that are scored on that measure, we would assign an achievement point value equal to 10 percent of the performance threshold. For example, for the CY 2026 performance period/2028 MIPS payment year, the median would have an achievement point value of 7.5, based on a performance threshold of 75 points as finalized in section IV.B.2.b.(2) of this final rule. For each administrative claims-based quality measure, the cut-offs for benchmark ranges would be calculated based on standard deviations from the median.

The benchmark ranges, the median, and the performance threshold-derived achievement point values aligned with the median would be dynamic and responsive to changes in performance rates assessed by administrative claims-

based quality measures and performance thresholds for each CY performance period/MIPS payment year. The performance threshold-derived point values could change based on the performance threshold established for each performance period/MIPS payment year. The standard deviations from the median used to determine cutoffs for benchmark ranges for each year would be reviewed for any necessary updates on an annual basis based on performance across MIPS eligible clinicians and the performance threshold established for the performance period/MIPS payment year. We would perform analyses when the performance threshold changes to set the benchmark ranges. To determine the benchmark ranges, we will adhere to the following principles: (1) center the majority of performance rates around the performance threshold-derived point value; (2) determine benchmark ranges according to the statistical distribution curve of the performance rate; and (3) distribution of achievement points for administrative claims-based quality measures should be reflective of overall program performance. We refer readers to Table C-14 for an example of how the proposed administrative claims-based quality measure scoring methodology could be implemented for a specific quality measure when the performance threshold is set to 75 points.

TABLE C-14: EXAMPLE OF IMPLEMENTATION OF THE SCORING METHODOLOGY FOR ASSIGNMENT OF ACHIEVEMENT POINTS FOR PERFORMANCE ON THE RISK-STANDARDIZED ACUTE CARDIOVASCULAR-RATED HOSPITAL ADMISSION RATES FOR PATIENTS WITH HEART FAILURE UNDER THE MERIT-BASED INCENTIVE PAYMENT SYSTEM ADMINISTRATIVE CLAIMS-BASED QUALITY MEASURE

Benchmark Range	Points	Methodology for Bottom of Benchmark Range	Example Benchmark Ranges (Performance Rate)
Benchmark Range 1	1 - 1.9	Median Performance Rate + (2.75 x standard deviation)	81.77-80.69
Benchmark Range 2	2 - 2.9	Median Performance Rate + (2.5 x standard deviation)	80.68-79.59
Benchmark Range 3	3 - 3.9	Median Performance Rate + (2.25 x standard deviation)	79.58-78.49
Benchmark Range 4	4 - 4.9	Median Performance Rate + (2 x standard deviation)	78.48-76.30
Benchmark Range 5	5 - 5.9	Median Performance Rate + (1.5 x standard deviation)	76.29-74.10
Benchmark Range 6	6 - 6.9	Median Performance Rate + (1 standard deviation)	74.69-71.92
Benchmark Range 7	7 - 7.9	Median Performance Rate + (0.5 x standard deviation)	71.91-67.53
Benchmark Range 8	8 - 8.9	Median Performance Rate + (0.5 x standard deviation)	67.52-65.34
Benchmark Range 9	9 - 9.9	Median Performance Rate + (1 x standard deviation)	65.33-63.15
Benchmark Range 10	10	Median Performance Rate + (1.5 x standard deviation)	63.14 and below

Continuing with the Risk-standardized Acute Cardiovascular-rated Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System

administrative claims-based quality measure example, now presented in Table C-14 as an example of implementation of the proposed scoring methodology, the median (50th

percentile) performance rate would remain 69.71. Under the proposed scoring methodology, for the CY 2025 performance period/2027 MIPS payment year, a MIPS eligible clinician

with a performance rate equal to the median performance rate of all MIPS eligible clinicians scored on that measure would receive 7.5 achievement points out of 10 possible achievement points, which falls within the Benchmark Range 7 in Table C–I4.

Using the same example as previously presented in section IV.B.1.a.(2)(b)(i) of this final rule, we would apply the proposed scoring benchmark methodology as shown in Table C–I4 to a MIPS eligible clinician with a performance rate for this measure that is 73.82 (a rate of 4.11 above the median rate). Based on the analysis of data in this example, the standard deviation for the example administrative claims-based quality measure would be 4.38. This value for the standard deviation would then be used to calculate the benchmark ranges in Table 69 by plugging in this value for the standard deviation for each benchmark range. For example, “ $69.71 + (1 \times 4.38)$ ” would be calculated for “Median performance rate + (1 standard deviation)” for the bottom of Benchmark range 6. As shown with the example in Table C–I4, under our proposed scoring methodology, the MIPS eligible clinician’s average performance rate of 73.82 percent would fall within Benchmark Range 6 for the example administrative claims-based quality measure, for which the MIPS eligible clinician may receive between 6.0 and 6.9 achievement points.

In alignment with the cost measure scoring methodology finalized last year (89 FR 98563), this proposed scoring methodology for administrative claims-based quality measures would be based on standard deviation, median, and an achievement point value derived from the performance threshold. For each administrative claims-based quality measure, standard deviations would be used to calculate the benchmark ranges which are then used to determine the measure scores for each MIPS eligible clinician scored on that measure based on their measure performance rate.

Under our proposal to modify the administrative claims-based quality measure scoring methodology for individual measures, we would continue to use our established formula to assign partial achievement points:

Benchmark Range # + [(performance rate – bottom of benchmark range) / (top of benchmark range – bottom of benchmark range)] = Administrative Claims-based Quality Measure Achievement Points.

As a result, using the example shown in Table C–I4, under our proposed administrative claims-based scoring methodology, the MIPS clinician would

receive 6.12 quality measure achievement points ($6 + [(73.82 - 74.09) / (71.92 - 74.09)] = 6.12$). The assignment of 6.12 achievement points under the proposed administrative claims-based quality measure scoring methodology would be closer to the performance threshold equivalent of 7.5 than the assignment of 2.83 achievement points under the current scoring methodology, as discussed in our previous example in section IV.B.1.a.(2)(b)(i) of this final rule.

This proposed modification in our scoring methodology for administrative claims-based quality measures would align the assignment of achievement points for such measures so that clinicians with performance rates near the measure’s 50th percentile (median) would not receive a disproportionately low score. Based on our analysis utilizing data from the CY 2024 performance period/2026 MIPS payment year, this proposed methodology would increase the mean quality performance category score from 76.75 out of 100 to 80.42 out of 100 (an increase of 3.67 points). Further, this proposed scoring methodology would increase the means for each administrative claims-based quality measure score by amounts ranging from 1.46 to 1.96 points. For example, the mean measure score for the Risk-Standardized Acute Cardiovascular-Related Hospital Admission Rates for Patients with Heart Failure under the Merit-based Incentive Payment System administrative claims-based quality measure would increase from 5.59 points out of 10 to 7.05 points out of 10. Our analyses showed that, under the proposed methodology, the mean final score would increase by 1.63 points for MIPS eligible clinicians assessed on at least one administrative claims-based quality measure and receiving a quality performance category score.

Specifically, our analyses support the intended goal for the proposed modification to the scoring methodology: MIPS eligible clinicians who perform near the median performance rate for all MIPS eligible clinicians scored on the administrative claims-based measure would receive scores at, or very close to, the performance threshold-derived score. Additionally, the proposed modification would align the scoring methodologies for administrative claims-based measures in the quality and cost performance categories.

We also proposed to modify § 414.1380(b)(1)(i) to specify that, except as specified otherwise under paragraph (b)(1)(ii), the number of measure

achievement points received for each such measure is determined based on the applicable benchmark decile category and the percentile distribution. We did not propose any modifications to the remainder of the language currently at § 414.1380(b)(1)(i).

We also proposed to codify benchmarking methodology at § 414.1380(b)(1)(ii)(D) to specify that beginning with the CY 2025 performance period/2027 MIPS payment year, for each administrative claims-based quality measure, CMS determines 10 benchmark ranges based on the median performance rate of all MIPS eligible clinicians scored on the measure, plus or minus standard deviations and that CMS awards achievement points based on which benchmark range a MIPS eligible clinician’s performance rate for an administrative claims-based quality measure corresponds. We also proposed to codify at § 414.1380(b)(1)(ii)(D) that, beginning with the CY 2025 performance period/2027 MIPS payment year, CMS awards achievement points equivalent to 10 percent of the performance threshold for a MIPS eligible clinician whose performance rate is equal to the median performance for all MIPS eligible clinicians scored on the measure.

We solicited comments on our proposals to modify our scoring methodology for administrative claims-based quality measures. We also solicited comments on our proposal to codify the scoring methodology for administrative claims-based quality measures in the quality performance category at § 414.1380(b)(1)(i) and (b)(1)(ii)(D).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposal to modify the benchmarking methodology for administrative claims-based quality measures to align with the benchmarking methodology used for cost measures, starting with the CY 2025 performance period/2027 MIPS payment year. Many commenters believe that the proposed methodology change would enhance fairness, promote a more consistent, equitable, and statistically sound scoring process, and improve clinician confidence in the MIPS program. Specifically, several commenters supported the proposal to assign an achievement point value equal to 10 percent of the performance threshold for clinicians whose performance rate equals the median and stated their belief that this adjustment

better reflects average performance and helps ensure that clinicians are not penalized for falling near the statistical center of the distribution. Several commenters noted that the current decile-based benchmark methodology for administrative claims-based measures may result in disproportionately lower scores compared to non-administrative-claims-based measures and noted their belief that this discrepancy undermines the fairness and consistency of MIPS scoring and may inadvertently penalize clinicians—particularly small practice and primary care physicians—who rely on administrative claims-based measures due to limited reporting options or practice infrastructure. A commenter expressed their belief that the proposed approach better reflects how most clinicians are performing, without giving an unfair boost to top outliers.

Response: We thank the commenters for their support.

Comment: Several commenters suggested that CMS apply the proposed benchmarking methodology to all quality measures, not only administrative claims measures. A few commenters believe that the proposed methodology would be an improvement over the existing decile-based quality measure benchmark methodology, as the points assigned to the median performance level from the benchmark period would be 10 percent of the MIPS performance threshold, not 6.0 as it is today. A commenter believes that under the decile-based methodology, if most clinicians' scores differ only slightly from each other, then a small difference in a clinician's score could lead to a large penalty. A few commenters also believe that the proposed methodology, if applied to all quality measures, would encourage clinicians to report more specialty or condition-specific measures and would reduce the complexity and administrative burden clinicians currently face in trying to determine why they received a high or low MIPS quality score as clinicians would be scored by a singular methodology in MIPS. A few commenters did not believe that it is necessary to use a different approach to benchmark non-administrative claims-based measures.

Response: We acknowledge the commenters' recommendation to implement the proposed modified policy for all quality measures in MIPS. In the CY 2017 QPP final rule (81 FR 77286), we finalized that measures submitted by MIPS eligible clinicians are scored using a percentile distribution, separated by decile categories and that for each set of

benchmarks, we calculate the decile breaks for measure performance and assign points based on which benchmark decile range the MIPS eligible clinician's measure rate is between. (81 FR 77284).

Based on our analysis of quality measure scores for the CY 2022 performance period/2024 MIPS payment year, we observed substantially lower scores for the administrative claims-based quality measures than for the non-administrative claims-based quality measures. The average quality measure median score for non-administrative claims-based quality measures was above 8 points, while the average quality measure median score for the administrative claims-based quality measures was about 5.5 points. MIPS eligible clinicians who perform near the median performance rate for all MIPS eligible clinicians scored on non-administrative claims-based measure are already receiving scores at or above the performance threshold-derived score. We wanted to ensure that MIPS eligible clinicians who perform near the median performance rate for all MIPS eligible clinicians scored on the administrative claims-based measure would receive scores at, or very close to, the performance threshold-derived score.

The differences in scores between administrative claims-based measures and non-administrative claims based measures, including their medians, led us to propose to modify the methodology for scoring the administrative claims-based measures within the quality performance category beginning with the CY 2025 performance period/2027 MIPS payment year, basing the methodology on standard deviation, median, and an achievement point value that is derived from the performance threshold. Currently, we do not believe that applying the proposed benchmarking methodology to all quality measures is appropriate. While we do acknowledge the complexity with using different benchmarking policies for administrative claims-based measures and non-administrative claims-based quality measures, we note that clinicians would not need to do anything differently under this new scoring methodology since we automatically score administrative claims-based quality measures using claims data. Additionally, the proposed methodology aligns with the benchmarking methodology used for cost measures, which are also administrative claims-based measures and automatically calculated by CMS. We will continue to monitor the benchmarking methodologies for quality

measures to determine if additional proposals are warranted in future years.

Comment: Several commenters suggested that CMS be transparent about how benchmark ranges and standard deviations are set each year, establish specific benchmark range thresholds, determined by standard deviations from the median, in regulation, and solicit formal comments before changing the thresholds. A commenter expressed concern regarding CMS adjusting the ranges to increase the penalties for low scores without adequately assessing the impact of those changes. A commenter requested that CMS provide clear guidance and education to help clinicians understand how their scores are derived under the new methodology and provide frequent and timely feedback to clinicians on their performance throughout the measurement year to allow them time to improve. A commenter recommended that CMS provide additional transparency by publishing illustrative data showing how 2024 performance would have been scored under the proposed benchmarking approach.

Response: We thank the commenters for their recommendations. The methodology for determining the benchmark ranges was described in the CY 2026 PFS proposed rule (90 FR 32760). As proposed, the benchmark ranges, the median, and the performance threshold-derived achievement point values aligned with the median would be dynamic and responsive to changes in performance rates assessed by administrative claims-based quality measures and performance thresholds for each CY performance period/MIPS payment year. Additionally, as performance thresholds are established for each performance period/MIPS payment years, the performance threshold-derived point values could also change. At this time, we review the standard deviations from the median used to determine cutoffs for benchmark ranges for each administrative claims-based quality measure for each year based on measure performance across MIPS eligible clinicians and the performance threshold established for the performance period/MIPS payment year. We perform analyses when the performance threshold changes to set the benchmark ranges. To determine the benchmark ranges, we adhere to the following principles: (1) the center of performance rates aligns with the performance threshold-derived point value; (2) determination of benchmark ranges according to the statistical distribution curve of the performance rate; and (3) distribution of achievement

points for administrative claims-based quality measures in alignment with and within expected ranges seen in the quality performance category overall. Any change to the cutoffs for benchmark ranges is based on performance and the impact of these changes would be analyzed. The benchmark ranges, once available, are posted at <https://qpp.cms.gov/benchmarks>.

We will continue to monitor the impact of these scoring changes on MIPS eligible clinicians and consider making available additional data. Additionally, we plan to make available additional examples and educational materials to inform MIPS eligible clinicians about the new administrative claim-based quality measure benchmarking methodology modifications and the anticipated impact. We will consider this feedback as we continue to work to improve the quality performance category overall.

Regarding the commenters' requests for frequent and timely feedback for MIPS eligible clinicians on their performance, we currently provide annual MIPS Performance Feedback that includes information on MIPS eligible clinicians' performance for the previous performance period. This feedback typically becomes available during the summer in between the performance period and the MIPS payment year, which is as soon as feasible. We provide these reports on an annual basis, as we calculate administrative claims-based quality measures following the end of the performance period. This is because MIPS administrative claim-based quality measure scores are calculated using benchmarks that are derived from data from all MIPS eligible clinicians, groups, and virtual groups that met the measure's case minimum for that performance period. MIPS eligible clinicians have episodes of care that begin and end at various times throughout the performance period, so to calculate an accurate comparison across clinicians, CMS has historically calculated all scores following the end of the performance period. Calculating the MIPS cost measures during the performance period may provide an incomplete indication of how a MIPS eligible clinician is performing. We are continuing to work towards providing meaningful and timely information on quality measures generally and we recognize the importance of providing this information for measures implemented in MIPS.

Comment: A few commenters suggested that CMS explore the use of prior year data when benchmarking administrative claims-based measures, like used for setting benchmarks for

measures derived from EHRs or registries since, unlike cost measures, quality performance does not have "inflation" which would preclude the use of prior year data from setting administrative claims-based quality measure benchmarks.

Response: We appreciate the commenters' suggestions. However, we continue to believe that since administrative claims-based quality measures require no data submission, using performance period benchmarks allows for the calculation of more current and representative measure scores that better track clinician performance and progress over time. While quality performance does not have inflation, we continue to believe that using a performance period benchmark to score these measures, instead of a historical benchmark based on prior year data, allows for measure scores that are more reflective of current performance.

Comment: A commenter requested that CMS monitor for any unintended effects, like reduced score variability or less distinction between high and low performers, and readjust the methodology, if needed. A commenter urged CMS to ensure that the revised methodology does not inadvertently disadvantage small or rural practices with limited patient volume and to monitor the impact of the new scoring approach on measure reliability and clinician engagement. A commenter encouraged CMS to continue refining the benchmarking methodologies to ensure balanced assessments across practice sizes and specialties.

Response: We thank the commenters for their recommendation to monitor the impact of the revised methodology and to readjust, if needed. At this time, our analyses support our intended goal for the proposed modification to the scoring methodology: MIPS eligible clinicians with administrative claims-based quality measure performance near the median for all MIPS eligible clinicians attributed the measure would receive scores at, or very close to, the performance threshold-derived score. We will continue to monitor the impact of these scoring changes on MIPS eligible clinicians on performance, measure reliability, and clinician engagement. We will also monitor the impact of these changes across practice sizes, rurality, and specialties.

After consideration of public comments, we are finalizing our proposals, as proposed, to modify our scoring methodology for administrative claims-based quality measures beginning with the CY 2025 performance period/2027 MIPS

payment year and codify the scoring methodology for administrative claims-based quality measures in the quality performance category at § 414.1380(b)(1)(i) and (b)(1)(ii)(D).

2. MIPS Payment Adjustments

a. Background

Section 1848(q)(6)(A) of the Act requires that we specify a MIPS payment adjustment factor for each MIPS eligible clinician for a year. This MIPS payment adjustment factor is a percentage determined by comparing the MIPS eligible clinician's final score for the given year to the performance threshold we established for that same year in accordance with section 1848(q)(6)(D) of the Act. The MIPS payment adjustment factors specified for a year must result in differential payments such that MIPS eligible clinicians with final scores above the performance threshold receive a positive MIPS payment adjustment factor, those with final scores at the performance threshold receive a neutral MIPS payment adjustment factor, and those with final scores below the performance threshold receive a negative MIPS payment adjustment factor.

For previously established policies regarding our determination and application of MIPS payment adjustment factors to each MIPS eligible clinician, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77329 through 77343), CY 2018 Quality Payment Program final rule (82 FR 53785 through 53799), CY 2019 PFS final rule (83 FR 59878 through 59894), CY 2020 PFS final rule (84 FR 63031 through 63045), CY 2021 PFS final rule (85 FR 84917 through 84926), CY 2022 PFS final rule (86 FR 65527 through 65537), CY 2023 PFS final rule (87 FR 70096 through 70102), CY 2024 PFS final rule (88 FR 79373 through 79380), and CY 2025 PFS final rule (89 FR 98448 through 98455).

b. Establishing the Performance Threshold

(1) Statutory Authority and Background

As discussed in this section of this final rule, to determine a MIPS payment adjustment factor for each MIPS eligible clinician for a year, we must compare the MIPS eligible clinician's final score for the given year to the performance threshold we established for that same year in accordance with section 1848(q)(6)(D) of the Act. Section 1848(q)(6)(D)(i) of the Act requires that we compute the performance threshold such that it is the mean or median (as selected by the Secretary) of the final

scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. Section 1848(q)(6)(D)(i) of the Act also provides that the Secretary may reassess the selection of the mean or median every 3 years.

Sections 1848(q)(6)(D)(ii) through (iv) of the Act provided special rules, applicable only for certain initial years of MIPS, for our computation and application of the performance threshold for our determination of MIPS payment adjustment factors. These special rules are no longer applicable for establishing the performance threshold beginning with the CY 2022 performance period/2024 MIPS payment year. We refer readers to the CY 2024 PFS proposed rule (88 FR 52596) for further information on these previously applicable requirements as they explain our prior computations of the performance threshold.

In the CY 2025 PFS final rule (89 FR 98448 through 98451), we selected the mean as the methodology for determining the performance threshold for the CY 2025 performance period/2027 MIPS payment year through CY 2027 performance period/2029 MIPS payment year. We codified this policy in our regulation at § 414.1405(g)(2), providing that, for each of the 2027, 2028, and 2029 MIPS payment years, the performance threshold would be the mean of the final scores for all MIPS eligible clinicians from a prior period as specified at § 414.1405(b)(10) (89 FR 98448 through 98451; 89 FR 98564). In the CY 2025 PFS final rule, we established the performance threshold for the CY 2025 performance period/2027 MIPS payment year by calculating the mean of the final scores for all MIPS eligible clinicians using CY 2017 performance period/2019 MIPS payment year data (89 FR 98451 through 98455). We also codified this

performance threshold at § 414.1405(b)(10)(i) (89 FR 98451 through 98455; 89 FR 98564).

We note that, in previous years, we have established the performance threshold for each performance period during the rulemaking cycle immediately preceding the performance period. However, section 1848(q)(6)(D)(i) of the Act does not specify when the Secretary shall compute a performance threshold that would apply for each MIPS payment year. Instead, section 1848(q)(6)(D)(i) of the Act provides the Secretary shall compute a performance threshold for each MIPS payment year based on the mean or median (selected once every 3 years) of the MIPS final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. We have determined that the performance threshold may be established with respect to the applicable year at any time as long as the performance threshold continues to be based on a prior period specified by the Secretary. In other words, we could establish a performance threshold that would apply to multiple MIPS payment years. We note that we may not always establish the performance threshold for multiple MIPS payment years, but we will consider this as an option as we continue to ensure that the performance threshold is truly reflective of MIPS eligible clinicians' performance in MIPS. Due to several large programmatic changes (such as, transitioning to reporting MVPs and digital quality measures and potential introduction of "Core Elements" for selection of quality measures in MVPs) discussed further in sections IV.A.3.b. and IV.A.4.c. of this final rule, establishing the same performance threshold for the 2028, 2029, and 2030 payment years would allow us to provide stability and predictability to

MIPS eligible clinicians as they adapt to and implement our policy changes for MIPS.

As further discussed under section IV.B.2.b.(2) of this final rule, we proposed to continue using the mean of the final scores for all MIPS eligible clinicians from the CY 2017 performance period/2019 MIPS payment year to establish the performance threshold as 75 points for the CY 2026 performance period/2028 MIPS payment year through the CY 2028 performance period/2030 MIPS payment year. We recognized that our proposal to establish the performance threshold for MIPS payment years 2028, 2029, and 2030 extends beyond the period for which we have established the mean methodology to determine the performance threshold. However, given the current statutory requirement, which allows us to reassess the methodology every 3 years, there is no requirement that prevents us from setting the methodology for a longer time frame. We plan to reassess the methodology in future rulemaking.

For further information on our current performance threshold policies, we refer readers to the CY 2017 Quality Payment Program final rule (81 FR 77333 through 77338), CY 2018 Quality Payment Program final rule (82 FR 53787 through 53792), CY 2019 PFS final rule (83 FR 59879 through 59883), CY 2020 PFS final rule (84 FR 63031 through 63037), CY 2021 PFS final rule (85 FR 84919 through 84923), CY 2022 PFS final rule (86 FR 65527 through 65532), CY 2023 PFS final rule (87 FR 70096 through 70100), CY 2024 PFS final rule (88 FR 79373 through 79380), and CY 2025 PFS final rule (89 FR 98448 through 98455).

We codified the performance thresholds for each of the first 9 years of MIPS at § 414.1405(b)(4) through (10). These performance thresholds are shown in Table C–J1.

TABLE C-J1: PERFORMANCE THRESHOLDS FOR THE CY 2017 PERFORMANCE PERIOD/2019 MIPS PAYMENT YEAR THROUGH THE CY 2025 PERFORMANCE PERIOD/2027 MIPS PAYMENT YEARS

MIPS Performance Period	2017 MIPS Performance Period	2018 MIPS Performance Period	2019 MIPS Performance Period	2020 MIPS Performance Period	2021 MIPS Performance Period	2022 MIPS Performance Period	2023 MIPS Performance Period	2024 MIPS Performance Period	2025 MIPS Performance Period
Year of MIPS Performance Threshold Change from prior year	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	Year 7	Year 8	Year 9
	1 points	15 points	30 points	45 points	60 points	75 points	75 points	75 points	75 points
	N/A	12 points	15 points	15 points	15 points	15 points	0 points	15 points	0 points

(2) Performance Threshold for the CY 2026 Performance Period/2028 MIPS Payment Year Through the CY 2028 Performance Period/2030 MIPS Payment Year

In the CY 2026 PFS proposed rule, we proposed to use the mean of 75 points

from the CY 2017 performance period/2019 MIPS payment year as it continues to be the most appropriate for establishing the performance threshold for the 2028, 2029, and 2030 MIPS payment years for several reasons (90 FR 32763 through 32765). As further described in this section of this final

rule, these reasons include providing stability and predictability for MIPS eligible clinicians, allowing MIPS eligible clinicians to gain experience with MVPs and other new MIPS policies, and continuing to support solo, small, and rural practices.

TABLE C-J2: POSSIBLE VALUES FOR THE PERFORMANCE THRESHOLD FOR THE 2028, 2029, AND 2030 MIPS PAYMENT YEARS

MIPS Payment Years	2019 MIPS Payment Year	2020 MIPS Payment Year	2021 MIPS Payment Year	2022 MIPS Payment Year	2023 MIPS Payment Year	2024 MIPS Payment Year	2025 MIPS Payment Year
Mean	74.65	87.00	85.65	89.47	89.22	82.71	83.18

At the time of the CY 2026 proposed rule, we had data available on MIPS eligible clinicians' final scores from the CY 2017 performance period/2019 MIPS payment year through CY 2023 performance period/2025 MIPS payment year. As shown in Table C-J2, we calculated the mean values of MIPS eligible clinicians' final scores for each year from the CY 2017 performance period/2019 MIPS payment year through the CY 2023 performance period/2025 MIPS payment year. As discussed in the CY 2026 proposed rule, we did not have MIPS eligible clinicians' final scores available from the CY 2024 performance period/2026 MIPS payment year and, therefore, the mean final score for the CY 2024 performance period/2026 MIPS payment year was not included for consideration as a potential performance threshold value for the 2028, 2029, and 2030 MIPS payment

years. As discussed further in this section of this final rule, we believe that the mean of 75 points from the CY 2017 performance period/CY 2019 MIPS payment year continues to be the most appropriate option that would provide stability and predictability for MIPS eligible clinicians while still encouraging high quality of care.

First, when looking at the data for purposes of establishing a performance threshold for the 2028 through 2030 MIPS payment years, we did not consider any data from the CY 2019 performance period/2021 MIPS payment year through the CY 2021 performance period/2023 MIPS payment year, as they were impacted by the Public Health Emergency (PHE) for the Coronavirus Disease 2019 (COVID-19), which we discussed in further detail in the CY 2025 PFS final rule (89 FR 98451 through 98453). The geographic differences of COVID-19

incidence rates along with different impacts resulting from Federal, State, and local laws and policy changes implemented in response to the PHE for COVID-19 may have affected which MIPS eligible clinicians were able to submit data for the CY 2019 performance period. This may have led to final scores that were not wholly representative of performance for all MIPS eligible clinicians. Also, for the CY 2020 performance period/2022 MIPS payment year and the CY 2021 performance period/2023 MIPS payment year, we extensively applied our reweighting policies, described at § 414.1380(c)(2)(i), to MIPS eligible clinicians nationwide due to the PHE for COVID-19.

Inherently, these actions, particularly re-weighting the performance categories, skewed the final scores from those years such that they are not an appropriate indicator for future performance of

MIPS eligible clinicians. Specifically, we are concerned that the final scores during the PHE for COVID–19 reflect the performance of only MIPS eligible clinicians that may have been less impacted by the pandemic, and do not accurately represent MIPS eligible clinician performance overall during this period. Since the Federal PHE for COVID–19 expired on May 11, 2023,⁴⁶⁹ many of the flexibilities and exceptions applied during the PHE for COVID–19, such as the extreme and uncontrollable circumstances reweighting policies described at § 414.1380(c)(2)(i), are no longer being applied in the context of the pandemic. In the interest of establishing a performance threshold using data that is reflective of clinician performance that is not affected by the PHE for COVID–19, continuing to use data from the CY 2017 performance period/2019 MIPS payment year to establish a performance threshold for the 2028, 2029 and 2030 MIPS payment years will allow us time to gather additional data that is more reflective of clinician performance outside of the PHE for COVID–19. We acknowledge more recent data will be available between CY 2026 performance period/2028 MIPS payment year through CY 2028 performance period/2030 MIPS payment year; however, with the various programmatic changes discussed in this section of the proposed rule, we aim to provide stability and predictability to MIPS eligible clinicians as they transition, implement, and adapt to these changes.

As new MVPs and their related changes are being introduced into the program, and as more MIPS eligible clinicians transition to MVP reporting, we want to provide some stability for MIPS eligible clinicians and allow time for more MVP data to become available. Specifically, in section IV.A.3. of this final rule, we discuss several policies to support our goal of phasing out traditional MIPS and fully transitioning to MVP reporting. As stated in the CY 2025 PFS proposed rule, we discussed that we anticipate to fully transition to MVPs by the CY 2029 performance period/2031 MIPS payment year (89 FR 62012). In section IV.A.3.b. of this final rule, we solicited comments in an RFI for a potential policy wherein MVP Participants would select one quality measure from a subset of quality measures in each MVP, referred to as “Core Elements” and MVP Participants would select the other 3 required quality measures and would still have to meet existing MVP reporting

requirements. We are considering proposing the Core Elements policy in the CY 2027 PFS proposed rule and proposing the policy for implementation prior to sunseting traditional MIPS. Further, as discussed in section IV.A.4.c. of this final rule, we aim to fully transition to a digital quality measure (dQM) landscape that promotes interoperability and increases the value of reporting quality measure data. As we continue to consider these potential policy changes over the next several years, we aim to provide consistency to MIPS eligible clinicians by maintaining the performance threshold at 75 points for the 2028, 2029, and 2030 MIPS payment years. Meanwhile, we will continue to evaluate how the performance threshold can best reflect clinicians’ performance in MIPS.

While the CY 2018 performance period/2020 MIPS payment year’s data predate the PHE for COVID–19, we continue to be concerned that an increase in the performance threshold will inadvertently harm certain clinician types, specifically small practices and solo practitioners. As we stated in the CY 2024 PFS final rule, we want to consider the impacts of the performance threshold and its related policies on small practices (88 FR 79377). As discussed in the CY 2025 PFS final rule, we have received feedback that many small practices and solo practitioners face challenges in their ability to participate in MIPS, including the costs to implement and maintain certified electronic health record (EHR) technology (CEHRT), staff and training costs, and limited staff capacity to manage the complexity of the program (89 FR 98451 through 98453). As discussed in the CY 2025 PFS final rule, we also learned that increases in the performance threshold add administrative and financial burden for small practices that discourage their participation in MIPS (89 FR 98451 through 98454).

Further, in a survey distributed during the summer of CY 2024, we learned that, of the small practices and solo practitioners that participated in the survey, the three major barriers for submitting MIPS data included: the burden of data collection and submission, lack of administrative support, and high costs associated with participating in the program. The small practices and solo practitioners that responded to the survey indicated that simplified reporting requirements, free technical assistance, and better informational resources may improve their participation in MIPS.

Though we have several policies within MIPS that continue to support

small and solo practices, including scoring and reweighting policies, we are interested in understanding how to best support small practices and enhance their ability to successfully participate in MIPS as MIPS continues to evolve (89 FR 98451 through 98453). As such, we continue to perform qualitative analysis through engagement with small practices, third party intermediaries, and other interested parties to gather information about the experience of small practices participating in the program. Maintaining a performance threshold of 75 points for the 2028, 2029, and 2030 MIPS payment years would allow us to continue developing strategies to reduce barriers for small practices and solo practitioners participating in MIPS.

Finally, as discussed in section IV.B.1.a.(2) of this final rule, we are continuing to assess how to best address our topped-out scoring policy within the quality performance category. Historically, there have been concerns that certain specialties only have topped out measures to report, which would make it difficult for them to meet an increased performance threshold even if they perform very well on those measures. Hence, as we continue to evaluate these programs scoring policies, establishing the performance threshold at 75 points will avoid inadvertently harming these clinician types.

Alternatively, in the CY 2026 PFS proposed rule (90 FR 32765), we considered maintaining the performance threshold at 75 points for either: (1) the CY 2026 performance period/2028 MIPS payment year and CY 2027 performance period/2029 MIPS payment year (excluding the CY 2028 performance period/2030 MIPS payment year, which is currently proposed); or (2) only the CY 2026 performance period/2028 MIPS payment year. We also considered raising the performance threshold. However, as previously discussed, based on the data that we have available, we believe that our proposal to set the performance threshold at 75 points for the 2028, 2029, and 2030 payment years provides stability as MIPS enters a period of transition agnostic of our discretion to reassess the performance threshold methodology for the CY 2028 performance period/2030 MIPS payment year. We will reassess the use of the median or mean methodology in future rulemaking in accordance with section 1848(q)(6)(D)(i) of the Act. We refer readers to section IV.B.2.b.(3) of this final rule for Request for Information (RFI) on Future MIPS Performance Thresholds for more discussion on establishing the

⁴⁶⁹ <https://www.hhs.gov/coronavirus/covid-19-public-health-emergency/index.html>.

performance threshold for single versus multiple years and potentially increasing the performance threshold in future rulemaking.

We refer readers to the section VII.I.5.d.(4)(c) of this final rule for an estimate of the percent of MIPS eligible clinicians that would receive a negative payment adjustment for the CY 2026 performance period/2028 MIPS payment year if the performance threshold is set at 75 points as proposed.

Maintaining a performance threshold of 75 points allows additional time for more MVP data to become available, continues to provide opportunities for clinicians to become familiar with the transition to MVPs, and ensures that we continue to support certain clinician types, such as small practices, solo practitioners, rural providers, and clinicians who have several topped out measures. Therefore, we proposed to establish a performance threshold of 75 points for the 2028, 2029, and 2030 MIPS payment years based on the mean of MIPS eligible clinicians' final scores from the CY 2017 performance period/2019 MIPS payment year. We also proposed to codify this performance threshold by adding § 414.1405(b)(10)(ii).

We solicited public comments on our proposal to establish a performance threshold of 75 points for the 2028, 2029, and 2030 MIPS payment years based on the mean of MIPS eligible clinicians' final scores from the CY 2017 performance period/2019 MIPS payment year. We also solicited comments on our proposal to codify this performance threshold by adding § 414.1405(b)(10)(ii).

We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported the proposal to continue using the mean of 75 points from CY 2017 performance period/2019 MIPS payment year for the CY 2026 performance period/2028 MIPS payment year. Many commenters agreed that this proposal would provide stability and predictability for clinicians as they transition to MVPs and adjust to the cost performance category changes. Some suggested that it would also alleviate the burden on smaller practices as they do not have adequate resources to meet an increased performance threshold. A few commenters shared their belief that this would help alleviate the burden on physicians as they deal with inflation. At least one commenter appreciated the stability as

they work on developing additional quality measures for their specialty.

Response: We thank the commenters for their support.

Comment: A commenter stated that they do not support the performance threshold of 75 for the CY 2026 through 2028 performance periods/CY 2028 through 2030 MIPS payment years due to concerns that the CY 2017 performance/2019 MIPS payment year data being used to establish the mean is too old. More specifically, the comment stated that MIPS participation in 2017 was significantly lower than today and using data from the CY 2017 performance/2019 MIPS payment year is not necessarily reflective of the program today.

Response: We thank the commenter for their feedback. We acknowledge that we want to utilize the data that is most reflective of MIPS eligible clinicians' performance for the purpose of establishing the performance threshold. However, as noted, for the 2028 through 2030 MIPS payment years, we did not consider any data from the CY 2019 performance period/2021 MIPS payment year through the CY 2021 performance period/2023 MIPS payment year, as they were impacted by the PHE for COVID-19 and related policies. Additionally, while we have CY 2018 performance period/2020 MIPS payment year data available which predates the PHE for COVID-19, we note that the mean of the performance period data from that time would be 87 points and we continue to be concerned that an increase in the performance threshold will inadvertently harm certain clinician types, specifically small practices and solo practitioners. Hence, in the interest of establishing a performance threshold using data that is reflective of clinician performance that is not affected by the-PHE for COVID-19, we continue to use data from the CY 2017 performance period/2019 MIPS payment year to establish a performance threshold for the 2028, 2029 and 2030 MIPS payment years. This will also allow time to continue to gather additional data that is more reflective of clinician performance outside of the PHE for COVID-19.

Comment: A commenter supported the proposal to continue using the mean of 75 points from CY 2017 performance period/2019 MIPS payment year for the CY 2026 performance period/2028 MIPS payment year but expressed concerns with small and rural practices and how they continue find it challenging to meet the performance threshold compared to larger group practices.

Response: We have several policies within MIPS that continue to support

small and rural practices, including bonus points (83 FR 59847 through 59850) and reweighting policies (86 FR 65521 through 65524), and opportunities to apply for hardships (81 FR 77240 through 77243). As we continue to conduct related analysis, we will continue to consider the impact of the performance threshold on small and rural practices.

Comment: A commenter expressed concerns that it was not within statutory limitations to establish the performance threshold for multiple years.

Response: We disagree. Section 1848(q)(6)(D)(i) of the Act provides the Secretary shall compute a performance threshold for each MIPS payment year based on the mean or median of the MIPS final scores for all MIPS eligible clinicians with respect to a prior period specified by the Secretary. We have determined that the performance threshold may be established with respect to the applicable year at any time if the performance threshold continues to be based on a prior period specified by the Secretary.

After consideration of public comments, we are finalizing as proposed to establish a performance threshold of 75 points for the 2028, 2029, and 2030 MIPS payment years based on the mean of MIPS eligible clinicians' final scores from the CY 2017 performance period/2019 MIPS payment year. We are also finalizing our proposal to codify this performance threshold by adding § 414.1405(b)(10)(ii).

(3) Request for Information on Future MIPS Performance Thresholds

As we consider the potential changes within MIPS while aiming to ensure that the performance threshold reflects clinician performance, we also requested public feedback on the following issues:

- Establishing the performance threshold for single versus multiple years (for example, 1, 2, or 3 years at a time) via rulemaking; and
- As we approach later years in MIPS, increasing the performance threshold based on data from a prior period which potentially would provide larger positive MIPS payment adjustments for MIPS eligible clinicians with MIPS final scores higher than such performance threshold.

We appreciate the feedback we received in response to this comment solicitation. We may consider this information to inform future rulemaking.

c. Example of Adjustment Factors

Figure C–J1 provides an illustrative example of how various final scores would be converted to a MIPS payment adjustment factor using the statutory formula and based on our proposed policies for the CY 2026 performance period/2028 MIPS payment year. In Figure C–J1, the performance threshold is set at 75 points, as we have proposed in section IV.B.2.b.(2) of this final rule.

For purposes of determining the maximum and minimum range of potential MIPS payment adjustment factors, section 1848(q)(6)(B) of the Act defines the applicable percentage as 9 percent for the CY 2026 performance period/2028 MIPS payment year. We calculate the MIPS payment adjustment factor using a linear sliding scale in accordance with section 1848(q)(6)(F)(i) of the Act. This linear sliding scale is calculated based on MIPS final scores from zero to 100, with zero being the lowest possible score which receives the negative applicable percentage and resulting in the lowest payment

adjustment, and 100 being the highest possible score which receives the highest positive applicable percentage and resulting in the highest payment adjustment.

However, there are two modifications to this linear sliding scale. First, as specified in section 1848(q)(6)(A)(iv)(II) of the Act, there is an exception for a final score between zero and one-fourth of the performance threshold (zero and 18.75 points based on the proposed performance threshold of 75 points for the CY 2026 performance period/2028 MIPS payment year). All MIPS eligible clinicians with a final score in this range will receive a negative MIPS payment adjustment factor equal to 9 percent (the applicable percentage). Second, the linear sliding scale for the positive MIPS payment adjustment factor is adjusted by the scaling factor, which cannot be higher than 3.0, as required by section 1848(q)(6)(F)(i) of the Act.

If the scaling factor is greater than zero and less than or equal to 1.0, then

the MIPS payment adjustment factor for a final score of 100 will be less than or equal to 9 percent (the applicable percentage). If the scaling factor is above 1.0 but is less than or equal to 3.0, then the MIPS payment adjustment factor for a final score of 100 will be greater than 9 percent. Only those MIPS eligible clinicians with a final score equal to 75 points (the performance threshold proposed for the CY 2026 performance period/2028 MIPS payment year) will receive a neutral MIPS payment adjustment.

Beginning with the CY 2023 performance period/2025 MIPS payment year, the additional MIPS payment adjustment for exceptional performance described in section 1848(q)(6)(C) of the Act is no longer available. For this reason, Figure 5 does not illustrate an additional adjustment factor for MIPS eligible clinicians with final scores at or above the additional performance threshold described in section 1848(q)(6)(D)(ii) of the Act.

FIGURE C-J1: ILLUSTRATIVE EXAMPLE OF MIPS PAYMENT ADJUSTMENT FACTORS BASED ON FINAL SCORES AND PERFORMANCE THRESHOLD FOR THE CY 2026 PERFORMANCE PERIOD/2028 MIPS PAYMENT YEAR

Note: The adjustment factor for final score values above the performance threshold is illustrative. For MIPS eligible clinicians with a final score of 100, the adjustment factor will be 9 percent times a scaling factor greater than zero and less than or equal to 3.0. The scaling factor is intended to ensure budget neutrality (BN) but cannot be higher than 3.0. This example is illustrative as the actual payment adjustments may vary based on the distribution of final scores for MIPS eligible clinicians.

Table C–J3 illustrates the changes in payment adjustment based on the final policies from the CY 2025 PFS final rule (89 FR 98448 through 98455) for the CY

2025 performance period/2027 MIPS payment year and the finalized policies for the CY 2026 performance period/2028 MIPS payment year, as well as the

applicable percent required by section 1848(q)(6)(B) of the Act.

**TABLE C-J3: ILLUSTRATION OF POINT SYSTEM AND ASSOCIATED ADJUSTMENTS
COMPARISON BETWEEN THE CY 2025 PERFORMANCE PERIOD/2027 MIPS PAYMENT
YEAR AND THE CY 2026 PERFORMANCE PERIOD/2028 MIPS PAYMENT YEAR**

2025 Performance Period Final Score Points	MIPS Adjustment for 2025 Performance Period	2026 Performance Period Final Score Points	MIPS Adjustment for 2026 Performance Period
0-0-18.75	Negative 9%	0-0-18.75	Negative 9%
18.76-74.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale	18.76-74.99	Negative MIPS payment adjustment greater than negative 9% and less than 0% on a linear sliding scale
75.00	0% adjustment	75.00	0% adjustment
75.01-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from greater than 0% to 9% for scores from 75.01 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.11 to preserve budget neutrality.	75.01-100	Positive MIPS payment adjustment greater than 0% on a linear sliding scale. The linear sliding scale ranges from greater than 0% to 6% for scores from 75.01 to 100.00. This sliding scale is multiplied by a scaling factor greater than zero but not exceeding 3.11 to preserve budget neutrality.

3. Review and Correction of MIPS Final Score—Feedback and Information To Improve Performance

Under section 1848(q)(12)(A)(i) of the Act, we are required to provide MIPS eligible clinicians with timely confidential feedback on their performance under the quality and cost performance categories beginning July 1, 2017, and we have discretion to provide such feedback regarding the improvement activities and Promoting Interoperability performance categories. In the CY 2018 Quality Payment Program final rule, we finalized that on an annual basis, beginning July 1, 2018, performance feedback will be provided to MIPS eligible clinicians and groups for the quality and cost performance categories, and if technically feasible, for the improvement activities and advancing care information (now called the Promoting Interoperability) performance categories (82 FR 53799 through 53801).

We made performance feedback available for the CY 2019 performance period/2021 MIPS payment year on August 5, 2020; for the CY 2020 performance period/2022 MIPS payment year on August 2 and

September 27, 2021; for the CY 2021 performance period/2023 MIPS payment year on August 22, 2022; for the CY 2022 performance period/2024 MIPS payment year on August 10, 2023; for the CY 2023 performance period/2025 MIPS payment year on August 12, 2024, and for the CY 2024 performance period/2026 MIPS payment year on September 9, 2025. We direct readers to qpp.cms.gov for more information.

4. Third Party Intermediaries General Requirements

a. Requirements for CMS-Approved Survey Vendors

(1) Background

The CAHPS for MIPS survey evaluates patients' experiences of care within a group, subgroup, virtual group, or Alternative Payment Model (APM) Entity. The CAHPS for MIPS survey must be administered by a CMS-approved survey vendor for the purposes of reporting (81 FR 28285). CMS-approved survey vendors must undergo the CMS approval process annually, which includes completing the Vendor Participation Form and complying with the Minimum Survey

Vendor Business Requirements (81 FR 28288).

We have codified definitions of key terms for the Quality Payment Program, including third party intermediaries such as CMS-approved survey vendors, at § 414.1305. First, we have defined a third-party intermediary as meaning an entity that CMS has approved at § 414.1400 to submit data on behalf of a MIPS eligible clinician, group, virtual group, subgroup, or APM entity for one or more of the quality, improvement activities, and Promoting Interoperability performance categories. Then, we also defined a CMS-approved survey vendor as meaning a survey vendor that is approved by CMS for a particular performance period to administer the CAHPS for MIPS survey and to transmit survey measures data to CMS.

We refer readers to § 414.1400, the CY 2017 Quality Payment Program final rule (81 FR 77386), the CY 2018 Quality Payment Program final rule (82 FR 53818 and 53819), the CY 2019 PFS final rule (83 FR 59907 and 59908), the CY 2022 PFS final rule (86 FR 65538 and 65539), and the CY 2025 PFS final rule (89 FR 98459 and 98460) for

previously finalized standards and criteria for third party intermediaries including CMS-approved survey vendors.

(2) Codification of Two Previously Finalized Policies

In the CY 2025 PFS final rule, we finalized a policy to require CMS-approved survey vendors to submit a range of the cost of their services with their application beginning with the CY 2026 performance period/2028 MIPS payment year (89 FR 98459 and 98460). While this policy was finalized as proposed in the CY 2025 PFS final rule, it was not codified in regulations governing third party intermediaries. To ensure program requirements are clear, in the CY 2026 PFS proposed rule, we proposed to codify this previously finalized policy at § 414.1400(d)(9), with a technical modification to indicate that this requirement begins on January 1, 2026, rather than with the CY 2026 performance period/2028 MIPS payment year (90 FR 32768). We specifically proposed to codify at § 414.1400(d)(9) to provide that, beginning with January 1, 2026, the entity seeking to be a CMS-approved survey vendor must include on its application the range of costs of its third-party intermediary services (90 FR 32768).

In the CY 2024 PFS final rule, we finalized a policy to require organizations to contract with a CMS-approved survey vendor that would administer the CAHPS for MIPS Survey in the Spanish language translation to Spanish-prefering patients using the procedures detailed in the CAHPS for MIPS Quality Assurance Guidelines (88 FR 79332 through 79334). While this policy was finalized as proposed in the CY 2024 PFS final rule, it was not codified in regulations governing third party intermediaries. To ensure program requirements are clear, we proposed to codify this previously finalized provision at § 414.1400(d)(3)(iv)(A), with technical modifications to refer more broadly to sub-regulatory guidance that details procedures for administering the CAHPS for MIPS Survey. Specifically, we proposed to codify at § 414.1400(d)(3)(iv)(A) to provide that, beginning on January 1, 2024, in addition to administering the survey in English, entities will administer the Spanish survey translation to Spanish-prefering patients using the procedures detailed in sub-regulatory guidance to standardize the CAHPS data collection process for MIPS and to make sure the survey data collected across survey

vendors are comparable within the program or model (90 FR 32768).

We received public comments on these proposals to codify at § 414.1400(d)(9) to provide that, beginning with January 1, 2026, the entity seeking to be a CMS-approved survey vendor must include on its application the range of costs of its third party intermediary services and to codify at § 414.1400(d)(3)(iv)(A) to provide that, beginning on January 1, 2024, in addition to administering the survey in English, entities will administer the Spanish survey translation to Spanish-prefering patients. The following is a summary of the comments we received and our responses.

Comment: A few commenters noted their support for codifying CMS' previously finalized policy to require an entity to administer the CAHPS for MIPS Survey Spanish translation to Spanish-prefering patients.

Response: We thank commenters for their support.

Comment: A few commenters noted their support for codifying CMS' previously finalized proposal to require CMS-approved survey vendors to submit a range of the cost of their services with their application.

Response: We thank commenters for their support.

After consideration of public comments, we are finalizing as proposed to codify at § 414.1400(d)(9) to provide that, beginning with January 1, 2026, the entity seeking to be a CMS-approved survey vendor must include on its application the range of costs of its third party intermediary services and to codify at § 414.1400(d)(3)(iv)(A) to provide that, beginning on January 1, 2024, in addition to administering the survey in English, entities must administer the Spanish survey translation to Spanish-prefering patients.

(3) Technical Changes

While reviewing the regulations for CMS-approved survey vendors, we identified an area in which language was used to describe survey protocols that is no longer consistent with current practice. In the CY 2026 PFS proposed rule (90 FR 32768) we proposed to modify § 414.1400(d)(3)(i) by removing the reference to 'mixed -modes' to better align with language typically used in current practice. Specifically, we proposed to modify § 414.1400(d)(3)(i) to provide that an entity must have at least 3 years of experience administering surveys in which mail survey administration is followed by survey administration via Computer

Assisted Telephone Interview (CATI) (90 FR 32768). We noted that this terminology change does not reflect a change in requirements for CMS-approved survey vendors.

We solicited public comments on this proposal to make a technical change to the regulation text at § 414.1400(d)(3)(i).

We did not receive public comments on this provision, and therefore, we are finalizing the technical change to the regulation text at § 414.1400(d)(3)(i) as proposed.

(4) CAHPS for MIPS Survey

For the MIPS quality performance category, the CAHPS for MIPS Survey measures patients' experience of care and is administered first through the mail and then by phone interview with non-respondents. The survey is administered in English and Spanish, with additional translations available. The CAHPS for MIPS Survey may only be administered by CMS-approved survey vendors. (81 FR 77116). More details on the CAHPS for MIPS survey can be found here: <https://www.cms.gov/data-research/research/consumer-assessment-healthcare-providers-systems/cahps-mips>.

(5) Requirement for Web-Mail-Phone Protocol for Administration of the CAHPS for MIPS Survey

In the CY 2025 PFS proposed rule (89 FR 61869, 62042, and 62043), we included a request for information (RFI) on the potential expansion of the survey modes of the CAHPS for MIPS Survey from a mail-phone protocol to a web-mail-phone protocol. We solicited public comments on this new protocol given positive results found from our 2023 CAHPS for MIPS Web Mode Field Test.⁴⁷⁰

The field test added the web-based survey mode to the current mail-phone protocol of CAHPS for MIPS survey administration, and we found that the addition resulted in a 43 percent response rate compared to 28 percent for the mail-phone protocol from the CY 2022 performance period CAHPS for MIPS Survey (89 FR 62043). In the CY 2025 proposed rule, we outlined details of the field test, including that surveys were administered to a random sample of survey-eligible patients from 20 Medicare Shared Savings Program ACOs between March 6, 2023, and May 31, 2023. These results were compared to survey data collected from the CY 2022 performance period CAHPS for MIPS

⁴⁷⁰ Centers for Medicare & Medicaid Services. (June 2024). 2023 CAHPS for MIPS Web Mode Field Test. Available at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/2893/2023_CAHPs_for_MIPS_WebMode_Field_Test.pdf.

Survey for the same Medicare Shared Savings Program ACOs.

Although comments in response to the RFI were not included in the 2025 PFS final rule, commenters widely supported an expansion of CAHPS for MIPS survey modes to include a web-based survey protocol, emphasizing that this could help increase response rates. A commenter noted that this is a long overdue update. The CAHPS for MIPS Survey RFI received input from 16 commenters, including medical societies, professional trade associations, Accountable Care Organizations, health care systems, an academic/research institution, and a consumer/patient advocacy organization. Key commenter takeaways included encouraging CMS to:

- Expand the CAHPS for MIPS survey modes to include a web-based option.
- Examine and implement additional changes to improve response rates and reduce burden associated with CAHPS surveys.
- Create additional approaches to assess and reduce any increased costs of survey administration for health care practices.
- Consider the potential impacts of sharing email addresses with vendors on patient privacy and administration burden.

The field test showed an increase in the survey response rate due to the addition of the web-based survey protocol which may lead to more groups meeting case minimum requirements for CAHPS. Additionally, adding a web survey mode increased flexibility for survey respondents, and commenters responded positively to the addition of a web-based survey protocol.

On these bases, in the CY 2026 PFS proposed rule we proposed to require that, beginning with the CY 2027 performance period/2029 MIPS payment year, CMS-approved survey vendors would have to administer the CAHPS for MIPS Survey via a web-mail-phone protocol. We propose to codify this requirement at § 414.1400(d)(10) (90 FR 32678 through 32769).

In addition, we proposed to codify new requirements at §§ 414.1400(d)(3)(v)(A), 414.1400(d)(3)(vi)(A), and 414.1400(d)(3)(vii) to ensure an entity applying to become a CMS-approved survey vendor is capable of administering a web-mail-phone protocol prior to CMS approval (90 FR 32769). We noted that, currently, an entity must apply to be a CMS-approved vendor on an annual basis, demonstrating they meet applicable requirements at § 414.1400. We proposed to modify our requirements at

§ 414.1400(d)(3) to ensure an entity is prepared to administer the web-mail-phone protocol prior to CMS approval. Specifically, we proposed that, beginning January 1, 2027, to be a CMS-approved survey vendor an entity must have sufficient experience, capability, and capacity to accurately report CAHPS data by demonstrating that they (1) use equipment, software, computer programs, systems, and facilities that can send survey invitations via email that include a patient-specific hyperlink to a web survey, collect data via web, and track cases from web surveys through telephone follow-up activities (§ 414.1400(d)(3)(v)(A)); (2) employ a web survey administrator (§ 414.1400(d)(3)(vi)(A)); and (3) have at least 3 years of experience administering surveys in which web survey administration is followed by survey administration via mail survey or Computer Assisted Telephone Interview (CATI) (§ 414.1400(d)(3)(vii)) (90 FR 32769).

As finalized, CMS will update the survey administration requirements and associated materials, including the survey vendor application, during the 1-year implementation delay. We note that entities seeking to, or that do, become a CMS-approved survey vendor would need to meet other applicable requirements at § 414.1400, including successfully completing CMS' vendor training(s) as provided at § 414.1400(d)(5).

We refer readers to section V.B.5.b. of this final rule for discussion on the burden estimates for this proposal.

We received public comments on this proposal to require that, beginning with the CY 2027 performance period/2029 MIPS payment year, CMS-approved survey vendors would have to administer the CAHPS for MIPS Survey via a web-mail-phone protocol. The following is a summary of the comments we received and our responses.

Comment: Several commenters noted their support for CMS' proposal to require that CMS-approved survey vendors would have to administer the CAHPS for MIPS Survey via a web-mail-phone protocol. Many commenters stated their belief that this policy will have positive impacts from the increased survey response rates. Specifically, commenters shared their beliefs that this policy would: allow more patient voices to be heard; improve the quality and usefulness of the survey; modernize patient engagement; allow physician practices the flexibility to administer the survey in the best possible manner for their patients; and reduce burden on patients. A commenter also encouraged CMS to

preserve this multimode design as it modernizes CAHPS survey administration to preserve accessibility, particularly for beneficiaries who may have limited internet access or digital literacy.

Response: We thank commenters for their support.

Comment: A commenter believes that to further enhance accessibility and response rates, CMS should consider adding Short Message Service (SMS) text messaging as an additional modality for survey administration.

Response: We thank the commenter for the response, and we will take this suggestion into consideration if we plan to include additional survey modes in future years. We note that any future additional requirements for the administration of the CAHPS for MIPS Survey will be proposed and finalized through future rulemaking.

Comment: A few commenters expressed their concern that the proposed policy will increase the cost of administering the survey. A commenter urged CMS to assess and disclose the cost implications for medical practices, noting their belief that implementing a three mode protocol may introduce new financial and operational burdens, particularly for small and rural practices. This commenter also stated their belief that CMS should cover the costs of survey administration to avoid shifting financial responsibility onto physician practices.

A few commenters expressed concern about the burden for clinicians.

Specifically, a commenter recommended that CMS ensure this policy is implemented in a way that minimizes burden for clinicians and survey vendors. Another commenter encouraged CMS to refine the various CAHPS surveys to remove duplication across programs and reduce burden for clinicians.

Response: We recognize the commenter's concern about the potential for additional cost burden of the web-mail-phone protocol to organizations fielding the CAHPS for MIPS survey, though CMS does not estimate the costs associated with a MIPS eligible clinician's vendor support. We believe any additional costs incurred by the web-mail-phone protocol are outweighed by the potential benefits, as field tests found that the addition of the web mode resulted in a 43 percent response rate compared to 28 percent for the mail-phone protocol from the CY 2022 performance period CAHPS for MIPS Survey (89 FR 62043). The initial field test demonstrates that adding the web mode promotes better response rates by enabling more patients

to participate in the survey and increasing flexibility for practices and survey respondents. We also note that we do not consider requiring CAHPS survey administration across programs to be duplicative. Collecting CAHPS survey data for different quality programs ensures that patient experience data is collected across the services and appropriate for the care measured by each program. The surveys focus on matters that patients report are important to them and for they are the best and/or only source of information. It is our goal to capture this data across care settings (for example, hospitals, clinics, long-term care).

Comment: A few commenters believe that the web administration of the CAHPS for MIPS survey should remain optional. A commenter stated their belief that practices should have the ability to determine what survey mode (that is, web, phone, or mail) is most appropriate for their patient population.

Response: The addition of web administration will provide another option for survey respondents to participate in the CAHPS for MIPS Survey. We are prioritizing this flexibility in participation options for survey respondents as initial field tests indicate that our proposed policy to require CMS-approved survey vendors to administer the survey via a web-mail-phone protocol may increase participation in the survey to survey respondents. The 2023 CAHPS for MIPS Web Mode Field Test showed a 15-percentage point increase in the survey response rate due to the addition of the web-based survey protocol, indicating that a subset of patients prefer the web mode. We believe that patients should be given the opportunity to choose their preference between web, phone, or mail response options.

Comment: A commenter expressed concern that clinicians have difficulty obtaining a sufficient number of survey responses to ensure reliability and validity. This commenter urged CMS to continue to monitor and address this issue, particularly as survey modalities evolve. The commenter also urged CMS to avoid requiring practices to provide patient email addresses.

Response: We note that, as discussed previously in this section of the final rule, the 2023 CAHPS for MIPS Web Mode Field Test added the web-based survey mode to the current mail-phone protocol of CAHPS for MIPS survey administration, and found that the addition resulted in a 43 percent response rate compared to 28 percent for the mail-phone protocol from the CY 2022 performance period CAHPS for MIPS Survey (89 FR 62043). As such,

we believe that adding the web-based survey mode will increase response rates, which may lead to more groups meeting case minimum requirements for CAHPS and strengthen the reliability and validity of the CAHPS for MIPS Survey measure. Additionally, electing to share patient email addresses with CMS-approved survey vendors is one action a practice can, but is not required to take to promote survey participation and response, just like sharing patient phone numbers or preferred language.

After consideration of public comments, we are finalizing our proposal to require that, beginning with the CY 2027 performance period/2029 MIPS payment year, CMS-approved survey vendors would have to administer the CAHPS for MIPS Survey via a web-mail-phone protocol and to codify this requirement at § 414.1400(d)(10) as proposed.

(6) Sunsetting Application Requirement at § 414.1400(d)(8)

In the CY 2026 PFS proposed rule, we proposed to modify § 414.1400(d)(8) to sunset its requirement that, to apply to become a CMS-approved survey vendor, the entity must send an interim survey data file to CMS that establishes the entity's ability to accurately report CAHPS data (90 FR 32769). Though this requirement was established to ensure accurate reporting, it is ultimately not feasible to implement because an entity cannot collect data until it is approved by CMS, and thus, the entity does not have any data to send to CMS prior to approval. Therefore, submission of a survey data file has not been used as a requirement for approval. We proposed to sunset the requirement at § 414.1400(d)(8) so it is only effective from January 1, 2019 (when it was first finalized in the CY 2019 PFS final rule) through December 31, 2025. We proposed that this requirement would no longer be in effect beginning January 1, 2026.

We did not receive public comments on this provision, and therefore, we are finalizing our proposal to sunset the requirement at § 414.1400(d)(8) as proposed.

5. Advanced APMs

a. Overview

The Quality Payment Program provides incentives for eligible clinicians to engage in value-based, patient-centered care under Medicare Part B via MIPS and Advanced APMs. The structure of the Quality Payment Program enables us to advance accountability and encourage improvements in care. Our vision for

increased clinician participation in Advanced APMs is aimed at integrating individuals' clinical needs across a spectrum of providers and settings to improve patient care and population health. As we continue to make improvements to the Quality Payment Program, we seek to develop, propose, and implement policies that encourage broad and meaningful clinician participation, including by specialists, in Advanced APMs.

In the CY 2025 PFS final rule (89 FR 98463 and 98464), we anticipated that we would propose a comprehensive approach to QP determination in future rulemaking (89 FR 98464). In the CY 2026 PFS proposed rule (90 FR 32593 through 32597), we proposed such a comprehensive approach, which includes two parts. First, we proposed adding an individual level calculation to Qualifying APM Participant (QP) determinations, as set forth in proposed § 414.1425(b)(3) and (c)(3), for all eligible clinicians participating in an Advanced APM, such that each eligible clinician would receive both APM Entity level calculation and an individual level calculation. Second, we re-proposed to expand the scope of the services in the sixth criterion of the definition of "attribution-eligible beneficiary" at § 414.1305 to use covered professional services (section 1848(k)(3)(A) of the Act). In the proposed rule we explained that CMS expected that, together, these proposals would modernize and improve the QP determination approach across Advanced APMs.

In addition to the previous proposals, we further proposed to sunset our Advanced APM criterion at § 414.1415(c)(7), which currently limits Medical Home Model participants to 50 clinicians.

Lastly, we proposed modifying § 414.1455(a)(b)(3)(ii) and (b)(3)(vi) pertaining to the QP Targeted Review process to align with MIPS Targeted Review process set forth at § 414.1385 to ensure that the QP and MIPS Targeted Reviews occur concurrently.

b. QP Determinations

(1) General

In the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77445), we finalized our policy for QP determinations at § 414.1425. Currently, § 414.1425(b)(1) provides that, for the purposes of making QP determinations, an eligible clinician must be present on the Participation List of an APM Entity in an Advanced APM on one of the "snapshot dates" (March 31, June 30, or August 31) for the QP Performance Period. An eligible clinician included

on a Participation List on any such snapshot date is included in the APM Entity group even if that eligible clinician is not included on that Participation List at one of the prior- or later-listed dates. We perform QP determinations for eligible clinicians in an APM Entity group three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination snapshot dates. An eligible clinician can be determined to be a QP only if the eligible clinician appears on the Participation List on a snapshot date that we use to determine the APM Entity group and to make QP determinations at the APM Entity group level based on participation in the Advanced APM. For eligible clinicians who appear on a Participation List for more than one APM Entity, but who do not achieve QP status based on any

APM Entity-level determinations, we make QP determinations at the individual level as described at § 414.1425(c)(4). Likewise, for eligible clinicians on an Affiliated Practitioner list for an Advanced APM, we make QP determinations at the individual-level three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination snapshot dates as described at § 414.1425(b)(2).

In the CY 2017 Quality Payment Program final rule (81 FR 77433 through 77440) we established a process to calculate Partial QP status at § 414.1425(d). While to date our Partial QP policies have impacted only a small number of eligible clinicians, and thus we have not focused our discussion on this specific policy, we note that any changes to QP determinations at

§ 414.1425 also would likely require conforming changes to the policies for Partial QPs for consistency across the program.

In the CY 2017 Quality Payment Program final rule (81 FR 77450 through 77457), we finalized the payment amount method and patient count method for calculation of Threshold Scores used for QP determinations under the Medicare option and codified these methods at § 414.1435(a) and (b), respectively. The payment amount method is based on payments for Medicare Part B covered professional services, including certain supplemental service payments, while the patient count method is based on numbers of patients. Both methods use the ratio of “Attributed beneficiaries” to “Attribution-eligible beneficiaries,” as these terms are defined at § 414.1305, as shown in Figure CN1.

FIGURE CN1: QP DETERMINATION CALCULATION

Regulation at § 414.1435(d) provide that if the Threshold Score (using either the payment amount or patient count method) calculated at the APM Entity or individual eligible clinician level, as applicable, meets or exceeds the relevant QP threshold described at § 414.1430(a), the relevant eligible clinician or clinicians (either the individual eligible clinician or all those on the APM Entity's Participation List) achieve QP status for such year.

Regulation at § 414.1435(b)(3) provides that a beneficiary may be counted only once in the numerator and denominator for a single APM Entity group, and at § 414.1435(b)(4) provides that a beneficiary may be counted multiple times in the numerator and denominator for multiple different APM Entity groups. In the CY 2021 PFS final rule (85 FR 84951 through 84952), we amended § 414.1435(c)(1)(i) to specify that beneficiaries who have been prospectively attributed to an APM Entity for a QP Performance Period are excluded from the attribution-eligible beneficiary count for any other APM Entity that is participating in an APM where that beneficiary would be ineligible to be added to the APM Entity's attributed beneficiary list.

An attributed beneficiary is a beneficiary attributed to the APM Entity

under the terms of the Advanced APM as indicated on the most recent available list of attributed beneficiaries at the time of a QP determination. There may be beneficiaries on the most recent available list who do not meet the criteria to be attribution-eligible beneficiaries because the QP performance period does not align with the Advanced APM's performance period or attribution period, or for other reasons. There may also be cases where a beneficiary's status changes, for example by enrolling in a Medicare Advantage Plan. As described in the CY 2017 Quality Payment Program final rule (81 FR 77451), attributed beneficiaries are a subset of attribution-eligible beneficiaries. Therefore, when calculating Threshold Scores for QP determinations, we exclude from the list of attributed beneficiaries any beneficiaries who do not meet the criteria to be attribution-eligible beneficiaries at that point in time.

(2) Individual QP Determination

When we initially established our policy in the CY 2017 Quality Payment Program final rule (81 FR 77439 through 77445) to make most QP determinations at the APM Entity level, we believed it was the best approach at the time. However, we did not intend for the

policy to create potentially conflicting incentives for an APM Entity between the goal for its eligible clinicians to achieve QP status under the Quality Payment Program and the goals of the Advanced APM(s) in which the APM Entity participates.

In the CY 2024 proposed rule (88 FR 52618), we proposed to address this issue by conducting all QP determinations at the individual level. However, commenters opposed that proposal, citing issues such as administrative burden for APM Entities tracking QP status and Partial QP status and elections at the individual level because of the implications for MIPS reporting. Many further believed that the change may have negative consequences for specialists, the opposite of our intent in making our proposal. In light of the comments received, we did not finalize our proposal from the CY 2024 proposed rule (88 FR 79403). Since that time, we have continued to examine QP determinations with a desire to right-size the methodology to current and future Advanced APM design, remove barriers to participation, and conduct calculations fairly.

Some commenters on our CY 2024 proposal recommended that we conduct QP determinations at both the APM

Entity and individual levels (88 FR 79403). At the time, we indicated that we did not believe that this approach would sufficiently encourage more intensive Advanced APM participation by individual eligible clinicians. However, based on continued examination of QP determinations, including in the time since the publishing of the CY 2025 PFS final rule, we have recognized the importance of individual contribution, particularly for models that are condition-specific or focused on an episode of care. Clinicians in these models are particularly disadvantaged when, as is frequently the case, their APM Entity fails to achieve QP status.

Under our current policy, there is the potential that an eligible clinician who has fully engaged with an Advanced APM may still be unable to earn QP status because it is calculated at the APM Entity level as described at § 414.1425(c)(3). As we previously noted, under our current policy we conduct individual determinations, but we only do so in the following specific circumstances: (1) for eligible clinicians who appear on a Participation List for more than one APM Entity, but who do not to achieve QP status based on any APM Entity-level determinations, we make QP determinations at the individual level as described at § 414.1425(c)(4), (2) for eligible clinicians on an Affiliated Practitioner list for an Advanced APM, we make QP determinations at the individual-level three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination snapshot dates as described at § 414.1425(b)(2). While these methods exist, individual calculations are not the norm, and for an eligible clinician in only one APM Entity our current policy does not provide for an individual determination.

As such, we proposed adding a new provision at § 414.1425(b)(3) to add a QP determination at the individual level for all Advanced APM participants, beginning with the 2026 QP Performance Period. As we explained in the CY 2026 proposed rule (90 FR 32593), this proposal would not impact our policy at § 414.1425(b)(1) for APM Entity -level determinations or our policy at § 414.1425(b)(2) determinations for Affiliated Practitioners as these policies also would remain in effect for 2026 and future QP Performance Periods. We proposed amending at § 414.1425(b)(3) to add a calculation of Threshold Scores for QP determinations at the individual level for each unique NPI associated

with an eligible clinician participating in an Advanced APM based on services furnished across all Tax Identification Numbers (TINs) to which the eligible clinician has reassigned their billing rights. This individual Threshold Score would provide a more specific measurement of each eligible clinician's participation in an Advanced APM. We proposed that we would calculate at the APM Entity-level as provided at § 414.1425(b)(1) and (2) and the individual level for each eligible clinician as provided at § 414.1425(b)(3) at each of the snapshot dates throughout the QP Performance Period. We also proposed that, an eligible clinician is a QP for a year under the Medicare option if, as described at § 414.1435(d), they meet or exceed the QP payment amount threshold or QP patient count threshold, as described at § 414.1430(a)(1) and (3), for that QP Performance Period, at the APM Entity-level, or as an individual eligible clinician as stated at § 414.1425(c)(3) or (c)(4) respectively.

We proposed to amend § 414.1425(c)(3) by adding a new (c)(3)(ii) and making conforming revisions at § 414.1425(c)(3)(i) and (4) to ensure that an eligible clinician is a QP for a year under the Medicare Option if beginning with the CY 2026 QP Performance Period, the eligible clinician individually, or as part of an APM Entity group, achieves a Threshold Score that meets or exceeds the corresponding QP payment amount threshold or QP patient count threshold for that QP Performance Period as described at § 414.1430(a)(1) and (3). Likewise, an eligible clinician is a QP for the year under the All-Payer Combination Option if the eligible clinician individually, or as part of an APM Entity group, achieves a Threshold Score that meets or exceeds the corresponding QP payment amount threshold or QP patient count threshold for that QP Performance Period as described at § 414.1430(b)(1) and (3).

We proposed a conforming revision to sunset at § 414.1425(c)(4) to clarify that the existing policy started with the CY 2017 QP Performance Period and would end with the CY 2025 QP Performance Period, and to preserve in the regulations the history of the applicable policies for specific QP Performance Periods.

We proposed a revision at § 414.1425(d)(1) and (2) such that an eligible clinician is a partial QP for a year under the Medicare option if they meet or exceed the corresponding Partial QP payment amount threshold or Partial QP patient count threshold for that QP Performance Period as described at § 414.1430(a)(2) and (4) at

the APM Entity-level or as an individual eligible clinician as stated at §§ 414.1425(d)(1) or (d)(2) respectively. The following is a summary of the comments we received and our responses.

Comment: Many commenters supported our proposal to add an individual-level QP determination beginning in the 2026 QP Performance Period. These commenters emphasized that the inclusion reflects clinician engagement and ensures fairness across specialties and noted that this change would prevent clinicians from being disadvantaged when their APM Entity does not meet thresholds.

Response: We agree with commentors that adding an individual-level QP determination will improve fairness, particularly for specialists and clinicians in condition-specific or episode-based models. This policy will help to ensure that individual contributions to Advanced APMs are recognized, even when the APM Entity does not, as a whole, achieve QP status.

Comment: Some commenters cautioned that implementing individual-level QP determinations could increase administrative complexity. The commenters expressed concern that tracking QP status and Partial QP status at the individual level across multiple snapshots throughout the QP performance period would add a burdensome process.

Response: We appreciate the comments and recognize that this policy will increase the number of clinicians and organizations tracking individual calculations. We are committed to aligning our QP determination process as much as is practicable with existing QPP reporting requirements. As such, in part to minimize the burden of tracking QP status at multiple points within the QP performance period, we will be providing individual QP determination calculations for all three snapshots when we deliver the third snapshot feedback at the end of the QP performance period. That way, rather than needing to track individual QP status throughout the QP performance period, clinicians can simply check when the third snapshot feedback is released and receive their final individual QP determination result. This operational approach is consistent with how we have delivered individual QP determination feedback in the specialized situations under which we currently perform individual-level QP determinations. Moreover, in waiting to perform the individual-level calculations until after the third snapshot, we are able to take into account any APM Entities that were

terminated from their Advanced APM participation after the first, second, or third snapshot, which is an action that can result in the loss of previously attained QP status at § 414.1425(c)(5) and (6) and could result in the eligible clinician being subject to MIPS. Rather than recalculate individual determinations based on such terminations, which both are inefficient operationally and have potential to confuse eligible clinicians and cause them to misunderstand their MIPS obligations, we can perform calculations for all three QP snapshot periods based on the most up-to-date participation as of the third snapshot and provide only the final answer to the relevant clinicians. Because this approach simply continues how we already perform and release both APM Entity-level and individual-level QP calculations, clinicians and practice representatives will be able to continue engaging with QPP as they always have, with APM Entity-level determinations being performed and released at each snapshot and individual-level determinations being performed and released at the third snapshot. We believe this approach will continue to maximize efficiency and transparency and reduce confusion for and administrative burden on eligible clinicians. We will continue to monitor and provide updates regarding the QP determination process where we believe there are necessary improvements.

After consideration of public comments, we are finalizing our policy to add an individual QP determination for all eligible clinicians as proposed.

(3) Attribution-Eligible Definition

At § 414.1305, we define an attribution-eligible beneficiary as a beneficiary who—

- Is not enrolled in Medicare Advantage or a Medicare cost plan;
- Does not have Medicare as a secondary payer;
- Is enrolled in both Medicare Parts A and B;
- Is at least 18 years of age;
- Is a United States resident; and
- Has a minimum of one claim for E/M services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period or, for an Advanced APM that does not base beneficiary attribution on E/M services and for which attributed beneficiaries are not a subset of the attribution-eligible beneficiary population based on the requirement to have at least one claim for E/M services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period, the

attribution basis determined by CMS based upon the methodology the Advanced APM uses for attribution, which may include a combination of E/M and other services.

When we finalized the definition of attribution-eligible beneficiary in the CY 2017 Quality Payment Program final rule, (81 FR 77451 through 77452), we intended that this definition would, for purposes of QP determinations, allow us to be consistent across Advanced APMs in how we consider the population of beneficiaries served by an APM Entity. The criteria we used to define attribution-eligible beneficiary were aligned with the attribution methodologies and rules for our contemporaneous Advanced APMs. The first five criteria are conditions that are required for a beneficiary to be attributed to any Advanced APM. The sixth criterion identifies beneficiaries who have received certain services from an eligible clinician who is associated with an APM Entity for any period during the QP Performance Period. We chose to refer to E/M services as the primary basis for purposes of attribution-eligibility because many of the Advanced APMs CMS offered at that time used E/M claims to attribute beneficiaries to their APM Entity groups. Over time, we have updated the list of services that are considered to be E/M services for purposes of identifying attribution-eligible beneficiaries and have published this list as part of the “2024 Learning Resources for QP Status and APM Incentive Payment” materials on the Quality Payment Program Resource Library at qpp.cms.gov.

We also included an exception in this sixth criterion to allow us to use an alternative approach for Advanced APMs that do not base beneficiary attribution on any E/M services, and thus for which attributed beneficiaries are not a subset of the attribution-eligible beneficiary population based on the requirement to have at least one claim for an E/M service. To date, we have implemented this alternative approach for four Advanced APMs:

- Bundled Payments for Care Improvement Advanced Model.
- Comprehensive Care for Joint Replacement Payment Model (CEHRT Track).
- Comprehensive ESRD Care Model (LDO arrangement and Non LDO Two-Sided Risk Arrangement).
- Maryland Total Cost of Care Model (Care Redesign Program).

We have published links to the methodologies we use to identify attribution-eligible beneficiaries for these Advanced APMs in the “2024 Learning Resources for QP Status and

APM Incentive Payment” materials on the Quality Payment Program Resource Library at qpp.cms.gov.

We adopted the general rule with flexibility to apply alternative methods for this criterion to ensure that, for the Advanced APMs for which beneficiary attribution is based on services other than E/M services, the attributed beneficiary population is truly a subset of the Advanced APMs’ attribution-eligible beneficiary populations and, ultimately, so that our way of identifying beneficiaries for purposes of Threshold Score calculations for QP determinations would be appropriate for such Advanced APMs. That said, our thought when we developed these approaches was shaped by the form and nature of the Advanced APMs that existed at that time. We believed that, by affording sufficient flexibility within the program, we could both foster innovation in Advanced APMs and simplify our execution of the program. However, with our more narrowly defined default approach to beneficiary attribution (relying on claims for E/M services), we have increasingly needed to exercise the flexibility to identify an alternative approach to attribution eligibility for Advanced APMs that fell into the exception, which meant that we identified several individually tailored ways of performing the beneficiary attribution methodology for specific Advanced APMs. We anticipate that Advanced APMs will continue to evolve and use novel approaches to value-based care that may emphasize a broad range of covered professional services, and in that event the application of our current regulations may result in increased variability among the ways we define attribution-eligible beneficiary when making QP determinations. In the CY 2025 PFS proposed rule (89 FR 62098 through 62101), we proposed to amend the final criterion in the definition of “attribution-eligible beneficiary” at § 414.1305 to expand the scope of services used to covered professional services, indicating that we would conduct further analysis. However, as further discussed in the CY 2025 PFS final rule (89 FR 98461 through 98465), we did not finalize this proposal.

After continued examination, in the CY 2026 PFS proposed rule, we re-proposed to modify the sixth criterion of the definition of “attribution-eligible beneficiary” at § 414.1305 to include any beneficiary who has received a covered professional service furnished by the eligible clinician for whom we are making the QP determination, beginning with the 2026 QP Performance Period. In the CY2026 PFS

proposed rule, we referred to the description of this proposed approach that CMS previously provided in the CY 2025 proposed rule, namely, that this policy, if finalized, would result in a QP calculation that, by including beneficiaries receiving any covered professional service, more accurately reflect eligible clinicians' actual participation in Advanced APMs, improve transparency and predictability of the determinations, be more operationally efficient than the current policy, and better align the QP determination methodology with the universe of services to which the Quality Payment Program (including MIPS and APMs) applies.

In response to comments in the CY 2025 PFS final rule, we explained that changes in the composition of APM Entity Participation Lists, services furnished, and attributed beneficiaries all have significant effects on the number of projected versus actual QPs for a QP performance period, which complicates the ability to assess effects of methodological changes to QP determinations (89 FR 98461 through 98465). We also described how any methodology changes can lead to varied QP Threshold Scores for APM Entities within the same Advanced APM, and noted that because QP status is determined based on specific QP payment amount and QP patient count thresholds, only those changes in scores that result in an eligible clinician crossing over a QP threshold percentage contribute to the net estimated change in QP counts (89 FR 98461 through 98465). In the CY 2026 PFS proposed rule, we also noted that the QP thresholds have increased relative to previous years and, effective with the 2025 QP Performance Period are now at 75 percent for the payment amount and 50 percent for the patient count. We noted that this change, which occurs by statute, will be responsible for the largest quantitative effect on our QP predictions, largely by reducing the number of QPs relative to the previous, lower thresholds. As such, while the quantitative effects of our proposals may show small changes in the number of QPs relative to the status quo, that status quo itself reflects this threshold level change to QP determinations, which is significant in its own right.

In the CY 2025 PFS final rule (89 FR 98463 and 98464), we stated that we believed that our proposal was a better approach than the status quo, and we believed that it should likely be part of a comprehensive approach to QP determinations that would better reflect the current and future state of Advanced APMs. In response to public comments,

we did not finalize at that time the proposal to revise the sixth criterion of the definition of "attribution-eligible beneficiary" at § 414.1305. However, at the time we stated that we anticipated to propose a comprehensive approach to QP determination in future rulemaking, including a strategy to address the needs of condition-specific models, and that this proposal might be included as one element of such future proposals (89 FR 98463 and 98464). We have further explored this issue and have determined that we could appropriately address the challenges we have described in this and prior rulemaking by allowing for the overall expansion of the QP determinations, in terms of both the level of determination as discussed in section XX.XX.x.(2). of this final rule, and the services included in the QP determinations as discussed in this section of the rule.

As we previously noted in this final rule, in our discussion of the proposal to calculate QP status at the individual NPI level, primary care practitioners generally furnish a higher proportion of E/M services than do specialists with the same beneficiary, and as for the Threshold Score calculations described previously, the emphasis on E/M services in our beneficiary attribution policy may have inadvertently encouraged APM Entities to exclude specialists from their Participation Lists. Under our current policy, if one or more eligible clinicians on the APM Entity's Participation List furnish covered professional services to a beneficiary but none of those services are among the E/M services we use for attribution, that beneficiary would not be attribution-eligible, and therefore, would not be included in our QP determination calculation, even though the beneficiary is actually receiving covered professional services from an eligible clinician on the APM Entity's Participation List.

We proposed to change the definition of "attribution-eligible beneficiary" at § 414.1305 so that, beginning with QP Performance Period 2026, a single definition using covered professional services would be applied regardless of the Advanced APMs in which the eligible clinician participates. As we explained in the CY 2026 proposed rule, we believed that this complements our proposal to add individual-level calculations to QP determinations. We were also concerned that retention of the current policy where E/M services are the default basis for attribution, and where special processes are required for Advanced APMs that use a different attribution basis, could result in a

complex set of unique attribution approaches for Advanced APMs.

We believe that this change would more appropriately recognize the Advanced APM participation of the eligible clinicians for whom these determinations are being made, particularly when considered in conjunction with the proposal to add an individual-level calculation to QP determinations. We further believe that this proposal would simplify and streamline QP determinations and address the challenges to Advanced APM participation reportedly faced by specialists who are less likely than primary care practitioners to provide E/M services.

We proposed to modify the sixth criterion in the definition of "attribution-eligible beneficiary" at § 414.1305 to provide that, beginning with the 2026 QP Performance Period, an attribution-eligible beneficiary is a beneficiary who during the QP Performance Period has a minimum of one claim for any covered professional service furnished by an eligible clinician who is on the Participation List for the APM Entity at any determination date during the QP Performance Period.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters were supportive of the CMS proposal to include Covered Professional Services in the QP determination method where it provides opportunities for participants, specifically clinicians who are less likely to provide E/M services, to receive credit for providing services to an attributed beneficiary.

Response: We appreciate the supportive comments and note that, while we have observed that factors outside our control such as the statutory QP thresholds and the eligible clinician makeup of a specific APM Entity have significant effects on QP determination results, we expect that for certain Advanced APMs, such as the Kidney Care Choices Model, the Enhancing Oncology Model (EOM), and the Transforming Episode Accountability Model (TEAM), this policy change may increase the number of QPs relative to the number there would have been in the absence of this change.

Comment: A few commenters not only supported the proposal but further suggested that CMS implement the proposed policy retroactively for the 2025 QP Performance Period rather than waiting until 2026.

Response: We appreciate these comments. However, it is not

operationally feasible to build the process change timely to perform it for the 2025 QP performance period. The QP determinations for the majority of the year have been performed already, and there is insufficient time to develop and incorporate updates to the QP determination formula, test them for accuracy, perform the updated determinations, and communicate the results timely for clinicians who would have to report to MIPS in 2026 for MIPS Performance Period 2025 to prepare for such reporting.

Comment: Several commenters expressed concern that the impact of switching the scope of services used in QP determinations on Advanced APM participants was unknown, especially where participants have consistently received calculations that use E/M services. Several such commenters were opposed to the CMS proposal to switch from E/M to Covered Professional Services in the QP determination method as they believed that this proposed change would lower the APM Entity score for certain ACO participants. A few such commenters suggested that we modify our proposal to provide a calculation at the APM Entity level using E/M services and the individual QP determination calculation using Covered Professional Services.

Response: We appreciate the concern and note that the impact of this policy is unlikely to be uniform across all Advanced APMs, or even across APM Entities or individual eligible clinicians within a single Advanced APM. In our proposal, we noted that we expect few APM Entities to notice a significant difference between their results using E/M services and Covered Professional Services. In fact, for ACOs specifically, we expect that for some, the APM Entity-level score will be higher based on Covered Professional Services, and for others, their score could decrease. We note that regardless of the direction of a change in scores, the impact bears meaning only when the change results in crossing a QP or Partial QP threshold percentage; for example, under current thresholds, if the proposed policy would result in an ACO's payment amount score increasing from 48 percent to 51 percent, that would cross the 50 percent Partial QP threshold and therefore attain Partial QP status for that ACO, which would be more meaningful than a situation where an ACO's payment amount score changed from 35 percent to 45 percent. However, we recognize that our estimates represent only point-in-time examples of the effects of our proposed policy, not consistent or predictable long-term effects, because QP determination

results are influenced by several mutable factors outside the parameters of the determination formula, as we described in more detail in a response to comment as part of the CY 2025 Physician Fee Schedule final rule (89 FR 98463). In that same response, we further noted that a change in score affects the net estimated counts of QPs and Partial QPs only when a QP or Partial QP threshold score is crossed. This is true irrespective of magnitude; a patient count score change from 50 percent to 70 percent has no effect (this NPI would be a QP either way) on the total estimate, but a patient count score change from 48 percent to 52 percent does (this NPI would go from Partial QP to QP due to the score change). As such, our practice has been to use quantitative analyses principally to assess the potential range or general magnitude of a change in QP calculations, and to look for consistency with our general expectations or the presence of any surprising results. We continue to believe that identifying a single methodology across all Advanced APMs may offer certain benefits related to consistency and transparency across the Advanced APM program, and we remain committed to ensuring that our policies support participation in Advanced APMs. Therefore, we believe the concerns expressed by commenters around unintended consequences for some Advanced APM participants warrant our modifying our proposal. Specifically, we are finalizing a modified version of our proposed policy, namely by maintaining the calculation of QP determinations using E/M services under both the patient count and payment amount methodologies and by also adopting our proposed policy to calculate QP determinations using Covered Professional Services, also for both the patient count and payment amount methodologies. Because this modification in effect creates two versions of each calculation, we are effectuating this final policy by amending § 414.1435 to create, effective with the 2026 QP Performance Period, separate calculations that use E/M services and Covered Professional Services, respectively. We further are finalizing amendments at § 414.1305 to support and clearly delineate these separate calculations by establishing two separate definitions for attribution-eligible beneficiaries—both a “Covered Professional Service attribution-eligible beneficiary” and an “E/M attribution-eligible beneficiary,” each corresponding with the appropriate set of serviced described in the

amendments to § 414.1435. To provide determination methods using both definitions, we are adopting a modified version of our proposed policy to include amendments at § 414.1435(c) and (d) that provide, starting with the 2026 QP performance period, for a determination first for the Covered Professional Service methods (payment and patient count), and at § 414.1435(e) and (f) for the E/M methods (payment and patient count). We appreciate commenters' suggestions to use E/M for APM Entity-level calculations and Covered Professional Services for individual-level calculations. However, we believe that using both sets of services across both the patient count and payment amount methods and at both the APM Entity and individual levels, and then using the highest score, will give us the opportunity to compare the methodologies over time without risking that a choice between the two sets of services has unintentionally and unfairly disadvantages any participants. This change to the proposal to use both the existing E/M services approach and the proposed Covered Professional Services approach will give us the opportunity to monitor the effects of each approach, particularly the use of E/M services in our QP determination methodology, to ensure that our methodology reflects and rewards meaningful participation in Advanced APMs. The use of the highest score is consistent with our existing approach to QP determinations at § 414.1435(h) (§ 414.1435(d) prior to the effective date of this final rule) where we use the higher of the patient count and payment amount scores and with our approach to use the higher of the APM Entity-based and individual clinician scores. We also believe it is fair given that different commenters have different concerns with each respective approach; while we are learning how scores compare across Advanced APM designs, specialties, etc., no Advanced APM participants are being disadvantaged in scoring outcomes. We note that the design and operation of Advanced APMs is expected to continue to evolve over time—particularly for CMS Innovation Center models which are inherently designed to continue innovating on contemporaneous baseline delivery and payment systems—and that, as always, we will continue to monitor the effects of each the existing and the new approaches to QP determinations with a plan to revisit our methodology if and when we determine that a future change is warranted. We remind our readers that some of the challenges that led us to the

policies we are finalizing in this final rule were identified and shared with us by Advanced APM participants, and we continue to want to hear about the impacts of our policies on participants' experiences in their Advanced APMs.

After consideration of public comments, we are finalizing with modification our policy at §§ 414.1435 and 414.1305 to perform QP determinations using both an E/M services approach and a Covered Professional Services approach.

c. Medical Home Model 50 Eligible Clinician Limit

In the CY 2017 Quality Payment Program final rule (81 FR 77428), we finalized a policy for the Medical Home Model nominal financial risk criterion to set a limit of 50 on the number of eligible clinicians in an organization that participates as an Advanced APM through a Medical Home Model. In the CY 2023 PFS final rule (87 FR 70117), we amended § 414.1415(c)(7) to apply the 50 eligible clinician limit directly to the APM Entity participating in the Medical Home Model, and to no longer look to the parent organization for the APM Entity.

Likewise, in the CY 2017 Quality Payment Program final rule (81 FR 77468) we finalized a policy at § 14.1420(d)(2) and (4) for the Medicaid Medical Home Model nominal financial risk criterion to set a limit of 50 on the number of eligible clinicians in an organization that participates as an Advanced APM through a Medical Home Model. In the CY 2020 PFS final rule (84 FR 63095) we finalized a proposed amendment at § 414.1420(d)(2) and (4) to include Aligned Other Payer Medical Home Models with the existing Medicaid Medical Home Model financial risk and nominal amount standards for Medicaid Medical Home Models.

When we established the medical home model 50 eligible clinician limit in the CY 2017 Quality Payment Program final rule our stated intent was to encourage organizations capable of taking on significant downside risk to participate in Advanced Alternative Payment Models that met the "Generally applicable financial risk standard" at § 414.1415(c)(1) (81 FR 77430). Based on our experience operating the Quality Payment Program we note that participation in Advanced APMs has increased, and the necessity of the Medical Home Model 50 eligible clinician limit has lessened. Moreover, we expect that this policy could provide a barrier for participation in models that meet the Medical Home Model definition in the future.

We proposed to amend the policy at § 414.1415(c)(7) to provide that beginning with the 2026 QP Performance Period we will no longer apply the Medical Home Model 50 eligible clinician limit. Specifically, we proposed to modify § 414.1415(c)(7) to sunset that provision and provide that it only applies from the 2023 QP performance Period through the 2025 QP Performance Period.

Additionally, we proposed a conforming amendment to the Aligned Other Payer Medical Home Model and Medicaid Medical Home Model 50 eligible clinician limit at § 414.1420(d)(8) beginning in the 2026 performance period we will no longer apply the Medical Home Model 50 eligible clinician limit.

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: A few commenters expressed their concern that the CMS proposal to no longer apply the Medical Home Model 50 eligible clinicians limit may limit participation in Advanced APMs by eligible clinicians in rural areas and those at small practices.

Response: We appreciate the commenters' desire to provide opportunities for small and rural practices. We do not anticipate that this change will have any impact on eligible clinicians in rural areas or to those with small practices. The proposed policy would not bar their participation in a Medical Home Model nor would it require an Advanced APM to allow larger participants; it simply would allow a Medical Home Model to operate without needing to examine the size of participants.

Comment: Many commenters expressed their support for the CMS proposal to no longer apply the Medical Home Model 50 eligible clinician limit.

Response: We appreciate the support to sunset the 50-clinician limit for Medical Home Model participants.

After consideration of public comments, we are finalizing this policy as proposed.

d. Targeted Review of QP Determinations

In the CY 2021 PFS final rule (85 FR 84952), we finalized a policy to provide an opportunity for eligible clinicians to bring to our attention potential clerical errors we may have made that could have resulted in the omission of an eligible clinician from a Participation List used for purposes of QP determinations, and for us to review and make corrections if warranted. We also finalized that, after the conclusion of the

time period for targeted review, there would be no further review of our QP determination with respect to an eligible clinician for the QP Performance Period (85 FR 84952). We noted that, consistent with section 1833(z)(4) of the Act, and as provided at § 414.1455(a), there is no right to administrative or judicial review at sections 1869 or 1878 of the Act, or otherwise, of the determination that an eligible clinician is a QP or Partial QP at § 414.1425, or of the determination of the amount of the APM Incentive Payment at § 414.1450.

In the CY 2021 PFS final rule (85 FR 84953), we finalized our proposal to align the timing and procedures for this targeted review process with the MIPS targeted review process as codified at § 414.1385. We noted this alignment would reduce the likelihood of confusion and burden on eligible clinicians and APM Entities. In the CY 2024 PFS proposed rule (88 FR 79380 through 79382 and 88 FR 79408), we modified the Targeted Review period for both MIPS and QPs such that we could meet our statutory obligation to apply the differentially higher QP conversion factor beginning on January 1 of each payment year beginning with CY 2026. When we made these updates, we also revised the language at § 414.1385 more generally, including a change from 30 days to 15 days between notification and a response at § 414.1385(a)(5), but we did not make corresponding changes to the QP Targeted Review at § 414.1455.

We recognized that the different language in the current versions of these two sections of regulation could make it appear that our intent is for the MIPS and QP Targeted Review periods to operate differently, and that in fact the inconsistencies could mean that the Targeted Review for both QPs and MIPS participants is not guaranteed to be aligned. Our intent for these Targeted Review periods to be aligned has not changed, and we do not want to give the impression that there is a misalignment between them. Accordingly, we proposed to modify the language at § 414.1455(b)(3)(ii) and (b)(3)(vi) to make clear that the same timing requirements that for MIPS Targeted Reviews that are currently specified in at § 414.1385(a)(2) and (a)(5) also apply for purposes of QP Targeted Reviews.

We solicited comments on our proposal to modify the language at § 414.1455(b)(3)(ii) and (b)(3)(vi) to the same timing requirements as that of MIPS Targeted Reviews specified at § 414.1385(a)(2) and (a)(5). The following is a summary of the comments we received and our responses.

Comment: A few commentors expressed concern that the CMS proposal would shorten the duration of the Targeted Review period for QPs and may not provide enough time to submit a Targeted Review.

Response: We appreciate the comments and agree that it is important to provide a sufficient window to submit a Targeted Review. However, we note that our proposed amendment to the regulatory text would not change anything about how the current Targeted Review period actually operates. We recognize that it was not clear that the QP and MIPS Targeted Reviews operate together as part of a single QPP experience, and our proposal was simply to clarify by aligning the language of the two regulatory sections.

Comment: Many commentors expressed support for the CMS proposal to modify the language at § 414.1455(b)(3)(ii) and (b)(3)(vi) to the same timing requirements as that of MIPS Targeted Reviews specified at § 414.1385(a)(2) and (a)(5).

Response: We appreciate the commenters’ support for our proposal.

After consideration of public comments, we are finalizing this policy as proposed.

V. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*), we are required to provide 60-day notice

in the **Federal Register** and solicit public comment before a “collection of information” requirement (as defined under 5 CFR 1320.3(c) of the PRA’s implementing regulations) is submitted to the Office of Management and Budget (OMB) for review and approval. To fairly evaluate whether a collection of information should be approved by OMB, section 3506(c)(2)(A) of the PRA requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In the CY 2026 PFS proposed rule (90 FR 32352), we solicited public comments on each of the aforementioned issues for the following sections of this document that contained information collection requirements (ICRs). Comments received are summarized under each relevant section.

A. Wage Estimates

To derive average costs, we used data from the U.S. Bureau of Labor Statistics’ (BLS) May 2024 National Occupational Employment and Wage Estimates for all

salary estimates (https://www.bls.gov/oes/2024/may/oes_nat.htm). In this regard, Tables D–A1 and D–A2 present BLS’ mean hourly wage, our estimated cost of fringe benefits and other indirect costs (calculated at 100 percent of salary), and our adjusted hourly wage. There are many sources of variance in the average cost estimates, both because fringe benefits and other indirect costs vary significantly from employer to employer, and because methods of estimating these costs vary widely from study to study. Therefore, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

We note that the May 2024 BLS data does not include median hourly wage rates for multiple physician occupation types listed in Table D–A2; in these cases, the BLS identifies that the median wage rate is equal to or greater than \$115.00/hr or \$239,200 per year. BLS data for prior years, such as the May 2022 and May 2023 data, provide similar notes for median wage rates for occupations that are above the same thresholds (\$115.00/hr or \$239,200 per year for the May 2022 BLS data (https://www.bls.gov/oes/2022/may/oes_nat.htm) and May 2023 BLS data (https://www.bls.gov/oes/2023/may/oes_nat.htm)). Therefore, for consistency with previous years for estimating physician wage rates, we have continued to use mean hourly wage rates across our wage estimates.

TABLE D-A1: National Occupational Employment and Wage Estimates (Excluding Physicians)

Occupation Title	Occupation Code	Mean Hourly Wage (2024)	Fringe Benefits and Other Indirect Costs (2024)	Adjusted Hourly Wage (2024)
Billing and Posting Clerks	43-3021	23.90	23.90	47.80
Business Operations Specialists	13-1000	43.76	43.76	87.52
Computer System Analysts	15-1211	53.83	53.83	107.66
General and Operations Managers	11-1021	64.00	64.00	128.00
Licensed Practical and Licensed Vocational Nurses	29-2061	30.84	30.84	61.68
Medical and Health Services Managers	11-9111	66.22	66.22	132.44
Secretary, Administrative Assistant	43-4000	22.90	22.90	45.80
Software Quality Assurance Analysts and Testers	15-1253	53.01	53.01	106.02
Training and Development Managers	11-3131	67.59	67.59	135.18
Chief Executive Officer	11-1011	126.41	126.41	252.82

For our purposes, BLS’ May 2024 National Occupational Employment and

Wage Estimates do not provide an occupation that we could use for

“Physician” wage data. To estimate a Physician’s costs, we used an average

conglomerate wage of \$299.32/hr as demonstrated below in Table D–A 2.

TABLE D-A2: National Occupational Employment and Wage Estimates (Physicians)

Occupation Title	Occupation Code	Mean Hourly Wage (\$/hr)	Fringe Benefits and Other Indirect Costs (\$/hr)	Adjusted Hourly Wage (\$/hr)
Anesthesiologists	29-1211	161.85	161.85	323.70
Family Medicine Physicians	29-1215	123.47	123.47	246.94
General Internal Medicine Physicians	29-1216	126.31	126.31	252.62
Obstetricians and Gynecologists	29-1218	135.16	135.16	270.32
Orthopedic Surgeons, Except Pediatric	29-1242	175.51	175.51	351.02
Pediatric Surgeons	29-1243	216.74	216.74	433.48
Pediatricians, General	29-1221	106.89	106.89	213.78
Physicians, All Other	29-1229	121.86	121.86	243.72
Psychiatrists	29-1227	129.39	129.39	258.78
Surgeons	29-1240	170.56	170.56	341.12
Surgeons, All Other	29-1249	178.50	178.50	357.00
Total				3,292.48

B. Information Collection Requirements (ICRs)

1. Ambulatory Specialty Model (42 CFR Part 512 and Section III.C of This Final Rule)

In section III.C of this final rule, we discuss testing the Ambulatory Specialty Model and finalized provisions for the model under the authority of the Innovation Center. Section 1115A of the Act authorizes the CMS Innovation Center to test innovative payment and service delivery models to reduce program expenditures while preserving or enhancing the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program beneficiaries. As stated in section 1115A(d)(3) of the Act, Chapter 35 of title 44, United States Code, shall not apply to the testing, evaluation, and expansion of models under section 1115A of the Act. As a result, the information collection requirements contained in this rule are not subject to the requirements of the PRA. However, the anticipated impact is scored below in section VII.I.5. of the Regulatory Impact Analysis.

We did not receive public comments related to the information collection requirements related to ASM, and therefore, we are finalizing provisions as discussed in section III.C of this final rule.

2. ICRs Regarding the Updates to the Medicare Diabetes Prevention Program (§§ 410.79, 414.84, and 424.205)

In section § 410.79(b), we are finalizing our proposal to make changes to regulation Conditions of Coverage. First, we are finalizing our proposal to amend § 410.79(b) by revising the definitions of “Extended flexibilities period” and “Online” and adding definitions for three new terms for MDPP, including “Live Coach interaction,” “Online delivery period,” and “Online session.” The definitions will extend virtual delivery flexibilities through December 31, 2029, describe accepted delivery modes for MDPP, and further align MDPP terminology with CDC DPRP Standards.⁴⁷¹ These finalized changes to the definitions aim to remove access barriers for beneficiaries and provide suppliers with more delivery options in response to comments regarding the increasing demand for virtual participation options.

We are finalizing our proposal to amend § 410.79(c)(1)(ii) by clarifying that weight measurements used to determine the achievement or maintenance of the required minimum

weight loss must be taken in person by an MDPP supplier during an MDPP session or reflected in the beneficiary's medical record dated within two (2) days of the completion of the MDPP session. After consideration of public comments indicating that the proposed 2 day timeframe was overly restrictive, we are finalizing the changes to the provision at § 410.79 (c)(1)(ii) to allow for weight measurements used to determine the achievement or maintenance of the required minimum weight loss to be based on weight documented in the beneficiary's medical record with an updated timeframe of five (5) calendar days, which provides sufficient flexibility while maintaining clear separation between sessions. Additionally, we are finalizing our proposal to amend § 410.79(e)(3)(iii)(C) to revise weight collection requirements for MDPP in response to comments regarding increased flexibility for MDPP participants who may be traveling or unable to obtain weight measurements at home due to mobility and safety considerations. This change allows beneficiaries to self-report weight from a reasonable location outside of an in-person delivery site while maintaining program integrity through existing date-stamp requirements described at § 410.79(e)(3)(iii)(c) which state that the photo or video must clearly document the weight of the MDPP beneficiary as

⁴⁷¹ Centers for Disease Control and Prevention Diabetes Prevention Recognition Program. Standards and Operating Procedures. Requirements for CDC Recognition. June 2024. <https://nationaldppcsc.cdc.gov/s/article/DPRP-Standards-and-Operating-Procedures>.

it appears on their digital scaled on the date associated with the billable MDPP session.

Finally, we are finalizing our proposal to amend § 410.79 by adding paragraph (f) to test the addition of coverage of an asynchronous, Online delivery modality during the “Online delivery period” (until December 31, 2029), and clarify that MDPP suppliers are not required to maintain in-person delivery capability during the Online delivery period. These changes will allow virtual-only organizations to enroll in Medicare as MDPP suppliers, streamline the process to allow for greater delivery of Online sessions, and promote alignment with the 2024 CDC DPRP Standards.

Upon further review of existing regulations, CMS has determined that current requirements for make-up sessions do not adequately address Online delivery. Make-up sessions for Online delivery were referenced in the CY 2026 PFS proposed rule at § 410.79 (f)(2)(i)(C), which states the Set of MDPP services, inclusive of make-up sessions, must be delivered to individual beneficiaries fully synchronously (that is, In-person, Distance learning, or In-person with a distance learning component) or fully asynchronously (that is, Online). Therefore, CMS is finalizing additional updates to ensure regulatory clarity for make-up sessions offered through Online delivery by revising existing requirements at § 410.79(d)(1), which state “an MDPP supplier may offer a make-up session to an MDPP beneficiary who missed a regularly scheduled session. MDPP make-up sessions may only use in-person or distance learning delivery.” CMS is revising this language to indicate that Online delivery is also an accepted delivery modality for make-up sessions by specifically stating that “an MDPP supplier may offer a make-up session to an MDPP beneficiary who missed a regularly scheduled session. MDPP make-up sessions may only use in-person, distance learning, or Online delivery.” CMS would like to reiterate that the Set of MDPP services, inclusive of make-up sessions, must be delivered to individual beneficiaries fully synchronously (that is, In-person, Distance learning, or In-person with a distance learning component) or fully asynchronously (that is, Online). Therefore, a supplier may not offer an Online make up session to a beneficiary who is participating in MDPP through In-person, Distance learning, or In-person with a distance learning component delivery.

We are finalizing the proposed edits throughout § 414.84 by revising paragraphs (b)(1) introductory text and

(b)(2) introductory text to update language to include all accepted MDPP delivery modes for performance goals in which beneficiaries achieve weight loss milestones and adding paragraph (c)(3) to indicate payment for Online delivery, including the inclusion of a new Healthcare Common Procedure Coding System (HCPCS) G-code for online delivery. Finally, we are finalizing the proposed changes to redesignate paragraphs (c)(3) and (4) as paragraphs (c)(4) and (5) respectively and revise the redesignated paragraph (c)(4)(ii) to include a payment rate for a core session or core maintenance session furnished Online during the Online delivery period.

Lastly, we are finalizing our proposal to amend § 424.205(c)(10) to allow the minimum number of required MDPP core sessions and core maintenance sessions to be delivered Online during the Online delivery period; § 424.205(f)(2)(i) to include the online modality among acceptable session types for session documentation; and § 424.205(f)(5) to update requirements for achieving 5 and 9 percent weight loss measured in accordance with § 410.79(c)(ii). Section 1115A(d)(3) of the Act exempts Innovation Center model tests and expansions, which include the MDPP expanded model from the provisions of the PRA. Accordingly, this collection of information section does not set out any burden for the provisions, including the collection of weights.

We did not receive public comments on the ICRs for MDPP, and therefore, we are finalizing these changes as proposed.

3. ICR Regarding the Medicare Prescription Drug Inflation Rebate Program Under Sections 11101 and 11102 of the Inflation Reduction Act (IRA)

Section 1860D–14B(b)(1)(B) of the Act requires that beginning with plan year 2026, we shall exclude from the total number of units for a Part D rebatable drug, for an applicable period, those units for which a manufacturer provides a discount under the 340B Program. In association with the CY 2026 Physician Fee Schedule Proposed rule, we solicited comments on a new information collection request to enable us to collect information to implement this voluntary reporting. The following proposed changes will be submitted to OMB for review under control number 0938–1485 (CMS–10930).

In section III.I. of this final rule, we are finalizing the proposed policies to establish a 340B repository and allow 340B covered entities (hereinafter

“covered entities”) to optionally begin submitting to the 340B repository data elements from 340B identified claims for covered Part D drugs billed to Medicare Part D. We will allow covered entities to begin submitting the fields specified by CMS to the 340B repository beginning in 2026 for Part D 340B-identified claims with dates of service on or after January 1, 2026. This testing period will provide data for us to conduct usability testing for the 340B repository and allow covered entities to develop and test processes for submitting data elements to the 340B repository. We will not use the data submitted for user testing to remove units from Part D inflation rebates unless and until a policy to do so is proposed and finalized. Please see section III.I. of this final rule for detailed information on these policies.

We proposed that covered entities may voluntarily submit data directly to us (or a contractor) to be included in the 340B repository. We will consider all five data elements received by the 340B repository to be associated with 340B Part D claims; that is, we (or a contractor) will not further verify the 340B status of a claim but rather, the 340B repository will serve solely to store these data. Under this process, we will require a certification from covered entities that choose to submit data to the 340B repository that the data elements from all claims submitted to the 340B repository are from verified 340B claims and, to the best of the covered entity's knowledge, their submission includes all Part D 340B-identified claims for the covered entity at the time of submission for dates of service during the relevant period.

We established in the final rule that covered entities that choose to submit data to the 340B repository during the testing period beginning in 2026 will submit the fields specified by us on a quarterly basis to the 340B repository by a date announced in the future, which would be no sooner than 3 months after the date on which the 340B repository is available to receive submissions from covered entities. We established that covered entities that choose to submit data will report data elements related to all 340B Part D claims with dates of service on or after January 1, 2026. We will provide a deadline that we believe would be necessary to allow sufficient time for covered entities to gather, validate, and submit the specified data to the 340B repository. We will provide the submission deadline(s) once the Medicare Prescription Drug Inflation Rebate ICR is approved. During the rest of the testing period, we anticipate that covered entities will be expected to

report data on a quarterly basis to the 340B repository within 3 months of the end of a given calendar quarter. We understand that covered entities typically contract with vendors, such as 340B third-party administrators (TPAs), to determine 340B eligibility of claims using data provided by covered entities and their contract pharmacies. We will allow covered entities that choose to participate, to arrange for their TPAs or other vendors to submit certain data elements to the 340B repository on their behalf. Covered entities would certify and would ultimately be responsible for the accuracy of the data submitted to the 340B repository, even if a covered entity has an arrangement with a vendor to submit on its behalf. The data from these quarterly submissions would be used to assess the usability of such data to remove 340B units from the total number of units and total rebate amount specified in the Preliminary Rebate

Report and Rebate Report detailed at § 428.401(b) and (c), respectively. We established that covered entities participating in the 340B repository during the testing period beginning in 2026 provide information identifying the covered entity, specifically the covered entity's 340B ID and name as designated in the 340B Office of Pharmacy Affairs Information System (OPAIS), when submitting claim information to the 340B repository. We will use the collected identifying information to (1) perform analyses to assess suitability of the data for future use in removing 340B units, and (2) provide a means to follow up with the covered entity on questions related to claims data submission.

In the proposed rule, we estimated that approximately 6,500 covered entities will respond and submit data to the 340B Repository Data Elements Reporting Form for CY 2026 based on

internal CMS analyses of the unique 340B ID numbers in the HRSA OPAIS database that are active (that is, not terminated) with at least one contract pharmacy association listed and based on comments received on the CY 2025 PFS proposed rule from interested parties, including covered entities, requesting and expressing support for the establishment of a 340B repository.

Using the wage rates from Table 74 of the proposed rule, we expect, for a covered entity or its TPA, a dedicated Software Quality Assurance Analyst and Tester, or team of analysts, 6 hours sampling for each submission and a General and Operations Manager 2 hours reviewing each submission.

In aggregate, we estimated an annual burden of 208,000 hours (6,500 covered entities or TPAs $\times$ 8 hr/response $\times$ 4 responses/year) at a cost of \$23,195,120 (26,000 responses $\times$ [(2 hr $\times$ \$128.00/hr) + (6 hr $\times$ \$106.02/hr)]).

TABLE D-A3: SUMMARY OF TOTAL ANNUAL BURDEN FOR ALL COVERED ENTITIES OR TPAS TO COMPLETE 340B REPOSITORY DATA ELEMENTS REPORTING FORM IN 2026

Sector(s): Under Title 42 of the CFR	OMB Control Number (NFS ID No.)	No. Respondents	Total Annual Responses	Hours per Response (hours)	Total Annual Hours (hours)	Hourly Cost (\$/hr)	Total Cost (\$)
Medicare Prescription Drug Inflation Rebate Program under Sections 11101 and 11102 of the Inflation Reduction Act	0938-1485 (CMS-10930)	6,500 Covered Entities or TPAs	26,000 (6,500 $\times$ 4 submissions per year)	8	208,000	Varies	23,195,120

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Some commenters supported CMS establishing the proposed voluntary 340B repository in calendar year 2026. A commenter emphasized that covered entities are facing new requirements and challenges and stated that the proposed testing period is critical to assess CMS' and providers' investment of time and resources into reporting to the repository.

By contrast, many other commenters requested that CMS make reporting to the repository mandatory for covered entities and their contractors. A few of these commenters stated that without a mandatory requirement, the repository will not fulfill the legal requirement to remove 340B units. Some commenters stated that a mandatory repository would provide a more comprehensive and accurate method for identifying and

excluding 340B units than a voluntary repository. A commenter recommended that if CMS does not implement a requirement to submit to the repository initially, it should make submission mandatory for key types of large hospitals such as DSH and Rural Referral Centers (RRCs), stating that these hospitals have sophisticated software to manage their 340B programs which could streamline submission to the repository. A few commenters requested that CMS clarify that the repository will be mandatory in 2027, which they state could encourage covered entities to use the repository when it is voluntary in 2026. A couple of commenters stated under the inflation rebate invoicing timeline, CMS could establish and test a repository and require covered entities to retrospectively report 340B claim data for 2026 to the repository once it is operational.

Some commenters expressed concern that with voluntary reporting, the

repository is unlikely to receive submissions from a significant number of covered entities. One of these commenters stated that time, system set up, and an attestation requirement reduce incentives for covered entities to submit data to a voluntary repository. Another commenter stated that covered entities have consistently opposed efforts to increase transparency in the 340B Program through broader access to claims data. A few commenters stated that low submission rates could impede CMS' ability to acquire the necessary data to test the repository. Another commenter stated that hospitals have had poor compliance rates with CMS-mandated price transparency reporting and, therefore, the commenter has little confidence that voluntary reporting to the repository would meet the statutory requirement to exclude 340B units. A couple of commenters recommended that CMS engage with interested parties and provide data protections before moving to a mandatory repository. A

few commenters stated that CMS should provide a timeline by which the 340B data collection will transition from voluntary to a mandatory requirement.

A couple of commenters requested CMS work with the HRSA to establish an enforcement mechanism tied to mandatory compliance with the repository. A couple of commenters recommended that CMS consider making data submission to the repository mandatory by relying on its authority at section 1121 of the Act to establish “a uniform system for the reporting,” of “discharge and bill data” by facilities and organizations, in addition to general CMS authorities related to organizations enrolled in Medicare. A few commenters recommended CMS make data submission to the repository mandatory by relying on IRA rulemaking authority and general rulemaking authority under sections 1102(a) and 1871(a)(1) of the Act to establish requirements for Medicare providers through Conditions of Participation. These commenters emphasized that covered entities that do not submit data to the repository could be considered to be in violation of the Conditions of Participation and could be subject to a range of actions up to and including termination of their provider agreements.

Response: We are finalizing the proposal to establish a repository to receive voluntary submissions from covered entities of certain data elements from Part D 340B claims to allow us to assess such data for use in identifying units of Part D rebatable drugs for which a manufacturer provides a discount under the 340B Program in a future applicable period. We decline to provide a timeline under which we would move to a mandatory repository, but as we stated in the proposed rule, we are actively considering options for mandatory reporting to the 340B repository in the near future and we recommend that covered entities take advantage of the testing period to prepare for future policy development related to 340B repository reporting. We expect that hospitals receiving Medicare DSH payments, FQHCs, and CAHs will begin to submit data elements to the 340B repository during the testing period. We encourage all covered entities to submit data elements to the 340B repository during the testing period beginning in 2026, as this participation would allow for robust testing of data quality and completeness.

We do not agree with the commenters that stated that without a mandatory requirement, the repository will not fulfill the legal requirement to remove

340B units. The repository will not be used at this time to fulfill the legal requirement to remove 340B units, but rather to allow for robust testing of data quality and completeness to allow us to assess whether such data could be used to identify and remove 340B units for purposes of calculating Part D inflation rebates in a future applicable period following proposal and finalization of a policy to do so. It will also provide an opportunity for covered entities to develop and test their data submission processes. We appreciate the recommendation to engage with interested parties and provide data protections before moving to a mandatory repository, and we plan to continue to engage with interested parties and ensure that data is protected as we consider options for mandatory reporting to the 340B repository.

Finally, we also appreciate the comments and input related to authorities that the agency may rely on to implement a mandatory reporting requirement to the repository and conduct enforcement related to reporting to the repository. We will consider them in connection with any future rulemaking we may undertake with respect to adoption of a mandatory reporting requirement.

Comment: Many commenters stated that data collected in the repository should be used only for inflation rebate purposes. A couple of commenters stated that if CMS were to decide to use data submitted to the repository for other programs outside the Medicare Part D Drug Inflation Rebate Program, CMS should provide ample notice, justification, and an opportunity for interested parties to provide feedback. A commenter requested that CMS clarify if the repository will be integrated with the Medicare Transaction Facilitator Data Module. Another commenter asserted that HHS should not impose two separate and overlapping data submission requirements on covered entities under the 340B repository and HRSA’s Rebate Model Pilot Program.

By contrast, some commenters stated that the repository should serve as more than just a resource for the Medicare Part D Drug Inflation Rebate Program and could be a centralized source to identify 340B-eligible claims across HHS programs. A few of these commenters asserted that CMS should work with HRSA to establish a repository with expanded scope that would support transparency across the 340B Program. One of these commenters stated that data submitted to the repository should be used to monitor misuse of the 340B Program by comparing data submitted to the 340B

repository to data submitted under HRSA’s 340B Rebate Model Pilot Program. Some commenters stated that the information submitted to the repository could be used in the administration of other programs, such as the Medicare Drug Price Negotiation Program. A couple of commenters recommended the repository be populated with claim-level data from the HRSA 340B Rebate Model Pilot Program for participating drugs.

A commenter expressed interest in how the data submitted to the repository may be used, suggesting that the data the repository would collect could offer significant value if used for public health trends and drug price modeling. This commenter stated they would be supportive of the repository if the goal of the repository was to better track revenue and provide more transparency and accountability to resolve disputes in addition to validating 340B product data.

Response: At this time, any data submitted to the repository will only be used to begin usability testing to assess usability for the purpose of removing 340B units under the Medicare Part D Drug Inflation Rebate Program. If we were to decide to use data submitted to the repository for other programs outside the Medicare Part D Drug Inflation Rebate Program, we will provide notice, justification, and an opportunity for interested parties to provide suggestions on the proposal.

Commenters who recommended the information submitted to the repository could be used in the administration of other programs, these comments are out of scope for this final rule because they address other programs and topics beyond the scope of the Medicare Part D Drug Inflation Rebate Program.

Comment: Many commenters supported the claims data elements that CMS proposed for submission to the 340B repository. Many commenters stated that the five data elements that CMS proposed are appropriate for submission to the repository and do not present overly burdensome requirements or put protected health information at risk. A couple of commenters stated that the proposed data elements represent the necessary information to accurately match to PDE records and that the proposed elements could be easily matched to data from Medicare Part D data to identify 340B units to remove. A couple of commenters recommended CMS minimize the number of data elements for covered entities to submit to the repository. A commenter recommended CMS define data elements and

submission timelines for submission to the repository.

Some commenters recommended CMS align the data elements to submit to the repository with the data elements from HRSA's 340B Rebate Model Pilot Program to increase efficiency. A commenter stated that CMS should collect 340B data for all segments of the market rather than only Part D claims, stating that these changes would streamline the submission process for covered entities.

A commenter recommended CMS finalize the data elements proposed with the addition of the "Quantity Dispensed" element. This commenter argued that covered entities tend to submit inaccurate, incomplete, or variable data in the Quantity Dispensed field. A commenter stated that the proposed "Fill Number" data element is not an element routinely collected or used by State and territorial ADAPs and should not be a required field for submission to the repository by State and territorial ADAPs. A commenter recommended CMS add the original purchase date of the units dispensed as an additional data element. A commenter stated that CMS should avoid relying on NPI for prescribers or contract pharmacy identifiers to identify 340B claims, stating that this would likely cause confusion and misidentification. A commenter recommended CMS include prescriber identification as a required data element for submissions to the repository. A couple of commenters recommended that CMS work with interested parties to identify data elements that minimize burden on ADAPs as much as possible.

Response: We intend to minimize burden on covered entities while collecting the minimum elements that would be necessary to match a submission to a PDE transaction to exclude units from inflation rebate calculations, were the repository to be used for such purpose in the future. We appreciate the commenters who submitted recommended additional data elements to collect and the commenters who supported the proposed data elements.

In the interest of minimizing burden on covered entities while collecting sufficient information to match a submission to a PDE transaction to exclude units from inflation rebate calculations, we are finalizing the requirement that entities (whether a 340B covered entity, or a vendor on their behalf) that choose to submit data to the 340B repository during the testing period provide information identifying the 340B covered entity, which could include information such as the covered

entity's 340B ID and name as designated in the 340B OPAIS database, when submitting claim information to the 340B repository. In addition to this identifying information, we are finalizing the requirement that covered entities that choose to submit data to the 340B repository during the testing period beginning in 2026 must submit the following data elements from Part D claims for covered Part D drugs that are purchased under the 340B Program and dispensed to Medicare Part D beneficiaries: (1) Date of Service; (2) Prescription or Service Reference Number; (3) Fill Number; (4) Dispensing Pharmacy NPI; and (5) NDC-11. We will use these data elements to match claims to PDE transactions and perform further analyses to assess suitability of the data for future use in removing 340B units from Part D inflation rebate calculations. In response to the comments regarding ADAP programs and the Fill Number data element, we believe the data elements we are finalizing to collect in the 340B repository minimize burden on covered entities while providing the information needed to match submitted data elements to PDE transactions. For Part D claims, the Fill Number data element is required information to accurately associate the submitted data elements to the correct corresponding PDE record.

Comment: A few commenters stated that submitting data to the repository would not be overly burdensome since entities are already developing infrastructure and operational workflows needed to prepare to submit similar data for a set of drugs that will be included in the HRSA 340B Rebate Model Pilot Program. A commenter supported the proposal to allow third party administrators to transmit that data to the repository on behalf of covered entities.

Some commenters advised CMS to minimize burden on covered entities reporting to the repository. A few commenters stated that the process of identifying claims should not shift costs or burden onto pharmacies or prescribers. A commenter requested CMS finalize the proposal to receive data directly from the covered entity, and not through any payer or manufacturer. A commenter requested that CMS clarify that pharmacies are not required to provide information to the repository, and that only covered entities are voluntarily providing this information.

A commenter interpreted CMS' proposal as requiring covered entities to begin submitting data fields to the 340B repository in 2026, and stated that this requirement would have significant

implications for the Indian Health System (IHS) as IHS facilities operate with limited staff and resources and the commenter stated that this data collection could be used to restrict 340B savings. A commenter raised concerns regarding administrative costs and cash-flow volatility for small participants if there are new rebate obligations. A commenter recommended that CMS withdraw the requirement to submit to the repository as it would create an overwhelming administrative burden for rural facilities and stated that CMS should work with payers and pharmacies that already have this data. A commenter raised concern about burden for hospital neurology departments and outpatient practices, stating that the availability of the data elements is variable. This commenter recommended that CMS track additional administrative burden associated with submitting data to the repository and devise a strategy to minimize burden without reducing the value of the repository.

A few commenters recommended that, to reduce burden on covered entities, CMS remove the proposed requirement that covered entities certify that the data elements submitted are for 340B claims with dates of service during the relevant time period and that the data elements from all claims submitted to the 340B repository are from verified 340B claims and, to the best of the covered entity's knowledge, their submission includes all Part D 340B claims for the covered entity at the time of submission for the applicable period. By contrast, a commenter recommended CMS finalize the proposed provision to require covered entities to complete this certification.

A commenter stated that they do not support the repository because it puts the stability of the 340B Program at risk. A few commenters stated that submitting data to the repository will substantially increase burden on providers and that providers would need to devote significant resources to ensure compliance, which could divert resources from direct patient care. For these reasons, a commenter suggested CMS use the claims-based methodology to identify 340B Part D claims and abandon the repository approach, including any future mandatory data repository. A commenter recommended that CMS allow State ADAP programs to submit direct purchase and rebate data to the repository.

Response: We are finalizing that the 340B repository will be established and will begin accepting voluntary submissions from covered entities of the fields specified by us beginning in 2026

for Part D 340B claims with dates of service on or after January 1, 2026 to allow for us to begin usability testing for the 340B repository. We will not use the data submitted during the testing period to remove units from Part D inflation rebates unless and until a policy to do so is proposed and finalized.

In developing the data elements for submission and process for voluntary submission to the repository, we considered how to minimize burden on covered entities. We do not intend to receive data from pharmacies, manufacturers, or plans on the covered entity's behalf. As we stated in the proposed rule, we understand covered entities typically contract with vendors, such as 340B third-party administrators, to determine 340B-eligibility of claims using data submitted by covered entities and their contractors. We will allow covered entities that choose to submit data to the repository to arrange for their TPAs or other vendors to submit certain data elements to the 340B repository on their behalf if they would like to do so. At this time, we are not collecting direct purchase or rebate data in the 340B repository but we note that if ADAPs are covered entities and used 340B drugs for a Part D claim, they can submit the data elements from that claim to the 340B repository.

We appreciate the commenters who submitted comments on the proposed requirement that covered entities certify that the data elements submitted are for 340B claims with dates of service during the relevant time period and that the data elements from all claims submitted to the 340B repository are from verified 340B claims and, to the best of the covered entity's knowledge, their submission includes all Part D 340B claims for the covered entity at the time of submission for the applicable period. We do not have access to data to validate and ensure accuracy of submitted data, therefore we find this certification necessary to ensure completeness and accuracy of data submissions to the 340B repository. We are finalizing the requirement that covered entities must certify the completeness and accuracy of the data submitted.

We do not agree that the 340B repository puts the stability of the 340B Program at risk. A wide array of interested parties commented on the CY 2025 PFS proposed rule and previous CMS policymaking documents recommending that we create a mechanism through which covered entities would retrospectively submit data to us identifying 340B claims dispensed under Part D. Interested parties advised that this mechanism

allow covered entities to submit these data directly to us, rather than through claims that dispensers submit via Part D plan sponsors and we believe this structure will not create risk for the 340B Program.

Comment: A few commenters advised CMS to engage with interested parties related to establishing the repository. A commenter encouraged CMS to collaborate with interested parties to ensure that the repository is established effectively and securely so that covered entities can meaningfully participate. A commenter recommended CMS provide a deadline of when the repository will be live and report on its testing of the repository's data matching regularly. A commenter stated that CMS should engage with interested parties to understand why and improve voluntary participation if voluntary reporting to the repository is lower than CMS expected.

A commenter requested that CMS consult with HRSA and provide educational resources and training related to submitting data to the repository that would lower administrative burdens on pharmacists. A commenter requested that CMS convene an advisory group to assist in finalizing and implementing policy related to ADAPs submitting data to the repository and suggested interested parties to serve as representatives for the group.

Response: We welcome engagement with interested parties, including on topics such as data submission requirements and timing, as we work to operationalize the repository. We will share more information about the repository operationalization as soon as possible and will work to engage with interested parties to understand any barriers to participation, including those representing ADAPs. We will also consider how to provide useful training and resources related to submitting data to the repository that would lower the administrative burdens.

After consideration of public comments, we are adopting the policies as proposed for covered entities to submit 340B claims data to a 340B repository.

4. ICRs Regarding Manufacturers Reporting of Drug Pricing (§§ 414.802, 414.804, and 414.902)

The following proposed changes will be submitted to OMB for review under control number 0938–0921 (CMS–10110)

a. Requiring Certain Manufacturers To Report Drug Pricing Information for Part B (§§ 414.802 and 414.902)

In the CY 2022 PFS final rule, it was stated that the new provisions finalized in that rule at §§ 414.802 and 414.804 implemented new statutory requirements under sections 1847A and 1927 of the Act, as amended by section 401 of Division CC, Title IV of the CAA, 2021 (for the purposes of this section of this proposed rule, hereinafter is referred to as “section 401”), which requires manufacturers without a Medicaid National Drug Rebate Agreement (NDRA) to report ASP information to CMS for calendar quarters beginning on January 1, 2022, for drugs or biologicals payable under Medicare Part B and described in sections 1842(o)(1)(C), (E), or (G) or 1881(b)(14)(B) of the Act, including items, services, supplies, and products that are payable under Part B as a drug or biological (86 FR 65560). In that final rule, we estimated that an additional 568 respondents had products for which they would be required to report ASP data to CMS beginning January 1, 2022 (86 FR 65560), some of which are manufacturers of skin substitutes. Following the implementation of section 401, we estimated 500 respondents, 2,000 responses (500 respondents × 4 responses/yr), 26,000 hours (2,000 responses × 13 hr/response).

In section II.K. of this final rule, we finalized that skin substitutes be paid as incident-to supplies, which are not required to be paid under section 1847A of the Act. Accordingly, manufacturers of skin substitutes will no longer be required to report ASP data to CMS. Instead, ASP data reporting for manufacturers of skin substitutes would become voluntary. The finalized policy of shifting the payment of skin substitute manufactures to incident-to supplies will therefore decrease the number of manufacturers that are required to report ASP data to CMS each quarter, ultimately decreasing the overall burden of ASP data reporting. Based on ASP data from the April 2025 pricing file, 65 skin substitute manufacturers are reporting ASP data. Under the finalized policy to pay for skin substitute products as incident-to supplies, the number of manufacturers required to report ASP data to CMS would decrease manufacturer burden by minus 65 respondents, minus 260 responses (– 65 respondents × 4 responses/yr), and minus 3,380 hours (– 260 responses × 13 hr/response) and minus \$154,804 (– 3,380 hr × \$45.80/hr).

TABLE D-A4: Summary Of Total Annual Burden Of Information Collection Request

Section(s) Under Title 42 of the CFR	CMS Contract Number (CMS ID No.)	No. Respondents	Est. Annual Responses	Est. per Response (hours)	Total Annual Time (hours)	Hourly Cost (\$/hr)	Total Cost (\$)
§§ 414.802 and 414.804	(93)-1421 (CMS-10110)	1651	2668	13	13,380	\$45.80	\$1,154,804

We note that these estimates have not changed since the proposed rule.

b. Average Sales Price: Price Concessions and Bona Fide Service Fees (§§ 414.802 and 414.804)

In section III.A of this final rule, we finalized revisions to § 414.804(a)(5) to add additional submission requirements for the reporting of ASP data. Specifically, the submission requirement is being expanded to include (1) reasonable assumptions for calculating the manufacturer's ASP, including a summary of the methodology used to determine fair market value for fee arrangements as described at § 414.804 and (2) warranty or certification letter from the recipient of a fee from a manufacturer as evidence that a fee was not passed on as a price concession in accordance with submission requirements at § 414.804.

Currently, in the absence of specific guidance in the Act or Federal regulations, the manufacturer may make reasonable assumptions in its calculations of the manufacturer's ASP, consistent with the general requirements and intent of the Act, Federal regulations, and its customary business practices. The reasonable assumptions explain the methodology used by the manufacturer to calculate ASP. This final rule will make the reasonable assumptions document, which is currently submitted voluntarily by some manufacturers along with ASP data, a required component of the quarterly ASP data submission.

The warranty or certification from the recipient of a bona fide service fee is a new document that we are finalizing to be required as evidence of whether or not a fee was passed on as a discount (that is, price concession).

The burden associated with these new requirements is the time and effort required by manufacturers of drugs and biologicals to submit ASP data to CMS quarterly under sections 1847A and 1927 of the Act and prepare and submit the reasonable assumption document and warrantee/certification letter to CMS.

We anticipate an increase in burden because, in addition to the current requirement for submission of ASP data each quarter to CMS, all manufacturers are required to submit reasonable assumptions and warrantee/certification letters to accompany their ASP data submissions. Because reasonable assumptions varied in terms of the exact information that was provided and were generally updated by each manufacturer every 1 to 3 years depending on changes in the product line and various contract terms and conditions with intermediaries or consultants, we are finalizing adding mandatory templates for submitting reasonable assumptions and bona fide service fee warrantee/certifications.

Consistent with the proposed rule, we continue to anticipate that the number of manufacturers required to report ASP data to CMS will decrease by minus 65 manufacturers (500 active estimate – 435 proposed estimate) and estimate (as described in the following paragraphs) that it will take 77 hours per year for each respondent.

Based on our review of voluntarily submitted reasonable assumption data, we are continuing to estimate that it would take 19 hours annually at \$45.80/hr for a Secretary/Administrative Assistant (consisting of 10 hr to compile and/or update the information and 5 hours to review the information approximately once annually and 1 hour per quarter (or 4 hr annually) to submit the reasonable assumptions to

CMS to CMS via ASP Data Collection System.

We continue to estimate the disclosure and submission of the warrantee/certification letter from the recipient of a bona fide service fee is 6 hours annually at \$45.80/hr for a Secretary/Administrative Assistant (consisting of 2 hr to review the warrantee/certification letter approximately once per year and 1 hour per quarter (or 4 hr annually)) to submit the warrantee/certification letter, including obtaining a signature, to CMS via the ASP Data Collection System. Although a warrantee/certification letter could be renewed up to every three years depending on the specific terms of each contract, we will use a calculation of once annually to accommodate the burden in most circumstances.

This burden is in addition to the current estimated burden of ASP data submission of 52 hours per year per respondent at \$45.80/hr for a Secretary/Administrative Assistant (13 hr per quarter).

In the proposed rule, we estimated that these would result in an annual burden of 25 hours (19 hr + 6 hr) per response per year. In aggregate, we estimate a burden of 10,875 hours (435 responses × 25 hr/response) at an annual cost of \$498,075 (10,875 hr × \$45.80/hr). This estimate remains the same for this final rule.

We did not receive public comments on these estimates; however, following publication of the proposed rule, we identified that we should account for some additional burden for a chief executive for the certification requirement. Specifically, in this final rule, we are adding burden for certifying ASP data for a chief executive, which would take 1 hour per quarter at \$252.82/hr. These additional updates are reflected in Table D-A5.

TABLE D-A5: Annual Requirements And Burden For Manufacturers Reporting Drug Pricing Information For PART B

Sections/Under Title 42 of the CFR	OMB Control Number (CMS ID No.)	No. Respondents	Total Annual Responses	Cost per Response (hours)	Total Annual Burden (hours)	Cost (per dollar)	Total Cost (\$)
§§ 414.802 and 414.804 (new burden associated with reasonable assumptions)	0938-1921 (CMS-10110)	435	4	4.75	19	45.80	378,537
§§ 414.802 and 414.804 (new burden associated with warranty/certification)	0938-1921 (CMS-10110)	435	4	1.5	6	45.80	119,538

§§ 414.802 and 414.804 (existing burden reduced by one hour per quarter shifted to chief executive)	0938-1921 (CMS-10110)	435	4	12	48	45.80	956,304
111 All (new burden plus active burden)	n/a	435	4	varies	77	varies	1,894,786

5. ICRs Regarding the Medicare Shared Savings Program

Section 1899(e) of the Act provides that chapter 35 of title 44 U.S.C., which includes such provisions as the PRA, shall not apply to the Shared Savings Program. Accordingly, we are not setting out Shared Savings Program burden estimates under this section of the rule. Please refer to the Regulatory Impact Analysis (section VI. of this final rule) for a discussion of the impacts associated with the changes to the Shared Savings Program as described in section III.F. of this final rule.

6. The Quality Payment Program (42 CFR Part 414 and Section IV. of This Final Rule)

The following Quality Payment Program-specific ICRs reflect changes to our currently approved requirements/ burden as summarized in section V.B.5.a.(1) in this final rule.

In the CY 2026 PFS proposed rule (90 FR 32778 through 32793), we presented detailed burden estimates for Quality Payment Program ICRs that are new or revised to reflect the estimated impact of policy proposals. We also discussed policy proposals for Quality Payment Program ICRs for which we assumed there were no burden impacts. In this final rule, we continue this approach for finalized policies. Non-rulemaking revisions, due to updated data and assumptions, and the changes due to provisions of this rule, will be submitted to OMB for approval under

the identified control numbers. This approach for the Quality Payment Program ICRs follows our long-standing process for setting out PRA-related burden in most of our proposed and final rules. It is intended to focus our PRA score on the impact of this rule's policy changes. We refer readers to section VII.1.5. of this final rule for the Regulatory Impact Analysis for discussion of this year's policies' impacts to final scores and payment adjustments. For all ICRs, including ICRs where we did not propose changes to the number of respondents, responses, or time per response, the costs identified in the revised collection of information requests reflect the updated 2024 wage rate data described in section V.A. of this final rule.

For the CY 2026 rulemaking cycle, we simplified our methodology for calculating the total cost of each ICR to be consistent with the approach adopted by other programs. In prior years, we assessed total cost as the number of responses multiplied by cost per response, determining cost per response as the time per wage rate category per response multiplied by the hours per response. We removed the cost per response measurement from our total cost calculations and, instead, determined cost as a function of hourly wage rates per labor category identified in Tables D-A1 and D-A2 of this final rule multiplied by the annual hours per labor category. We determined annual hours per labor category by multiplying the annual burden hours per response

by the number of annual responses. Accordingly, we updated our summary calculations of the total change in time and cost of this rulemaking to focus on the estimated incremental burden of this rulemaking.⁴⁷²

a. Background

(1) ICRs Regarding the Merit-Based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APMs)

In section V.B.5.a.(2) of this final rule, we discuss changes in the estimated burden for the information collections associated with the Quality Payment Program. The changes to the estimated burden and the information collections for the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey, described in section V.B.5.b.(1) of this final rule, will be submitted to OMB for approval under control number 0938-1222 (CMS-10450). All other changes to burden and information collections for Quality Payment Program ICRs due to policy changes described in this section of the final rule, or the availability of updated data, will be submitted to OMB for approval under control number 0938-

⁴⁷² Due to this approach to estimate the change in cost, annual changes to the hourly wages rates as identified by BLS are not identified as a change in cost due to data adjustments. Any changes in cost due to data adjustments in section V.B.5.a.(1)(a) of this final rule reflect changes due to the annual hours based on the availability of updated MIPS submission data since our currently approved estimates.

1314 (CMS–10621). We did not propose changes to the virtual group election process or burden estimates, currently approved under OMB control number 0938–1343 (CMS–10652).

(a) Summary of Annual Quality Payment Program Burden Estimates

We are finalizing our proposed changes to six Quality Payment Program ICRs due to policies finalized in this final rule. For these six ICRs (five under OMB control number 0938–1314 (CMS–10621) and one under OMB control number 0938–1222 (CMS–10450)), we also updated our burden assumptions based on the updated MIPS participation data. These updated data sources are described in section V.B.5.a.(4)(b) of this final rule. The following paragraphs in this section summarize these changes to our currently approved burden estimates. Detailed discussions per ICR begin in section XX of this final rule.

For ICRs under OMB control number 0938–1314 (CMS–10621), we estimate that the policies finalized in this final rule will result in 2,312 additional responses due to the availability of new

MIPS Value Pathways (MVPs). This change reflects the number of historic traditional MIPS submissions we estimate will move to MVP reporting due to the availability of new MVPs and will need to complete a registration form that is not required with traditional MIPS submissions.

Accordingly, we estimate the increase in MVP submissions and registrations, and resulting decrease in traditional MIPS submissions will result in an annual decrease of 6,798 hours and \$840,757 (see total Policy Change in Tables D–A6, D–A7 and D–A8, respectively) beginning with the CY 2026 performance period/2028 MIPS payment year. In addition, we separately estimate changes to annual burden due to the availability of updated MIPS submission data for these five ICRs since our currently approved estimates will result in an additional annual burden decrease of 5,353 responses, 59,372 hours, and \$7,119,526 (see total of Change Due to Updated Data in Tables D–A6, D–A7 and D–A8, respectively). Taken together, we estimate a total reduction of 3,041 responses, 66,169 hours, and \$7,960,283

(see total of Total Change in Tables D–A6, D–A7 and D–A8, respectively). All time estimates in the referenced tables are rounded to the hour, and all cost estimates are rounded to the dollar. The change in total time and total cost in the referenced tables per ICR are described in section V.B.5.c. of this final rule and reflect the sum of changes due to policy provisions and newly available data before this rounding. Accordingly, the total change in time per ICR may not equal the sum of changes due to policy and data adjustments because of this rounding. The Total row estimate per table represents the sum of the component ICR rows in that table.

For the Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS Survey ICRs under OMB control number 0938–1222 (CMS–10450) (see section V.B.5.b.(1) of this final rule), we estimate that the policy provisions in this final rule will result in an annual change of 0 responses, +10 hours, and +\$1,077 (see total of Total Change in Tables D–A9, D–A10, and D–A11, respectively), beginning with the CY 2027 performance period/2029 MIPS payment year.

TABLE D–A6: ANNUAL RESPONSES BEGINNING WITH THE CY 2026 PERFORMANCE PERIOD/2028 MIPS PAYMENT YEAR UNDER OMB CONTROL NUMBER 0938–1314 (CMS–10621)

Requirement	Currently Approved Responses [*]	CMS 1832 ^{**} Annual Responses ^{***}	Total Change ^{***}	Change Due to Policy	Change Due to Updated Data ^{***}

Total	68,954	65,913	(3,041)	2,312	(5,353)

^{*}Currently approved annual estimates for CY 2023 performance period/2025 MIPS payment year under OMB Control Number 0938–1314 (CMS–10621).

^{**}Total annual estimate beginning with the CY 2026 performance period/2028 MIPS payment year, reflecting the currently approved estimate and the total change due to both policy changes and updated data.

^{***}Total impact of policies finalized in this final rule and the availability of updated MIPS submission data.

^{****}Change reflects the availability of updated MIPS submission data. The currently approved estimate incorporated MIPS submission estimates from the CY 2022 performance period/2024 MIPS payment year. In this final rule, we apply updated MIPS submission data from the CY 2023 performance period/2025 MIPS payment year. For additional information, see section V.B.5.a.(4) of this final rule.

TABLE D-A7: ANNUAL TIME BEGINNING WITH THE CY 2026 PERFORMANCE PERIOD/2028 MIPS PAYMENT YEAR UNDER OMB CONTROL NUMBER 0938-1314 (CMS-10621)

Requirement	Currently Approved Total Time (Hours)*	Total Time (Hours)**	Total Change (Hours)***	Change Due to Policy	Change Due to Updated Data****
Quality Performance Category: Medicare Part B Claims Measure Collection Type (Traditional MIPS)	173,197	118,570	(54,627)	(5,510)	(49,118)
Quality Performance Category: MIPS CQM/QCDR Measure Collection Type (Traditional MIPS)	154,454	158,108	3,624	(7,357)	10,981
Quality Performance Category: eCQM Collection Type (Traditional MIPS)	217,432	191,488	(25,944)	(8,912)	(17,032)
MVP Registration	1,571	2,027	456	578	(122)
MVP Quality Submission	40,195	50,515	10,322	14,405	(4,081)
Total	586,877	520,708	(66,169)	(6,798)	(59,372)

* Currently approved annual estimates for CY 2025 performance period/2027 MIPS payment year under OMB Control Number 0938-1314 (CMS-10621).

** Total annual estimate beginning with the CY 2026 performance period/2028 MIPS payment year, reflecting the currently approved estimate and the total change due to both policy changes and updated data.

*** Total impact of policies finalized in this final rule and the availability of updated MIPS submission data. The estimate per ICR applies the change in policy and change in updated data as calculated in section V.D.3.c. of this final rule, before rounding to the full hour as displayed in this table. Therefore, the sum of the "Change Due to Policy" and "Change Due to Updated Data" columns may be one hour different from this estimate due to rounding. The "Total" row is the sum of the preceding rows in this table.

**** This change reflects the change in hours due to the updated number of estimated responses due to the availability of updated MIPS submission data independent of the finalized policy to add six new MVPs. The currently approved estimate incorporated MIPS submission estimates from the CY 2022 performance period/2024 MIPS payment year. In this final rule, we apply updated MIPS submission data from the CY 2023 performance period/2025 MIPS payment year.

TABLE D-A8: ANNUAL COST BEGINNING WITH THE CY 2026 PERFORMANCE PERIOD/2028 MIPS PAYMENT YEAR UNDER OMB CONTROL NUMBER 0938-1314 (CMS-10621)

Requirement	Total Change in Cost	Change Due to Policy	Change Due to Updated Data*
Quality Performance Category: Medicare Part B Claims Measure Collection Type (Traditional MIPS)	(\$6,496,552)	(\$655,328)	(\$5,841,224)
Quality Performance Category: MIPS CQM/QCDR Collection Type (Traditional MIPS)	\$444,109	(\$901,575)	\$1,345,684
Quality Performance Category: eCQM Collection Type (Traditional MIPS)	(\$3,231,520)	(\$1,110,056)	(\$2,121,463)
MVP Registration	\$49,120	\$62,227	(\$13,108)
MVP Quality Submission	\$1,274,560	\$1,763,875	(\$489,315)
Total	(\$7,961,283)	(\$840,757)	(\$7,119,526)

* This change reflects the change in cost due to the total change in hours (determined as the sum of change in hours multiplied by hourly wages, per labor category). This change incorporates changes due to policy and due to updated data. The estimate per ICR applies the change in policy and change in updated data as calculated in section V.D.3.c. of this final rule, before rounding to the full dollar as displayed in this table. Therefore, the sum of the "Change Due to Policy" and "Change Due to Updated Data" columns may be one dollar different from this estimate due to rounding. The "Total" row is the sum of the preceding rows in this table.

** This change reflects the change in dollars due to the updated number of estimated responses due to the availability of updated MIPS submission data independent of the finalized policy to add six new MVPs. The currently approved estimate incorporated MIPS submission estimates from the CY 2022 performance period/2024 MIPS payment year. In this final rule, we apply updated MIPS submission data from the CY 2023 performance period/2025 MIPS payment year.

TABLE D-A9: ANNUAL RESPONSES BEGINNING WITH THE CY 2027 PERFORMANCE PERIOD/2029 MIPS PAYMENT YEAR UNDER OMB CONTROL NUMBER 0938-1222 (CMS-10450)

Requirement	Currently Approved Responses ^a	Responses ^{a,b}	Total Change in Responses	Change Due to Policy	Change Due to Updated Data

^a Currently approved annual estimates under OMB Control Number OMB control number 0938-1222 (CMS-10450).

^b Total annual time per response beginning with the CY 2027 performance period/2029 MIPS payment year.

^c Total annual estimate beginning with the CY 2027 performance period/2029 MIPS payment year, reflecting the currently approved estimate and the total change due to both policy changes and updated data.

^d Total impact of policies finalized in this final rule and the availability of updated MIPS submission data.

^e We did not change our currently approved estimates due to the availability of updated data that is independent of the impacts of finalized policies.

TABLE D-A11: ANNUAL COST BEGINNING WITH THE CY 2027 PERFORMANCE PERIOD/2029 MIPS PAYMENT YEAR UNDER OMB CONTROL NUMBER 0938-1222 (CMS-10450)

Requirement	Total Change in Cost ^a	Change in Cost Due to Policy	Change in Cost Due to Updated Data
CAHPS for MIPS Survey Vendor Application	\$1,077	\$1,077	N/A

^a This change reflects the change in cost due to the total change in hours (determined as the sum of change in hours multiplied by hourly wages, per labor category). This change incorporates changes due to policy and due to updated data.

(2) Summary of Changes for the Quality Payment Program: MIPS

(a) MIPS ICRs With Changes Due to Policy Provisions

For the six ICRs detailed in Tables D-A6 through D-A13, we are finalizing our proposed burden changes based on policies finalized in this final rule as well as updated data available when preparing the CY 2026 PFS proposed rule. These discussions begin in section V.B.5.b. of this final rule.

(b) MIPS ICRs With No Changes to Currently Approved Burden Estimates

In the CY 2026 PFS proposed rule (90 FR 32782), we did not propose to update our burden estimates for the following ICRs under OMB control number 0938-1314 (CMS-10621)

because there were no proposed policies that affect our currently approved burden estimates, and we did not have updated available data by which to revise our currently approved burden estimates for respondents or hours: (1) Nomination of Improvement Activities; (2) Nomination of MVPs; (3) Opt-out of Performance Data Display on Compare Tools for Voluntary Participants; (4) Subgroup Registration; (5) Qualified Clinical Data Registry (QCDR) Full Self Nomination and other Requirements; (6) QCDR Simplified Self-Nomination and other Requirements; (7) Qualified Registry Full Self Nomination and other Requirements; (8) Qualified Registry Simplified Self Nomination and other Requirements; and (9) Third Party Intermediary Plan Audits. Additionally,

we did not propose changes to our burden response and hour estimates for the following ICRs under OMB control number 0938-1222 (CMS-10450): (1) Beneficiary Responses to CAHPS for MIPS Survey; and (2) Group Registration for CAHPS for MIPS Survey. Lastly, we did not propose changes to our burden estimates for Registration for Virtual Groups under OMB control number 0938-1343 (CMS-10652). Where applicable, we discuss related policy provisions finalized in this final rule and the reasoning for not impacting our burden estimates per ICR, beginning in section V.B.5.b.(2) of this final rule.

(c) MIPS ICRs With Changes Due to Available Data

Separate from the policies finalized in section IV. of this final rule and ICRs described in Tables D–A6 through D–A11, we identified in the CY 2026 PFS proposed rule (90 FR 32782) that we are updating our burden estimates for the following ICRs for the CY 2026 performance period/2028 MIPS payment year due to the availability of updated data. Since the changes were not derived from policy provisions, we do not set out these changes in this final rule: (1) Call for Quality Measures; (2) Data Submission for the Improvement Activities Performance Category; (3) Data Submission for the Promoting Interoperability Performance Category; (4) Open Authorization (OAuth) Credentialing and Token Request Process; (5) Quality Payment Program Identity Management Application Process; and (6) Reweighting Applications for Promoting Interoperability and Other Performance Categories.

Where applicable, we discuss any related policies finalized in this final rule and our reasoning for why these policies do not impact our burden estimates per ICR, beginning in section V.B 5.d.(2) of this final rule.

(d) New MIPS ICRs

The following changes will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In the CY 2026 PFS proposed rule (90 FR 32782 and 32783), we proposed to add a new ICR to reflect submissions for the Alternative Payment Model Performance Pathway (APP), due to the availability of updated data. The APP is an optional MIPS reporting and scoring pathway for MIPS eligible clinicians who are also participants in MIPS APMs, as defined at § 414.1367. Our burden estimates for the APP focus on submissions by individuals, groups, or non-Shared Savings Program ACO APMs for the APP quality measure set. As there were no related policy provisions affecting these estimates, we did not detail the APP burden estimates in the CY 2026 PFS proposed rule.

We did not estimate burden for Shared Savings Program ACOs under the APP. Section 1899(e) of the Act provides that chapter 35 of title 44 U.S.C., which includes such provisions as the PRA, shall not apply to the Shared Savings Program. Additionally, we did not establish an ICR for the APP Plus quality measure set. In the CY 2025 PFS final rule (89 FR 98355 through 98371), we established the APP Plus as

a new quality measure set designed for APP participants that expands the existing APP measure set and is mandatory for Shared Savings Program ACOs starting in the CY 2025 performance period/2027 MIPS payment year. We continued our assumption from the CY 2025 PFS final rule (89 FR 98549 and 98550) that MIPS eligible clinicians, groups, and APM Entities (excluding Shared Savings Program ACOs) will not elect to submit the APP Plus quality measure set. This assumption is because the APP Plus quality measure set has greater reporting requirements than the APP quality measure set. The APP Plus quality measure set for CY 2026 performance period/2028 MIPS payment year finalized in the CY 2025 PFS final rule (89 FR 98368) requires that MIPS eligible clinicians, groups, or non-Shared Savings Program ACOs actively report five quality measures (via the eCQM, MIPS CQM, and Part B Claims collection types as available per measure for non-Shared Savings Program ACOs per measure) instead of three quality measures in the APP quality measure set that are actively reported via the MIPS CQM, part B Claims and eCQM collection types, as available per measure for non-Shared Savings Program ACOs. We do not believe MIPS eligible clinicians, groups, and APM Entities who are not required to report the APP Plus quality measure set will elect to report APP Plus over APP quality measure set due to the increased data collection and submission requirements.

(3) Summary of Changes for the Quality Payment Program: Advanced APMs

In the CY 2026 PFS proposed rule (90 FR 32783), we did not propose changes to the following ICRs due to policy provisions or the availability of updated submission data beyond the wage rate data described in section V.A. of this final rule: (1) Partial Qualifying Advanced APM (QP) Elections; (2) Other Payer Advanced APM Determinations: Payer-Initiated Process; (3) Other Payer Advanced APM Determinations: Eligible Clinician-Initiated Process; and (4) Submission of Data for QP Determinations under the All-Payer Combination Option. We discuss related policy provisions and why they do not impact our burden estimates in sections V.B 5.a.(4)(c) and VII.I.5.e.(2)(b) of this final rule.

(4) Framework for Understanding the Burden of MIPS Data Submission and Data Considerations**(a) Framework for Understanding the Burden of MIPS Data Submission**

Across organizations permitted or required to submit data on behalf of clinicians, there can be variation across the types of data provided, and whether a clinician is a MIPS eligible clinician or other eligible clinician voluntarily submitting data, a MIPS APM participant, or an Advanced APM participant. MIPS eligible clinicians and other clinicians voluntarily submitting data to MIPS for the quality, Promoting Interoperability, and improvement activities performance categories may submit data as the following participation types: individual; group; virtual groups (available only for traditional MIPS); subgroups (available only for MVPs); and APM Entities. Eligible clinicians who attain Partial QP status may incur additional burden if they elect to participate in MIPS. MIPS eligible clinicians are not required to submit any additional data for the cost performance category, as CMS calculates performance on measures specified for this performance category based on claims-data.

Virtual groups are subject to the same data submission requirements as groups, and therefore, we will refer only to groups for the remainder of this section, unless otherwise noted.

For the aforementioned participation types, we assessed the same burden per reporting option and assumed from our available data that all non-Shared Savings Program ACO APM Entity submissions represent single Taxpayer Identification Number (TIN) APMs. We excluded performance category submissions by Shared Savings Program ACO APM Entities from our MIPS reporting estimates. Per section 1899(e) of the Act, the PRA does not apply to the Shared Savings Program. The regulatory impact analysis in section VII. of this final rule discusses impacts to the Shared Savings Program from provisions associated with this final rule.

There are three MIPS reporting options: traditional MIPS, MVPs, and the APP. In section V.B.5.c. of this final rule, we provide distinct estimates for the traditional MIPS and MVP reporting options for the quality performance category, focusing on changes to our currently approved burden estimates. We do not detail burden estimates for the Promoting Interoperability and improvement activities performance categories because we are not finalizing any updates to our burden estimates

associated with policy provisions of this final rule; for discussion of these provisions relative to burden implications, please see sections V.B.5.d. and V.B.5.e. of this final rule. As with the CY 2026 PFS proposed rule (90 FR 32783), we have not separately estimated burden for traditional MIPS and MVPs for the Promoting Interoperability and improvement activities performance categories. Traditional MIPS and MVPs require reporting on all Promoting Interoperability performance category objectives and measures. Traditional MIPS reporting for the improvement activities performance category typically requires attestation to two improvement activities; however, clinicians, groups, and virtual groups with a special status designation are only required to attest to one improvement activity. MVP participants are required to attest to one improvement activity regardless of special status. For additional details on historic burden assumptions for the improvement activities performance category, we refer readers to the CY 2025 PFS final rule (89 FR 98492). In the related collection of information request (OMB control number 0938–1314 (CMS–10621)), we aggregate submissions across all reporting options. For additional burden historic frameworks, we refer readers to the CY 2024 PFS final rule (88 FR 79422 through 79424) and the CY 2025 PFS proposed rule (89 FR 62111 through 62114).

(b) Summary of Available MIPS Submission Data Sources

Where available, we incorporated updated data into our burden estimates beginning with the CY 2026 performance period/2028 MIPS payment year. These updates include submission data from the CY 2023 performance period/2025 MIPS payment year. To estimate QPs excluded from MIPS reporting requirements, we used the Advanced APM payment and patient percentages from the APM Participant List for the final snapshot for the 2023 QP Performance period.

The available CY 2023 performance period/2025 MIPS payment year data identifies performance category submissions by non-Shared Savings Program ACO APM Entities. We incorporated these estimates alongside our longstanding inclusion of individual, group, and virtual group data.

As detailed in section V.B.5.c.(6) of this final rule, we updated our assessment of estimated MVP quality performance category submissions and

registrations. We assessed measure-level submission trends from the CY 2023 performance period/2025 MIPS payment year (87 FR 70650 through 70701) alongside the MVP inventory finalized in the CY 2025 PFS final rule Appendix 3 (89 FR 98972 through 99057), and the new MVPs finalized as proposed in section IV.A.4.a.(1) of this final rule. The CY 2023 performance period/2025 MIPS payment year submission data include MVP submissions and registration for the 12 MVPs available at that time for MIPS reporting. Due to the expanded MVP inventory (16 MVPs available for the CY 2024 performance period/2026 MIPS payment year (88 FR 79978 through 80047), 21 MVPs available for the CY 2025 performance period/2027 MIPS payment year (89 FR 98972 through 99057)), and 27 MVPs as finalized in this final rule for the CY 2026 performance period/2028 MIPS payment year, we anticipate increased MVP adoption for the CY 2026 performance period/2028 MIPS payment year and beyond. We estimated MVP submissions as a percentage of the total traditional MIPS and MVP submissions from the CY 2023 performance period/2025 MIPS payment year. For details on this analysis, we refer readers to section V.B.5.c.(6) of this final rule.

(c) Additional Data Considerations

The accuracy of our estimates of the total burden for data submission for MIPS performance categories may be impacted by several primary factors. First, we are unable to predict with certainty who will be a QP for the CY 2026 performance period/2028 MIPS payment year and later years.

Second, it is difficult to predict whether Partial QPs, who can elect to report to MIPS, will choose to participate in the CY 2026 performance period/2028 MIPS payment year or later years compared to the CY 2023 performance period/2025 MIPS payment year. Therefore, the actual number of Advanced APM participants and how they elect to submit data may differ from our estimates. However, we believe our estimates are the most appropriate given the available data. We refer readers to section VII.I.5.e.(2)(b) of this final rule for a discussion of the potential but unquantifiable burden implications on MIPS-related burden of the provisions to change QP determinations and remove the eligible clinician limit to the Medical Home Model, Aligned Other Payer Medical Home Model, and Medicaid Medical Home Model, finalized in section IV.B.5. of this final rule.

In section IV.B.5.d. of this final rule, we are finalizing our proposal to make a technical amendment to the language in § 414.1455 that establishes Targeted Review for QPs. This provision revises the timeline but not the other established processes for requested a targeted review. We note that information collection requirements, such as targeted reviews, that are imposed after an administrative action are not subject to the PRA under 5 CFR 1320.4(a)(2).

b. ICRs Regarding Third Party Intermediaries

(1) CMS-Approved Survey Vendor Requirements

We refer readers to § 414.1400(d) for the requirements for CMS-approved survey vendors that may submit data on the CAHPS for MIPS Survey. We refer readers to the CY 2024 PFS final rule (88 FR 79433 through 79434) and the CY 2025 PFS final rule (89 FR 98475) for recent burden discussions on this ICR. The following changes (associated with CAHPS survey vendors to submit data for eligible clinicians) will be submitted to OMB for approval under control number 0938–1222 (CMS–10450). We will make the revised files available for public review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices, which are expected to publish in the CY 2026 performance period/2028 MIPS payment year.

As discussed in section IV.B.4.a.(5) of this final rule, we are finalizing our proposal to add a web administration mode to the current CAHPS for MIPS Survey administration in addition to the existing mail and phone options. Beginning with the CY 2027 performance period/2029 MIPS payment year, CMS-approved survey vendors are required to administer the CAHPS for MIPS Survey via a web-mail-phone protocol. During the 1-year implementation delay, we will update the survey administration requirements and associated materials.

For the CY 2027 performance period/2029 MIPS payment year, we proposed to increase the currently approved burden estimate of 10 hours to complete the vendor application by 1 hour for a total of 11 hours per application (90 FR 32784). The currently approved burden estimate for the vendor application includes completing the Vendor Attestation Statement, the Vendor Participation Form, and compiling documentation, including the quality assurance plan that demonstrates compliance with the Minimum Survey

Vendor Business Requirements. We estimate that it will take applicants an additional 0.5 hours to compile documentation related to the web mode and an additional 0.5 hours to develop a quality assurance plan related to web implementation. We assumed that our proposal to add a web administration

mode to the current CAHPS for MIPS survey administration will not affect our currently approved estimate of 10 survey vendor applicants. We estimate an annual increase of 10 hours due to this proposed requirement (+1 hr/vendor × 10 vendors) at a cost of +\$1,077 (10 hr × \$107.66/hr for a

computer systems analyst or equivalent). We have summarized the comments we received about the proposal to add the web administration mode in section XX of this final rule. We did not receive public comments about these burden estimates.

TABLE D-A12: ANNUAL REQUIREMENT AND BURDEN ESTIMATES FOR CMS-APPROVED SURVEY VENDORS

Section(s) Under Title 42 of the CFR	OMB Collection Number (2) MIS ID No.	Sec. Requirement(s)	Total Annual Responses	Time per Response (minutes)	Annual Total (hours)	Hourly Cost (\$/hr.)	Total Cost (\$)
§§ 414.1480 Quality Payment Program, CAHPS for MIPS Survey	(0938-1222 (CMS-10450)	10	10	1	10	107.66	1,077

(2) Full and Simplified Self-Nomination for Qualified Clinical Data Registries and Qualified Registries

In section IV.A.4.a.(3) of this final rule, we are finalizing our proposal to provide additional flexibilities to allow third party intermediaries additional time to fully support finalized MVPs. The provision does not alter requirements related to the self-nomination process, therefore we did not propose revisions in the CY 2026 PFS proposed rule (90 FR 32784) to our currently approved responses and time per response for both the Full and Simplified Self-Nominations for Qualified Registries and Qualified Clinical Data Registries under OMB control number 0938–1314 (CMS–10621).

c. ICRs Regarding Quality Data Submission (§§ 414.1318, 414.1325, 414.1335, and 414.1365)

(1) Changes to Quality Performance Category Submissions

As discussed in the CY 2026 PFS proposed rule (90 FR 32784 through 32786), we estimated the number of submissions for each collection type that require active reporting by individual clinicians, groups, subgroups (as applicable for MVP reporting), or non-Shared Savings Program ACO APM Entities. This includes Medicare Part B claims measures (individual clinicians only), MIPS Clinical Quality Measures (CQM) and QCDR measures, and electronic Clinical Quality Measures (eCQM). Notably, we did not assess burden for the quality administrative claims collection type, as CMS automatically calculates scores for individual clinicians, groups, subgroups (as applicable for MVP reporting), or non-Shared Savings Program ACO APM Entities that meet requirements to be scored. We assumed that the proposal to

revise QP determinations, finalized with modification in section IV.B.5.b. of this final rule, does not affect MIPS performance category-level data submissions. For additional discussion of this assumption, we refer readers to section XX of this final rule.

Because MIPS eligible clinicians may submit data for multiple collection types for the quality performance category, the estimated numbers of individual clinicians, groups, subgroups (as applicable for MVP reporting), and non-Shared Savings Program ACO APM Entities to collect via the various collection types are not mutually exclusive and reflect the occurrence of individual clinicians, groups, subgroups (as applicable for MVP reporting) and non-Shared Savings Program ACO APM Entities that collected and submitted data via multiple collection types or reporting options during the CY 2023 performance period/2025 MIPS payment year. We describe our approach for each MIPS reporting option below.

(a) Traditional MIPS

As described in the CY 2026 PFS proposed rule (90 FR 32785), we estimated the number of traditional MIPS submissions for the CY 2026 performance period/2028 MIPS payment year as the sum of estimated traditional MIPS and MVP quality performance submissions from the CY 2023 performance period/2025 MIPS payment year for each actively submitted collection type (Medicare Part B claims measures, MIPS CQMs and QCDR measures, and eCQMs) submitted by individual clinicians, groups, or non-Shared Savings Program APM Entities individual, less the estimated number of submissions we expect to submit MVPs. This analysis is described in section V.B.5.c.(6) of this final rule.

(b) MVPs

As described in the CY 2026 PFS proposed rule (90 FR 32785), we estimated the number of MVP submissions for the CY 2026 performance period/2028 MIPS payment year as a percent of the total traditional MIPS and MVP submissions from the CY 2023 performance period/2025 MIPS payment year for each actively submitted collection type (Medicare Part B claims measures, MIPS CQMs and QCDR measures, and eCQMs) by individual clinicians, groups, or non-Shared Savings Program ACO APM Entities, and add our estimate of subgroup submissions described in section V.B.5.c.(6) of this final rule. We believe this approach to estimate MVP submissions as a function of historic traditional MIPS and MVP submissions, and not just MVP submissions from a given year, is appropriate to estimate future reporting behaviors because we expect increased adoption due to the annual expansion of and updates to the MVP inventory as summarized in section IV.A.4.a. of this final rule. This analysis is described in section V.B.5.c.(6) of this final rule.

(c) APM Performance Pathway (APP)

We assumed the number of submissions per available collection type that is actively reported by clinicians, groups, or non-Shared Savings Program APM ACO Entities. We do not detail these estimates in this final rule as there are no changes due to policy provisions.

(d) Factors Affecting Quality Performance Category Submission Estimates

Several factors drove our updates to the number of submissions for the Medicare Part B claims measures, MIPS CQMs and QCDR measures, and eCQMs,

as presented in the CY 2026 PFS proposed rule (90 FR 32785). First, we incorporated updated traditional MIPS and MVP submission data available for the CY 2023 performance period/2025 MIPS payment year. For the CY 2025 PFS final rule (89 FR 98475), our available submission data for the CY 2022 performance period/2024 MIPS payment year included only traditional MIPS submissions. We aggregated submissions for both traditional MIPS and MVPs by collection type and created a new baseline to which we applied our MVP participation estimates for the CY 2026 performance period/2028 MIPS payment year. Please see section V.B 5.a.(4) of this final rule for additional details on updates to available data.

Second, we proposed to update our estimates for MVP participation for the CY 2026 performance period/2028 MIPS payment year. This updated estimate for MVP participation impacted our estimate of the number of estimated clinicians submitting quality data for traditional MIPS using each collection type. As detailed in section V.B.5.c.(6) of this final rule, we updated our estimates to account for the expected increase in MVP participation of 4 percentage points due to the finalized addition of six new MVPs in this final rule; we associated this incremental effect, all else equal, with policy provisions. With this approach, any increase to our expected MVP participation rate reduces the number of estimated submissions for each quality performance category collection type via traditional MIPS. Similarly, any decrease to our estimated MVP participation rate increases the number of estimated submissions for each quality performance category collection type via traditional MIPS.

(e) Medicare Part B Claims Measure, MIPS CQMs/QCQR Measure, and eCQM Collection Types

Table D–A13 of this final rule identifies our methods to estimate the number of individual clinicians, groups, and non-Shared Savings Program ACO APM Entities that may submit data via each collection type in the CY 2026 performance period/2028 MIPS payment year, separating traditional MIPS and MVP estimates. As presented in the CY 2026 PFS proposed rule (90 FR 32785 through 32786), we identify estimated submissions per collection type from CY 2023 performance period/2025 MIPS payment year data (row a). We estimated that 14 percent of these quality performance category submissions may report via MVPs for the CY 2026 performance period/2028

MIPS payment year (row b). This 14 percent encompasses our estimate that 10 percent of submissions will report the MVPs previously finalized in the CY 2025 PFS final rule (row c), and that 4 percent of submissions will submit the new MVPs finalized in this final rule (row d). The basis of these assumptions is described in section V.B.5.c.(6) of this final rule.

In the following paragraphs, we discuss the impacts to the estimated number of submissions for traditional MIPS, aggregated across individual clinician, group, and non-Shared Savings Program APM Entity submissions where applicable per collection type. We discuss the impacts to the estimated number of submissions for MVPs in section V.B.5.c.(6) of this final rule. For each collection type, we assume there is one annual submission or response per respondent.

Medicare Part B Claims Measure Collection Type:

In the CY 2025 PFS final rule (89 FR 98479 through 98481), we estimated 12,197 submissions. For the CY 2026 performance period/2028 MIPS payment year we estimate 3,459 fewer submissions for this collection type via traditional MIPS due to the availability of updated submission data and assumptions. Additionally, we estimate that the six new MVPs finalized as proposed in section XX of this final rule will result in 388 fewer traditional MIPS submissions for this collection type, as the availability of new MVPs may lead clinicians who previously reported via traditional MIPS to report via MVPs. We estimate that there will be approximately 8,350 Medicare Part B claims measure collection type submissions for the CY 2026 performance period/2028 MIPS payment year submitted by individual clinicians. Taken together, we estimate a total decrease of 3,847 submissions (–388 submissions due to policy provisions + –3,459 submissions due to updated data). The net result is 8,350 submissions (12,197 currently approved submissions – 3,847 submissions).

The aforementioned changes, as presented in the CY 2026 PFS proposed rule (90 FR 32785), apply to OMB control number 0938–1314 (CMS–10621). We did not receive public comment on these submission estimates and are finalizing these burden estimates as proposed. We calculated the impact of these updated submission estimates on total annual cost and total hours per participation option and collection type in section XX of this final rule.

MIPS CQM and QCQR Measure Collection Types:

In the CY 2025 PFS final rule (89 FR 98481 through 98483), we estimated 17,008 submissions. For the CY 2026 performance period/2028 MIPS payment year we estimate 1,209 more submissions for this collection type via traditional MIPS due to the availability of updated submission data and assumptions. Additionally, we estimate that the new MVPs finalized as proposed in section IV.A.4.a.(1) of this final rule will result in 810 fewer traditional MIPS submissions for this collection type, as the availability of new MVPs may lead clinicians who previously reported via traditional MIPS to report via MVPs. We estimate that there will be approximately 17,407 MIPS CQM/QCQR measure collection type submissions for the CY 2026 performance period/2028 MIPS payment year (11,266 individual clinicians + 6,132 groups + 9 non-Shared Savings Program ACO APM Entities). This is a total increase of 399 submissions (1,209 submissions due to updated data + –810 submissions due to policy provisions). The net result is 17,407 submissions (17,008 currently approved submissions + 399 submissions). Given the number of measures required for clinicians and groups is the same, we expect the burden to be the same for each respondent collecting data via MIPS CQMs or QCQR measures.

The aforementioned changes, as presented in the CY 2026 PFS proposed rule (90 FR 32786), apply to OMB control number 0938–1314 (CMS–10621). We did not receive public comment on these submission estimates and are finalizing these burden estimates as proposed. We calculated the impact of these updated submission estimates on total annual cost and total hours per participation option and collection type in section XX of this final rule.

eCQM Collection Type:

In the CY 2025 PFS final rule (89 FR 98483 to 98485), we estimated 27,179 submissions. For the CY 2026 performance period/2028 MIPS payment year we estimate 2,129 fewer submissions for this collection type via traditional MIPS due to the availability of updated submission data and assumptions. Additionally, we estimate that the new MVPs finalized as proposed in section IV.A.4.a.(1) of this final rule will result in 1,114 fewer traditional MIPS submissions for this collection type, as the availability of new MVPs may lead clinicians who previously reported via traditional MIPS to report via MVP. We estimate that there will be approximately 23,936 eCQM collection type submissions for

the CY 2026 performance period/2028 MIPS payment year (approximately 18,282 individual clinicians + 5,647 groups + 7 non-Shared Savings Program ACO APM Entities). This is a total decrease of 3,243 submissions (– 2,129 submissions due to updated data + – 1,114 submissions due to policy provisions). The net result is 23,936 submissions (27,179 currently approved submissions – 3,243 submissions). The aforementioned changes, as presented in the CY 2026 PFS proposed rule (90 FR 32786), apply to OMB control number 0938–1314 (CMS–10621). We did not receive public

comment on these submission estimates and are finalizing these burden estimates as proposed. We calculated the impact of these updated submission estimates on total annual cost and total hours per participation option and collection type in section XX of this final rule. Consistent with the policy finalized in the CY 2018 Quality Payment Program final rule that for MIPS eligible clinicians who collect measures via Medicare Part B claims, MIPS CQM, eCQM, or QCDR measure collection types and submit more than the required number of measures (82 FR

53735 through 54736), we will score the clinician on the required measures with the highest assigned measure achievement points and thus, the same clinician may be counted as a respondent for more than one collection type. Therefore, our columns in Table D–A13 are not mutually exclusive. We assume that each response or submission per collection type for traditional MIPS includes six quality measures, and that each response or submission per collection type for MVPs includes four quality measures.

TABLE D-A13: ESTIMATED NUMBER OF SUBMISSIONS FOR QUALITY PERFORMANCE CATEGORY DATA BY COLLECTION TYPE

Burden and Submission Description	Medicare Part B Claims Measure	MIPS (CQM)eCQM Measure	eCQM
2026 MIPS Performance Period (Excludes QPs) Before Applying Estimated MVP Submission Rate (a)	9,709	20,241	27,833
Total Estimated MVP Submissions (14%) (b) = (a) × 0.14 or (c) + (d)	(1,359)	(2,834)	(3,897)
Estimate for CY 2025 Approved MVPs (10 percent) (c) = (a) × 0.10	(971)	(2,024)	(2,783)
Estimate for MVPs Finalized in the CY 2026 Final Rule (4 percent) (d) = (b) × (c)	(388)	(810)	(1,114)
2026 MIPS Performance Period (Excludes QPs and Estimated MVP Submissions) (e) = (a) + (b)	8,350	17,407	23,936
2025 MIPS Performance Period from CY 2025 PFS Final Rule (Excludes QPs) (f)	12,197	17,008	27,179
Difference in Number of Submissions (g) = (e) – (f)	(3,847)	399	(3,243)
Change Due to Policies in the CY 2026 Final Rule (h) = (d)	(388)	(810)	(1,114)
Change Due to Availability of Updated Data (i) = (g) – (h)	(3,459)	1,209	(2,129)

(2) Additional Burden Assumptions for the Quality Performance Category For a discussion of the longstanding burden assumptions and any related limitations associated with the submission of quality performance category data, we refer readers to the CY 2025 PFS final rule (89 FR 98478 and 98479). We refer readers to the CY 2022 PFS final rule for details on MVP quality reporting requirements (86 FR 65411 through 65412). As described in section IV.A.4.d.(1)(c)(iii) of this final rule, for the quality performance category, we are finalizing our proposal with modification to update the MIPS quality measure inventory; and are revising the definition of a high priority measure. As described in section IV.A.4.b.(2) of this final rule, we are finalizing our proposal to incorporate the updated versions of the MIPS quality measures used in the APP quality measure set. As these provisions do not affect the minimum reporting requirements for the quality performance category under traditional MIPS, MVPs, and the APP quality measure set, we did not propose burden changes for the Quality Payment

Program (90 FR 32786). We refer readers to Table Group A of Appendix 1 for the finalized new measures; Table Group C of Appendix 1 for the finalized removed measures; and Table Groups D and DD of Appendix 1 for the finalized substantive changes to measures. In sections V.B.5.c.(3), V.B.5.c.(4), and V.B.5.c.(5) of this final rule, we detail the estimated burden changes per collection type for traditional MIPS, and in section V.B.5.c.(6) for MVPs finalized in this rulemaking. As noted in section V.B.5.a.(4) of this final rule, we revised our estimates described in the CY 2025 PFS final rule due to: (1) the availability of updated performance category data; (2) the inclusion of data estimates for non-Shared Savings Program ACO APM Entities; and (3) the new MVPs. (3) Traditional MIPS Quality Data Submission by Clinicians: Medicare Part B Measure Collection Type The following changes, as presented in the CY 2026 PFS proposed rule (90 FR 32787), will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

The following estimates apply to requirements for the traditional MIPS reporting option and submissions by individual clinicians. For our most recent discussions of related burden, we refer readers to the CY 2024 PFS final rule (88 FR 70149 through 70151) and the CY 2025 PFS final rule (89 FR 98479 through 98481). As with the CY 2025 PFS final rule (89 FR 98479 through 98481), we acknowledge a range of times for computer system analysts to submit quality measure data (minimum, mean, and maximum burden estimates) for this collection type. We continue to apply the maximum burden in our total burden estimates. All changes to the number of quality performance category submissions as described in this section are relative to our currently approved estimate of 12,197 submissions detailed in the CY 2025 PFS final rule (89 FR 98479 through 98481). Impact of Policy Provisions: We estimate a change of – 388 submissions due to finalizing six new MVPs in this final rule. Multiplying the estimated change in submissions (– 388) by the time per submission by labor category, we estimate a maximum total change of

minus 5,509.60 hours. All estimates encompass time to review measure specifications unless otherwise noted. This change of –5,509.60 hours incorporates the following estimates:

- Minimum of –446.20 hours for computer system analysts (–388 submissions $\times$ 1.15 hr/submission (0.15 hr to submit data and 1 hr to review measure specifications)).
- Mean of –795.40 hours for computer system analysts (–388 submissions $\times$ 2.05 hr/submission (1.05 hr to submit data and 1 hr to review measure specifications)).
- Maximum of –3,181.60 hours for computer system analysts (–388 submissions $\times$ 8.2 hr/submission (7.2 hr to submit data and 1 hr to review measure specifications)).
- –1,164 hours for medical and health service managers (–388 submissions $\times$ 3 hr/submission).
- –388 hours for licensed practical nurses (LPNs) (–388 submissions $\times$ 1 hr/submission).
- –388 hours for billing clerks (–388 submissions $\times$ 1 hr/submission).
- –388 hours for physicians (–388 submissions $\times$ 1 hr/submission).

We estimate a maximum annual change of minus \$655,228.02 [(–3,181.602 hr $\times$ \$107.66/hr = –\$342,531.06 for computer system analysts) + (–1,164 hr $\times$ \$132.44/hr = –\$154,160.16 for medical and health service managers) + (–388 hr $\times$ \$61.68/hr = –\$23,931.84 for LPNs) + (–388 hr $\times$ \$47.60/hr = –\$18,468.80 for billing clerks) + (–388 hr $\times$ \$299.32/hr = –\$116,136.16 for physicians)].

Impact of Updated Data: We estimate an additional change of –3,459 submissions due to the availability of updated data and assumptions. Multiplying the estimated change in submissions (–3,459) by the time per submission identified by labor category in preceding list, we estimate a maximum total change of –49,117.808 hours. This change incorporates the following estimates:

- Minimum of –3,997.85 hours for computer system analysts (–3,459 submissions $\times$ 1.15 hr/submission).
- Mean of –7,090.95 hours for computer system analysts (–3,459 submissions $\times$ 2.05 hr/submission).
- Maximum of –28,363.80 hours for computer system analysts (–3,459 submissions $\times$ 8.2 hr/submission).
- –10,377 hours for medical and health service managers (–3,459 submissions $\times$ 3 hr/submissions).
- –3,459 hours for LPNs (–3,459 submissions $\times$ 1 hr/submission).
- –3,459 hours for billing clerks (–3,459 submissions $\times$ 1 hr/submission).

- –3,459 hours for physicians (–3,459 submissions $\times$ 1 hr/submission).

We estimate a maximum annual change of –\$5,841,323.994 [(–28,363.80 hr $\times$ \$107.66/hr = –\$3,053,646.71 for computer system analysts) + (–10,377 hr $\times$ \$132.44/hr = –\$1,374,329.88 for medical and health service managers) + (–3,459 hr $\times$ \$61.68/hr = –\$213,351.12 for LPNs) + (–3,459 hr $\times$ \$47.60/hr = –\$164,648.40 for billing clerks) + (–3,459 hr $\times$ \$299.32/hr = –\$1,035,347.88 for physicians)].

Total Impact: Taken together, we estimate that the changes in submissions due to policy provisions and newly available data will result in a change of minus 3,847 submissions (–388 due to policy provisions + –3,459 due to updated data), a maximum annual burden change of minus 54,627 hours (–5,509.60 hr due to policy provisions + –49,117.80 hr due to updated data, rounded to the hour) and minus \$6,496,552 (–\$655,228.02 due to policy provisions + –\$5,841,323.994 due to updated data). We estimate a total of 8,350 traditional MIPS submissions under the Medicare Part B collection type for the CY 2026 performance period/2028 MIPS payment year.

We did not receive public comments on our burden estimates and assumptions, and therefore, we are finalizing our burden estimates as proposed.

(4) Traditional MIPS Quality Data Submission: MIPS CQM and QCDR Measure Collection Types

The following changes, as presented in the CY 2026 PFS proposed rule (90 FR 32787 through 32788), will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

These estimates apply to requirements for the traditional MIPS reporting option and submissions by individual clinicians, groups, and non-Shared Savings Program ACO APM Entities. For our most recent discussions of related burden, we refer readers to the CY 2024 PFS final rule (88 FR 70149 through 70151) and the CY 2025 PFS final rule (89 FR 98479 through 98483). All estimates encompass time to review measure specifications unless otherwise noted. All changes to the number of quality performance category submissions described below are relative to our currently approved estimate of 17,008 submissions detailed in the CY 2025 PFS final rule (89 FR 98481 through 98483).

Impact of Policy Provision: We estimate a change of minus 810 submissions due to finalizing six new MVPs in this final rule. Multiplying the estimated change in submissions (–810) by the time per submission by labor category, we estimate a total change of –7,357.23 hours. This change of incorporates the following estimates: –3,307.23 hours for a computer system analyst (–810 submissions $\times$ 4.083 hr/submission (3 hr to submit data; 1 hr to review measure specifications, and 5 minutes (0.083 hr) to authorize or instruct the qualified registry or QCDR to submit quality measure data on their behalf), –1,620 hours for medical and health service managers (–810 submissions $\times$ 2 hr/submission), –810 hours for LPNs (–810 submissions $\times$ 1 hr/submission), –810 hours for billing clerks (–810 submissions $\times$ 1 hr/submission), and –810 hours for physicians (–810 submissions $\times$ 1 hr/submission). We estimate an annual change of –\$901,575.18 [(–3,307.23 hr $\times$ \$107.66/hr = –\$356,056.38 for computer systems analysts) + (–1,620 hr $\times$ \$132.44/hr = –\$214,552.80 for medical and health service managers) + (–810 hr $\times$ \$61.68/hr = –\$49,960.80 for LPNs) + (–810 hr $\times$ \$47.60/hr = –\$38,556.00 for billing clerks) + (–810 hr $\times$ \$299.32/hr = –\$242,499.20 for physicians)].

Impact of Updated Data: Additionally, we estimate a change of +1,209 submissions due to the availability of updated data and assumptions. Multiplying the estimated change in submissions (+1,209) by the time per submission identified in the preceding paragraph by labor category, we estimate a total change of +10,981.35 hours. This change incorporates the following estimates: 4,936.347 hours for computer system analysts (+1,209 submissions $\times$ 4.083 hr/submission), 2,418 hours for medical and health service managers (+1,209 submissions $\times$ 2 hr/submission), 1,209 hours for LPNs (+1,209 submissions $\times$ 1 hr/submission), 1,209 hours for billing clerks (+1,209 submissions $\times$ 1 hr/submission), and 1,209 hours for physicians (+1,209 submissions $\times$ 1 hr/submission). We estimate an annual change of +\$1,345,684.44 [(+4,936.347 hr $\times$ \$107.66/hr = \$531,447.12 for computer system analysts) + (+2,418 hr $\times$ \$132.44/hr = \$320,239.92 for medical and health service managers) + (+1,209 hr $\times$ \$61.68/hr = \$74,571.12 for LPNs) + (+1,209 hr $\times$ \$47.60/hr = \$57,548.40 for billing clerks) + (+1,209 hr $\times$ \$299.32/hr = \$361,877.88 for physicians)].

Total Impact: Taken together, we estimate that the changes in submissions due to policy provisions

and newly available data will result in a change of +399 submissions (– 810 submissions due to policy provisions + 1,209 submissions due to updated data), an annual burden change of +3,624 hours (– 7,357.23 hr due to policy provisions + 10,981.35 hr due to updated data, rounded to the hour) at a cost of +\$444,109 (– \$901,575.18 due to policy provisions + \$1,345,684.44 due to updated data, rounded to the dollar). We estimate a total of 17,407 traditional MIPS submissions under the MIPS CQM/QCDR measure collection types for the CY 2026 performance period/2028 MIPS payment year (11,266 individual clinicians + 6,132 groups + 9 non-Shared Savings Program ACO APM Entities). We did not receive public comments on our burden estimates and assumptions, and therefore, we are finalizing our burden estimates as proposed.

(5) Traditional MIPS Quality Data Submission: eCQM Collection Type

The following changes, as presented in the CY 2026 PFS proposed rule (90 FR 32788), will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

These estimates apply to requirements for the traditional MIPS reporting option and submissions by individual clinicians, groups, and non-Shared Savings Program ACO APM Entities. For our most recent discussions of related burden, we refer readers to the CY 2024 PFS final rule (88 FR 79441 through 79442) and the CY 2025 PFS final rule (89 FR 98483 through 98485). All estimates encompass time to review measure specifications unless otherwise noted. All changes to submissions as described in this section are relative to our currently approved estimate of 27,179 submissions detailed in the CY 2025 PFS final rule (89 FR 98483 through 98485).

Impact of Policy Provisions: We estimate a change of – 1,114 submissions due to finalizing six new MVPs in this final rule. Multiplying the estimated change in submissions by the time per submission by labor category, we estimate a total change of – 8,912 hours. This change incorporates the following estimates: – 3,342 hours for computer system analysts (– 1,114 submissions × 3 hr/submission (2 hr to submit data file and 1 hr to review measure specifications)), – 2,228 hours for medical and health service managers (– 1,114 submissions × 2 hr/submission), – 1,114 hours for LPNs (– 1,114 submissions × 1 hr/submission), – 1,114 hours for billing clerks (– 1,114 submissions × 1 hr/submission), and – 1,114 hours for

physicians (– 1,114 submissions × 1 hr/submission). We estimate an annual change of – \$1,110,056.44 [(– 3,342 hr × \$107.66/hr = – \$359,799.72 for computer system analysts) + (– 2,228 hr × \$132.44/hr = – \$295,076.32 for medical and health service managers) + (– 1,114 hr × \$61.68/hr = – \$68,711.52 for LPNs) + (– 1,114 hr × \$47.60/hr = – \$53,026.40 for billing clerks) + (– 1,114 hr × \$299.32/hr = – \$333,442.48 for physicians)].

Impact of Updated Data:

Additionally, we estimate a change of – 2,129 submissions due to the availability of updated data and assumptions. Multiplying the estimated change in submissions (– 2,129) by the time per submission identified in the preceding paragraph by labor category, we estimate a total change of – 17,032 hours. This change incorporates the following estimates: – 6,387 hours for computer system analysts (– 2,129 submissions × 3 hr/submission), – 4,258 hours for medical and health service managers (– 2,129 submissions × 2 hr/submission), – 2,129 hours for LPNs (– 2,129 submissions × 1 hr/submission), – 2,129 hours for billing clerks (– 2,129 submissions × 1 hr/submission), and – 2,129 hours for physicians (– 2,129 submissions × 1 hr/submission). We estimate an annual change of – \$2,121,463.34 [(– 6,387 hr × \$107.66/hr = – \$687,624.42 for computer system analysts) + (– 4,258 hr × \$132.44/hr = – \$563,929.52 for medical and health service managers) + (– 2,129 hr × \$61.68/hr = – \$131,316.72 for LPNs) + (– 2,129 hr × \$47.60/hr = – \$101,340.40 for billing clerks) + (– 2,129 hr × \$299.32/hr = – \$637,252.28 for physicians)].

Total Impact: Taken together, we estimate that the changes in submissions due to policy provisions and the availability of updated data will result in a change of – 3,243 submissions (– 1,114 due to policy provisions + – 2,129 due to updated data), an annual burden change of – 25,944 hours (– 8,912 hr due to policy provisions + – 17,032 hr due to updated data) at a cost of – \$3,231,520 (– \$1,110,056.44 due to policy provisions + – \$2,121,463.34 due to updated data, rounded to the dollar). We estimate a total of 23,936 traditional MIPS submissions under the eCQM collection type for the CY 2026 performance period/2028 MIPS payment year (18,282 individual clinicians + 5,647 groups + 7 non-Shared Savings Program ACO APM Entities). We did not receive public comments on our burden estimates or assumptions, and therefore our finalizing our estimates as proposed.

(6) ICRs Regarding Burden for MVP Reporting and Registration

The following changes, as presented in the CY 2026 PFS proposed rule (90 FR 32788 through 32791), will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In the CY 2022 PFS final rule, we finalized an option for clinicians choosing to report MVPs to participate through subgroups beginning with the CY 2023 performance period/2025 MIPS payment year (86 FR 65392 through 65394). We refer readers to the CY 2022 PFS final rule (86 FR 65590 through 65592), CY 2023 PFS final rule (87 FR 70155), CY 2024 PFS final rule (88 FR 79443), and CY 2025 PFS final rule (89 FR 98487) for our previously finalized burden assumptions and requirements for submitting quality performance category data for the MVP reporting option.

We refer readers to Appendix 3: MVP Inventory of this final rule for the updated format of the MVP tables. We do not anticipate that the new stratified update to the MVP format will affect the reporting burden, as it does not alter the composition of an MVP and does not affect the general minimum reporting requirements for each MVP.

In section IV.A.4.a. of this final rule, we are finalizing our proposal to update the MVP inventory in line with the MVP development criteria (85 FR 84849 through 84854). We are also finalizing our proposal to add six new MVPs to the MVP inventory for the CY 2026 performance period/2028 MIPS payment year.

In the CY 2025 PFS final rule (89 FR 98485 and 98486), we estimated that 10 percent of MIPS eligible clinicians from the CY 2022 performance period/2024 MIPS payment year will move from traditional MIPS reporting to MVP reporting for the CY 2025 performance period/2027 MIPS payment year. For details on prior approaches to estimating MVP reporting, we refer readers to the CY 2022 PFS final rule (86 FR 65588 through 65590), CY 2023 PFS final rule (87 FR 70155 and 70156), and CY 2024 PFS final rule (88 FR 79443 and 79444).

To estimate MVP submissions for the CY 2026 performance period/2028 MIPS payment year, we calculated the average quality measure submission rate for each of the new MVPs finalized in this final rule for the CY 2026 performance period/2028 MIPS payment year. For these analyses, we assessed measure submissions in the CY 2023 performance period/2025 MIPS payment year for clinicians with

relevant clinical specialties for each MVP. We considered quality reporting trends from all quality performance category reporting options (traditional MIPS, MVPs, and the APP), by clinicians, groups, subgroups, and non-Shared Savings Program ACO APM Entities. The total of these average quality measure submissions for all the MVPs finalized as proposed was equivalent to about 4 percent of the total quality performance category submissions in the CY 2023 performance period/2025 MIPS payment year. Adding this incremental change of 4 percentage points to the existing estimate of 10 percent for MVPs established in the CY 2025 PFS final rule (89 FR 98485 and 98486), we estimated that MVP reporting will account for 14 percent of MIPS quality performance category submissions for the CY 2026 performance period/2028 MIPS payment year.

Continuing our approach from the CY 2022 PFS final rule (86 FR 65589 and 65590), CY 2023 PFS final rule (87 FR 70155 and 70156), CY 2024 PFS final rule (88 FR 79443 and 79444), and CY 2025 PFS final rule (89 FR 98486), we assumed that number of MVP registrations will equal our estimated MVP quality submissions.

(a) Burden for MVP Registration: Individuals, Groups, Subgroups, and APM Entities

The following changes, as presented in the CY 2026 PFS proposed rule (90 FR 32789), will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

In section IV.A.3.a. of this final rule, we are finalizing our proposal to add a new self-attestation requirement to the MVP registration process requiring each group to attest whether it is either a single-specialty group or multispecialty group meeting the requirements of a small practice. We believe the associated impact of this provision will be minimal, and that this provision will not require the burden per registration to exceed the currently approved estimate of 15 minutes per registration. Therefore, we did not propose to revise the burden per MVP registration under OMB control number 0938–1314 (CMS–10621), and are not making any changes to the subgroup registration process under this control number. We refer readers to section IV.A.3.a. of this final rule for additional details on the MVP registration self-attestation requirement.

As described in section V.B.5.c.(6). of this final rule, we estimate that approximately 14 percent of the clinicians that participate in MIPS quality performance category reporting

will submit data for the measures and activities in an MVP. For the CY 2026 performance period/2028 MIPS payment year, we assume that the total number of individual clinicians, groups, non-Shared Savings Program ACO APM Entities, and subgroups that will complete the MVP registration process is 8,110. All changes to the MVP registrations described below are relative to our currently approved estimate of 6,285 registrations detailed in the CY 2025 PFS final rule (89 FR 98486 and 98487).

We estimate that the finalized addition of six new MVPs will result in an increase of 2,312 MVP registrations. Using the currently approved estimate of 0.25/hr per registration, we estimate an annual burden change of +578.00 hours (+2,312 registrations × 0.25 hr/registration) at a cost of +\$62,227.48 (+578 hr × \$107.66/hr for a computer system analyst or equivalent). Additionally, we estimate that the availability of updated data will result in a change of –487 registrations. Using the currently approved estimate of 0.25 hr/registration, we estimate an annual change of –121.75 hours (–487 registrations × 0.25 hr/registration) at a cost of –\$13,107.61 (–121.75 hr × \$107.66/hr for a computer system analyst or equivalent) due to the availability of updated data.

Taken together, we estimate that the anticipated changes due to policy provisions and the availability of updated data will result in a change of +1,825 registrations (2,312 registrations due to policy provisions + –487 registrations due to updated data), an annual burden change of +456 hr (578.00 hr due to policy provisions + –121.75 hr due to updated data, rounded to the hour) at a cost of +\$49,120 (+\$62,227.48 due to policy provisions + –\$13,107.61 due to updated data, rounded to the dollar). We estimate a total of 8,110 MVP registrations for the CY 2026 performance period/2028 MIPS payment year.

We summarized comments received about the self-attestation proposal in section XX of this final rule and provided responses. We did not receive any comments about these on our burden estimates, and are finalizing the requirements and burden estimates as proposed.

(b) Burden for Subgroup Registration

In the CY 2026 PFS proposed rule (90 FR 32789), we did not propose to revise burden for subgroup registration for the CY 2026 performance period/2028 MIPS payment year. We previously finalized a requirement for subgroup reporting for

multispecialty groups choosing to report as an MVP Participant beginning in the CY 2026 performance period/2028 MIPS payment year (§ 414.1305; 86 FR 65394 through 65397). In section IV.A.3.a.(3) of this final rule, we are finalizing our proposal to update the MVP group registration process to add the self-attestation process for groups. If a group does not self-attest as a single specialty group or a multispecialty group meeting the requirements of a small practice during MVP registration, clinicians in the group cannot register as a group. Clinicians in such groups could register as subgroups to participate in MVP reporting. However, we did not propose to revise our subgroups' burden estimates because we are operationalizing previously finalized policies that will not impact the utilization of subgroups by groups and hence, will not change the way groups choose to organize clinicians in subgroups.

Additionally, we are finalizing our proposal to maintain the MVP group reporting option for multispecialty groups with a small practice designation in section IV.A.3.a.(3) of this final rule. Maintaining the MVP group reporting option will not impact the currently approved burden for subgroup registration because it will not change any requirements related to subgroup registration. As future performance year data becomes available to reflect subgroup reporting trends amid revisions to the MVP inventory, we will evaluate changes to our currently approved burden estimate under OMB control number 0938–1314 (CMS–10621).

(c) Burden for MVP Quality Performance Category Submission

In the CY 2022 PFS final rule (86 FR 65411 through 65415), we finalized the reporting requirements for the MVP quality performance category at § 414.1365(c)(1)(i). For prior discussions of our related burden estimates, please see the CY 2022 PFS final rule (86 FR 65590 through 65592), CY 2023 PFS final rule (87 FR 70157 through 70159), CY 2024 PFS final rule (88 FR 79444 through 79446), and CY 2025 PFS final rule (89 FR 98487 through 98490).

The following changes as proposed in the CY 2026 PFS proposed rule (90 FR 32790) will be submitted to OMB for approval under control number 0938–1314 (CMS–10621), relative to the currently approved burden estimates detailed in the CY 2025 PFS final rule (89 FR 98487 through 98490).

We estimate a change to the number of annual MVP quality performance category submissions per collection type

from our currently approved burden estimates, beginning with the CY 2026 performance period/2028 MIPS payment year. These estimates include the figures detailed in section V.B.5.c.(1)(e) of this final rule plus our currently approved estimate of 20 subgroup submissions (split evenly across the eCQM and MIPS CQM/QCDR measure collection types). These estimates aggregate individual clinician, group, subgroup, and non-Shared Savings Program ACO APM Entity submissions. All estimates encompass time to review measure specifications unless otherwise noted.

(i) Medicare Part B Claims Measure Collection Type

All estimates below presume the maximum submission time. All changes to the estimated number of quality performance category submissions as described in this section are relative to our currently approved estimate of 1,355 submissions detailed in the CY 2025 PFS final rule (89 FR 98487 through 98490).

Impact of Policy Provisions: We estimate a change of +388 submissions due to the six new MVPs finalized in this final rule. Multiplying the estimated change in submissions (+388) by the time per submission by labor category, we estimate a total change of +3,662.72 hours. This change incorporates the following estimates: 2,118.48 hours for computer system analysts (+388 submissions $\times$ 5.46 hr/submission (4.8 hr to submit data + 0.66 hr to review measure specifications), 776 hours for medical and health service managers (+388 submissions $\times$ 2 hr/submission), 256.08 hours for LPNs (+388 submissions $\times$ 0.66 hr/submission), 256.08 hours for billing clerks (+388 submissions $\times$ 0.66 hr/submission), and 256.08 hours for physicians (+388 submissions $\times$ 0.66 hr/submission). We estimate an annual change of +\$435,483.29 [(2,118.48 hr $\times$ \$107.66/hr = \$228,075.56 for computer system analysts) + (776 hr $\times$ \$132.44/hr = \$102,773.44 for medical and health service managers) + (256.08 hr $\times$ \$61.68/hr = \$15,795.01 for LPNs) + (256.08 hr $\times$ \$47.60/hr = \$12,189.41 for billing clerks) + (256.08 hr $\times$ \$299.32/hr = \$76,649.87 for physicians)].

Impact of Updated Data: Additionally, we estimate a change of – 384 submissions due to the availability of updated data and assumptions. Multiplying the estimated change in submissions (– 384) by the time per submission by labor category, we estimate a total change of – 3,624.96 hours. This change incorporates the following estimates, and applies the

annual time per labor category identified in the preceding paragraph: – 2,096.64 hours for computer system analysts (– 384 submissions $\times$ 5.46 hr/submission), – 768 hours for medical and health service managers (– 384 submissions $\times$ 2 hr/submission), – 253.44 hours for LPNs (– 384 submissions $\times$ 0.66 hr/submission), – 253.44 hours for billing clerks (– 384 submissions $\times$ 0.66 hr/submission), and – 253.44 hours for physicians (– 384 submissions $\times$ 0.66 hr/submission). We estimate an annual change of – \$430,993.76 [(– 2,096.64 hr $\times$ \$107.66/hr = – \$225,724.26 for computer system analysts) + (– 768 hr $\times$ \$132.44/hr = – \$101,713.92 for medical and health service managers) + (– 253.44 hr $\times$ \$61.68/hr = – \$15,632.18 for LPNs) + (– 253.44 hr $\times$ \$47.60/hr = – \$12,063.74 for billing clerks) + (– 253.44 hr $\times$ \$299.32/hr = – \$75,859.66 for physicians)].

Total Impact: Taken together, we estimate that the changes in submissions due to policy provisions and newly available data will result in a change of +4 submission (+388 submissions due to policy provisions + – 384 submissions due to updated data), an annual burden change of +38 hours (3,662.72 hr due to policy provisions + – 3,624.96 hr due to updated data, rounded to the hour) at a cost of +\$4,490 (\$435,483.29 due to policy provisions + – 430,993.76 due to updated data, rounded to the dollar). We estimate a total of 1,359 MVP submissions under the Medicare Part B claims measure collection type for the CY 2026 performance period/2028 MIPS payment year. We did not receive public comments on our burden estimates and assumptions for this collection type, and therefore, we are finalizing our burden estimates as proposed.

(ii) MIPS CQM/QCDR Measure Collection Type

All changes to the estimated number of quality performance category submissions described later in this section are relative to our currently approved estimate of 1,900 submissions detailed in the CY 2025 PFS final rule (89 FR 98487 through 98490).

Impact of Policy Provisions: We estimate a change of +810 submissions due to the six new MVPs finalized in this final rule. Multiplying the estimated change in submissions (+810) by the time per submission by labor category, we estimate a total change of +4,835.70 hours. All estimates encompass time to review measure specifications unless otherwise noted. This change incorporates the following estimates: 2,154.60 hours for computer

system analysts (+810 submissions $\times$ 2.66 hr/submission (2 hr to submit data and 0.66 hr to review measure specifications)), 1,077.30 hours for medical and health service managers (+810 submissions $\times$ 1.33 hr/submission), 534.60 hours for LPNs (+810 submissions $\times$ 0.66 hr/submission), 534.60 hours for billing clerks (+810 submissions $\times$ 0.66 hr/submission), and 534.60 hours for physicians (+810 submissions $\times$ 0.66 hr/submission). We estimate an annual change of \$593,079.41 [(2,154.60 hr $\times$ \$107.66/hr = \$231,964.24 for computer system analysts) + (1,077.30 hr $\times$ \$132.44/hr = \$142,677.61 for medical and health service managers) + (534.60 hr $\times$ \$61.68/hr = \$32,974.13 for LPNs) + (534.60 hr $\times$ \$47.60/hr = \$25,446.96 for billing clerks) + (534.60 hr $\times$ \$299.32/hr = \$160,016.47 for physicians)].

Impact of Updated Data:

Additionally, we estimate a change of +134 submissions due to the availability of updated data and assumptions. Multiplying the estimated change in submissions (+134) by the time per submission by labor category, we estimate a total change of +799.98 hours. This change incorporates the following estimates, and applies the annual time per labor category identified in the preceding paragraph: +356.44 hours for computer system analysts (+134 submissions $\times$ 2.66 hr/submission), 178.22 hours for medical and health service managers (+134 submissions $\times$ 1.33 hr/submission), 88.44 hours for LPNs (+134 submissions $\times$ 0.66 hr/submission), 88.44 hours for billing clerks (+134 submissions $\times$ 0.66 hr/submission), and 88.44 hours for physicians (+134 submissions $\times$ 0.66 hr/submission). We estimate an annual change of \$98,114.37 [(356.44 hr $\times$ \$107.66/hr = \$38,374.33 for computer system analysts) + (178.22 hr $\times$ \$132.44/hr = \$23,603.46 for medical and health service managers) + (88.44 hr $\times$ \$61.68/hr = \$5,454.98 for LPNs) + (88.44 hr $\times$ \$47.60/hr = \$4,209.74 for billing clerks) + (88.44 hr $\times$ \$299.32/hr = \$26,471.86 for physicians)].

Total Impact: Taken together, we estimate that the changes in submissions due to policy provisions and newly available data will result in a change of +944 submissions (810 due to policy provisions + 134 due to updated data), an annual burden change of 5,636 hours (4,835.70 hr due to policy provisions + 799.98 hr due to updated data, rounded to the hour) at a cost of +\$691,194 (\$593,079.41 due to policy provisions + 98,114.37 due to updated data, rounded to the dollar). We estimate a total of 2,844 MVP submissions under the MIPS CQM/

QCDR measure collection types for the CY 2026 performance period/2028 MIPS payment year (10 subgroups + 1,834 individuals + 999 groups + 1 non-Shared Savings Program APM ACO entity).

We did not receive public comments on our burden estimates and assumptions for this collection type, and therefore, we are finalizing our burden estimates as proposed.

(iii) eCQM Collection Type

All changes to the estimated number of quality performance category submissions as described in this section are relative to our currently approved estimate of 3,030 submissions detailed in the CY 2025 PFS final rule (89 FR 98487 through 98490).

Impact of Policy Provisions: We estimate a change of +1,114 submissions due to the six new MVPs finalized in this final rule. Multiplying the estimated change in submissions (+1,114) by the time per submission by labor category, we estimate a total change of +5,904.20 hours. All estimates incorporate time to review measure specifications unless otherwise noted. This change incorporates the following estimates: 2,216.86 hr for computer system analysts (+1,114 submissions $\times$ 1.99 hr/submission (1.33 hr to submit data file and 0.66 hr to review measure specifications)), 1,481.62 hr for medical and health service managers (+1,114 submissions $\times$ 1.33 hr/submission), 735.24 hr for LPNs (+1,114 submissions $\times$ 0.66 hr/submission), 735.24 hr for billing clerks (+1,114 submissions $\times$ 0.66 hr/submission), and 735.24 hr for physicians (1,114 submissions $\times$ 0.66 hr/submission). We estimate an annual change of +\$735,311.96 [(2,216.86 hr $\times$ \$107.66/hr = \$238,667.15 for computer system analysts) + (1,481.62 hr $\times$ \$132.44/hr = \$196,225.75 for medical and health service managers) + 735.24 hr $\times$ \$61.68/hr = \$45,349.60 for LPNs) + (735.24 hr $\times$ \$47.60/hr = \$34,997.42 for billing clerks) + (735.24 hr $\times$ \$299.32/hr = \$220,072.04 for physicians)].

Impact of Updated Data: Additionally, we estimate a change of – 237 submissions due to the availability of updated data and assumptions. Multiplying the estimated change in submissions (– 237) by the time per submission by labor category, we estimate a total change of – 1,256.10 hours. This change incorporates the following estimates, and applies the annual time per labor category identified in the preceding paragraph: – 471.63 hr for computer system analysts (– 237 submissions $\times$ 1.99 hr/submission) + – 315.21 hr for medical and health service managers (– 237

submissions $\times$ 1.33 hr/submission) + – 156.42 hr for LPNs (– 237 submissions $\times$ 0.66 hr/submission) + – 156.42 hr for billing clerks (– 237 submissions $\times$ 0.66 hr/submission) + – 156.42 hr for physicians (– 237 submissions $\times$ 0.66 hr/submission). We estimate an annual change of – \$156,435.31 [(– 471.63 hr $\times$ \$107.66/hr = – \$50,775.69 for computer systems analysts) + (– 315.21 hr $\times$ \$132.44/hr = – \$41,746.41 for medical and health service managers) + (– 156.42 hr $\times$ \$61.68/hr = – \$9,647.99 for LPNs) + (– 156.42 hr $\times$ \$47.60/hr = – \$7,445.59 for billing clerks) + (– 156.42 hr $\times$ \$299.32/hr = – \$46,819.63 for physicians)].

Total Impact: Taken together, we estimate that the changes in submissions due to policy provisions and newly available data will result in a change of +877 submissions (1,114 due to policy provisions + – 237 due to updated data), an annual burden change of +4,648 hours (5,904.20 hr due to policy provisions + – 1,256.10 hr due to updated data, rounded to the hour) at a cost of – \$578,877 (\$735,311.96 due to policy provisions + – \$156,435.31 due to updated data, rounded to the hour). We estimate a total of 3,907 MVP submissions using the eCQM collection type for the CY 2026 performance period/2028 MIPS payment year (10 subgroups + 2,977 individuals + 919 groups + 1 non-Shared Savings Program APM ACO entity).

We did not receive public comments on our burden estimates, and therefore, we are finalizing our burden estimates as proposed.

(iv) Summation of Medicare Part B Claims Measure, MIPS CQM/QCDR Measure, and eCQM Collection Types

Across the quality performance category collection types for MVPs, we estimate that policy provisions will result in a total change of +2,312 submissions (388 Medicare Part B claims measure submissions + 810 MIPS CQM/QCDR measure submissions + 1,114 eCQM submissions), an annual burden change of +14,402.62 hours (3,662.72 hr for Medicare Part B claims measure submissions + 4,835.70 hr for MIPS CQM/QCDR measure submissions + 5,904.20 hr for eCQM submissions) at a cost of +\$1,763,874.66 (\$435,483.29 for Medicare Part B claims measure submissions + \$593,079.41 for MIPS CQM/QCDR measure submissions + \$735,311.96 for eCQM submissions).

Additionally, we estimate that updated data and assumption will result in a total change of – 487 submissions (– 384 Medicare Part B claims measure submissions + 134 MIPS CQM/QCDR

measure submissions + – 237 eCQM submissions), an annual burden change of – 4,081.08 hours (– 3,624.96 hr for Medicare Part B claims measure submissions + 799.98 hr for MIPS CQM/QCDR measure submissions + – 1,256.10 hr for eCQM submissions) at a cost of – \$489,314.70 (– \$430,993.76 for Medicare Part B claims measure submissions + \$98,114.37 for MIPS CQM/QCDR measure submissions + – \$156,435.31 for eCQM submissions).

Taken together, we estimate that the change in submissions due to finalized policy provisions and newly available data will result in a change of +1,825 submissions (+2,312 submissions due to policy provisions + – 487 submissions due to updated data), an annual burden change of +10,322 hours (+14,402.62 hr due to policy provisions + – 4,081.08 hr due to updated data, rounded to the hour) at a cost of +\$1,274,560 (+\$1,763,874.66 due to policy provisions + – \$489,314.70 due to updated data, rounded to the dollar). We estimate a total of 8,110 MVP submissions under the Medicare Part B claims measure, MIPS CQM/QCDR measure, and eCQM collection types for the CY 2026 performance period/2028 MIPS payment year (20 subgroups + 6,170 individuals + 1,918 groups + 2 non-Shared Savings Program ACO APM entities).

We did not receive public comments on our burden estimates and assumptions, and therefore, we are finalizing our burden estimates as proposed.

(7) Beneficiary Responses to CAHPS for MIPS Survey

In section IV.B.4.a.(5) of this final rule, we are finalizing our proposal to update the CAHPS for MIPS Survey measure by changing from a mail-web protocol to a web-mail-phone protocol. As we were unable to estimate the incremental change in submissions above our currently approved estimates, we did not propose to change our currently approved estimates under OMB control number 0938–1222 (CMS–10450) (90 FR 32791 and 32792). We proposed to continue our currently approved estimate of response time per survey of 0.2183 hours (13.1 minutes), as we did not propose revisions to the survey questions. We did not receive public comments on our burden assumptions.

(8) Group Registration for CAHPS for MIPS Survey

In section IV.B.4.a.(5) of this final rule, we are finalizing our proposal to update the CAHPS for MIPS Survey measure by changing from a mail-web

protocol to a web-mail-phone protocol. We do not anticipate that the provision will affect the number of groups registering for the CAHPS for MIPS Survey, nor will it affect the time to complete each group registration. In the CY 2026 PFS proposed rule (90 FR 32792), we did not propose changes to the requirements and burden estimates currently approved by OMB under control number 0938–1222 (CMS–10450). We did not receive public comments on our burden assumptions.

d. ICRs Regarding Reporting the Promoting Interoperability Performance Category

(1) Background

We refer readers to § 414.1375 for our previously established policies regarding reporting for the Promoting Interoperability performance category. We also refer readers to § 414.1305 for the definition of attestation, § 414.1325 for data submission requirements, and §§ 414.1380(b)(4) and 414.1365(d)(3)(iv) for Promoting Interoperability performance category scoring. For historic assumptions on reporting requirements for the Promoting Interoperability performance category, we refer readers to the CY 2024 PFS final rule (88 FR 79449 through 79451). As identified in section V.B.4., we do not estimate MIPS reporting burden due to requirements of the Shared Savings Program in the collection of information pages.

(2) Submitting Promoting Interoperability Data

In the following paragraphs, we outline the policy changes to the MIPS Promoting Interoperability performance category reporting requirements finalized in section IV.A.4.d.(4) of this final rule and our assumptions as to why such policies do not affect burden. For the first three policies finalized in this final rule, there are similar policies for the Medicare Promoting Interoperability Program in the Fiscal Year (FY) 2026 Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment Systems (IPPS/LTCH PPS) final rule (90 FR 37045 through 37056). Our burden assumptions for policies affecting the MIPS Promoting Interoperability performance category are consistent with the FY 2026 IPPS/LTCH PPS proposed rule (90 FR 18414 and 18415) and FY 2026 IPPS/LTCH PPS final rule (90 FR 37199).

First, beginning with the CY 2026 performance period/2028 MIPS payment year we are finalizing our

proposal to modify the Security Risk Analysis measure to require MIPS eligible clinicians to submit a second attestation (“Yes” or “No”) to having conducted security risk management activities as required under the HIPAA Security Rule implementation specification for risk management (codified at 45 CFR 164.308(a)(1)(ii)(B)). This attestation is in addition to the current requirement under the measure for MIPS eligible clinicians to attest “Yes” to having conducted or reviewed a security risk analysis as required under the HIPAA Security Rule. In the CY 2026 PFS proposed rule (90 FR 32792), we did not propose to update the currently approved time per MIPS Promoting Interoperability performance category submission due to the additional attestation, as we believe the currently approved burden of 2.7 hours per MIPS Promoting Interoperability performance category submission is sufficient to absorb the negligible effort of the additional attestation included as a component of the Security Risk Analysis measure.

Second, beginning with the CY 2026 performance period/2028 MIPS payment year, we are finalizing our proposal to modify the High Priority Practices Safety Assurance Factors for EHR Resilience (SAFER) Guide measure by specifying that MIPS eligible clinicians use the version of the SAFER Guides published in January 2025. In the CY 2026 PFS proposed rule (90 FR 32792), we did not propose to revise our burden estimates because the modification of the measure does not alter the core requirement to attest “Yes” or “No.”

Third, beginning with the CY 2026 performance period/2028 MIPS payment year, we are finalizing our proposal to establish the new optional bonus measure Public Health Reporting under Trusted Exchange Framework and Common Agreement (TEFCA). We did not propose to update our burden estimates in the CY 2026 PFS proposed rule (90 FR 32792) because the measure submission is optional and we cannot predict which MIPS eligible clinicians will elect to report this measure and how they will participate in MIPS (individual, group, virtual group, subgroup, or APM Entity (excluding Shared Savings Program Accountable Care Organizations (ACOs)) level). For further discussion regarding the three aforementioned policies, we refer readers to section IV.A.4.d.(4) of this final rule.

In sections IV.A.4.d.(4)(f) and IV.A.4.d.(4)(g) of this final rule, we are finalizing the following: (1) establish a measure suppression policy for the

MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program; and (2) suppress the Electronic Case Reporting measure for the CY 2025 performance period/2027 MIPS payment year for the MIPS Promoting Interoperability performance category and the EHR reporting period in CY 2025 for the Medicare Promoting Interoperability Program. For further discussion regarding such policies, we refer readers to sections IV.A.4.d.(4)(f) and IV.A.4.d.(4)(g) of this final rule. The suppression of a measure only pertains to a measure not being assessed for performance, and thus, MIPS eligible clinicians, eligible hospitals, and CAHs will continue to be required to report the measure. In the CY 2026 PFS proposed rule (90 FR 32792), we did not propose to revise our burden estimates because the measure suppression policy does not impact reporting requirements of the MIPS Promoting Interoperability performance category and the Medicare Promoting Interoperability Program.

We summarized the comments received regarding the aforementioned proposals in section XX of this final rule. We did not receive public comment on the burden assumptions for submitting Promoting Interoperability data, and are finalizing our requirements and burden estimates as proposed.

Independent of the aforementioned policies, we proposed to update the currently approved burden estimates for the number of total submissions for the MIPS Promoting Interoperability performance category due to the availability of updated data from the CY 2023 performance period/2025 MIPS payment year (90 FR 32792). Additionally, we increased the time per MIPS Promoting Interoperability performance category submission by 30 seconds (0.083 hour) to account for the addition of the Electronic Prior Authorization measure under the Health Information Exchange objective for the MIPS Promoting Interoperability performance category beginning with the CY 2027 performance period/2029 MIPS payment year. Such measure was established in the CMS Interoperability and Prior Authorization final rule published in the **Federal Register** on February 8, 2024 (89 FR 8758). In this final rule, we do not outline the burden estimate updates in this collection of information section due to the burden estimates not being affected by the policy provisions in this final rule. The applicable burden changes will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

e. ICRs Regarding Reporting for the Improvement Activities Performance Category

We refer readers to §§ 414.1355 and 414.1365(c)(3) for our previously established policies regarding reporting for the improvement activities performance category. We also refer readers to § 414.1305 for the definition of attestation, § 414.1360 for data submission requirements, and §§ 414.1380(b)(3) and 414.1365(d)(3)(iii) for improvement activities performance category scoring. For historic assumptions on reporting requirements for the improvement activities performance category, we refer readers to the CY 2024 PFS final rule (88 FR 79454 and 79455).

In section IV.A.4.d.(3)(b) of this final rule, we are finalizing our proposed changes to the Improvement Activities Inventory for the CY 2026 performance period/2028 MIPS payment year and future years. Consistent with our assumptions in the CY 2023 PFS final rule (87 FR 70211), the CY 2024 PFS final rule (88 FR 79519), and the CY 2025 PFS final rule (89 FR 98492), we believe clinicians performing

improvement activities will continue to perform the same activities because previously finalized improvement activities continue to apply for the current and future years unless otherwise modified via rulemaking (82 FR 54175). We did not receive public comment on these burden assumptions.

We refer readers to section VII.I.5.e.(2)(a) of this final rule for additional discussion. Independent of these policies, we are updating the number of submissions due to the availability of updated submission data from the CY 2023 performance period/2025 MIPS payment year. While not scored in this rule, the non-policy changes will be submitted to OMB for approval under control number 0938–1314 (CMS–10621).

f. ICRs Regarding the Cost Performance Category (§ 414.1350)

The cost performance category relies on administrative claims data. The Medicare Parts A and B claims submission process (OMB control number 0938–1197; CMS–1500 and CMS–1490S) is used to collect data on cost measures from MIPS eligible

clinicians. MIPS eligible clinicians are not required to provide any documentation by Compact Disc or hardcopy. The following policies finalized in section IV.A.4.d.(2) of this final rule will not result in the need to add or revise or delete any claims data fields: (1) modify the Total Per Capita Cost (TPCC) measure beginning in the CY 2026 performance period/2028 MIPS payment year; (2) update the operational list of care episode and patient condition groups and codes to reflect coding changes identified through annual maintenance of MIPS cost measures; and (3) adopt an informational-only feedback period of 2 years for new MIPS cost measures. Consequently, we are not making any changes under the aforementioned OMB control number.

C. Summary of the Annual Burden Estimates

Table D–A14 sets out the burden for the provisions that are subject to the PRA. It does not score burden adjustments that are strictly based on updated data and are unrelated to any of this rule's provisions.

TABLE D-A14: THE ANNUAL REQUIREMENTS AND BURDEN ESTIMATES

Section(s) Under Title 42 of the CFR	OMB Control Number (CMS ID No.)	No. Respondent Entities	Total Annual Responses	Time per Response (Hours)	Total Annual Time (hours)	Hourly Cost (\$/hr)	Total Cost (\$)
§§ 414.802 and 414.804	0938-1921 (CMS-10110)	65	260	13	3,380	45.80	154,804
§§ 414.802 and 414.804	0938-1921 (CMS-10110)	435	4	Varies	77	Varies	1,894,286
§§ 414.1325, 414.1335, and 414.1365 Quality Payment Program	0938-1314 (CMS-10621)	57,800	65,913	Varies	6,798	Varies	840,757
§§ 414.1400 Quality Payment Program: CAHPS for MIPS Survey	0938-1222 (CMS-10450)	10	10	+1	+10	107.66	+1,077
Medicare Prescription Drug Inflation Rebate Program under Sections 11101 and 11102 of the Inflation Reduction Act	0938-TBD (CMS-10930)	6,500 Covered Entities or TPAs	26,000 Covered Entities or TPAs	8 Covered Entities or TPAs	208,000 Covered Entities or TPAs	Varies	23,195,120 Covered Entities or TPAs
TOTAL	n/a	64,683	91,667	varies	197,909	varies	22,698,711

VI. Regulatory Impact Analysis

A. Statement of Need

In this final rule, we finalized payment and policy changes under the Medicare PFS. Our proposed policies in

this rulemaking specifically address: changes to the PFS; and other changes to Medicare Part B payment policies to ensure that payment systems are updated to reflect changes in medical practice, the relative value of services,

and changes in the statute; updates and refinements to Medicare Shared Savings Program (Shared Savings Program) requirements; updates to the Quality Payment Program (MIPS and Advanced APMs); changes to payment policies for

drugs and biologicals products paid under Medicare Part B, other changes to Medicare Part B payment policies for Rural Health Clinics and Federally Qualified Health Centers, and changes to the regulations associated with the Ambulance Fee Schedule. The policies reflect CMS' stewardship of the Medicare program and overarching policy objectives for ensuring equitable beneficiary access to appropriate and quality medical care.

1. Statutory Provisions

a. Medicare Prescription Drug Inflation Rebate Program

Section III.I. of this final rule finalized regulations to implement provisions of the Inflation Reduction Act of 2022 (IRA) that establish the Medicare Prescription Drug Inflation Rebate Program. Sections 11101 and 11102 of the Inflation Reduction Act of 2022 (IRA) (Pub. L. 117–169, enacted August 16, 2022) established requirements under which drug manufacturers must pay inflation rebates if they raise their prices for certain drugs payable under Part B and/or covered under Part D faster than the rate of inflation. Specifically, section 11101 of the IRA amended section 1847A of the Social Security Act (the Act) by adding new subsection (i) which establishes a requirement for drug manufacturers to pay rebates into the Federal Supplementary Medical Insurance Trust Fund for Part B rebatable drugs for each calendar quarter beginning on or after January 1, 2023, if the specified amount, as determined under section 1847A(i)(3)(A)(ii) of the Act, exceeds the inflation-adjusted payment amount, which is calculated as set forth in section 1847A(i)(3)(C) of the Act. The IRA also provides for an adjustment to the beneficiary coinsurance amount in cases where the price of a Part B rebatable drug increases faster than the rate of inflation such that the beneficiary coinsurance is calculated based on the lower inflation-adjusted payment amount instead of the applicable payment amount. Section 1847A(i)(2) of the Act defines a “Part B rebatable drug,” in part, as a single source drug or biological product (as defined in section 1847A(c)(6)(D) of the Act), including a biosimilar biological product (as defined in section 1847A(c)(6)(H) of the Act), but excluding a qualifying biosimilar biological product (as defined in section 1847A(b)(8)(B)(iii) of the Act) for which payment is made under Part B.

Section 11102 of the IRA added section 1860D–14B of the Act, which requires drug manufacturers to pay

rebates into the Medicare Prescription Drug Account in the Federal Supplementary Medical Insurance Trust Fund for each 12-month applicable period, starting with the applicable period that began on October 1, 2022, for Part D rebatable drugs if the annual manufacturer price (AnMP) of such drug, which is calculated as set forth in section 1860D–14B(b)(2) of the Act, exceeds the inflation-adjusted payment amount, which is calculated as set forth in section 1860D–14B(b)(3) of the Act. Section 1860D–14B(g)(1)(A) of the Act defines a “Part D rebatable drug,” in part, as a drug or biological described at section 1860D–14B(g)(1)(C) of the Act that is a “covered Part D drug” as that term is defined in section 1860D–2(e) of the Act. The definition of a Part D rebatable drug includes drugs approved under a new drug application under section 505(c) of the Federal Food, Drug, and Cosmetic (FD&C) Act, drugs approved under an abbreviated new drug application under section 505(j) of the FD&C Act that meet certain sole source criteria described at sections 1860D–14B(g)(1)(C)(ii)(I) through (IV) of the Act, and biologicals licensed under section 351 of the Public Health Service Act, including biosimilars.

b. Quality Payment Program

This final rule is also necessary to make changes to the Quality Payment Program to move the program forward to focus more on measurement efforts, refine how clinicians would be able to participate in a more meaningful way through the Merit-based Incentive Payment System (MIPS) Value Pathways (MVPs), and highlight the value of participating in Advanced Alternative Payment Models (APMs). Authorized by MACRA, the Quality Payment Program is a value-based payment program that includes two participation tracks: MIPS and Advanced APMs. MIPS eligible clinicians are subject to a MIPS payment adjustment based on their performance in four performance categories: cost, quality, improvement activities, and Promoting Interoperability. We continue to move the Quality Payment Program forward, including focusing more on alignment between the Merit-based Incentive Payment System (MIPS) and Advanced Alternative Payment Models (APM) tracks of participation, alignment with broader CMS initiatives, and new options for clinicians to participate in more meaningful ways. We aim to achieve continuous improvement in the quality of health care services provided to Medicare beneficiaries and other patients through the MIPS and Advanced APMs for the CY 2026

performance period/2028 MIPS payment year.

2. Discretionary Provisions

a. Drugs and Biological Products Paid Under Medicare Part B

In section III.A.1. of this final rule, as part of our continued implementation of section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117–58, November 15, 2021) (IIJA), which amended section 1847A of the Act to require manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug (hereinafter, refundable drug), we discuss two applications received for increased applicable percentage.

In section III.A.2 of this final rule, we discuss the calculation of manufacturer's Average Sales Price (ASP) related to price concessions and bona fide service fees (BFSFs). Regarding the proposals we made for price concessions, we finalized adding a definition of bundled arrangement at § 414.802 to specify how certain financial benefits, including rebates, discounts or other price concessions, are conditional upon certain requirements being met. We also finalized adding paragraphs at § 414.804(a)(2) to provide manufacturers with additional guidance on how to allocate discounts under bundled arrangements.

We also finalized several evidence requirements changes for BFSFs at § 414.804. Specifically, we finalized revisions at § 414.804(a)(5) that manufacturers are required to provide sufficient evidence that the BFSF is not passed on in whole or in part to a client or customer of an entity, whether or not the entity takes title to the drug by providing documentation (such as a certification or warranty from the recipient of the fee). In addition, we finalized to revise § 414.804(a)(5) to add data submission requirements. Under this revision, manufacturers will be required to submit reasonable assumptions for calculations of the manufacturer's ASP, including documentation of the fair market value methodology for BFSF contracts.

In section III.A.3. of this final rule, we finalized that preparatory procedures for patient-specific cell or tissue procurement required for manufacturing an autologous cell-based immunotherapy or gene therapy be included in the payment of the product itself. However, we are not finalizing the proposal to require manufacturers, beginning January 1, 2026 (that is, data reflecting sales beginning on that date), to include manufacturer-paid

preparatory procedures for such procurement in the calculation of the manufacturer's ASP. Instead, we conclude that such payments may be treated as BFSFs when the four-part test at § 414.802 is satisfied.

b. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

In section III.B.2. of this final rule, we finalized changes to the furnishing of Advance Primary Care Management (APCM) services in RHCs and FQHCs. We finalized to adopt add-on codes for APCM that will facilitate billing for Behavioral Health Integration (BHI) and Psychiatric Collaborative Care Model (CoCM) services when RHCs and FQHCs are providing advanced primary care. We also finalized to require RHCs and FQHCs to report the individual codes that make up the CoCM HCPCS code, G0512. We also finalized to require RHCs and FQHCs to report the individual codes that make up the communications technology-based services (CTBS), HCPCS code G0071 as well. In addition, we finalized to revise § 405.2464(c) and (e) to reflect our proposal on payment of CoCM and CTBS services for RHCs and FQHCs. We also finalized to adopt services that are established and paid under the PFS and designated as care management services as care coordination services for purposes of separate payment for RHCs and FQHCs.

In section III.B.3. of this final rule, we finalized to adopt the definition "immediate availability" as including real-time audio and visual interactive telecommunications for the direct supervision permanently for all RHC and FQHC services. We also finalized, on a temporary basis, to facilitate payment for non-behavioral health visits furnished via telecommunication technology using a payment methodology based upon payment rates that are similar to the national average payment rates for comparable telehealth services under the PFS. RHCs and FQHCs will continue to bill for RHC and FQHC services furnished using telecommunication technology services by reporting HCPCS code G2025 on the claim through December 31, 2026. We also finalized that, beginning October 1, 2025, there must be an in-person mental health service furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary is receiving services furnished via telecommunications technology for

diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient's medical record.

c. Ambulatory Specialty Model (ASM)

In section III.C of this final rule, we discuss the finalized provisions of the mandatory alternative payment model called the Ambulatory Specialty Model (ASM) which would be tested under the authority at section 1115A of the Act. Section 1115A of the Act authorizes the testing of innovative payment and service delivery models that preserve or enhance the quality of care furnished to Medicare, Medicaid, and Children's Health Insurance Program (CHIP) beneficiaries while reducing program expenditures.

Health care is becoming more fragmented as Medicare beneficiaries are increasingly seeing a greater number of specialists on a more regular basis. We believe there are opportunities to improve coordination between specialists and primary care providers (PCPs) and increase beneficiary engagement in care decisions, particularly with respect to preventing the onset and progression of chronic disease. ASM will test whether rewarding select specialists that furnish a high volume of services related to heart failure or low back pain based on measures of quality, cost, care coordination, and Promoting Interoperability results in enhanced quality of care and reduced costs through more effective upstream chronic condition management for ASM's targeted chronic conditions. We expect that a more targeted approach where clinicians are evaluated: (1) on a set of relevant performance measures they are required to report; and (2) among clinicians furnishing similar sets of services for similar chronic conditions, will produce scores and subsequent payment adjustments that are more reflective of clinician performance. A more targeted approach to measurement will also offer more insight into how clinical decisions and processes, such as care coordination, affect patient outcomes. We believe this insight is necessary to support and incentivize accountable care, increasing beneficiary access to coordinated specialty care.

We believe that ASM's meaningful comparisons of performance to similar specialists furnishing a substantial

volume of services related to ASM's targeted chronic conditions when matched with a payment methodology that creates impactful Medicare Part B payment adjustments will encourage quality improvements in specialty care and meaningful engagement with primary care clinicians to both prevent and manage the onset of chronic conditions, all while achieving net savings to Medicare.

We refer readers to section III.C.1 of this final rule for more information on our research and rationale for ASM, as well as our finalized provisions.

d. Effects of Proposals Being Finalized Relating to the Medicare Diabetes Prevention Program Expanded Model

1. Effects on Beneficiaries

We proposed to modify certain Medicare Diabetes Prevention Program (MDPP) expanded model policies to: (1) address barriers related to weight collection requirements by clarifying that weight measurements used to determine the achievement or maintenance of the required minimum weight loss must be taken in person by an MDPP supplier during an MDPP session or reflected in the beneficiary's medical record dated within two (2) days of the completion of the MDPP session; (2) allow beneficiaries to self-report weight from a reasonable location outside of an in-person delivery site; (3) extend the flexibilities allowed during the PHE for COVID-19 through December 31, 2029; (4) test the addition of coverage of asynchronous, Online delivery of MDPP through December 31, 2029; (5) clarify that MDPP suppliers are not required to maintain In-person delivery capability through December 31, 2029; and (6) introduce a new Healthcare Common Procedure Coding System (HCPCS) G-code and payment for Online sessions.

MDPP is a non-pharmacological behavioral intervention consisting of up to 22 sessions using a Centers for Disease Control and Prevention (CDC) approved National Diabetes Prevention Program (National DPP) curriculum.⁴⁷³ CDC administers a national quality assurance program recognizing eligible organizations that furnish the National DPP through its evidence-based DPRP Standards, which are updated every 3 years. The 2024 CDC DPRP Standards replaced the 2021 CDC DPRP Standards in June 2024.⁴⁷⁴

⁴⁷³ <https://www.cdc.gov/diabetes/prevention/resources/curriculum.html>.

⁴⁷⁴ Centers for Disease Control and Prevention Diabetes Prevention Recognition Program. Standards and Operating Procedures. Requirements

The CY 2021 PFS final rule allowed for increased virtual delivery of MDPP during the PHE for COVID-19 (85 FR 84830). Improvements to MDPP in the CY 2024 final rule included a simplified payment structure to allow for fee-for-service (FFS) payments for beneficiary attendance, while retaining the performance-based payments for diabetes risk reduction (that is, weight loss) (88 FR 79241) and an extension of PHE flexibilities to deliver some or all MDPP sessions via distance learning, until December 31, 2027 (88 FR 79241). Another PHE flexibility extended through the CY 2024 PFS final rule was for MDPP suppliers to obtain weight measurements for beneficiaries using one of the following options through December 31, 2027: (1) via digital technology, such as scales that transmit weights securely via wireless or cellular transmission; or (2) via self-reported weight measurements from the at-home digital scale of the MDPP beneficiary (88 FR 79243). The CY 2025 PFS expanded this flexibility by allowing beneficiaries with the choice to submit one or two (2) photos for self-reporting weight for an MDPP Distance learning session (89 FR 98047). Finally, to align with 2024 CDC DPRP Standards, the CY 2025 PFS final rule (89 FR 98045) updated the MDPP definition of “Online” to align with the 2024 CDC DPRP definition for this delivery modality. However, while the CY 2025 PFS final rule updated the MDPP definition for Online, only In-person, Distance learning (synchronous), and In-person with a distance learning component remained accepted delivery modalities for MDPP in CY 2025.

We proposed to revise the definitions of “Extended flexibilities period” and “Online” and add definitions for three new terms for MDPP, including “Live Coach interaction,” “Online delivery period,” and “Online session.” These changes will extend virtual delivery flexibilities through December 31, 2029, describe accepted delivery modes for MDPP by including Online (asynchronous) delivery, and further align MDPP terminology with CDC DPRP Standards. These proposed changes aim to remove access barriers for beneficiaries and provide MDPP suppliers with more delivery offerings in response to comments regarding the increasing demand for virtual participation options.

Through the CY 2026 PFS (90 FR 32593 through 32597), we proposed to clarify that weight measurements used

to determine the achievement or maintenance of the required minimum weight loss must be taken in person by an MDPP supplier during an MDPP session or reflected in the beneficiary’s medical record dated within two (2) days of the completion of the MDPP session. Beneficiaries may also choose to report weight measurements according to the CY 2025 PFS policies regarding beneficiary weight self-reported measurements and virtual weight collection (89 FR 98045), which allow beneficiaries to self-report their weights by providing one or two (2) date-stamped photo(s) or a video recording of the beneficiary’s weight, with the beneficiary visible on the scale, submitted by the MDPP beneficiary to the MDPP supplier. Beneficiaries who participate in MDPP do not currently have the option to submit medical record data as proof of weight. This proposed change is in response to MDPP supplier feedback that the current weight collection requirements discourage individuals with mobility concerns from participating in MDPP due to risk of injury while self-reporting weight from home. For example, some beneficiaries may need to obtain weight at a medical office using a special scale (for example, wheelchair scale). This flexibility may promote safe and consistent collection of weight for MDPP sessions while encouraging model participation. After consideration of public comments indicating that the proposed 2 day timeframe was overly restrictive, we are finalizing the changes to the provision at § 410.79 (c)(1)(ii) to allow for weight measurements used to determine the achievement or maintenance of the required minimum weight loss to be based on weight documented in the beneficiary’s medical record with an updated timeframe of five (5) calendar days, which provides sufficient flexibility while maintaining clear separation between sessions.

Additionally, we proposed to revise weight collection requirements for MDPP in response to comments regarding increased flexibility for MDPP beneficiaries who may be traveling or unable to obtain weight measurements at home. This change allows beneficiaries to self-report weight from a reasonable location outside of an In-person delivery site while maintaining program integrity through existing date-stamped photo requirements described at § 410.79(e)(3)(iii)(c) which state that the photo or video must clearly document the weight of the MDPP beneficiary as it appears on their digital scaled on the date associated with the

billable MDPP session. The current weight collection requirements state that beneficiaries self-report weight by submitting date-stamped photo(s) or video of the beneficiary’s weight on the scale with the beneficiary visible in their home. This limits beneficiaries from participating by reporting weight from other reasonable locations outside of an in-person delivery site or home, such as a medical office, or hotel if the beneficiary is on vacation but otherwise able to participate in MDPP sessions. This proposed change is expected to remove barriers to weight collection and provide flexibilities that may increase session attendance.

We proposed to test the addition of coverage of an asynchronous, Online delivery modality during the Online delivery period (until December 31, 2029). This change will allow virtual-only organizations to enroll in Medicare as MDPP suppliers, streamline the process to allow for greater delivery of Online sessions, and promote alignment with the 2024 CDC DPRP Standards, which support asynchronous delivery. To date, MDPP suppliers have commented that the exclusion of the asynchronous modality significantly limits program participation among Medicare beneficiaries. Advocacy group members pursued legislation that would require CMS to open the MDPP to suppliers of asynchronous, Online MDPP programs through the PREVENT DIABETES Act [H.R. 7856]⁴⁷⁵ in April 2024. Although this bill was not enacted into law, suppliers continue to encourage CMS to meet the demand for asynchronous delivery of MDPP. To facilitate the ability of MDPP suppliers to deliver the program through an asynchronous, Online delivery modality, we proposed to clarify that MDPP suppliers are not required to maintain the ability to deliver the program In-person during the Online delivery period. This will allow for virtual-only organizations to enroll in Medicare as MDPP suppliers and streamline the process to allow for greater asynchronous delivery. Additionally, beneficiary focus groups indicate that among beneficiaries who participate in MDPP via Distance learning or In-person with a distance learning component (hybrid), most expressed their satisfaction by citing the flexibility the choices provided when faced with challenges such as inclement weather or travel restrictions that made

for CDC Recognition. June 2024. <https://nationaldppsc.cdc.gov/s/article/DPRP-Standards-and-Operating-Procedures>.

⁴⁷⁵ H.R. 7856 (118th): PREVENT DIABETES Act, <https://www.govtrack.us/congress/bills/118/hr7856/text>.

in-person participation difficult.⁴⁷⁶ This extended flexibility is expected to promote beneficiary access to the Set of MDPP services, since suppliers may deliver the set of MDPP services to beneficiaries across State lines, reaching beneficiaries who do not live near an In-person delivery site. Upon further review of existing regulations, we have determined that current requirements for make-up sessions do not adequately address Online delivery. Make-up sessions for Online delivery were referenced in the CY 2026 PFS proposed rule (90 FR 32593) at § 410.79 (f)(2)(i)(C), which states the Set of MDPP services, inclusive of make-up sessions, must be delivered to individual beneficiaries fully synchronously (that is, In-person, Distance learning, or In-person with a distance learning component) or fully asynchronously (that is, Online). Therefore, we are finalizing additional updates to ensure regulatory clarity for make-up sessions offered through Online delivery by revising existing requirements at § 410.79(d)(1), which state “an MDPP supplier may offer a make-up session to an MDPP beneficiary who missed a regularly scheduled session. MDPP make-up sessions may only use in-person or distance learning delivery.” We are revising this language to indicate that Online delivery is also an accepted delivery modality for make-up sessions by specifically stating that “an MDPP supplier may offer a make-up session to an MDPP beneficiary who missed a regularly scheduled session. MDPP make-up sessions may only be used in-person, distance learning, or Online delivery.” We would like to reiterate that the Set of MDPP services, inclusive of make-up sessions, must be delivered to individual beneficiaries fully synchronously (that is, In-person, Distance learning, or In-person with a distance learning component) or fully asynchronously (that is, Online). Therefore, a supplier may not offer an Online make up session to a beneficiary who is participating in MDPP through In-person, Distance learning, or In-person with a distance learning component delivery.

We proposed edits throughout § 414.84 by revising paragraphs (b)(1) introductory text and (b)(2) introductory text to update language to include all accepted MDPP delivery modes for performance goals in which beneficiaries achieve weight loss milestones. We also proposed adding

paragraph (c)(3) to describe the proposed payment for Online delivery, including the inclusion of a new HCPCS G-code for the Set of MDPP services delivered Online. Finally, we proposed redesignating paragraphs (c)(3) and (c)(4) as paragraphs (c)(4) and (c)(5) respectively and revising the redesignated paragraph (c)(4)(ii) to include a payment rate for a core session or core maintenance session furnished Online during the Online delivery period.

Lastly, we proposed amending § 424.205(c)(10) to allow the minimum number of required MDPP core sessions and core maintenance sessions to be delivered Online during the Online delivery period; § 424.205(f)(2)(i) to include the Online delivery modality among acceptable session types for session documentation; and § 424.205(f)(5) to update requirements for achieving 5 and 9 percent weight loss measured in accordance with § 410.79(c)(ii). Overall, these modifications address MDPP supplier and beneficiary needs based upon available monitoring and evaluation data received to date, feedback from existing MDPP suppliers, and feedback from beneficiary focus groups. The proposed changes are also in response to comments from interested parties made through public comments in response to prior rulemaking. These proposed changes are aimed towards increasing access and participation in this prevention-focused program, empowering beneficiaries, and promoting further alignment between MDPP and the CDC DPRP Standards.

The policy changes proposed for MDPP in the CY 2026 PFS (90 FR 32593) are expected to have a significant impact on beneficiaries’ access to MDPP services. Aligning with 2024 CDC DPRP Standards for MDPP delivery modes may help expand beneficiary access and increase the number of MDPP eligible organizations that enroll in Medicare as MDPP suppliers. Additionally, the proposed changes to weight collection requirements and the inclusion of Online delivery will increase flexibility for both MDPP suppliers and beneficiaries and may help increase access for beneficiaries who lack transportation or live in geographic areas without access to an In-person delivery site.

2. Effects on the Market

We anticipate that the policy changes proposed in this rulemaking are likely to result in a greater number of MDPP suppliers and increased beneficiary access to the Set of MDPP services. We anticipate that our proposal will result

in the delayed onset and reduction of the incidence of diabetes among eligible Medicare beneficiaries.

As of May 2025, there are approximately 1,253 nationally recognized In-person organizations that are eligible to become MDPP suppliers based on their preliminary or full CDC Diabetes DPRP status.⁴⁷⁷ However, only 330 (26 percent) of these eligible In-person organizations are participating in MDPP.⁴⁷⁸ Aligning with CDC DPRP delivery modes, particularly allowing asynchronous, Online delivery, is expected to help increase recruitment of new DPRP organizations, MDPP suppliers, and beneficiaries.

3. Payment for MDPP Services

Regulations at § 414.84 specify that MDPP suppliers may be eligible to receive payments for furnishing MDPP services and meeting performance targets related to MDPP beneficiary weight loss and attendance.

We anticipated that the inclusion of asynchronous, Online delivery will have minimal impact on total payment for MDPP services, as current performance payments for 5 percent weight loss achieved from baseline weight (G9880) and 9 percent weight loss achieved from baseline weight (G9881) will remain the same regardless of delivery modality for MDPP. For each beneficiary, MDPP suppliers must either bill claims with G9886, G9887, a combination of G9886 and G9887, or G9871. The proposed G9871 for behavioral counseling for diabetes prevention, online, 60 minutes (\$18) is for the Set of MDPP services delivered Online, asynchronously. The existing G9886, behavioral counseling for diabetes prevention, in-person, group, 60 minutes, and G9887, behavioral counseling for diabetes prevention, distance learning, 60 minutes are delivered synchronously. Therefore, we proposed that for each MDPP beneficiary, suppliers may not bill for the Set of MDPP services that were delivered through a combination of synchronous and asynchronous delivery modalities, inclusive of make-up sessions. To evaluate the efficacy of the Online delivery modality during the Online Delivery Period, beneficiary outcomes from synchronous (that is, In-person, Distance learning, or In-person with a Distance learning component)

⁴⁷⁷ Centers for Disease Control and Prevention. Diabetes Prevention Recognition Program Application. Registry of All Recognized Organizations. <https://dprp.cdc.gov/Registry>.

⁴⁷⁸ Medicare Provider Enrollment, Chain, and Ownership System (PECOS), Centers for Medicare & Medicaid Services √ CMS (gov), accessed May 1, 2025).

⁴⁷⁶ RTI International. Evaluation of the Medicare Diabetes Prevention Program. March 2025. <https://www.cms.gov/priorities/innovation/data-and-reports/2025/mdpp-finaevalrpt>.

delivery of the Set of MDPP services must be compared to beneficiary outcomes from asynchronous (that is, Online), therefore, these modalities must be delivered separately for individual beneficiaries in order to evaluate whether Online results, including weight loss, are similar to In-

person and Distance learning delivery modalities.
The total maximum payment per beneficiary for MDPP for In-person or Distance learning delivery will remain unchanged by our proposals. The total maximum payment per beneficiary for Online delivery of MDPP will be \$619.

4. Effects on the Medicare Program
(a) Estimated 10-Year Impact of MDPP

Table D–B1 shows the estimated impact (in millions) on Medicare spending for allowing asynchronous, Online delivery of the MDPP benefit:

TABLE D-B1: ESTIMATED IMPACT (IN MILLIONS) ON MEDICARE SPENDING

	2026	2027	2028	2029	Year 2030	2031	2032	2033	2034
Gross Medicare Impacts	-\$1	-\$4	-\$7	-\$9	-\$11	-\$11	-\$11	-\$10	-\$8
Performance Payments	\$6	\$11	\$2	\$2	\$0	\$0	\$0	\$0	\$0
Total Impact	\$5	\$6	-\$5	-\$7	-\$11	-\$11	-\$11	-\$10	-\$8

(b) Assumptions/Notes

- While we proposed several changes to the existing MDPP expanded model for CY 2026, these changes should not lead to significantly different impacts on Medicare spending. The previous table provides projected impacts to Medicare fee for service spending resulting from allowing asynchronous, Online, delivery of MDPP without requiring providers to maintain an In-person delivery option.
- The assumed annual cost of diabetes from the initial certification of MDPP was trended forward using USPCF FFS PMPM spending assumptions included in the 2024 Trustees Report.
- Average per beneficiary MDPP payments for the asynchronous, Online delivery was assumed to be less than the In-person or Distance Learning benefit due to the reduced payment rate for session attendance. In 2025, the maximum total payment for completion of MDPP with weight loss is \$795. The proposed maximum payment for the asynchronous, Online, delivery of MDPP is \$619. Average per beneficiary MDPP payments were trended forward using a projected annual increase of 2.4 percent, consistent with the long-range

CPI-U assumption included in the 2024 Trustees Report.
• The previous listed impact assumes that there are 15,000 new beneficiaries in 2026; 25,000 new beneficiaries in 2027; tapering off to 5,000 new beneficiaries in years 2028 and 2029. It is anticipated that the number of new beneficiaries in 2026 and 2027 may be higher due to pent up demand for the Online delivery modality. Additionally, it may take up to 90 days for approval of a Medicare enrollment application for those organizations newly enrolling as MDPP suppliers with an Online organization code, leading to lower uptake of the model in 2026 compared to 2027. There is a high degree of uncertainty with respect to the potential utilization of the asynchronous benefit. The CMS Office of Communications (OC) sends emails to a distribution list made up of potential MDPP participants twice every year. The emails contain a link to a website where more information relating to MDPP is available. OC reviews Medicare fee for service claims data to exclude beneficiaries that would be ineligible to participate in MDPP (ESRD patients or beneficiaries with a diabetes diagnosis) to develop the distribution list. In the

last email distribution, approximately 11.8 million emails were sent. Of those receiving the email, about 86,000 recipients followed the link. With little information about the potential interest in the asynchronous, Online benefit from the supplier and beneficiary sides, utilization was assumed to be up to 20 percent in the first year and up to just over half of the number of email recipients who followed the email link during the 4 years of the asynchronous test.
• To evaluate the reduction in diabetes rates, the effectiveness of asynchronous, Online benefit is assumed to be equal to that of the in-person benefit. This assumption is revisited in the sensitivity analysis section.

(c) Sensitivity Analysis

Table D–B2 shows projected 10-year financial impacts (in millions) of delivering the asynchronous Online benefit from 2026 to 2029 at various levels of effectiveness with respect to the In-person benefit. It also provides the first year in which the accumulated savings are greater than the performance payments.

TABLE D-B2: 10-YEAR COST IMPACTS (IN MILLIONS) OF ONLINE DELIVERY OF MDPP SERVICES AND BREAK-EVEN POINT

Effectiveness Relative to In-Person	10-Year Impact	Break-Even Year
—100%	-\$56	2029
75%	-\$36	2030
50%	-\$16	2031

As indicated in Table D–B2, asynchronous, Online delivery of MDPP services is estimated to produce savings over the next 10 years even when it is

50 percent as effective as the In-person delivery.
As for the Medicare Diabetes Prevention Program, given that we tried

to align this final rule as much as possible with the CDC DPRP Standards, there should be minimal regulatory familiarization costs. This rule impacts

only enrolled MDPP suppliers and eligible beneficiaries who have started MDPP or are interested in enrolling in MDPP.

We solicited comments on the regulatory impact analysis for this proposal.

We did not receive public comments on the regulatory impact analysis for this provision, and therefore, we are finalizing as proposed.

e. Medicare Shared Savings Program

In section III.F. of this final rule, we are finalizing modifications to the Shared Savings Program regulations to allow for timely improvements to program policies and operations. The changes to the Shared Savings Program include the following.

We are finalizing our proposed changes to limit participation in a one-sided model to an ACO's first agreement period under the BASIC track's glide path (if eligible), for a maximum of 5 performance years instead of 7 performance years. Under the policies being finalized, ACOs inexperienced with performance-based risk Medicare ACO initiatives (defined at § 425.20) will progress more rapidly to higher levels of risk and potential reward under Level E of the BASIC track or the ENHANCED track (if eligible), compared to existing policies. These changes apply to agreement periods beginning on or after January 1, 2027.

We are also finalizing our proposed modifications to the Shared Savings Program eligibility and financial reconciliation requirements in connection with the statutory requirement that ACOs have at least 5,000 assigned Medicare FFS beneficiaries to: (1) require ACOs applying to enter a new agreement period beginning on or after January 1, 2027, to have at least 5,000 assigned beneficiaries in benchmark year (BY) 3, while allowing an ACO to have fewer than 5,000 assigned beneficiaries in BY1, BY2, or both; (2) establish safeguards to reduce the risk that ACOs owe shared losses payments, or are owed shared savings payments by the program, based on normal variation in beneficiary expenditures by (i) requiring that an ACO applying to enter a new agreement period that has fewer than 5,000 assigned beneficiaries in BY1, BY2, or both, may only enter the BASIC track, and (ii) capping shared savings or shared losses at a lesser amount if an ACO, at any time during the agreement period, has fewer than 5,000 assigned beneficiaries in any of the three BYs; as well as (3) exclude ACOs that fall below 5,000 assigned beneficiaries in any benchmark year from being eligible to

leverage existing policies that provide certain low revenue ACOs participating in the BASIC track with increased opportunities to share in savings.

We are finalizing our proposed changes to the Shared Savings Program's quality performance standard and other quality reporting requirements, including to: (1) revise the definition of a beneficiary eligible for Medicare CQMs at § 425.20 for performance year 2025 and subsequent performance years so that the population identified for reporting within the Medicare CQM collection type will have greater overlap with the beneficiaries that are assignable to an ACO; (2) update the APP Plus quality measure set for Shared Savings Program ACOs including the removal of Quality ID: 487 Screening for Social Drivers of Health; and (3) implement a web-mail-phone protocol and discontinue the mail-phone protocol for the CAHPS for MIPS Survey beginning with 2027. We are finalizing with modifications our proposal to remove the health equity adjustment applied to an ACO's quality score and to revise the terminology used to describe the health equity adjustment and other related terms; specifically, we are removing the health equity adjustment applied to an ACO's quality score beginning in performance year 2026 and we are revising the terminology used to describe the health equity adjustment and other related terms for performance years 2023 through 2025.

We are finalizing our proposed changes to expand the application of the Shared Savings Program's quality and finance extreme and uncontrollable circumstances (EUC) policies to an ACO that is affected by an EUC due to a cyberattack, including ransomware/malware, as determined by the Quality Payment Program, for performance year 2025 and subsequent performance years.

We are finalizing our proposed changes to other programmatic areas, including: changes to Shared Savings Program eligibility requirements and change request procedures to: (1) require ACOs that experience certain ACO participant CHOWs outside of the change request cycle to update their certified ACO participant list to reflect such ACO participant's CHOW; and (2) require ACOs to submit changes which occur during the performance year to the ACO's SNF affiliate list, if a SNF affiliate undergoes a CHOW resulting in a new TIN. We are finalizing our proposed updates to the beneficiary assignment methodology to revise the definition of primary care services to align with payment policy changes and include, among other services for the

purposes of beneficiary assignment, new behavioral health integration and psychiatric collaborative care model add-on services when these services are furnished with advanced primary care management services. We are finalizing our proposed changes to the Shared Savings Program's regulations specifying the financial benchmarking methodology applicable for agreement periods beginning on January 1, 2025, and in subsequent years, to rename the "health equity benchmark adjustment" (HEBA) the "population adjustment." Finally, we are finalizing our proposed changes to revise the Shared Savings Program's quality reporting monitoring policies.

f. Changes to the Regulations Associated With the Ambulance Fee Schedule

As outlined in section III.G. of this final rule, section 3203 of the American Relief Act of 2025 and most recently, section 2203 of the Full-Year Continuing Appropriations and Extensions Act, 2025 amended section 1834(l)(12)(A) and (l)(13) of the Act to extend the payment add-ons sets forth in those subsections through September 30, 2025. The ambulance extender provisions are enacted through legislation that is self-implementing. We proposed only to revise dates at § 414.610(c)(1)(ii) and (c)(5)(ii) to conform the regulations to these self-implementing statutory requirements.

B. Overall Impact

We have examined the impacts of this final rule as required by Executive Order 12866, Regulatory Planning and Review (September 30, 1993), Executive Order 14192, "Unleashing Prosperity Through Deregulation"; the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354); section 1102(b) of the Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4); and Executive Order 13132, Federalism (August 4, 1999).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity).

A regulatory impact analysis (RIA) must be prepared for regulatory actions that are significant under section 3(f)(1) of Executive Order 12866. Based on our estimates, OMB's Office of Information and Regulatory Affairs has determined this rulemaking is significant per

section 3(f)(1)). Accordingly, we have prepared an RIA that, to the best of our ability, presents the costs and benefits of the rulemaking. The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals, practitioners, and most other providers and suppliers are small entities, either by nonprofit status or by having annual revenues that qualify for small business status under the Small Business Administration standards. (For details, see the SBA's website at <https://www.sba.gov/document/support-table-size-standards> (refer to the 620000 series).) Individuals and States are not included in the definition of a small entity.

The RFA requires that we analyze regulatory options for small businesses and other entities. We prepare a regulatory flexibility analysis unless we certify that a rule would not have a significant economic impact on a substantial number of small entities. The analysis must include a justification concerning the reason action is being taken, the kinds and number of small entities the rule affects, and an explanation of any meaningful options that achieve the objectives with less significant adverse economic impact on the small entities.

Approximately 95 percent of practitioners, other suppliers, and providers are considered to be small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this section, as well as elsewhere in this final rule is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare an RIA if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. Medicare does not pay rural hospitals for their services under the PFS; rather, Medicare payment is made under the PFS for physicians' services, which can be furnished by physicians

and NPPs in a variety of settings, including rural hospitals. We did not prepare an analysis for section 1102(b) of the Act because we determined, and the Secretary certified, that this rulemaking will not have a significant impact on the operations of a substantial number of small rural hospitals.

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits on State, local, or tribal governments or on the private sector before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2025, that threshold is approximately \$187 million. This rule will impose no mandates on State, local, or tribal governments or on the private sector.

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has federalism implications. Since this rulemaking does not impose any costs on State or local governments, the requirements of Executive Order 13132 are not applicable.

We prepared the following analysis, which, together with the information provided in the rest of this rule, meets all assessment requirements. The analysis explains the rationale for and purposes of this rule; details the costs and benefits of this rulemaking; analyzes alternatives; and presents the measures we will use to minimize the burden on small entities. As indicated elsewhere in this rule, we discussed various changes to our regulations, payments, or payment policies to ensure that our payment systems reflect changes in medical practice and the relative value of services and to implement provisions of the statute. We provide information for each policy change in the relevant sections of this final rule. We are unaware of any relevant Federal rules that duplicate, overlap, or conflict with this rule. The relevant sections of this rulemaking describe significant alternatives we considered, if applicable.

C. Executive Order 14192, "Unleashing Prosperity Through Deregulation"

Executive Order 14192, titled "Unleashing Prosperity Through Deregulation" was issued on January 31, 2025, and requires that "any new incremental costs associated with new regulations shall, to the extent permitted by law, be offset by the elimination of

existing costs associated with at least 10 prior regulations."

D. Changes in Relative Value Unit (RVU) Impacts

1. Resource-Based Work, PE, and MP RVUs

Section 1848(c)(2)(B)(ii)(II) of the Act requires that increases or decreases in RVUs may not cause the amount of Medicare Part B expenditures for the year to differ by more than \$20 million from what expenditures would have been in the absence of these changes. If this threshold is exceeded, we make adjustments to preserve budget neutrality.

Our estimates of changes in Medicare expenditures for PFS services compare payment rates for CY 2025 with payment rates for CY 2026 using CY 2024 Medicare utilization. The payment impacts described in this rule reflect averages by specialty based on Medicare utilization. The payment impact for an individual practitioner could vary from the average and will depend on the mix of services they furnish. The average percentage change in total revenues will be less than the impact displayed here because practitioners and other entities generally furnish services to both Medicare and non-Medicare patients. In addition, practitioners and other entities may receive substantial Medicare revenues for services under other Medicare payment systems. For instance, independent laboratories receive approximately 83 percent of their Medicare revenues from clinical diagnostic laboratory tests that are paid under the Clinical Laboratory Fee Schedule (CLFS).

As required by section 1848(d)(1)(A) of the Act, beginning in CY 2026, there will be two separate conversion factors (CFs): one for items and services furnished by a qualifying APM participant as defined in section 1833(z)(2) of the Act (referred to as the qualifying APM conversion factor) and another for other items and services (referred to as the nonqualifying APM conversion factor), equal to the respective conversion factor for the previous year (or, for CY 2026, equal to the single conversion factor for CY 2025) multiplied by the update established under section 1848(d)(20) of the Act for such respective conversion factor for such year. As specified by section 1848(d)(20) of the Act, the update to the qualifying APM conversion factor for CY 2026 is 0.75 percent while the update to the nonqualifying APM conversion factor for CY 2026 is 0.25 percent. To calculate the estimated CY 2026 PFS conversion

factors, we took the CY 2025 conversion factor and multiplied it by the budget neutrality adjustment required as described in the preceding paragraphs, then multiplied by the qualifying APM and nonqualifying APM updates specified by section 1848(d)(20) of the Act, then applied the 1-year increase of 2.50 percent for CY 2026 established by statute. We estimate the CY 2026 PFS qualifying APM CF to be \$33.5675

which reflects a 0.49 percent positive budget neutrality adjustment required under section 1848(c)(2)(B)(ii)(II) of the Act and the 0.75 percent update adjustment factor specified under section 1848(d)(20) of the Act. We estimate the CY 2026 PFS nonqualifying APM CF to be \$33.4009 which reflects a 0.49 percent positive budget neutrality adjustment required under section 1848(c)(2)(B)(ii)(II) of the Act and the

0.25 percent update adjustment factor specified under section 1848(d)(20) of the Act. We estimate the CY 2026 anesthesia qualifying APM CF to be 20.5998 and the CY 2026 anesthesia nonqualifying APM CF to be 20.4976, reflecting the same overall PFS adjustments with the addition of anesthesia-specific PE and MP adjustments.

TABLE DB-3: CALCULATION OF THE CY 2026 PFS QUALIFYING APM CONVERSION FACTOR

PFS Qualifying APM Conversion Factor	Percentage	Actual Adjustment	Conversion Factor
Conversion Factor in effect in CY 2025			32.3465
CY 2026 Qualifying APM Update Factor	0.75 percent	1.0075	
CY 2026 RVU Budget Neutrality Adjustment	0.49 percent	1.0049	
CY 2026 2.50 Percent Increase	2.50 percent	1.0250	
CY 2026 Conversion Factor			33.5675

TABLE D-B4: CALCULATION OF THE CY 2026 PFS NON-QUALIFYING APM CONVERSION FACTOR

PFS Non-Qualifying APM Conversion Factor	Percentage	Actual Adjustment	Conversion Factor
Conversion Factor in effect in CY 2025			32.3465

TABLE D-B6: CALCULATION OF THE CY 2026 ANESTHESIA NON-QUALIFYING APM CONVERSION FACTOR

Anesthesia Non-Qualifying APM Conversion Factor	Percentage	Actual Adjust.	Conversion Factor
Conversion Factor in effect in CY 2025			20.3178
CY 2026 Non-Qualifying APM Update Factor	0.25 percent	1.0025	
CY 2026 RVU Budget Neutrality Adjustment	0.44 percent	1.0044	
CY 2026 2.50 Percent Increase	2.50 percent	1.0250	
CY 2026 Anesthesia Fee Schedule Practice Expense and Malpractice Adjustment	-2.30 percent	0.9770	
CY 2026 Conversion Factor			20.4976

Table D-B7 shows the impact on PFS payment for physicians' services based on the proposed policies included in this rule. To the extent that there are year-to-year changes in the volume and mix of services provided by practitioners, the actual impact on total Medicare revenues will be different from those shown in Table D-B7 (CY 2026 PFS Estimated Impact on Total Allowed Charges by Specialty).

In recent years, we have received requests from interested parties to provide more granular information that separates the specialty-specific impacts by site of service. These interested parties have presented us with high-level information suggesting that Medicare payment policies are directly responsible for consolidating privately owned physician practices and freestanding supplier facilities into larger health systems. Their concerns highlight a need to update the information under the PFS to account for current trends in healthcare delivery, especially concerning independent versus facility-based practices. We published an RFI in the CY 2023 PFS proposed rule to gather feedback on this issue and refer readers to the discussion in the CY 2023 PFS final rule (87 FR 69429 through 69438). As part of our holistic review of how best to update our data and offer interested parties additional information that addresses

some of the concerns raised, we have recently improved our current suite of public use files (PUFs) by including a new file that shows estimated specialty payment impacts at a more granular level, specifically by showing ranges of impact for practitioners within a specialty. This file is available on the CMS website under downloads for the CY 2026 PFS proposed rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

Some of the proposed policies in this rule are estimated to have significant differential effects depending on the site of service, especially the proposed changes to the allocation of indirect PE in the facility setting. Therefore, we published the impact tables including a facility/non-facility breakout of payment changes, as we believed that displaying the total impact by specialty alone, without the setting of care context, could be misleading for interested parties. The following is an explanation of the information represented in Table D-B7.

- Column A (Specialty): Identifies the specialty for which data are shown.
- Column B (Setting): Identifies the facility or non-facility setting for which data are shown.
- Column C (Allowed Charges): The aggregate estimated PFS allowed

charges for the specialty based on CY 2024 utilization and CY 2025 rates. That is, allowed charges are the PFS amounts for covered services and include coinsurance and deductibles (which are the financial responsibility of the beneficiary). These amounts have been summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty.

- Column D (Impact of Work RVU Changes): This column shows the estimated CY 2026 impact on total allowed charges of the changes in the work RVUs, including the impact of changes due to potentially misvalued codes.

- Column E (Impact of PE RVU Changes): This column shows the estimated CY 2026 impact on total allowed charges of the changes in the PE RVUs.

- Column F (Impact of MP RVU Changes): This column shows the estimated CY 2026 impact on total allowed charges of the changes in the MP RVUs.

- Column G (Combined Impact): This column shows the estimated CY 2026 combined impact on total allowed charges of all the changes in the previous columns. Column G may not equal the sum of columns D, E, and F due to rounding.

TABLE D-B7: CY 2026 PFS ESTIMATED IMPACT ON TOTAL ALLOWED CHARGES BY SPECIALTY

2. CY 2026 PFS Impact Discussion

a. Changes in RVUs

The most widespread specialty-level impacts of the RVU changes are generally related to the changes to RVUs for specific services resulting from the misvalued code initiative, including RVUs for new and revised codes. The estimated impacts for most specialties in the office-based setting, including surgical specialties, primary care specialties, behavioral health specialties, and those who furnish highly technical services outside of the hospital setting reflect significant increases relative to most of those same specialties in the facility setting. These increases can largely be attributed to, the proposed adjustment to indirect PE allocation in the facility setting. To a lesser degree, projected increases for some specialties, especially in primary care and behavioral health are driven by the redistributive effects of the proposed efficiency adjustment to work RVUs and the third year of the behavioral health work update. Increases are also due to proposed increases in valuation for particular services after considering the recommendations from the American Medical Association's (AMA) Relative Value Scale Update Committee (RUC) and CMS review, and increased payments resulting from supply and equipment pricing updates. For independent laboratories, it is important

to note that these entities receive approximately 83 percent of their Medicare revenues from services that are paid under the Clinical Lab Fee Schedule. Therefore, the estimated 1 percent increase for CY 2026 is only applicable to approximately 17 percent of the Medicare payment to these entities.

The estimated impacts for specialties in the hospital-based setting are driven primarily by the proposed adjustment to indirect PE allocation in the facility setting and the proposed efficiency adjustment. These decreases are also due to the revaluation of individual procedures based on reviews, including consideration of AMA RUC review and recommendations, as well as decreases resulting from the continued phase-in implementation of the previously finalized supply and equipment pricing updates. The estimated impacts also reflect decreased payments due to continued implementation of previously finalized code-level reductions that are being phased in over several years.

We note that several specialties appear on the specialty impacts table with both the largest projected increases in payment as well as the largest projected decreases in payment, split across the site of service differential.

We often receive comments regarding the changes in RVUs displayed on the specialty impact table (Table D–B7), including comments received in

response to the valuations. We remind interested parties that although the estimated impacts are displayed at the specialty level, typically, the changes are driven by the valuation of a relatively small number of new and/or potentially misvalued codes. The percentage changes in Table D–B7 are based upon aggregate estimated PFS allowed charges summed across all services furnished by physicians, practitioners, and suppliers within a specialty to arrive at the total allowed charges for the specialty and compared to the same summed total from the previous calendar year. Therefore, they are averages and may not necessarily represent what is happening to the particular services furnished by a single practitioner within any given specialty.

As previously discussed, we have reviewed our suite of public use files and have worked on new ways to offer interested parties' additional information that addresses concerns about the lack of granularity in our impact tables. To illustrate how impacts can vary within specialties, we created a public use file that models the expected percentage change in total RVUs per practitioner. Using CY 2024 utilization data, Total RVUs change between -2 percent and 2 percent for roughly 25 percent of practitioners, representing approximately 32 percent of the changes in Total RVUs for all practitioners, with variation by

specialty. We also note the code level RVU changes are available in the Addendum B public use file that we make available with each rule (see <https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/addendum-a-b-updates>).

The specialty impacts displayed in Table D–B7 reflect changes within the pool of total RVUs. The specialty impacts table, therefore, includes any changes in spending that result from proposed policies that are subject to the statutory budget neutrality requirement at section 1848(c)(2)(B)(ii)(II) of the Act (such as the proposed specialty impacts displayed in Table D–B7 reflect changes within the pool of total RVUs. The specialty impacts table, therefore, includes any changes in spending that result from proposed policies that are subject to the statutory budget neutrality requirement at section 1848(c)(2)(B)(ii)(II) of the Act (such as the proposed efficient adjustment or the proposed changes to indirect PE allocation in the facility setting) but does not include any changes in spending which result from proposed policies that are not subject to the statutory budget neutrality adjustment, and therefore, have a neutral impact across all specialties. The 0.75 percent and 0.25 percent updates to the CY 2026 qualifying APM and APM and nonqualifying APM conversion factors, respectively, as well as the single year increase of 2.50 percent to the conversion factor for CY 2026, are statutory changes that take place outside of BN, and therefore, are not captured in the specialty impacts displayed in Table D–B7.

b. Impact

Column G of Table D–B7 displays the estimated CY 2025 impact on total allowed charges, by specialty, of all the RVU changes. A table showing the estimated impact of all of the changes on total payments for selected high-volume procedures is available under “downloads” on the CY 2026 PFS proposed rule website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>. We selected these procedures for the sake of illustration from among the procedures most commonly furnished by a broad spectrum of specialties. The change in both facility rates and non-facility rates are shown. For an explanation of facility and non-facility PE, we refer readers to Addendum A on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/>.

c. Estimated Impacts Related to the Proposed Efficiency Adjustment

In section II.E.2.b of this final rule, we finalized the application of an efficiency adjustment to the work RVU and corresponding intraservice portion of physician time for non-time-based services as we expect these kinds of services to accrue efficiencies over time. This applies to all codes except time-based codes, including but not limited to, E/M services, care management services, behavioral health services, services on the CMS telehealth list, and maternity codes with a global period of MMM, as well as new services. This efficiency adjustment policy will apply to all codes that are not otherwise excluded. Included code families represent the procedures, diagnostic tests, and radiology services that CMS expects to accrue efficiencies over time as changes in medical practice occur, including changes in clinician expertise, workflows, and technology.

The finalized efficiency adjustment for CY 2026 is calculated as the sum of the productivity adjustments used in the Medicare Economic Index (MEI) for the prior 5 years (2021 through 2025). The MEI is a measure of input price inflation faced by physicians and practitioners furnishing physicians’ services such as physician’s own time, non-physician employees’ compensation, office rent, medical equipment, and more. The MEI productivity adjustment reflects the most recent historical estimate of the 10-year moving average growth of private nonfarm business total factor productivity, as calculated by the Bureau of Labor Statistics. Every year, the productivity adjustment is calculated by the CMS Office of the Actuary (OACT) based on the most recent historical data published by BLS at the time of the PFS final rule. Beginning in CY 2026, we are finalizing a 5-year look-back period to calculate the initial efficiency adjustment. See section II.E.2.b of this rule for more information on the proposed methodology. This calculation results in a proposed efficiency adjustment of 2.5 percent for CY 2026.

Generally, specialties that bill more often for timed codes, such as family practice, clinical psychologists, clinical social workers, geriatrics, and psychiatry would likely see an increase in RVUs; while specialties that bill more often for procedures, diagnostic imaging, and radiology services (such as radiation oncology, radiology, and some surgical specialties), would likely see a decrease in RVUs. This efficiency adjustment will decrease the work RVU for many services across most specialty

types to reflect the efficiency gains that have taken place over time. Since this adjustment will reduce the work RVU for affected services, we project that there will be a net increase to the conversion factor as required under our budget neutrality provisions. We estimate that almost all specialties will experience no more than +1 or –1 percent change in RVUs as a result of this proposed policy, although the effect on individual services may be greater.

As stated in section II.E.2.b of this final rule, we finalized the proposed efficiency adjustment of 2.5 percent, and exempted additional codes, specifically time-based codes, services on the CMS telehealth list, and new codes for CY 2026, as reflected in the Codes Subject to Efficiency Adjustment public use file. This file can be found in the public use files for CY 2026; the file is available on the CMS website under downloads for the CY 2026 PFS final rule at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html>.

d. Estimated Impacts Related to the Proposed Site of Service Payment Differential

In section II.B. of this final rule, we proposed to, for each service valued in the facility setting, reduce the portion of the facility PE RVUs allocated based on work RVUs to half the amount allocated to non-facility PE RVUs for CY 2026.

Overall, specialties that practice primarily in the non-facility setting will see an increase in PE RVUs as a result of this redistribution. Specialties that perform services primarily in the facility setting will see a decrease in PE RVUs as a result of the proposed reduction to facility indirect PE. Overall, this proposed methodology change to indirect PE allocation will not affect the conversion factor, as all changes in valuation will be contained within the development of PE RVUs and redistribute PE RVUs from the facility to the non-facility setting.

E. Impact of Changes Related to Telehealth Services

We are finalizing as proposed the addition of several codes to the Medicare Telehealth Services List, including HCPCS codes G0473 and G0545, and CPT codes 90849, 92622, and 92623. We are not finalizing as proposed, the removal of HCPCS code G0136 from the Medicare Telehealth Services List. We are finalizing certain telecommunications technology-related flexibilities, including that we will continue to use a definition of direct supervision that allows “immediate

availability” of the supervising practitioner using real-time audio and video interactive telecommunications for services without a 010 or 090 global period indicator. We are finalizing as proposed, eliminating the telehealth frequency limitations for subsequent nursing facility and inpatient hospital visits. While we noted that certain other Medicare telehealth flexibilities related to the Public Health Emergency (PHE) for the Coronavirus Disease 2019 (COVID-19) (PHE for COVID-19) are expiring, including the removal of statutory geographic and location limitations for most Medicare telehealth services, the beneficiary’s home continues to be a permissible originating site for certain types of services including those furnished for the diagnosis, evaluation, or treatment of a mental health disorder, including a Substance Use Disorder (SUD), and for monthly End Stage Renal Disease (ESRD) related clinical assessments described in section 1881(b)(3)(B) of the Act. However, expiration of certain flexibilities for Medicare telehealth services is not expected to impact broader utilization of these services because reasonable and necessary services for the diagnosis or treatment of an illness or injury continue to be covered. Despite the fact that some services will no longer be furnished under telehealth, we expect that they will continue to be furnished in-person. Therefore, we anticipate that our provisions will result in continued utilization of services that can be furnished as Medicare telehealth services during CY 2026 at levels comparable to observed utilization of these services during CY 2025.

F. Other Provisions of the Final Rule

1. Impact of Changes Related to Medicare Part B Payment for Skin Substitutes When Used During a Covered Application Procedure Under the PFS in the Non-Facility Setting

As discussed in detail in section II.K.D. of this final rule, starting January 1, 2026, we are finalizing to pay for the provision of certain groups of skin substitute products used during a covered application procedure (CPT codes 15271 through 15278) as supplies. These skin substitutes will be paid as incident-to supplies under the PFS in the non-facility setting in accordance with section 1861(s)(2)(A) of the Act. While costs associated with supplies are usually bundled into the PE RVUs for particular services in non-facility settings, these products have been paid separately for many years in the non-

facility setting, where the majority of these products are currently used.

As discussed in detail in section II.K. of this final rule, in light of our careful review of the applicable statutory provisions governing products paid under the ASP methodology under 1847A of the Act, the different FDA regulatory frameworks used for these products, and the skyrocketing increase in Medicare spending for such products, we proposed to pay separately for specific skin substitute products (other than products licensed under section 351 of the PHS Act, which will continue to be paid as biologicals under the ASP methodology in section 1847A of the Act) that are eligible for Medicare coverage during a covered application procedure in the non-facility setting as incident-to supplies in accordance with section 1861(s)(2)(A) of the Act. To reflect relevant product characteristics, we are finalizing to group skin substitutes that are not drugs or biologicals (that is, biological products licensed under section 351 of the PHS Act) using three CMS payment pathways (PMAs, 510(k)s, and 361 HCT/Ps) to set payment rates. We believe that finalizing to pay for these supplies as incident-to supplies under the PFS, valued in groups by how the products are used, better aligns payment with the resources involved in the provision of these incident-to supplies during a covered application procedure and will generate payment stability over time. In the proposed rule, we estimated that under the proposal, which assumed a single rate of approximately \$125.38 for CY 2026, there would be an estimated savings of \$9.4 billion, based on a single year comparison to 2024 using claims data available at that time.

Based on the Midsession Review of the 2026 President’s Budget baseline, which was released in August of this year, we estimate that gross fee-for-service program spending for skin substitute services would be reduced by \$19.6 billion in 2026. This impact is higher than prior estimates due to the incorporation of actual experience so far in 2025, which is significantly higher than estimated. This higher experience resulted in higher projected growth in spending for these services.

Because the resources involved in provision of these supplies were not previously incorporated into RVUs under the PFS, the costs are not accounted for when we compare the RVUs for physicians’ services from 1 year to the next. In other words, changes in payment rates for these particular codes will be incorporated into PFS relativity once we use claims data from

2026, should the policy be finalized. Under the usual methodology, that means that changes in rates for these services between CY 2027 and CY 2028 would have an impact on the development of PE RVUs for other services. Over time, we anticipated that our proposal will continue to result in significant overall price reductions since grouped valuation instead of product-specific pricing should result in downward pricing pressure in the market. Additionally, we do not anticipate an impact to beneficiaries’ access to appropriate care.

2. Drugs and Biological Products Paid Under Medicare Part B

a. Requiring Manufacturers of Certain Single-Dose Container or Single-Use Package Drugs To Provide Refunds With Respect to Discarded Amounts

Section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117–58, November 15, 2021) amended section 1847A of the Act to require manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug. The refund amount is either as noted in section 1847A(b)(1)(B) of the Act in the case of a single source drug or biological or as noted in section 1847A(b)(1)(C) of the Act in the case of a biosimilar biological product, multiplied by the amount of discarded drug that exceeds an applicable percentage, which is required to be at least 10 percent, of total charges (subject to certain exclusions) for the drug in a given calendar quarter. In the CY 2023, 2024, and 2025 PFS final rules, we finalized several policies to implement the provision. In December of 2024, CMS sent discarded drug refund reports for CY 2023 “new refund quarters,” as defined at § 414.902. The total refunds owed for these quarters amount to over \$139 million, which was deposited into the Supplementary Medical Insurance (SMI) trust fund, as required by law. In section III.A.1 of this final rule, we discuss two applications (CMS 10835, OMB 0938–1435) for increased applicable percentage which will have no impact on Medicare spending.

b. Average Sales Price: Price Concessions and Bona Fide Service Fees (§§ 414.804 and 414.802)

In section III.A.2 of this final rule, we finalized modifications to two aspects of the calculation of manufacturer’s Average Sales Price (ASP), including price concessions and bona fide service fees (BFSFs). Both price concessions and BFSFs have direct implications on

the manufacturer's ASP. For example, if a manufacturer currently classifies an amount paid to an entity to be a BFSF but must reclassify the amount as a price concession under these proposed changes, the manufacturer's ASP would theoretically decrease. The resulting payment limit for the drug, typically ASP plus 6 percent, would also decrease. The opposite would also be true; that is, if a manufacturer considers an amount paid to an entity a price concession but then determines the amount to be a BFSF, the manufacturer's ASP would increase. However, we did not finalize the proposal to modify the definition of BFSF. Therefore, we anticipate that the finalized proposals will not have a significant impact on Medicare spending. Nevertheless, as the finalized policies will increase accuracy and transparency of ASP reporting, we anticipate that the finalized policy will likely result in reduced drug spending overall, resulting in decreases in ASP. If this occurs, there will be decreased spending on affected drugs. However, since details of arrangements and terms that manufacturers have with other entities are often not known to CMS, we are not able to quantify the possible changes in the payment limits for separately paid drugs under Medicare Part B.

c. Impacts Related to Autologous Cell-Based Immunotherapy and Gene Therapy Payment

In section III.A.4. of this final rule, we finalized that preparatory procedures for patient-specific cell or tissue procurement required for manufacturing an autologous cell-based immunotherapy or gene therapy be included in the payment of the product itself. Since the payment for preparatory procedures is an extension of the current policy for a subset of these products, Chimeric Antigen Receptor (CAR) T-cell therapies, and these products are furnished to very few beneficiaries, we do not anticipate the finalized policy to have a significant financial impact.

In addition, we are not finalizing the proposal that, beginning January 1, 2026 (that is, data reflecting sales beginning on that date), any preparatory procedures for patient-specific cell or tissue procurement required for manufacturing an autologous cell-based immunotherapy or gene therapy that are paid by the manufacturer be included in the calculation of the manufacturer's ASP. Instead, when the four-part test at § 414.802 is satisfied, these manufacturer-paid amounts may be treated as BFSFs and excluded from

ASP. Because we have little information about how manufacturers currently factor in the cost of cell or tissue procurement into pricing these products, we cannot predict the exact financial impact on Medicare payment. However, given that the cost of cell or tissue procurement is typically a very small fraction of the overall cost of the product and that some manufacturer-paid amounts may be excluded from ASP under this policy, we anticipate that any financial impact will not be substantial.

3. Impacts Related to Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

In section III.B.2. of this final rule, to continue alignment with the PFS and goals associated with APCM services, we finalized adoption of the add-on codes for APCM that would facilitate billing for BHI and CoCM services when RHCs and FQHCs are providing advanced primary care. We also finalized requiring RHCs and FQHCs to report individual codes that make up HCPCS code G0512. We also finalized requiring RHCs and FQHCs to report the individual codes that make up the communications technology-based services (CTBS), HCPCS code G0071. In addition, we finalized revisions to § 405.2464(c) and (e) to reflect our proposal on payment of CoCM and CTBS services for RHCs and FQHCs. We also finalized the proposal to adopt services that are established and paid under the PFS and designated as care management services as care coordination services for purposes of separate payment for RHCs and FQHCs. In terms of the estimated impacts to the Medicare program, we believe that the finalized policies discussed in section III.B.2 of this final rule will have a negligible impact on Medicare spending.

In section III.B.3 of this final rule, we finalized the policy to adopt the definition "immediate availability" as including real-time audio and visual interactive telecommunications for the direct supervision permanently for all RHC and FQHC services and the definition of physician supervision at § 405.2401(b). We finalized, on a temporary basis, to facilitate payment for non-behavioral health visits furnished via telecommunication technology using a payment methodology based upon payment rates that are similar to the national average payment rates for comparable telehealth services under the PFS. RHCs and FQHCs would continue to bill for RHC and FQHC services furnished using telecommunication technology services

by reporting HCPCS code G2025 on the claim through December 31, 2026. We also finalized that, beginning October 1, 2025, there must be an in-person mental health service furnished within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient's medical record. As such, finalized revisions to 42 CFR part 405, subpart X, specifically, at § 405.2463(b)(3), "What constitutes a visit," and, at § 405.2469(d) "FQHC supplemental payments," as proposed.

We believe these RHC/FQHC policies related to telecommunication technology will have a negligible impact on Medicare spending.

4. Ambulatory Specialty Model (ASM) a. Scale of the Model

As we discuss in sections III.C.2.c.(4) and III.C. 1. of this final rule, there is no one-size-fits-all approach to designing, implementing, and evaluating Innovation Center models. Each payment and service delivery model tested by the Innovation Center is unique in its goals, and thus its design. Models vary in size to accommodate various design features and satisfy a variety of priorities. Decisions made regarding the features and design of the model strongly influence the extent to which the evaluation will be able to accurately assess the effect of a given model test and produce clear and replicable results.

The Innovation Center conducts analyses to determine the ideal number of participants for each model for evaluation purposes. This analysis considers a variety of factors including the target population (for example, Medicare beneficiaries with select chronic conditions), model eligibility (for example, participant eligibility criteria for inclusion in the model), participant enrollment strategy (for example, mandatory versus voluntary) and, the need to test effects on subgroups. Model size can also be influenced by the type and size of hypothesized effect on beneficiary

outcomes, such as quality of care, or the target level of model savings. The smaller the expected impact a model is hypothesized to achieve, the larger a model needs to be for CMS to have confidence in the observed impacts.

An insufficient number of participants increases the risk that the evaluation will be imprecise in detecting the true effect of a model, potentially leading, for example, to a false negative or false positive result. The goal is to design a model that is sufficiently large to achieve adequate precision but not so large as to waste CMS' limited resources. These decisions affect the quality of evidence CMS can present regarding the impacts of a model on quality of care, utilization, and spending.

In the case of ASM, in this final rule we have determined the sample size necessary for a minimum estimated savings impact of 3.5 percent. While savings higher than 3.5 percent would require a smaller sample size from an evaluation perspective, if we were to reduce the size of ASM and if the actual savings are at or just below the 3.5 percent level, then we would increase the risk of being unable to detect whether ASM resulted in savings.

We expect that ASM will include approximately 25 percent of all CBSAs and metropolitan divisions. As finalized at § 512.710(f), a CBSA or metropolitan division must have at least one clinician of the required specialty types who furnished at least 20 eligible episodes heart failure and at least one clinician of the required specialty types who furnished at least 20 eligible low back pain episodes between January 1, 2024 and December 31, 2024 to be eligible for selection into ASM. We performed a simulation based on our proposed policies. We simulated the random selection of CBSAs and metropolitan divisions using CY 2023 data based on the methodology finalized at § 512.710(f), which will allow us to detect the minimum estimated savings impact of 3.5 percent described earlier in this section of this final rule.

Based on this simulation, we expect to have approximately 3,400 ASM heart failure participants billing under 1,160 TINs and approximately 5,200 ASM low back pain participants billing under 2,400 TINs in the simulated mandated geography areas. Within the ASM heart failure cohort, we expect ASM to include approximately 164,000 unique heart failure episodes, 162,600 unique beneficiaries triggering episodes, and \$1.6 billion in total episode FFS spending (Medicare Part A and Part B only) of allowed charges for each ASM performance year. Within the ASM low

back pain cohort, we expect ASM to include approximately 441,000 unique low back pain episodes, 398,500 unique beneficiaries triggering episodes, and \$1.2 billion in total episode FFS spending of allowed charges for each ASM performance year. To determine the number of ASM participants in each ASM cohort, we counted the number of clinicians in mandatory geographic areas (as described at § 512.710(f)) with the selected specialty types (as described at § 512.710(d)) that furnished at least 20 episodes related to the ASM's cohort targeted chronic condition in CY 2023 (as described at § 512.710(e)). Similarly, to determine episode count, beneficiary count, and total spending estimates, we drew upon the historical data of ASM participants in the simulated mandatory geographic areas selected for participation.

We solicited public comments on the proposed scale of ASM.

We did not receive public comments on the scale of ASM, and therefore, we are finalizing provisions related to the random selection of CBSAs as described at § 512.720(f). We refer readers to section III.C.2.c.(4). of this final rule for a summary of comments received related to ASM's mandatory geographic areas and our responses.

b. Effects on ASM Participants

ASM will not alter the way ASM participants bill Medicare. Therefore, we believe that there will be no additional burden for ASM participants related to billing practices.

We believe the audit and retention policies of ASM are generally consistent with existing policies under Medicare. Additionally, the monitoring requirements for ASM are consistent with the monitoring and evaluation requirements already in place under 42 CFR 405.1110(b) for participants in models tested under section 1115A of the Act. Therefore, we believe the audit and retention policies and the monitoring and evaluation requirements do not add additional regulatory burden on ASM participants.

We do not believe that the model evaluation for ASM would include beneficiaries or clinicians completing surveys.

We estimated the administrative costs of adjusting to and complying with the measure reporting requirements for ASM to be approximately \$3,077.36 per ASM participant per year. We believe the burden estimate for submitting data to meet the proposed quality, improvement activities, and Promoting Interoperability measure reporting requirements in sections III.D.C.d.(2)., III.C.2.d.(4)., and III.C.2.d.(5). of this

final rule will apply to ASM participants that are and are not considered small entities (see section VI.E.7.b.(1). of this final rule for further discussion on the estimated effects of ASM on small businesses). To estimate the costs per ASM participant, we estimate the burden for submitting data in the quality, improvement activities, and Promoting Interoperability ASM performance categories generally using the same assumptions for time and labor categories for the staffing that the Quality Payment Program uses for MVP submissions in section V. of this final rule. As discussed in section III.C.2.d.(1).(b). of this final rule, ASM participants will not need to submit data for the cost ASM performance category and the administrative claims measures in the quality ASM performance category. Therefore, we did not estimate burden for the administrative claims measures in the cost and quality ASM performance categories.

To estimate the burden for submitting quality measure data for an ASM cohort as described in section III.C.2.d.(2). of this final rule, we assume 50 percent of the ASM participants will submit data on quality measures using the eCQM collection type, and the remaining 50 percent of the ASM participants would submit data using the MIPS CQM collection type. For an ASM participant to submit a quality measure using the eCQM collection type, we assume it will take a total of 5.3 hours [1.33 hours for a computer system analyst to submit data, 1.33 hours for a Medical and Health Services Manager to review the measure specifications, and 0.66 hours each for a computer system analyst, Licensed Practical Nurse (LPN), billing clerk, and physician to review the measure specifications]. For an ASM participant to submit a quality measure using the MIPS CQM collection type, we assume it will take a total of 5.97 hours [2 hours for a computer system analyst to submit data, 1.33 hours for a Medical and Health Services Manager to review the measure specifications, and 0.66 hours each for a computer system analyst, LPN, billing clerk, and physician to review the measure specifications]. To calculate the estimated cost, we used the May 2024 wage rate data from the U.S. Department of Labor (https://www.bls.gov/oes/current/oes_nat.htm) and doubled the mean hourly wage to account for overhead and benefits. Accounting for overhead and benefits, we used salary estimates of \$107.66/hr for a computer systems analyst, \$132.44/hr for a Medical and Health Services Manager,

\$61.68/hr for a LPN, \$47.60/hr for a billing clerk, and \$296.74/hr for a physician. We estimated it would require ASM participants approximately 21.2 hours (4 eCQM measures $\times$ 5.3 hours) to submit data using the eCQM collection type or 23.88 hours (4 MIPS CQMs $\times$ 5.97 hours) to submit data using the MIPS CQM collection type for the required four quality data measures once annually. We estimate it would cost \$658.37 (1.33 hours $\times$ \$107.66/hr + 1.33 hours $\times$ \$132.44/hr + 0.66 hours $\times$ \$61.68/hr + 0.66 hours $\times$ \$47.60/hr + 0.66 hours $\times$ \$296.74/hr) per measure to submit quality data using the eCQM collection type and \$730.50 (2 hours $\times$ \$107.66/hr + 1.33 hours $\times$ \$132.44/hr + 0.66 hours $\times$ \$61.68/hr + 0.66 hours $\times$ \$47.60/hr + 0.66 hours $\times$ \$296.74/hr) per measure to submit quality data using the MIPS CQM collection type. Therefore, we estimate the total annual cost for an ASM participant to submit the required measures in the quality ASM performance category using the eCQM collection type would be \$2,633.48 (4 eCQM measures $\times$ \$658.37) or \$2,922 (4 MIPS CQM measures $\times$ \$730.50) using the MIPS CQM collection type.

We also estimate that data submission of the proposed improvement activities discussed in section III.C.2.d.(4). of this final rule will take 0.083 hours (or 5 minutes) and will be required once annually per ASM participant. Data submission for the Promoting Interoperability measures discussed in section III.C.2.d.(5). of this final rule will take 2.7 hours and will occur once annually per ASM participant. We used the salary estimate of \$107.66/hr for a computer systems analyst to estimate burden for submitting data in the Promoting Interoperability and improvement activities ASM performance categories. For an ASM participant to submit data for the improvement activities ASM performance category, we estimate it will cost \$8.94 (\$107.66/hr $\times$ 0.083 hours $\times$ 1 submission). For data submission for the Promoting Interoperability ASM performance category, we estimate it will cost \$290.68 (\$107.66/hr $\times$ 2.7 hours $\times$ 1 submission). We estimate that the burden for collecting and reporting quality, improvement activities, and Promoting Interoperability measures for an ASM participant submitting data using the eCQM collection type will be 23.983 hours (21.2 hours + 0.083 hours + 2.7 hours) at a cost of \$2,933.10 (\$2,633.48 + \$8.94 + \$290.68) and 26.663 hours (23.88 hours + 0.083 hours + 2.7 hours) at a cost of \$3,221.62 (\$2,922 + \$8.94 + \$290.68) for an ASM

participant submitting data using the MIPS CQM collection type. We estimate approximately 7,622 ASM participants that will report data, therefore, the total burden estimate for all ASM participants collecting and reporting the measures in the quality, improvement activities, and Promoting Interoperability performance categories will be approximately 193,012 hours (23.983 hours $\times$ 3,811 ASM participants + 26.663 hours $\times$ 3,811 ASM participants) at a cost of \$23,455,621 (\$2,933.10 $\times$ 3,811 ASM participants + \$3,221.62 $\times$ 3,811 ASM participants).

Additionally, we assume that approximately 50 percent of ASM participants that are currently not participating in MIPS will need to submit a one-time registration to access the CMS Enterprise Portal User Account (EUA). We estimate that it will take approximately 1 hour for an ASM participant or their representative to submit the registration for EUA. We used the salary estimate of \$107.66/hr for a computer systems analyst to submit the registration for EUA access. Therefore, we estimate it will cost \$107.66 (\$107.66/hr $\times$ 1 hour) per registration. We estimate approximately 530 ASM participants will submit the application for EUA access. Therefore, the total burden estimates for ASM participants submitting the registration for EUA access will be approximately 530 hours at a cost of \$ 57,059.80 (530 hours $\times$ \$107.66/hr). We note that we did not include the estimated burden for submitting the registration for EUA access in calculating the total estimated burden per ASM participant as this submission does not occur annually.

We solicited public comments on our proposed estimated burden impacts on ASM participants.

We did not receive public comments about the estimated burden impacts on ASM. Therefore, we refer readers to section III.C.2 of this final rule for summaries of comments received, our responses to those comments, and our finalized provisions related to ASM.

c. Effects on Small Entities

As described in section VI.H of this final rule, the RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. HHS uses an RFA threshold of at least a 5 percent impact on the affected entities within an identified industry to determine whether a proposed rule is likely to have “significant” impacts on small

entities.⁴⁷⁹ Approximately 95 percent of practitioners, other suppliers, and providers are considered small entities, based upon the SBA standards. There are over 1 million physicians, other practitioners, and medical suppliers that receive Medicare payment under the PFS. Because many of the affected entities are small entities, the analysis and discussion provided in this section is intended to comply with the RFA requirements regarding significant impact on a substantial number of small entities. Although many ASM participants may be small entities as that term is used in the RFA, the proportion of revenue from Medicare Part B covered professional services to which ASM would adjust payments would represent a small fraction of revenue generated by the ASM participant.

Our analysis assumed that ASM would include only Medicare FFS beneficiaries receiving services from ASM participants. During 2024, 53.3 percent of Medicare beneficiaries with both Medicare Part A and Part B coverage on average are estimated to be enrolled in Medicare Advantage plans.⁴⁸⁰ ASM participants may also serve patients with other coverage, such as Medicaid or commercial insurance. Given that ASM would only adjust payments to Medicare Part B payments for covered professional services based on performance—not other revenue from other payers like Medicare Advantage and commercial insurance that we expect to be about 50 to 60 percent of total revenue combined—we expect that the anticipated average impact of revenue based solely on Medicare Part B payments for covered professional services to be less than 1 percent. Therefore, we determine that the finalized provisions of ASM will not have a greater than 5 percent impact on total revenues on a substantial number of small entities.

As discussed in section VI.E.b.(1). of this final rule, we believe that burden estimate of reporting the required measures and activities for ASM will be the same for ASM participants regardless of their small business status.

We solicited public comments on our analysis that estimates no differential impact of ASM on small entities.

⁴⁷⁹ Office of Advocacy, Small Business Administration. (2012). A Guide for Government Agencies, How to Comply with the Regulatory Flexibility Act, Implementing the President's Small Business Agenda and Executive Order 13272, Retrieved from www.sba.gov/sites/default/files/rfaguide_0512_0.pdf (accessed March 18, 2019).

⁴⁸⁰ This figure comes from the 2024 Medicare Trustees Report, Table IV.C1, p157 from the footnote that has the A and B share.

We did not receive public comments on the impact of ASM on small entities. Therefore, we refer readers to section III.C.2 of this final rule for summaries of comments received, our responses to those comments, and our finalized provisions related to ASM.

d. Effects on the Medicare Program

(1) Overview

Under the current Medicare FFS payment system, services are paid on a per service basis to clinicians through the PFS. As a mandatory model, ASM will test whether rewarding clinicians based on measures of quality, cost, care coordination, and CEHRT interoperability results in enhanced quality of care and reduced costs through more effective upstream chronic condition management. ASM will test adjusting Medicare Part B covered professional services claims of an ASM participant according to a payment adjustment that is determined by an ASM participant's performance on a set of measures they must report (see sections III.C.2.d and III.C.2.f of this final rule). For each ASM participant, the payment adjustment amount will be determined as proposed at § 512.750.

ASM is not a total cost of care model. ASM participants will still bill traditional FFS Medicare for services as usual.

(2) Data and Methods

A simulation based on the proposed policies was created to estimate the financial impacts of ASM. The simulation relied upon simulated final scores and ASM payment adjustments, as well as assumptions derived from EBCM episodes related to ASM's targeted chronic conditions from CY 2023 and Medicare FFS claims data. We reviewed these assumptions and determined them to be reasonable for the estimates.

We simulated an ASM final score based on the methodology described in sections III.C.2.d and III.C.2.e of this final rule.

For scoring the quality ASM performance category, we first made assumptions on who would report based on whether clinicians were engaged in the CY 2023 MIPS performance period/2025 MIPS payment year and submitted data. We believe that historical engagement and submission of data to MIPS would be an appropriate predictor of an ASM's participant likelihood to submit data to meet ASM's requirements. For clinicians we identified as engaged, we assumed the ASM participants would report all required quality measures (meeting data

completeness requirements and case minimum requirements) as discussed in section III.D.2.d.(2). For ASM participants who were eligible for the 2023 MIPS performance period/2025 MIPS payment year, we generally assigned participants as engaged or not engaged based on their 2023 MIPS participation. We carved out an exception for clinicians who were labeled "not engaged" in MIPS but had MIPS final scores of 75 as we believe most of these clinicians received extreme and uncontrollable circumstances approval (which will result in a final score of 75 points equal to the MIPS performance threshold).⁴⁸¹ For these participants, we cleared the engaged status flag. For ASM participants who did not have a populated engaged status flag (either because they were not eligible for CY 2023 MIPS performance period/2025 MIPS payment year or because we cleared their engaged status flag as described earlier), we randomly assigned engaged and not engaged flags, based on practice size, to mimic the proportion of ASM participants who were engaged and not engaged in the CY 2023 MIPS performance period/2025 MIPS payment year. This process resulted in all ASM participants receiving an engaged or not engaged assumption for the purpose of simulating a final score and payment adjustment.

In calculating a quality ASM performance category score for engaged participants (and we assumed participants would submit all quality measures meeting data completeness and case minimum requirements), we did not have adequate historical MIPS performance data for the proposed measures in sections III.C.2.d.(2).(b) and III.C.2.d.(2).(c). of this final rule. Therefore, we randomly assigned measure achievement points for each proposed ASM measure. The values ranged from 1 to 10 based on decile benchmarks to simulate performance using benchmarks based on ASM participants only. We recognize that this method may not accurately assign performance for an individual. However, we believe it approximates the relative differences within a benchmark distribution and represents the best available approach given that most ASM participants that previously participated in MIPS did not submit the proposed quality ASM performance category measures in MIPS.

For the ASM participants we identified as not engaged and assumed

they would not submit quality measures, we assigned a score of zero for the quality ASM performance category. Ultimately, these non-engaged ASM participants received an ASM final score of zero in our model for not meeting the required minimum data submission requirements, as discussed in section III.C.2.e.(2) of this final rule.

For the cost ASM performance category score proposed in section III.C.2.d.(3) of this final rule, we assigned measure achievement points and calculated a cost ASM performance category score using heart failure and low-back pain episode-based cost measure files based on CY 2023 administrative claims data.

To simulate the improvement activity ASM performance category score and scoring adjustment that is proposed in section III.C.2.d.(4).(d). of this final rule, we relied on the same engagement assumptions that we used for the quality ASM performance category. We assumed that engaged ASM participants will also report all the required improvement activities. These ASM participants would have an improvement activities ASM performance category score of 100 percent and will not have any negative ASM improvement activities scoring adjustment. For ASM participants we identified as not engaged, we assigned an ASM performance category score of zero and an improvement activities ASM performance category scoring adjustment of negative 20 points.

For the Promoting Interoperability ASM performance category, we calculated the Promoting Interoperability ASM performance category score and scoring adjustment discussed in section III.C.2.d.(5).(e). of this final rule using proxies for the Promoting Interoperability ASM performance category score. Our primary proxy for the Promoting Interoperability ASM performance category score was to use the CY 2023 MIPS performance period/2025 MIPS payment year Promoting Interoperability performance category score where it was available. The Promoting Interoperability ASM performance category scoring adjustment was calculated using the formula discussed in section III.C.2.e.(1). of this final rule. If an ASM participant was not eligible for the 2023 MIPS performance period/2025 MIPS payment year, we assumed that the Promoting Interoperability ASM performance category score will be 100, as over half of potential ASM participants that were eligible in the CY 2023 MIPS performance period/2025 MIPS payment year and reported

⁴⁸¹ We also excluded one participant, who was facility-based, who had a score greater than 75.

Promoting Interoperability information had a Promoting Interoperability performance category score of 100. ASM participants with a Promoting Interoperability ASM performance category score of 100 would not have a negative scoring adjustment for the Promoting Interoperability ASM performance category. For ASM participants who were in the CY 2023 MIPS performance period/2025 MIPS payment year but did not have a 2023 MIPS Promoting Interoperability performance category score because the performance category was reweighted, we assumed these participants may not have CEHRT and thus may not be able to report measures for the Promoting Interoperability ASM performance category. For these ASM participants, we assumed a Promoting Interoperability ASM performance category score of 0 which translates into a Promoting Interoperability ASM performance category scoring adjustment of negative 10 points. We anticipated that these clinicians could use CEHRT in the future and that we may be overestimating the number of ASM participants without CEHRT.

Finally, we simulated a final score for each ASM participant using the formula proposed in section III.C.2.e. of this final rule. As described in this same section, we utilized scores for the quality and cost ASM performance categories and the scoring adjustments for the improvement activities and Promoting Interoperability ASM performance categories. We also calculated a complex patient scoring adjustment, described in section III.C.2.e.(3). of this final rule, and applied a small practice scoring adjustment, described in section III.C.2.e.(4). of this final rule, using variables in the Quality Payment Program final eligibility file for the CY 2023 MIPS performance period/2025 MIPS payment year. As described earlier in this section, any ASM participants who we assumed would not

be engaged, were assigned a final score of zero points.

Using the simulated final scores for ASM participants, we simulated the resulting payment adjustments using the methods described in section III.C.2.f. of this final rule. We used Medicare Part B paid amounts from claims for covered professional services in CY 2023 to calculate each ASM incentive pool. For each ASM cohort, we calculated the scaling factor and the resulting ASM payment adjustment factor and ASM payment multiplier for each ASM participant based on their final score and the proposed logistic exchange function with a midpoint at the median final score for the applicable ASM cohort.

We solicited comments on our methods to estimate an ASM final score, ASM payment adjustment factor, and ASM payment multiplier for each ASM participant.

We did not receive public comments on the data and methods used to simulate an ASM final score, ASM payment adjustment factor, and ASM payment multiplier for each ASM participant. Therefore, we refer readers to section III.C.2 of this final rule for summaries of comments received, our responses to those comments, and our finalized provisions related to ASM.

(3) Medicare Estimates

In this final rule, we summarized the estimated impact of ASM in Table D–B8. We estimate a net impact of \$177 million in net savings to the Medicare program due to ASM from January 1, 2029 through December 31, 2033.

The estimated impact reflects the finalized provisions described in this final rule. To summarize relevant finalized provisions, we will test ASM for five performance years from January 1, 2027 through December 31, 2031 with payment adjustments occurring in corresponding ASM payment years from January 1, 2029 through December 31, 2033. As discussed earlier in this

section of this final rule, ASM will operate in 25 percent of all CBSAs and metropolitan divisions. ASM participants will be subject to a maximum risk level for each ASM payment year, which will range from 9 percent to 12 percent over the ASM test period, and under which an ASM participant will receive an ASM payment adjustment factor based on their final score and the amount of each ASM incentive pool distributed to each ASM cohort in the form of scaled payment adjustments.

The estimated impact uses Medicare Part B paid amounts for covered professional services attributed to the simulated ASM participants in CY 2023 to determine the baseline spending. We trended the baseline spending in CY 2023 forward to the ASM payment years (CY 2029 through CY 2033) using the trend assumptions underlying the 2024 Medicare Trustees Report. We calculated the financial impact percentage as the downward ASM risk level (that is, the percentage of ASM participant spending at risk for each ASM participant for a given ASM payment year) multiplied by 15 percent (that is, the average amount of the ASM incentive pool that will not be distributed to ASM participants in the form of payment adjustments). We applied this financial impact percentage to the trended baseline spending for each ASM payment year. The estimates in Table D–B8 do not account for behavioral effects that could occur as a result of implementing ASM. We refer readers to the sensitivity analysis later in this section of this final rule for further discussion on potential behavioral effects on spending as a result of ASM.

Thus, we estimate that the Medicare program would save \$177 million over ASM's model test period. This estimate excludes changes in beneficiary cost sharing liability to the extent it is not a Federal outlay under the policy.

TABLE D-B8: ESTIMATES OF MEDICARE PROGRAM SAVINGS (MILLIONS \$) FOR THE AMBULATORY SPECIALTY MODEL (Starting January 1, 2029)

Year	2029	2030	2031	2032	2033	Total
Baseline Spending (\$M)	\$2,171.3	\$2,235.9	\$2,302.4	\$2,368.5	\$2,439.1	\$11,517.2
Financial Impact (%)	-1.35%	-1.35%	-1.50%	-1.65%	-1.80%	-1.54%
Financial Impact (\$M)	-\$29.3	-\$30.2	-\$34.5	-\$39.1	-\$43.9	-\$177.0

We solicited public comments on our estimated impact of ASM on the Medicare program.

We did not receive public comments about our estimated impact of ASM on the Medicare program. Therefore, we

refer readers to section III.C.2 of this final rule for summaries of comments received, our responses to those

comments, and our finalized provisions related to ASM.

(i) Sensitivity Analysis

ASM participants will receive payment adjustments based on their final scores. We expect these payment adjustments to incentivize participants to improve their ASM performance category scores, which will impact costs. The degree to which the participants will be incentivized to alter their behavior will depend on the magnitude of the payment adjustments, and the magnitude of the payment adjustment, including whether it is positive or negative, depends on the distribution of final scores used in the payment adjustment calculation. Since that distribution is unknown, we have not incorporated behavioral effects into the estimate.

There is evidence that shows that delivering higher-value care could lead to savings for Medicare. For example, better adherence to clinical guidelines for heart failure patients under ASM could reduce the number of

hospitalizations that occur among ASM beneficiaries. Since hospitalizations and associated costs comprise a large share of total heart failure patient spending, such changes could reduce spending significantly. Similarly, improved adherence to clinical guidelines for low back pain could lead to lower rates of imaging service use, fewer invasive surgeries, and lower spending among ASM beneficiaries. However, it is unknown how well these changes in care patterns could ultimately be implemented.

Alternatively, some of the quality measures used in determining final scores could motivate ASM participants to deliver more services than they would have absent the model. For example, preventive care and screening metrics for BMI and depression could incentivize participants to provide more care for some patients with low back pain, and metrics on controlling high blood pressure could have a similar effect. Another consideration is that ASM participants could react to

negative payment adjustments with adverse behavior (for example, increasing coding intensity) to help offset revenue losses.

To explore the potential financial impacts of these behavioral effects, we adjusted the original impact estimates under several illustrative scenarios using different amounts of behavioral effects, measured in percent change in spending. Table D–B9 shows estimated financial impacts on total Medicare Parts A and B spending from heart failure and low back pain episodes attributed to our simulated ASM participants based on the estimated behavioral effect levels. The estimated financial impacts presented in Table D–B9 present one set of assumptions on the behavioral effect on spending; the behavioral impact on spending could be larger in magnitude than the illustrative scenarios here. The resulting financial impact estimates (in millions of dollars) of each scenario in Table D–B9 represent the total estimated impact across ASM’s test period.

TABLE D-B9: ASM FINANCIAL IMPACT BY ILLUSTRATIVE BEHAVIORAL EFFECTS ON SPENDING, CY 2029 THROUGH CY 2033

Behavioral Effect	Adjusted Financial Impact (\$M)
-2%	-\$326.7
-1%	-\$351.9
0%	-\$177.0*
1%	-\$2.2
2%	\$172.7

* The adjusted financial impact without any behavioral effects is equal to the total estimated financial impact during ASM’s test period included in Table D-BXX

We solicited public comments on our sensitivity analysis related to the estimated financial impacts of ASM.

We did not receive public comments on our sensitivity analysis related to the estimated financial impacts of ASM on the Medicare program. Therefore, we refer readers to section III.C.2. of this final rule for summaries of comments received, our responses to those comments, and our finalized provisions related to ASM.

e. Effects on the Market

There could be spillover effects in the non-Medicare market, because of the implementation of ASM. Testing changes in Medicare payment policy may have implications for non-Medicare payers. For example, non-Medicare patients may benefit if participating providers and suppliers introduce system-wide changes that improve the coordination and quality of health care.

Other payers may also be developing payment models and may align their payment structures with CMS or may be waiting to utilize results from CMS’ evaluations of payment models. Because there is uncertainty about whether and how this evidence applies to a test of these new payment models, our analyses assume that spillover effects on non-Medicare payers would not occur, although this assumption is subject to considerable uncertainty. We solicit comments on this assumption and evidence on how this rulemaking would impact non-Medicare payers and patients.

We solicited public comments on our impact of ASM on the market.

We did not receive public comments on our estimated impact of ASM on the market. Therefore, we refer readers to section III.C.2. of this final rule for summaries of comments received, our

responses to those comments, and our finalized provisions related to ASM.

5. Impact of Provisions for Medicare Prescription Drug Inflation Rebate Program

In this final rule, we finalized new policies to implement the Medicare Part B Drug Inflation Rebate Program, including CMS’ method for calculating the payment amount in the payment amount benchmark quarter if a published payment limit is not available or if there is no published payment limit and neither positive Average Sale Price (ASP) nor positive Wholesale Acquisition Cost (WAC) data are available in the ASP Data Collection System. Additionally, we finalized revised and new policies to implement the Medicare Part D Drug Inflation Rebate Program, including but not limited to, a claims-based methodology to implement § 428.203(b)(2), which

provides that, for claims with dates of service on or after January 1, 2026, and with respect to an applicable period, CMS will exclude from the total number of units used to calculate the total rebate amount for a Part D rebatable drug those units of the Part D rebatable drug for which a manufacturer provided a discount under the 340B Program and the establishment of a Part D claims data 340B repository to receive voluntary submissions from 340B covered entities of certain data elements from Part D 340B claims.

We do not expect the proposed policies regarding the Medicare Part B and Part D Drug Inflation Rebate Program to have a material impact on the calculation of total rebates in aggregate, as these proposals are refinements to regulatory requirements and do not otherwise change the scope of rebatable drugs.

In the CY 2025 PFS final rule (89 FR 98593), CMS finalized the proposal at § 428.203(b)(2)(i) to exclude from the total number of units determined at § 428.203(a) units for which a manufacturer provided a discount under the 340B Program (“340B units”), as well as the proposal at § 428.203(b)(2)(ii) to determine the total number of 340B units by using data reflecting the total number of units of a Part D rebatable drug for which a discount was provided under the 340B Program and that were dispensed during the applicable period. However, after consideration of the data limitations of the proposed estimation methodology and public comments, CMS did not finalize the proposed estimation methodology for the applicable period that begins on October 1, 2025. Instead, CMS stated that it would explore avenues to implement section 1860D–14(b)(1)(B) of the Act, which requires the exclusion from the total number of units for a Part D rebatable drug those units for which a manufacturer provides a discount under the 340B Program starting January 1, 2026, through the establishment of a 340B repository. CMS did not repropose the estimation methodology proposed in the CY 2025 PFS proposed rule but did consider this estimation percentage as an alternative to the proposal this year, as described in section III.E.3.c.iii. of this final rule titled “Alternative Policy Considered”. Rather, we finalized at § 428.203(b)(2) implementation of a claims-based methodology to remove 340B units beginning January 1, 2026. We also finalized the establishment of a 340B repository to receive voluntary submissions from covered entities of certain data elements from Part D 340B claims to allow CMS to assess such data

for use in identifying 340B units for removal in a future applicable period.

We do not anticipate our inflation rebate proposed policies will result in an incrementally significant financial impact on the Medicare program relative to a baseline that reflects the status quo in the absence of any modifications to inflation rebate regulations at parts 427 and 428 as these finalized policies are refinements to regulatory requirements.

We did not receive public comments on these provisions, and therefore, we are finalizing as proposed.

6. Medicare Shared Savings Program

a. General Impacts

As of January 1, 2025, 11.2 million Medicare beneficiaries receive care from a healthcare provider in one of the 477 ACOs participating in the Shared Savings Program.⁴⁸² The modifications to the Shared Savings Program policies we are finalizing in this final rule are designed, in part, to further improve the quality of care furnished by ACOs by revising the quality performance standard and reporting requirements, encourage more ACOs to move to a two-sided risk model, and promote the continued integrity and fairness of Shared Savings Program financial calculations.

As we described in the CY 2026 PFS proposed rule (90 FR 32814), the ACOs in the program in performance year 2023 combined to cover \$128 billion in benchmark target spending. Actual ACO spending totaled approximately \$123 billion—about \$5.2 billion below combined benchmark. After accounting for \$3.1 billion in net shared savings to ACOs, the remaining difference of \$2.1 billion would represent federal savings from the program if benchmarks proved to be a perfect counterfactual in aggregate. The Regulatory Impact Analysis in the December 2018 final rule (see 83 FR 68044 through 68050) provided evidence that the benchmarks for performance year 2016 combined to represent a lower spending target than the theoretical counterfactual for estimating what spending would have been in the total FFS Medicare Program had ACOs not been present that year. Evidence included all of the following:

- Lower combined market level spending trends observed for cohorts of Hospital Referral Regions (HRRs) with significant ACO formation relative to other HRRs without material ACO activity.

- Spillover effects on spending outside of ACO benchmarks, including non-assigned beneficiaries served by ACO providers and suppliers.

- Program design elements that restrained benchmark levels, including rebasing with agreement periods of only 3 years, feedback of communal ACO effects on national trends used to update benchmarks, and restrictions on risk adjustment.

The Regulatory Impact Analysis in the December 2018 final rule (83 FR 68048) estimated that ACOs may have been responsible for half of the 1.2 percent difference in spending trend observed between national average and the subset of HRRs with minimal ACO activity through 2016. This scaled impact represented about four times the gross savings measured relative to benchmarks, or about 0.5 percent net savings across the entire FFS program after accounting for shared savings payments despite benchmarks only officially showing roughly equivalent overall reductions in spending relative to benchmark compared to total outlays from shared savings payments. Since 2016, changes to the Shared Savings Program have potentially moved the benchmarks closer to what the spending would have been in the absence of the program.

In the CY 2026 PFS proposed rule (90 FR 32814 through 32815), we explained that updating the earlier study to compare more recent trends for markets with varying levels of ACO activity requires updates to the initial study approach, as ACOs have become active in an increasing majority of markets across the nation. There no longer exists a sufficient number of HRRs with nominal ACO penetration in 2023 to construct a de facto counterfactual similar to the study in the December 2018 final rule. An alternate method, however, continues to show spending trends inversely correlated with ACO penetration over time. Roughly 5 percent of beneficiaries live in HRRs with ACO penetration consistently below the national average by 10 percentage points or more over the 2013 to 2023 time series (“Lagging”) while about 9 percent of beneficiaries live in HRRs with ACO penetration 10 percentage points or more above the national average over the same period (“Leading”). Relative to the 2011 base year immediately preceding the Shared Savings Program’s introduction, growth in average unadjusted per capita spending in 2023 for Lagging and Leading markets was 4.3 percent higher and 3.9 percent lower than the national average. The divergence in spending growth was even wider after HCC risk

⁴⁸² See “Shared Savings Program Fast Facts—As of January 1, 2025”, available at <https://www.cms.gov/files/document/2025-shared-savings-program-fast-facts.pdf>.

adjustment: 5.3 percent higher for Lagging markets and 4.6 percent lower for Leading markets.

These market trends potentially overstate the impact that ACOs may have had on program spending in 2023. The portion of the difference in spending growth driven by risk adjustment may reflect efforts by ACOs to increase coding intensity. Leading markets may exhibit higher participation rates in CMMI models. ACO participation may naturally flock to markets with lower trend for exogenous reasons. Still, conservatively assuming only 35 percent of the unadjusted trend gap is causally related to Shared Savings Program ACOs would roughly validate the \$5.2 billion gross savings indicated by comparing aggregate program benchmarks to actual ACO spending in 2023, and the roughly \$2 billion in net savings to FFS

Medicare. A more optimistic estimate, assuming Shared Savings Program ACOs were responsible for 50 percent of the risk-adjusted spending growth difference (mirroring assumptions used in the December 2018 final rule), would imply net savings roughly 3 times greater, or roughly \$6 billion net savings for FFS Medicare.

In the CY 2026 PFS proposed rule (90 FR 32815 through 32816), we explained that a study of benchmark performance for cohorts of ACOs that participated in both performance year 2022 and performance year 2023 (with related details in Table D–B10) reveals that the BASIC track is the primary driver of net savings (as measured by program benchmark target spending less actual spending and shared savings payments). Twenty-five ACOs moved from a one-sided model of the BASIC track (Level A or B) to a two-sided model of the

BASIC track (Level C, D or E) over performance year 2022 to 2023 and showed the highest rates of net savings to the program at 2.4 percent of benchmark. One hundred six ACOs remained in two-sided models of the BASIC track (Levels C, D or E) over that same 2-year period and reached 2.3 percent net savings. Both cohorts showed the lowest average unadjusted per capita spending trend over this 2-year period at about 6 percent. One hundred thirty-nine ACOs remained in one-sided models of the BASIC track (Level A or B) over both years and saw net savings grow from 1.4 percent to 1.7 percent by 2023. The 135 ACOs that remained in the ENHANCED track over these 2 years showed 1.3 percent net savings in 2023, up slightly from 1.2 percent for 2022. Findings are compared for each cohort in the study in Table D–B10.

TABLE D-B10: WEIGHTED AVERAGE FINANCIAL PERFORMANCE BY ACO COHORT DEFINED BY PATH OF PARTICIPATION OVER PY 2022 TO PY 2023 (\$ BILLIONS; NEGATIVE VALUES REPRESENT SAVINGS TO THE PROGRAM)

Participation Pathway From PY22 to PY23	ACOs Count	Benchmark (\$B) [A]	Gross Savings % of Benchmark [B]		Shared Savings % of Benchmark [C]		Net Difference % of Benchmark [D]		Unadjusted Per Capita Spending Growth 2022 to 2023 [E]
			2022	2023	2022	2023	2022	2023	
BASIC AB→AB	139	34	-2.2%	-2.7%	0.8%	1.0%	-1.4%	-1.7%	1.06
BASIC AB→CDE	25	5	-1.3%	-1.4%	1.6%	2.1%	-2.7%	-2.1%	1.06
BASIC CDE→CDE	106	16	-3.8%	-4.4%	1.8%	2.2%	-2.0%	-2.3%	1.06
BASIC→ENHANCED	10	5	-5.0%	-6.9%	2.2%	3.1%	-2.8%	-1.8%	1.13
ENHANCED→ENHANCED	135	48	-1.6%	-5.0%	3.4%	3.7%	-1.2%	-1.3%	1.07

Notes: "Participation Pathway" are the following groups of ACOs, identified by the track/level of their participation in PY 2022 and PY 2023: "BASIC AB→AB" are ACOs that remained in a one-sided model of the BASIC track (level A or B) for PY 2022 and PY 2023; "BASIC AB→CDE" are ACOs that participated in a one-sided model of the BASIC track (level A or B) for PY 2022, and advanced to a two-sided model of the BASIC track (Level C, D, or E) for PY 2023; "BASIC CDE→CDE" are ACOs that remained in two-sided models of the BASIC track (Levels C, D or E) for PY 2022 and PY 2023; "BASIC→ENHANCED" are ACOs that participated in the BASIC track in PY 2022, and entered a new agreement period to participate in the ENHANCED track for PY 2023, and "ENHANCED→ENHANCED" are ACOs that remained in the ENHANCED track for PY 2022 and PY 2023.

"Benchmark" [A] is the total PY 2023 benchmark spending for each cohort, in billions of dollars.

"Gross Savings % of Benchmark" [B] is the percentage that a cohort's combined spending deviated from their combined benchmark spending (a negative percentage implies savings).

"Shared Savings % of Benchmark" [C] is the cohort's combined shared savings (and losses) paid to (from) ACOs expressed as a percentage of benchmark.

"Net Difference % of Benchmark" [D] is the sum of "Gross Savings % of Benchmark" [B] and "Shared Savings % of Benchmark" [C] and represents the portion of gross savings (as measured by program benchmark) retained by the program.

"Unadjusted Per Capita Spending Growth 2022 to 2023" [E] is the combined average per capita spending for the cohort in 2023 divided by the corresponding average for the same cohort in 2022.

We will continue to study program data as it emerges, including the extent that new ACOs serving higher spending populations of beneficiaries enter the program and drive down spending in the BASIC track, and whether ACOs with lower relative spending migrating

to the ENHANCED track are able to demonstrate materially lower spending trend after multiple years under that higher incentive arrangement.

Two changes to Shared Savings Program policies, described in section III.F. of this final rule, are estimated to

have a material impact on overall program spending. First, we anticipate that there may be an incremental cost to allowing only 5 performance years in a one-sided model (down from 7 performance years under the current regulations) for ACOs that are

inexperienced with performance-based risk Medicare ACO initiatives, with no prior participation in the Shared Savings Program, entering an agreement period beginning on or after January 1, 2027. The cost would depend on the frequency that the extra 2 performance years in a one-sided model would have proven essential for certain ACOs serving higher-cost populations of beneficiaries to transition to performance-based risk and remain in the Shared Savings Program for multiple agreement periods. We have already implemented Shared Savings Program changes to increase participation from this general type of ACO, including ending negative regional adjustments to benchmarks, implementing the health equity benchmark adjustment (in this final rule being renamed “population

adjustment”), and providing a prior savings adjustment to the rebased benchmark. However, some ACOs remaining under a one-sided model throughout their first agreement period would likely face significant uncertainty in predicting how these policies may or may not help provide margin for their rebased benchmark at the start of a potential second agreement period. Some such ACOs may find that uncertainty an insurmountable hurdle to renewing their participation in the Shared Savings Program directly into performance-based risk in the first year of their second agreement period. On the other hand, there is a potential for improved care management and increased savings from other ACOs that successfully manage the transition to performance-based risk earlier than they

would have, if they had access to 7 performance years instead of 5 performance years of one-sided model participation in the Shared Savings Program. On net, we project the eventual termination of participation by some ACOs will involve a marginally greater reduction in program savings compared to the potential increase in efficiency from earlier transition to performance-based risk from other ACOs, leading to \$370 million higher spending over 10 years, ranging from \$50 million lower spending to \$920 million higher spending at the 10th and 90th percentiles, respectively. The annual and 10-year total projections for the changes to Shared Savings Program participation options are detailed in Table D–B11.

TABLE D-B11: PROJECTED IMPACT OF REDUCING NEW AND RISK INEXPERIENCED ACOs ELIGIBILITY TO 5 YEARS FROM THE CURRENT 7 YEARS (\$ MILLIONS; NEGATIVE VALUES REPRESENT SAVINGS TO THE PROGRAM)

	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	Total
Impact Estimate	0	0	0	0	20	40	80	90	70	70	370
Estimate Range:											
Low Estimate (10 th Percentile)	0	-10	-20	-40	-40	-20	0	0	10	10	-50
High Estimate (90 th Percentile)	0	10	10	50	80	150	180	200	100	140	920

Note: Projections at the 10th and 90th percentiles are distinct at the annual level from the corresponding percentiles of the 10-year totals and therefore the sum of the annual percentiles will not necessarily match the corresponding percentiles of the 10-year totals.

The second area of material impact on program spending is from the policies to allow ACOs to enter a new agreement period in the BASIC track when an ACO has fewer than 5,000 assigned beneficiaries in BY1, BY2, or both, in combination with capping the shared savings or shared losses at a lesser amount for ACOs with fewer than 5,000 assigned beneficiaries in any of the three benchmark years. These policies

are expected to marginally increase participation by ACOs that would have otherwise been unable to satisfy the 5,000 assigned beneficiary minimum in BY1, BY2, or both, and to do so under an alternative cap that provides a safeguard against excessive payments if assignment were to grow dramatically during the agreement period despite very low assignment in one or more benchmark years. The alternative cap is

also anticipated to generate savings from ACOs that would have otherwise changed composition during the agreement period and exhibited reduced assignment in 1 or more benchmark years in ways that could have produced excessive shared savings payments due to random variation. The annual and 10-year total projections for these provisions are detailed in Table D–B12.

TABLE D-B12: PROJECTED IMPACT FOR ALLOWING ACOs TO ENTER NEW AGREEMENT PERIOD DESPITE EITHER BY1 AND/OR BY2 ASSIGNMENT BELOW 5,000 COMBINED WITH ALTERNATIVE CAP ON SHARED SAVINGS / SHARED LOSSES FOR ACOs WITH FEWER THAN 5,000 ASSIGNED BENEFICIARIES IN ANY BY (\$ MILLIONS; NEGATIVE VALUES REPRESENT SAVINGS TO THE PROGRAM)

	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	Total
Impact Estimate	0	0	-10	-10	-20	-50	-70	-80	-70	-70	-390
Estimate Range:											
Low Estimate (10 th Percentile)	0	-10	-10	-30	-50	-90	-100	-120	-100	-110	-540
High Estimate (90 th Percentile)	0	0	0	0	-10	-30	-30	-40	-40	-40	-250

Note: Projections at the 10th and 90th percentiles are distinct at the annual level from the corresponding percentiles of the 10-year totals and therefore the sum of the annual percentiles will not necessarily match the corresponding percentiles of the 10-year totals.

The remaining changes to the Shared Savings Program regulations, as described in section VI.A.2.e. of this

final rule, are not estimated to have an impact on program spending at the aggregate level.

The combined impacts for all Shared Savings Program provisions are shown in Table D–B13. Because estimates are

rounded to the nearest \$10 million, and
because the percentiles are

independently sorted for each year and
for the 10-year totals, the annual

estimates may not sum to exactly match
the total 10-year estimates.

TABLE D-B13: PROJECTED IMPACT OF MEDICARE SHARED SAVINGS PROGRAM PROVISIONS (INDIVIDUALLY SHOWN IN TABLES D-B11 AND D-B12) (\$ MILLIONS; NEGATIVE VALUES REPRESENT SAVINGS TO THE PROGRAM)

	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	Total
Impact Estimate	0	0	-10	-10	-10	-10	10	10	0	0	-20
Estimate Range:											
Low Estimate (10 th Percentile)	0	-20	-30	-70	-90	-110	-100	-120	-90	-100	-590
High Estimate (90 th Percentile)	0	10	10	50	70	100	150	160	120	100	670

Note: Projections at the 10th and 90th percentiles are derived at the annual level from the corresponding percentiles of the 10-year totals and therefore the sum of the annual percentiles will not necessarily match the corresponding percentiles of the 10-year totals.

b. Compliance With Requirements of Section 1899(i)(3) of the Act

Certain policies, including both existing policies and the new policies adopted in this final rule, rely upon the authority granted in section 1899(i)(3) of the Act to use other payment models that the Secretary determines will improve the quality and efficiency of items and services furnished under the Medicare program, and that do not result in program expenditures greater than those that would result under the statutory payment model. The following policies require the use of our authority under section 1899(i) of the Act: changes to the requirements for ACOs' progression to performance-based risk under the program's participation options (described in section III.F.2. of this final rule); potentially applying an alternative loss recoupment limit, in conducting financial reconciliation for each performance year, for an ACO with fewer than 5,000 assigned beneficiaries in any BY, for agreement periods beginning on or after January 1, 2027 (described in section III.F.4.c. of this final rule); excluding ACOs that fall below 5,000 assigned beneficiaries in any BY from being eligible to benefit from the policies providing certain low revenue ACOs participating in the BASIC track with additional opportunities to share in savings, for agreement periods beginning on or after January 1, 2027 (described in section III.F.4.c. of this final rule); and mitigating shared losses for an ACO determined to be affected by an EUC due to a cyberattack, including ransomware/malware, as determined by the Quality Payment Program, for performance year 2025 and subsequent performance years (described in section III.F.7.c. of this final rule). When considered together, these changes to the Shared Savings Program's payment methodology are expected to improve the quality and efficiency of items and services furnished under the Medicare

program by hastening the transition to performance-based risk while improving protections against excessive liabilities both for shared losses charged to participants and shared savings paid by the program. These changes are not expected to result in a situation in which the payment methodology under the Shared Savings Program, including all policies we have adopted under the authority of section 1899(i) of the Act, results in more spending under the program than would have resulted under the statutory payment methodology in section 1899(d) of the Act.

In the CY 2023 PFS final rule, we estimated that the projected impact of the payment methodology that incorporates all policies finalized by that final rule would result in \$4.9 billion in greater program savings compared to a hypothetical baseline payment methodology that excluded the policies that we have enacted relying on section 1899(i)(3) of the Act as authority (see 87 FR 70195 and 70196). The marginal impact of the changes in the CY 2024 PFS final rule were estimated to lower net spending by \$330 million over the subsequent 10-year period for all new policies combined, including the cap an ACO's regional service area risk score growth, the addition of a new third step to the beneficiary assignment methodology, and the revised approach to identify the assignable beneficiary population (88 FR 79496). The marginal impact of the changes in the CY 2025 PFS final rule were estimated to lower net spending by an additional \$200 million in total through 2034 (89 FR 98527). The marginal impact of the changes in this final rule is estimated to be a \$20 million reduction in net spending. The cumulative impact of all policies (including those in this final rule) is estimated to result in more than \$4.9 billion in greater program savings compared to a hypothetical baseline payment methodology that excludes the

policies we have enacted relying on section 1899(i)(3) of the Act as authority. Therefore, we estimate that program expenditures associated with the implementation of the provisions in this final rule, in combination with other policies associated with the statutory payment model and current policies we have adopted under the authority of section 1899(i)(3) of the Act, are expected to improve the quality and efficiency of items and services furnished under the Medicare program and would not be expected to increase program expenditures relative to those of the statutory payment model.

We will continue to reexamine this projection in the future to ensure that an alternative payment model does not result in additional program expenditures and so continues to satisfy the requirement under section 1899(i)(3)(B) of the Act. Additional Shared Savings Program data beginning to accumulate after the end of the PHE for COVID-19, along with emerging information on the characteristics of, and performance trends for, new entrants in the Shared Savings Program for agreement periods beginning on January 1, 2024, and January 1, 2025, are anticipated to gradually improve our ability to reevaluate program impacts in a comprehensive fashion. If we later determine that the payment model that includes policies established under section 1899(i)(3) of the Act no longer meets this requirement, we will undertake notice and comment rulemaking to adjust the payment model to ensure continued compliance with the statutory requirements.

We did not receive public comments on this section, and therefore, we are finalizing as proposed.

7. Changes to the Regulations Associated With the Ambulance Fee Schedule

As outlined in section III.G. of this final rule, section 3203 of the American

Relief Act of 2025 and most recently, section 2203 of the Full-Year Continuing Appropriations and Extensions Act, 2025 amended section 1834(l)(12)(A) and (l)(13) of the Act to extend the payment add-ons sets forth in those sections through September 30, 2025. The ambulance extender provisions are enacted through legislation that is self-implementing. We proposed to revise dates at § 414.610(c)(1)(ii) and (c)(5)(ii) to conform the regulations to these self-implementing statutory requirements.

A plain reading of the statute requires only a ministerial application of the mandated rate increase and does not require any substantive exercise of discretion on the part of the Secretary. As a result, there are no policy proposals associated with these legislative provisions. We have estimated the cost of these provisions to be \$20 million in FY 2025 and \$10 million in FY 2026 and the Congressional Budget Office (CBO)'s estimated cost of these provisions was \$36 million in FY 2025 and \$27 million in FY 2025 to 2029 (<https://www.cbo.gov/system/files/2025-03/hr1968.pdf>, page 4).

We did not receive any public comments on the impacts of the ambulance extender provisions. Therefore, in this final rule, we are finalizing our proposals to codify our regulations at § 414.610(c)(1)(ii) and (c)(5)(ii) to conform the regulations to these statutory requirements.

8. Updates to the Quality Payment Program

In this section of this final rule, we estimated the impacts of the Quality Payment Program policies. We estimated participation, final scores, and payment adjustments for eligible clinicians participating through MIPS, and the Advanced APMs, and MVPs. We also presented the impacts on the number of expected Qualified Participants (QPs) and associated APM Incentive Payments that result from our proposed policies, relative to a baseline model that reflects the status quo in the absence of any modifications to the previously finalized policies.

a. Overall Impact Modeling Approach and Data Assessment

(1) MIPS Impact Modeling Approach

For this final rule, we used a similar modeling approach as the CY 2025 PFS final rule (89 FR 97710 through 99057). We created two MIPS impact models: a baseline and a proposed policy model. Our baseline model includes previously finalized policies that are in effect for

the CY 2025 performance period/2027 MIPS payment year and in the absence of any of the new policies in this final rule. Examples of previously finalized policies included in the baseline model are updated QP and partial QP thresholds and the previously finalized list of MVPs. Please refer to CY2025 PFS final rule for a comprehensive, detailed discussion of finalized policies (89 FR 97710).

The policies model builds on the baseline model and incorporates the new MIPS policies we are proposing for the CY 2026 performance period/2028 MIPS payment year included in this final rule. By comparing the baseline model to the proposed policies model, we are able to estimate the impact of the specific policies in this final rule.

Our modeling approach utilizes the same scoring engine that is used to determine MIPS payment adjustments. This approach enables our model to align as much as possible with actual MIPS scoring and minimize differences between our projections and actual policy implementation. Our model's limitations are outlined later in this impact analysis.

(2) Data Used To Estimate Future MIPS Performance

In the CY 2025 PFS final rule (89 FR 98531), we explained our decision to use CY 2022 performance period submissions data. We noted that using CY 2022 performance data presents the most current data and aligns participation, final scoring, and payment adjustment analysis around the same common data set. For this final rule, CY 2023 performance data is the most recently available data for us to construct a model simulation for this final rule.

b. APM Incentive Payments to QPs in Advanced APMs and Other Payer Advanced APMs

Beginning with QP Performance Period 2017 (payment year 2019), through the Medicare Option, eligible clinicians who are determined to have a sufficient percentage of their Medicare Part B payments for covered professional services or Medicare patients through Advanced APMs are QPs for the applicable QP performance period and the corresponding payment year. In payment years 2019 through 2024, these QPs received a lump-sum APM Incentive Payment equal to 5 percent of their estimated aggregate paid amounts for covered professional services furnished during the base year (the calendar year immediately preceding the payment year). In payment year 2025, eligible clinicians

who attained QP status for QP Performance Period 2023 will receive a lump-sum APM Incentive Payment equal to 3.5 percent of their estimated aggregate paid amounts for covered professional services furnished during CY 2024. In payment year 2026, eligible clinicians who attained QP status in QP Performance Period 2024 will receive a lump-sum APM Incentive Payment equal to 1.88 percent of their estimated aggregate paid amounts for covered professional services furnished during CY 2025.

Beginning with QP Performance Period 2019 (payment year 2021), in addition to the Medicare Option, the All-Payer Combination Option also affords eligible clinicians an opportunity at QP status. The All-Payer Combination Option allows eligible clinicians to become QPs by assessing a combination of both Medicare Part B covered professional services furnished or patients through Advanced APMs and services furnished or patients through Other Payer Advanced APMs. Eligible clinicians who become QPs for a given QP Performance Period are not subject to MIPS reporting requirements and payment adjustments for the contemporaneous MIPS performance period/payment year. Eligible clinicians who do not become QPs but who meet a lower threshold requirement to become Partial QPs for the year may elect whether or not to report to MIPS. If they elect to report, they are scored in and receive a payment adjustment under MIPS. Partial QPs are not eligible to receive the APM Incentive Payment.

If an eligible clinician does not attain either QP or Partial QP status and is not excluded from MIPS on another basis, the eligible clinician will be subject to the MIPS reporting requirements and will receive the corresponding MIPS payment adjustment.

Separately from the APM Incentive Payment, beginning in payment year 2026, there are two separate PFS CFs—one for eligible clinicians who are QPs for the year (the qualifying APM CF), and the other for all non-QP eligible clinicians and other suppliers paid under the PFS (the non-qualifying APM CF). The update to the qualifying APM CF for a year is 0.75 percent, whereas the update to the non-qualifying APM CF for a year is 0.25 percent. For payment year 2026, under current law, both an APM Incentive Payment and the qualifying APM CF will apply. This means that eligible clinicians who attained QP status for QP Performance Period 2024 will receive a lump-sum payment of 1.88 percent of their 2025 covered professional services paid claims as described above, and

additionally their 2026 covered professional services claims will be paid using the physician fee schedule rates that are established for the qualifying APM CF.

The thresholds to achieve QP status in the 2026 QP Performance Period (2028 payment year) are set to 75 percent for the payment amount, and 50 percent for the patient count. Overall, we estimated that for the 2026 QP Performance Period, between 375,000 and 482,200 eligible clinicians will become QPs, and therefore will be excluded from MIPS reporting requirements and payment adjustments.

In section IV.A.4.m.(2) of the CY2026 PFS proposed rule, we proposed to modify the definition of “attribution-eligible beneficiary” to include any beneficiary who has received a covered professional service furnished by the eligible clinician (NPI) for whom we are making the QP determination. We are finalizing this proposal with modification to include a methodology that continues to use E/M services and a methodology using covered professional services. Additionally, we are finalizing our proposal to add a QP determination at the individual level for all Advanced APM participants, beginning with the 2026 QP Performance Period.

We projected the number of eligible clinicians who will be QPs, and thus excluded from MIPS, using several sources of information. First, the projections are anchored in the most recently available public information on Advanced APMs. The projections reflect Advanced APMs that will be operating during the 2026 QP Performance Period, as well as some Advanced APMs anticipated to be operational during the 2026 QP Performance Period. The projections also reflect an estimated number of eligible clinicians who will attain QP status through the All-Payer Combination Option. The following APMs are expected to be Advanced APMs for the 2026 QP Performance Period:

- ACO REACH Model (formerly Global and Professional Direct Contracting) Model;
- States Advancing All-Payer Health Equity Approaches and Development (AHEAD) Model
- Enhancing Oncology Model (EOM);
- Kidney Care Choices Model (Comprehensive Kidney Care Contracting Options, Professional Option and Global Option);
- Medicare Shared Savings Program (Level E of the BASIC Track and the ENHANCED Track); and
- Transforming Episode Accountability Model (TEAM)

We used the Participation Lists and Affiliated Practitioner Lists, as applicable (see § 414.1425(a) for information on the APM Participant Lists used for QP determinations) for the 2024 QP performance period third snapshot QP determination date to estimate the number of QPs for the 2026 QP Performance Period. For models starting in the 2026 QP Performance Period we estimated performance based on projected participation. We examined the extent to which Advanced APM participants will meet the QP Thresholds of having at least 75 percent of their Part B covered professional services or at least 50 percent of their Medicare beneficiaries were attribution eligible through the APM Entity.

c. Estimated Number of MIPS Eligible Clinicians in the CY 2026 Performance Period/2028 MIPS Payment Year

(1) Initial Population of Clinicians Included in the RIA Baseline and Proposed Policies Models

For this final rule, we applied the same assumptions as in the CY 2025 PFS final rule (89 FR 98532) to estimate our initial population of clinicians using 2023 performance data. Specifically, we used the CY 2023 final reconciled eligibility determination file, same as the 2022 file described in the CY 2025 PFS final rule (88 FR 79505). This file reconciles eligibility from two determination periods and aligns with the CY 2023 performance period submissions data on which we based this model. Our analysis included 1,889,733 clinicians with PFS claims in this initial population. This initial population of clinicians was used to determine eligibility using the methodology described in the following sections.

(2) Estimated Number of MIPS Eligible Clinicians After Applying Eligibility Assumptions

(a) Methods and Assumptions Used To Estimate Eligibility

After identifying the clinician population with PFS claims, we applied the same eligibility assumptions and determination process described in the CY 2025 PFS final rule (89 FR 97710). We did not proposed any modifications to MIPS eligibility requirements and the same eligibility assumptions apply to both the baseline and proposed policies model.

For our impact analysis model, we established the “required eligibility” category, which means the clinician exceeds the low-volume threshold in all 3 criteria (§§ 414.1305 and 414.1310(b)(1)(iii)) and is subject to a

MIPS payment adjustment. We based this estimate on the CY 2023 performance period data described in this section of this final rule, which includes the 3 low volume criteria. Within the eligible clinicians, we divided them into two groups—clinicians who report MIPS data and clinicians who do not report MIPS data.

Our next two eligibility assumptions concern clinicians in groups, who may voluntarily participate in MIPS, but are not required to participate. First, we estimate group eligibility. These are the clinicians who have a group submission, and their group exceeds the low-volume threshold in all 3 criteria. Next, we apply our opt-in eligibility assumptions. Individuals or groups who exceed the low-volume threshold in at least one criterion, but not all three, may elect to opt in. Based on the number of individuals who opted in to MIPS for the CY 2023 performance period/2025 MIPS payment year, our model estimates that these clinicians will continue to opt in to MIPS.

After applying the process outlined in this section of this final rule, we then estimate the number of “Potentially MIPS Eligible” clinicians. These clinicians are not included in our total number of MIPS eligible clinicians. These clinicians are potentially eligible; however, they do not choose to report to MIPS.

Finally, we estimated the number of clinicians who are neither MIPS eligible nor potentially MIPS eligible. First, we estimated the number of clinicians who are below all 3 low-volume criteria (both as an individual and as a group) using the CY 2023 performance data as outlined in this section of this final rule.

Next, we estimated the number of QPs (not MIPS eligible). Also in this final rule, we estimated a range of QPs. For the purposes of our impact analysis, we estimate a specific number of QPs because a specific number of clinicians is needed to simulate the impacts of our proposed policies on participation, final scores, and payment adjustments. Finally, we estimate the number of clinicians who are excluded for other reasons, for example, they are in a clinician type that is not MIPS eligible or newly enrolled in Medicare.

After applying these assumptions to our initial population, we estimate that there will be 607,419 MIPS eligible clinicians with ~\$51.84 billion in allowed charges in CY2026.

(b) MIPS Eligibility Estimates

For the impact analysis, we use the estimated population of 607,419 MIPS eligible clinicians described previously in this section of this final rule. Table

D-B14 summarizes our eligibility estimates for the policies model after

applying our assumptions outlined in this section of this final rule.

TABLE D-B14: ESTIMATION OF MIPS ELIGIBILITY STATUS FOR CY 2026 PERFORMANCE PERIOD/2028 MIPS PAYMENT YEAR USING THE CY 2026 PFS FINAL RULE ASSUMPTIONS**

Eligibility Status	Predicted Participation Status in MIPS Among Clinicians *	Number of Clinicians	PFS allowed charges (\$ in mil)**
MIPS Eligible Clinicians			
MIPS eligible (always subject to a MIPS payment adjustment because individual clinicians exceed the low-volume threshold in all 3 criteria)	Reported to MIPS	98,485	\$28,689
MIPS eligible (Group eligibility) (only subject to payment adjustment because clinicians' groups exceed low-volume threshold in all 3 criteria)	Did not Report to MIPS	38,784	\$11,172
Opt-in eligibility assumptions (only subject to a positive, neutral, or negative adjustment because the individual or group exceeds the low-volume threshold in at least 1 criterion but not all 3, and they elect to opt-in to MIPS)	Had a group submission	465,291	\$11,705
	Opted-in To MIPS	4,812	\$275
Total Number of MIPS Eligible Clinicians and the associated PFS allowed charges		607,419	\$51,843
Not MIPS Eligible Clinicians			
Potentially MIPS Eligible (not subject to payment adjustment for non-participation; could be eligible for one of two reasons: (1) meet group eligibility; or (2) opt-in eligibility criteria)	Opt-in Eligible, Do not opt-in	176,052	\$5,484
Potentially MIPS Eligible	Group Eligible: Did not Report	472,842	\$10,966
Below the low-volume threshold (never subject to payment adjustment; both individual and group is below all 3 low-volume threshold criteria)	Not applicable	130,002	\$810
Excluded for other reasons (Non-eligible clinician type, newly enrolled)	Not applicable	62,084	\$549
Qualified Participant (QP)***	Not applicable	441,334	\$20,836
Total Number of Clinicians Not MIPS Eligible		1,282,314	\$38,644
Total Number of Clinicians (MIPS and Not MIPS Eligible)		1,889,733	\$90,487

* Participation excludes facility-based clinicians who do not have scores in the 2023 MIPS submission date.

** Allowed charges estimated in 2023 dollars. Low-volume threshold is calculated using allowed charges. MIPS payment adjustments are applied to the paid amount.

*** Our QP estimate differs from that reported in section VII.I.5.b. of this final rule because, for purposes of establishing the population used in our modeling, we estimate an absolute number of QPs rather than a range.

We did not have proposals related to applying Eligibility Assumptions.

d. Modeling Approach and Methods for MIPS Value Pathways (MVPs) and Traditional MIPS

(1) Summary of Approach

In this final rule, we present several proposals that impact the measures and activities, the performance category

scores, final scores, and MIPS payment adjustments for MIPS eligible clinicians. In section VII.I.5.d(3), of this final rule, we outline these changes in more detail and describe our methodology to estimate MIPS payment adjustments for the CY 2026 performance period/2028 MIPS payment year. We then present the impact of the policies in the CY 2026 performance period/2028 MIPS

payment year and compare select metrics to the baseline model. By comparing model outputs in the baseline model to the proposed policies model, we are able to observe the impact of the policies for the CY 2026 performance period/2028 MIPS payment year.

MIPS eligible clinicians' final scores are calculated based on the clinicians'

performance on measures and activities specified under the four MIPS performance categories: quality, cost, improvement activities, and Promoting Interoperability. MIPS eligible clinicians can participate in the four MIPS performance categories as an individual, group, virtual group, APM Entity and via traditional MIPS, the APM Performance Pathway (APP), or MVP reporting options. MIPS APM participants can participate in the APP as an individual, group, virtual group, or APM Entity and are only scored on three MIPS performance categories: quality, improvement activities, and Promoting Interoperability. Our simulation applies the proposed and baseline policies to the existing MIPS scoring engine.

In the CY 2022 PFS final rule (86 FR 65394 through 65397), we finalized policies at § 414.1365 for implementing MIPS Value Pathways beginning in the CY 2023 performance period/2025 MIPS payment year.

(2) Methodology To Assess Impact for MIPS Value Pathways

At § 414.1365(b), we require MVP Participants (which can be a group, individual, subgroup, or APM entity) to register prior to submitting an MVP. We assessed whether to use CY 2024 MVP registration data to estimate MVP participation and policy impact, but elected not to simulate the impact for MVP because we do not presently have sufficient MVP scoring data for modeling and simulation, as we only have 1 year of MVP data from the CY 2023 performance period/2025 MIPS payment year. Our model is based on CY 2023 performance data, which contains only 1 year of MVP scores, and this is insufficient for conducting reconciliation between multiple years, which introduces uncertainty and complexity into our model. As more MVP scoring data becomes available in the future, we will reassess our methodology for estimating MVP participation, final scores, and payment adjustments.

(3) Methodology To Assess Impact for Traditional MIPS

To estimate the impact of the policies on MIPS eligible clinicians, we generally use the CY 2023 performance data, including data submitted or calculated for the quality, cost, improvement activities, and Promoting Interoperability performance categories.

We supplemented this information with the most recent data available for CAHPS for MIPS and CAHPS for ACOs, administrative claims data for the new quality performance category measures,

and other data sets. We calculated a hypothetical final score for the CY 2026 performance period/2028 MIPS payment year for the baseline and policies scoring models for each MIPS eligible clinician using score estimates for quality, cost, improvement activities, and Promoting Interoperability performance categories, and the application of our final scoring policies.

(a) Methodology To Estimate the Quality Performance Category Score

We used the CY 2025 PFS final rule final policies model as the starting point of our baseline model. Since there are no previously finalized policies impacting the quality performance category that were not already included in the CY 2024 PFS final rule policies model, we did not make any modifications to the quality performance category and the baseline model is identical to the CY 2025 PFS final rules policies model with respect to the quality category.

Our policies model incorporates the following policies from this final rule as outlined in section IV.B. of this final rule:

- In section IV.B.1.a.(2)(a) of this final rule, to facilitate fairer scoring, we proposed to remove the scoring cap and change the benchmarking approach for certain topped out measures applicable to clinicians facing both limited measure choice and limited scoring opportunities. We did not simulate the addition of quality measures described in section IV.A.4.d.(1)(c)(i) of this final rule since we use existing quality measure data from the CY 2023 performance period, which does not include new measures. We did not simulate the removal of quality measures described in section IV.A.4.d.(1)(c)(ii) of this final rule since we cannot predict how clinician behavior and measure selection will change in response.

- In section IV.B.1.a.(2)(b)(3) of this final rule, we proposed to modify the methodology for scoring the administrative claims-based measures within the quality performance category. The proposed administrative claims-based quality measure scoring methodology will be based on the standard deviation, the median, and an achievement point value that is derived from the performance threshold. Specifically, for a MIPS eligible clinician whose performance rate under an administrative claims-based measure will be equal to the median performance rate for all MIPS eligible clinicians that are scored on that measure, we will assign an achievement point value equal to 10 percent of the performance

threshold. For example, for the CY 2026 performance period/2028 MIPS payment year, the median would have an achievement point value of 7.5, based on a performance threshold of 75 points as proposed in section IV.B.2.b.(2) of this final rule. For each administrative claims-based quality measure, the cut-offs for benchmark ranges would be calculated based on standard deviations from the median. This policy is incorporated into our model based on the specifications explained in section IV.B.1.a.(2)(b)(3) of this final rule.

(b) Methodology To Estimate the Cost Performance Category Score

We estimated the cost performance category score using a methodology similar to the methodology described in the CY 2025 PFS final rule (89 FR 98531) for the baseline and the proposed policies RIA models with the modifications described later in this section.

For this final rule, the baseline policies RIA model used the same methodology as the final policies RIA model in the CY 2025 PFS final rule (89 FR 98530). The policies RIA model incorporated and implemented the following changes:

- In section IV.A.4.(d).(2).(c). of this final rule, we proposed to modify the Total Per Capita Cost (TPCC) measure. We also proposed to update the operational list of care episodes and patient condition groups and codes to reflect coding changes identified through our annual maintenance process for MIPS cost measures. We incorporated measures test data with the specifications for the modified measures.

- In section IV.A.4.(d).(2).(d). of this final rule, we proposed to adopt a 2-year informational-only feedback period for newly implemented MIPS cost measures, which we also proposed to codify at § 414.1380(b)(2).

(c) Methodology To Estimate the Promoting Interoperability Performance Category Score

In section IV.A.4.d.(4). of this final rule, we proposed modifications to 2 measures and the adoption of one new optional bonus measure: Public Health Reporting Under TEFCA Measure. However, we did not estimate Promoting Interoperability performance category score impacts because, after conducting an assessment of the proposed policies, we determined that there is insufficient data to model the impact of adding a new, optional bonus measure on the Promoting Interoperability performance category

scores, and therefore, did not incorporate it into our model.

(d) Methodology To Estimate the Improvement Activities Performance Category Score

For the baseline and policies model we used the same method to estimate the improvement activities performance category score as described in the CY 2025 PFS final rule (89 FR 79508) including alignment with the clarification provided regarding IA automatic weighting for APM participants (89 FR 79366).

In section IV.A.4.d.(3)(b). of this final rule, we proposed to amend at § 414.1355(c)(7) by adding a new subcategory, “Advancing Health and Wellness” (AHW), to replace the “Achieving Health Equity” subcategory. We proposed adding three new Improvement Activities while removing eight existing ones. However, the 3 new measures were not included in the RIA model because we lack historical benchmark data to estimate their potential impact. Additionally, the 8 measures being removed were also excluded from the RIA model, as the models cannot predict how clinicians will alter their behavior once these measures are removed.

(e) Methodology To Estimate the Complex Patient Bonus Points

This final rule does not include proposals to modify the complex patient bonus. Therefore, for the baseline and proposed policies RIA model, we used the previously established method to calculate the complex patient bonus as described in the CY 2022 PFS final rule (86 FR 64996).

(f) Methodology To Estimate the Final Score

We did not propose any changes to how we calculate the MIPS final score. Our baseline and proposed policies models assigned a final score for each TIN/NPI by multiplying each estimated performance category score by the corresponding performance category weight, adding the products together, multiplying the sum by 100 points, adding the complex patient bonus, and capping at 100 points.

For both models, after adding any applicable complex patient bonus, we reset any final scores that exceeded 100 points to equal 100 points. For MIPS eligible clinicians who were assigned a weight of zero percent for any performance category, we redistributed the weights according to § 414.1380(c).

For the purposes of this model, if a MIPS eligible clinician was approved for reweighting of one or more performance category to zero percent of their final score, and the category’s weight redistributed to other performance category(ies), for the CY 2023 performance period/2025 MIPS payment year (which was the data source used in our model) in accordance with our reweighting policies under § 414.1380(c)(2), then we continue to apply that reweighting in our model by assigning them a neutral score equal to the performance threshold if all categories were reweighted or assigning the applicable weights to the categories which were reweighted.

Although it is unlikely (but possible) that the exact same clinicians will apply for and receive reweighting in both the CY 2023 performance period/2025 MIPS payment year (which our data is based on) and the CY 2026 performance period/2028 MIPS payment year (which we are simulating), we believe that this assumption accurately reflects future clinician behavior for two reasons. First, while the exact same MIPS eligible clinicians may not receive reweighting in 2 different years, we believe that this assumption allows us to quantify the impact of the reweighting on a population level. In other words, even if the same clinicians do not apply for and receive reweighting in these 2 different years, the absolute number of reweighting and the characteristics of practices that receive reweighting are likely to remain similar. Secondly, if we were to not assign reweighting to those MIPS eligible clinicians, many of them would receive a very low final score because they did not submit data for one or more performance categories during the year in which they received reweighting. We do not believe that it is a realistic assumption that, in the absence of reweighting, those clinicians will continue not to submit data. For these reasons, we assume that clinicians who received reweighting in the CY 2023 performance period/2025 MIPS payment year are also approved for reweighting in the CY 2026 performance period/2028 MIPS payment year. These clinicians are assigned a score of the performance threshold (75) in our model because this corresponds with a neutral (0 percent) payment adjustment.

(g) Methodology To Estimate the MIPS Payment Adjustment

For the baseline and proposed policies models, we applied the

hierarchy as finalized in the CY 2023 PFS final rule (86 FR 65536 through 65537) to determine which final score should be used for the payment adjustment for each MIPS eligible clinician when more than one final score is available. We then calculate the parameters of an exchange function in accordance with the statutory requirements related to the linear sliding scale, budget neutrality, and minimum and maximum adjustment percentages.

For the baseline model, we apply the performance threshold of 75 points finalized in the CY 2025 PFS final rule. In section IV.B.2.b.(2) of this final rule, we proposed to again set the performance threshold at 75. Therefore, for both the baseline and proposed policies models we used a performance threshold of 75 to calculate the exchange function used for MIPS payment adjustments. We noted that the results of this exchange are not identical between the baseline and proposed policies models. This is due to the scaling factor used to determine positive adjustments is dependent on the total dollar amount of negative payment adjustments and those adjustments differ as final scores are not identical between both models.

For both the baseline and proposed policies models, we use these resulting parameters to estimate the positive or negative MIPS payment adjustment based on the estimated final score and the allowed charges for covered professional services furnished by the MIPS eligible clinician.

(4) Simulation Results and Projected Impact to MIPS Eligible Clinicians

Based on the methodology described in section VII.I.5.d.(3). of the final rule, we create a baseline and proposed policies simulation. Using this simulation, we estimate the impact of the policies of this final rule.

(a) Impact on Clinician Eligibility

In section VII.E.17.c.(2). of this final rule, we noted that we do not modify clinician eligibility and therefore there is no difference in the total number of MIPS eligible clinicians between our models.

(b) Impact on Clinician’s Final Scores

Table D–B15 shows the median final score by practice size and the percentage of MIPS eligible clinicians of each practice size with a positive, neutral, or negative adjustment.

TABLE D-B15: CY 2026 FINAL SCORE ESTIMATES BY PRACTICE SIZE

Practice Size	Total Number of MIPS Eligible Clinicians	Median Final Score Estimate	Percent Eligible Clinicians with Positive Payment Adjustment	Percent Eligible Clinicians with Neutral Payment Adjustment	Percent Eligible Clinicians with Negative Payment Adjustment
Baseline					
(1) Solo	17,074	75.00	32.88%	17.98%	49.14%
(a) Engaged***	8,131	87.63	68.86%	7.77%	23.37%
(b) Non-Reporting****	8,943	21.95	0.11%	27.27%	72.62%
(2) 2 to 15	66,808	87.21	66.19%	12.54%	21.27%
(3) 16 to 99	116,647	87.37	76.37%	7.17%	16.45%
(4) 100+	406,890	88.46	90.68%	1.19%	8.14%
Overall	607,419	87.96	83.61%	4.06%	12.33%
Proposed Policies					
(1) Solo	17,074	75.00	32.85%	17.99%	49.16%
(a) Engaged	8,131	87.70	68.92%	7.76%	23.32%
(b) Non-Reporting	8,943	21.99	0.11%	27.27	72.62%
(2) 2 to 15	66,808	87.53	66.39%	12.57%	21.04%
(3) 16 to 99	116,647	88.32	77.23%	7.06%	15.71%
(4) 100+	406,890	89.89	91.04%	1.18%	7.78%
Overall	607,419	89.47	84.04%	4.03%	11.92%

The median final score includes clinicians who receive reweighting for all MIPS performance categories our policies at § 11.1.1380(c)(2). These clinicians who have all performance categories reweighted are assigned a score of 75 (neutral payment adjustment) in our model.

*** An engaged clinician refers to a MIPS-eligible clinician who self-reports at least one measure, attribution, or activity.

**** A non-reporting clinician was a clinician who was required to report but did not actively self-report at least 1 measure, attribution, or activity.

The overall median final score is 87.96 in our baseline model and 89.47 in our proposed policies model, a slight increase for all practice sizes. There is a slight increase in the percentage of clinicians receiving a positive payment adjustment. We project that, overall, 83.61 percent of MIPS eligible clinicians will receive a positive adjustment in our baseline model, and 84.04 percent of MIPS eligible clinicians will receive a

positive adjustment in our policies model. This slight increase is largely due to our proposed policies in the quality category, including the change to the administrative claims based quality measure scoring methodology and the updated topped out measure policy discussed in section IV.B.1.a.(2). of this final rule. Table D-B16 shows the median quality category score for MIPS eligible clinicians who are scored

on the quality performance category for our baseline and proposed policies model. There is a noticeable difference in median quality category scores between our two models. This is true across almost all practice sizes, except for solo practitioners. The overall median quality category score is 78.78 in our baseline model and 83.76 in our policies model.

TABLE D-B16: CY 2026 QUALITY SCORE ESTIMATES BY PRACTICE SIZE

Practice Size	MIPS Eligible Clinicians Receiving Quality Score	Total Number of MIPS Eligible Clinicians	Proportion of MIPS Eligible Clinicians Receiving Quality Score	Median Quality Score Estimate
Baseline				
(1) Solo	13,862	17,074	81.19%	29.94%
(a) Engaged ^a	7,386	8,131	90.62%	82.54%
(b) Non-Reporting ^a	6,494	8,943	72.62%	0%
(2) 2 to 15	56,708	66,808	84.88%	83.43%
(3) 16 to 99	99,123	116,647	84.98%	80.14%
(4) 100+	381,902	406,890	93.86%	78.47%
Overall	551,595	607,419	90.81%	78.78%
Proposed Policies				
(1) Solo	13,863	17,074	81.19%	29.96%
(a) Engaged	7,369	8,131	90.63%	84.02%
(b) Non-Reporting	6,494	8,943	72.62%	0%
(2) 2 to 15	56,713	66,808	84.89%	84.58%
(3) 16 to 99	99,333	116,647	85.16%	82.44%
(4) 100+	382,671	406,890	94.05%	84.04%
Overall	552,480	607,419	90.97%	83.76%

Figure D-B1 shows the distribution of final scores for all MIPS eligible clinicians. Note that there is a noticeable size of MIPS eligible clinicians with a final score of 75. MIPS

eligible clinicians whom we approved for reweighting of all MIPS performance categories in accordance with our reweighting policies at § 414.1380(c)(2) are assigned a final score of exactly the

performance threshold (75). Overall, the distribution is left skewed, indicating that many more clinicians would receive final scores on the higher side.

FIGURE D-B1: Count of MIPS Eligible Clinicians by Final Score

(i) Impact to Small and Solo Practices

Solo practitioners account for 17,074 MIPS eligible clinicians or 2.81 percent of all MIPS eligible clinicians in both the baseline and proposed policies models. The median final score for all solo practitioners is exactly equal to the performance threshold (75) in both the baseline and proposed policies model.

The portion of all solo practitioners receiving a positive adjustment are almost the same between the baseline and the proposed policies models (32.85 percent baseline vs 32.88 percent proposed policies).

Solo practitioners have a lower overall median final score than other practice sizes. This is largely due to the fact that many of these solo practitioners

do not actively submit data to MIPS despite being MIPS eligible clinicians. Our 2022 analysis indicates that 49.12 percent of solo practitioners submit data to MIPS compared to 94.07 percent of all clinicians. For solo practitioners who submit data, the median final score is 87.63 in the baseline and 87.70 in the proposed policies model. In contrast, those who did not report data to MIPS

have a median final score of to 21.95 in the baseline model and 21.99 in the proposed model. These findings indicate that the lower final scores among solo practitioners are likely, and largely, due to not reporting data to MIPS.

Table D–B17 shows that, even among engaged solo practitioners, the percentage receiving a positive payment adjustment is lower than that of clinicians from medium or large practices, while being comparable to those from small practices. Similarly, even for engaged solo practitioners, a higher proportion of them face negative payment adjustments compared to those in other practice sizes. Figure D–B2 shows the distribution of final scores for

solo practitioners. Both box plots show similar final score distributions, and both baseline and proposed policies models show a large distance between the lower and upper quartiles. Figure D–B3 shows the final score distribution for all MIPS eligible clinicians between the baseline and the proposed policies models. These models show similar final score distributions, with the proposed policies model showing slightly higher scores. The upper quartile of is 94.25 in the baseline model and 95.82 in the proposed policies model. The distance between lower and upper quartiles is substantially narrower for all MIPS eligible clinicians than it is for solo practitioners. Figure D–B4 shows the

distribution of final scores for solo practitioners who actively submit data to MIPS. This distribution is similar to the distribution of final scores in all MIPS eligible clinicians.

Additionally, the upper quartile is at 95.86 in the baseline and at 96.07 in the proposed policies model, which are slightly higher than that for all MIPS eligible clinicians. This suggests that, while many solo practitioners do not submit data to MIPS, those who do submit MIPS data tend to perform comparably to all MIPS eligible clinicians. This further supports the idea that the primary reason for low final scores among solo practitioners is the high number of them who do not submit MIPS data.

FIGURE D-B2: Distribution of Final Scores for Solo Practitioners

FIGURE D-B3: Distribution of Final Scores for All MIPS Eligible Clinicians

FIGURE D-B4: Distribution of Final Scores for Solo Practitioners who Submit Data

Small practices, defined at § 414.1305 as groups with 2 to 15 clinicians, have a median final score of 87.21 in the baseline and 87.53 in the policies model. This is slightly lower than the overall median final scores of 87.96 in the baseline model and 89.47 in the proposed policies model. Among small practices that submit data (Table D-B17), the median final score is 91.67 in the proposed policies model and 91.23 in the baseline model. They are higher than the median final score for all MIPS eligible clinicians who submit data, which are 90.10 in the proposed policy model and 89 in the baseline model.

This indicates that small practices that submit MIPS data perform slightly better than it is for all MIPS eligible clinicians. Table D-B17 shows the percentage of clinicians, by practice size, either do or do not submit data to MIPS and their corresponding median final scores. Note that, in the proposed policies model, the median final scores for medium and large practice clinicians who do not submit data are 75. This indicates that many medium or large practice clinicians who do not submit data to MIPS have been approved for reweighting of all of their MIPS performance categories under our

policies at § 414.1380(c)(2). In contrast, the median final scores for solo and small practice clinicians, who do not submit data are 21.99 and 27.65, respectively. This indicates that many of them are either not being eligible for or not applying for our reweighting policies. Over 90 percent of the medium and large practice clinicians submit data to MIPS. It is possible that the 10 percent or less MIPS eligible clinicians who do not submit data to MIPS are primarily those who have received reweighting under our policies at § 414.1380(c)(2).

TABLE D-B17: PERCENTAGE OF MIPS ELIGIBLE CLINICIANS WHO SUBMIT DATA AND MEDIAN FINAL SCORE

	Percentage of MIPS Eligible Clinicians who Submit Data (by practice size)	Median Final Score of MIPS Eligible Clinicians who Submit Data	Median Final Score of MIPS Eligible Clinicians who Do not submit data.
Baseline			
(1) Solo	47.62%	87.63	21.95
(2) Small (2 to 15)	74.31%	91.23	28.21
(3) Medium (16 to 99)	90.14%	89.02	75
(4) Large (100+)	98.70%	88.65	75
Overall	93.49%	89.00	75
Proposed Policies			
(1) Solo	47.62%	87.70	21.99
(2) Small (2 to 15)	74.31%	91.67	27.65
(3) Medium (16 to 99)	90.34%	89.91	75
(4) Large (100+)	98.71%	90.06	75
Overall	93.53%	90.10	75

(ii) Impact to Rural Providers

In our data we assign rural practitioners a special status. Impact

assessment of this group of clinicians indicates that their final scores are similar to the overall MIPS eligible clinicians. Table D-B18 shows the

median final score and the percentage of eligible clinicians with a positive, neutral, or negative adjustment by practice size for rural practitioners.

TABLE D-B18: CY 2026 FINAL SCORE ESTIMATES BY PRACTICE SIZE FOR RURAL PRACTITIONERS ONLY

Practice Size	Total Number of MIPS Eligible Clinicians	Median Final Score Estimate	Percent Eligible Clinicians with Positive Payment Adjustment	Percent Eligible Clinicians with Neutral Payment Adjustment	Percent Eligible Clinicians with Negative Payment Adjustment
Baseline					
(1) Solo	2,306	75.00	37.73%	14.92%	47.35%
(a) Engaged*	1,251	86.78	69.54%	5.36%	25.10%
(b) Non-Reporting**	1,055	21.14	0.00%	26.26%	73.73%
(2) 2 to 15	10,112	88.61	71.78%	8.24%	19.99%
(3) 16 to 99	20,427	87.31	79.62%	4.04%	16.34%
(4) 100+	36,288	86.34	90.66%	0.11%	8.93%
Overall	69,133	86.42	82.87%	3.11%	14.02%
Proposed Policies					
(1) Solo	2,306	75.00	37.77%	14.92%	47.31%
(a) Engaged	1,251	86.78	69.62%	5.36%	25.02%
(b) Non-Reporting	1,055	21.57	0.00%	26.26%	73.74%
(2) 2 to 15	10,112	89.11	71.94%	8.24%	19.82%
(3) 16 to 99	20,430	88.63	81.57%	4.06%	14.37%
(4) 100+	36,293	87.74	90.67%	0.40%	8.94%
Overall	69,131	87.80	83.47%	3.11%	13.41%

*An engaged clinician refers to a MIPS-eligible clinician who self-reports at least 1 measure, attestation, or activity.

**A non-reporting clinician was a clinician who was required to report but did not actively self-report at least 1 measure, attestation, or activity.

The overall median final score for rural practitioners is 86.42 in our

baseline model and 87.80 in our policies model. This is slightly lower than the

median final score for all MIPS eligible clinicians, which is 87.96 in our

baseline model and 89.47 in our policies model. According to the results from the proposed policies model, large practice rural clinicians (100+) have a slightly lower median final score (87.74) than it (89.89) is for all MIPS eligible clinicians practicing in large practices.

(iii) Impact to Safety Net Providers

(a) Updated Definition of Safety Net Providers

In the CY 2022 PFS final rule (87 FR 70094), we finalized our complex patient bonus methodology. This bonus is composed of two distinct calculations which are added together: Medical Complexity and Social Risk. Medical Complexity is determined based on a MIPS eligible clinicians Hierarchical Conditions Categories risk score and

social risk is determined based on the proportion of a MIPS eligible clinicians Medicare patient population who are dually eligible for both Medicare and Medicaid.

In the 2024 PFS final rule (88 FR 79513), we compared the performance of clinicians who received the complex patient bonus with our overall population. As we further developed our model, we decided to adopt a more precise definition of safety net providers. We believe that by narrowing our definition of safety net providers to clinicians fall in the top 20 percentile for their percent share of patients who are dually eligible for Medicare and Medicaid, we can identify providers who care for a large proportion of socially vulnerable individuals.

Table D–B19 shows the final score estimates for safety net providers under this new definition. Safety net has higher median final scores (92.43 in the proposed model) than the overall population of MIPS eligible clinicians (89.47 in the proposed model). Safety net solo providers who submit data have a slightly higher median final score (89.66 in the proposed model) than that from the overall solo population who submit data (87.70 in the proposed model). However, only 42.89 percent of safety net solo and 71.14 percent of safety net small practice providers submit data compared to 47.62 percent and 79.31 percent of the overall solo and small practice providers, respectively. Table D–B19.

TABLE D-B19: CY 2026 FINAL SCORE ESTIMATES BY PRACTICE SIZE FOR SAFETY NET PRACTITIONERS ONLY

Practice Size	Total Number of MIPS Eligible Clinicians	Median Final Score Estimate	Percent Eligible Clinicians with Positive Payment Adjustment	Percent Eligible Clinicians with Neutral Payment Adjustment	Percent Eligible Clinicians with Negative Payment Adjustment
Baseline

Overall	91.19%	93.51	90.61%	0.62%	8.77%

(c) Impact to MIPS Eligible Clinicians' Payment Adjustments

We did not propose to increase the performance threshold in this final rule and did propose to set the performance threshold at 75 points for a period of 3 years. However, as we get consistent and more data as the program evolves, we will continue to gauge whether the performance threshold should be increased in future years.

Table D-B21 shows that the payment adjustments are very similar between

the baseline and proposed policies model. This is because we have made minimal changes to our proposed policies. Although payment adjustments are slightly higher in the baseline model. In the baseline model, we project redistributing \$464 million, and in the proposed policies model, we project redistributing \$463 million. This decrease is due to the slightly higher proportions of clinicians receiving positive payment adjustments in the proposed policies model (84.05 percent) than it is in the baseline model (83.61

percent). As the proportion of MIPS eligible clinicians receiving a positive payment adjustment increases, the portion of clinicians receiving a negative payment adjustment decreases accordingly (11.92 percent in the proposed policies model vs. 12.33 percent in the baseline model). As the proportion of MIPS eligible clinicians receiving negative payment adjustments decreases, the budget neutral funds available for redistribution also decrease.

FIGURE D-B5: Final Score Distribution and Payment Adjustment

We also report on the median positive and negative payment adjustments by practice size in Table D-B21.

TABLE D-B21: CY 2026 MEDIAN POSITIVE AND NEGATIVE PAYMENT ADJUSTMENT ESTIMATES BY PRACTICE SIZE

Practice Size	Median Positive Payment Adjustment*	Median Negative Payment Adjustment*
Baseline		
Solo (1)	1.52%	-6.58%
(a) Engaged**	1.52%	-7.02%
(b) Non-Reporting***	0.13%	-9.00%
Small (2-15)	1.51%	-5.97%
Medium (16-99)	1.15%	-1.77%
Large (≥99)	1.25%	-1.46%
Overall	1.28%	-1.93%
Proposed Policies Model		
Solo (1)	1.44%	-6.55%
(a) Engaged	1.45%	-7.04%
(b) Non-Reporting	0.09%	-9.00%
Small (2-15)	1.44%	-6.08%
Medium (16-99)	1.22%	-1.78%
Large (≥99)	1.27%	-1.44%
Overall	1.30%	-1.88%

Final score above the performance threshold. The median negative adjustment is defined as the median payment adjustment among clinicians with a final score below the performance threshold. Neither median includes clinicians with a final score equal to the performance threshold.

**An engaged clinician refers to a MIPS-eligible clinician who self-reports at least 1 measure, attestation, or activity.

***A non-reporting clinician was a clinician who was required to report but did not actively self-report at least 1 measure, attestation, or activity.

The overall median negative payment adjustment in the proposed policies model is slightly lower than it is in the baseline model. That is because the proposed policies model has a higher mean final score than the baseline model (89.47 proposed vs. 87.96 baseline). In Table D-B22, we report the proportion of MIPS eligible clinicians

who either did or did not submit data with the maximum negative adjustment (-9 percent).

e. Additional Impacts From Outside Payment Adjustments

(1) Burden Overall

In addition to policies affecting payment adjustments, we are finalizing

several policies that will impact burden. In section V.B.5. of this final rule, we separately estimate the burden impacts of finalized policy provisions, and the associated updated data sources. In Table D-B22, we summarize the incremental burden of the finalized policy provisions for these ICRs by year and OMB control number.

TABLE D-B22: INCREMENTAL ESTIMATED BURDEN FROM ASSOCIATED POLICIES

PRA Package(s)	Performance Year	Burden Description and Associated Provisions	Burden Hours	Burden Dollars
0938-1314 (CMS-10621)	CY 2026 performance period/ 2028 MIPS payment year*	Annual burden change for Traditional MIPS Quality Data Submission by Clinicians, Medicare Part B Claims-Based Collection Type ICR due to the finalized provision of additional MVPs**	(5,510)	(\$55,228)
0938-1314 (CMS-10621)	CY 2026 performance period/ 2028 MIPS payment year*	Annual burden change for Traditional MIPS Quality Data Submission by Clinicians, MIPS CQM-QCDR Collection Type ICR due to the finalized provision of additional MVPs**	(7,357)	(\$901,575)
0938-1314 (CMS-10621)	CY 2026 performance period/ 2028 MIPS payment year*	Annual burden change for Traditional MIPS Quality Data Submission by Clinicians, eCQM Collection Type ICR due to the finalized provision of additional MVPs**	(8,912)	(\$1,110,056)
0938-1314 (CMS-10621)	CY 2026 performance period/ 2028 MIPS payment year*	Annual burden change for MVP registration ICR due to the finalized provision of additional MVPs**	578	\$62,227
0938-1314 (CMS-10621)	CY 2026 performance period/ 2028 MIPS payment year*	Annual burden change for MVP Quality Submission ICR submissions due to the finalized provision of additional MVPs**	14,403	\$1,763,875
	CY 2026 performance period/ 2028 MIPS payment year*	Annual total change in burden due to policy provisions**	(6,798)	(\$840,757)
	CY 2026 performance period/ 2028 MIPS payment year	Annual total burden for relevant ICRs***	520,708	\$63,731,976
0938-1222 (CMS-10450)	CY 2027 performance period/ 2029 MIPS payment year	Annual burden change for CAHPS for MIPS Vendor Registration due to the finalized provision of the additional web mode**	10	\$1,077
0938-1222 (CMS-10450)	CY 2027 performance period/ 2029 MIPS payment year	Annual total burden for relevant ICR***	110	\$11,843
	CY 2027 performance period/ 2029 MIPS payment year	Annual total change in burden due to policy provisions**	(6,788)	(\$839,680)

* Initial performance year affected by this policy. We presume the same annual burden also applies to the CY 2027 performance period/2029 MIPS payment year. Accordingly, these estimates are included in the annual total change in burden for the CY 2027 performance period/2029 MIPS payment year displayed in this table.

** Change in hours relative to estimates for the currently approved under OMB control number 0938-1222 (CMS-10450) and as currently submitted for OMB approval under 0938-1314 (CMS-10621). Change in cost represents change in hours multiplied by the related wage rates.

*** This calculation is the total annual burden estimate for the referenced ICR per control number in this table, inclusive of the currently approved estimates and changes due to both policy and data adjustments.

(2) Additional Impacts to Clinicians

We provide additional burden discussions for policy provisions that we are unable to quantify.

(a) Modifications to the Improvement Activities Inventory

As discussed in section IV.A.4.d(3)(b)(ii) of this final rule, we are finalizing our proposed changes to

the Improvement Activities Inventory beginning with the CY 2026 performance period/2028 MIPS payment year. We do not expect these changes to affect our burden estimates for the number of estimated respondents or response time, as most of the improvement activities in the Improvement Activities Inventory remain unchanged for the CY 2026

performance period/2028 MIPS payment year. We refer readers to section IV.A.4.d(3)(b)(ii). of this final rule for details on the changes to the Improvement Activities Inventory.

(b) Qualifying Alternative Payment Model (APM) Participant (QP) Determinations

In section IV.B.5.b. of this final rule, we are finalizing our proposal to add a QP determination at the individual level for all Advanced APM participants. Additionally, we are finalizing with modification our proposal to update the definition of “attribution-eligible beneficiary” at § 414.1305. We note that year-over-year participation changes have historically had outsized impacts on our projections. For example, ACOs frequently add or remove participants as part of their operations. These changes in participation make it difficult to project how these proposals will impact clinicians who are determined to be QPs, Partial QPs, or previously reported MIPS (at the individual, group, subgroup, or APM Entity level), if at all. Accordingly, we have not adjusted our estimates related to performance category submissions due to these policy provisions. For details on these policies, see section IV.B.5.b. of this final rule. Additionally, we are finalizing our proposal to remove the current 50 clinician limit from the Medical Home Model, the Aligned Other Payer Medical Home Model, and the Medicaid Medical Home model. Where there are no APMs meeting the definition of these three models in the CY 2026 performance period/2028 MIPS payment year, we do not anticipate any reporting impact for these provisions. For details on these policies, see section IV.B.5.c. of this final rule.

(c) Ambulatory Specialty Model

In section III.D. of this final rule, the Innovation Center is finalizing to test a new mandatory model titled the Ambulatory Specialty Model (ASM). The ASM leverages a framework similar to the MVP framework and shares some quality and cost measures with those in the Advancing Care for Heart Disease MVP and the Rehabilitative Support for Musculoskeletal Care MVP. Review section III.D. of this final rule for additional details on the finalized model requirements and correlation to the existing MVP framework, and impacts of the finalized ASM model.

f. Assumptions & Limitations

In our MIPS eligible clinician assumptions, we assumed that clinicians who elected to opt-in for the CY 2023 Quality Payment Program and submitted data will continue to elect to opt-in for the CY 2026 performance period/2028 MIPS payment year.

As discussed in section V.B.8. of this final rule, we are unable to predict

which specific MIPS eligible clinicians will receive reweighting for one or more performance categories under policies at § 414.1380(c)(2) in the CY 2026 performance period/2028 MIPS payment year. On this basis, we assumed that those MIPS eligible clinicians for whom we approved reweighting of one or more performance categories under our policies are representative of the number and attributes of MIPS eligible clinicians who will receive reweighting under these policies in the future.

In addition to the limitations described throughout the methodology sections, to the extent that there are year-to-year changes in the data submission, volume, and mix of services provided by MIPS eligible clinicians, the actual impact on total Medicare revenues will be different from those shown in Table D–B23.

G. Alternatives Considered

This final rule contains a range of policies, including some provisions related to specific statutory provisions. The preceding preamble provides descriptions of the statutory provisions that are addressed, identifies those policies when we exercise agency discretion, presents rationale for our policies, and, where relevant, alternatives that were considered. For purposes of the payment impact on PFS services of the policies contained in this final rule, we presented above the estimated impact on total allowed charges by specialty.

1. Alternatives Considered Related to the Use of the Relationship Between OPPS APC Payment Rates To Establish PE RVUs for Radiation Oncology Treatment Delivery (CPT Codes 77387, 77402, 77407, 77412, and 77417) and Superficial Radiation Treatment (CPT Codes 77X05, 77X07, 77X08, and 77X09)

As we discuss in sections II.B and II.E. of this final rule, we proposed to utilize the relationship between OPPS APC payment rates to establish PE RVUs for Radiation Oncology Treatment Delivery and Superficial Radiation Treatment services. As we considered the most accurate approach to developing PE RVUs for these code families, an alternative we considered was the following approach:

Step 1: Estimate the share of direct costs for all services in the radiology-therapeutic cost center using the hospital cost reports.

Step 2: For each service in an APC, calculate the weighted geometric mean of the OPPS total costs. The weights are PFS non-facility volume.

Step 3: Multiply the result of step 2 by the result of step 1.

We did not select this alternative because the use of cost report data to calculate the share of direct costs may reflect an imprecise accounting of direct costs. In addition, the percentage of direct costs is imprecise for a particular service. Therefore, we are unable to confirm the precision of the estimate of the direct costs for these services, which is a necessary step in this calculation. We refer the reader to the RAND Corporation (“RAND”) report prepared for CMS, entitled *Practice Expense Methodology and Data Collection Research and Analysis*, available at https://www.rand.org/pubs/research_research_483

2. Alternatives Considered Related to the Use of the Relationship Between OPPS APC Payment Rates To Establish PE RVUs for Radiation Oncology Treatment Delivery (CPT Codes 77387, 77402, 77407, 77412, and 77417) and Superficial Radiation Treatment (CPT Codes 77X05, 77X07, 77X08, and 77X09)

As we discuss in sections II.B. and II.E. of this final rule, we proposed to utilize the relationship between OPPS APC payment rates to establish PE RVUs for Radiation Oncology Treatment Delivery and Superficial Radiation Treatment services. As we considered the most accurate approach to developing PE RVUs for these code families, an alternative we considered was the following approach:

Step 1: Estimate the share of direct costs for all services in the radiology-therapeutic cost center using the hospital cost reports.

Step 2: For each service in an APC, calculate the weighted geometric mean of the OPPS total costs. The weights are PFS non-facility volume.

Step 3: Multiply the result of step 2 by the result of step 1.

We did not select this alternative because the use of cost report data to calculate the share of direct costs may reflect an imprecise accounting of direct costs. In addition, the percentage of direct costs is imprecise for a particular service. Therefore, we are unable to confirm the precision of the estimate of the direct costs for these services, which is a necessary step in this calculation. We refer the reader to the RAND Corporation (“RAND”) report prepared

⁴⁸³ Burgette, Lane F., Jodi L. Liu, Benjamin M. Miller, Barbara O. Wynn, Stephanie Dellva, Rosalie Malsberger, Katie Merrell, et al. “Practice Expense Methodology and Data Collection Research and Analysis.” RAND Corporation, April 11, 2018. https://www.rand.org/pubs/research_reports/RR2166.html.

for CMS, entitled *Practice Expense Methodology and Data Collection Research and Analysis*, available at https://www.rand.org/pubs/research_reports/RR2166.html.⁴⁸⁴

3. Alternatives Considered for Adjusting RVUs To Match PE Share in the American Medical Association's (AMA) Physician Practice Information (PPI) and Clinician Practice Information (CPI) Surveys

As discussed in section II.B. of this final rule, “(5) PE RVU Methodology,” Steps 3, 10, and 18, and “3. Adjusting RVUs To Match PE Share of the Medicare Economic Index (MEI),” we hold the work RVUs constant and adjust the PE RVUs, MP RVUs, and CF to produce the appropriate balance in RVUs among the PFS components and payment rates for individual services, that is, that the total RVUs on the PFS are proportioned to approximately 51 percent work RVUs, 45 percent PE RVUs, and 4 percent MP RVUs. As the Medicare Economic Index (MEI) cost shares are updated, we would typically proposed to modify steps 3 and 10 described in section II.B. of this final rule to adjust the aggregate pools of PE costs (direct PE in step 3 and indirect PE in step 10) in proportion to the change in the PE share in the updated MEI cost share weights, as previously described in the CY 2014 PFS final rule (78 FR 74236 and 74237), and to recalibrate the relativity adjustment that we apply in step 18 described in section II.B. of this final rule. The most recent recalibration was done for the CY 2014 RVUs. Of note, although we did not propose to for CY 2023, we considered using the rebased and revised 2017-based MEI cost share weights to adjust the aggregate pools of PE RVUs and the relativity adjustment to reflect more recent data, shifting over a 4-year transition to reach the proportions of work, PE, and MP. We refer readers to a detailed discussion of this alternative considered in sections II.B. and V.I. of the CY 2023 PFS final rule (87 FR 69414 through 69415 and 70212 through 70217) for awareness regarding potential future rulemaking.

As an alternative to adjusting the aggregate pools of direct and indirect PE costs and using a relativity adjustment based on the currently used 2006-based MEI, we considered three different alternatives related to the weights from

the American Medical Association's (AMA) Physician Practice Information (PPI) and Clinician Practice Information (CPI) Surveys, as discussed in detail in section II.B. of this final rule, for purposes of adjusting the RVUs to match PE share from the surveys for CY 2026:

- Full implementation of the updated PPI and CPI Survey PE/HR data, while maintaining the current cost shares (2006-based MEI) (to allow for isolated comparison to the CY 2025 Final Rule impacts)
- Full implementation of the updated shares, as reported by the AMA, while maintaining the current PE/HR data (to allow for isolated comparison to the CY 2025 final rule impacts)
- Full implementation of updated shares, weighted by Medicare RVUs, while maintaining the current PE/HR data (to allow for isolated comparison to the CY 2025 final rule impacts)

Likely due in part to lower-than-expected response rates, more Medicare specialties were grouped together in the updated PPI and CPI Survey data than the original PPI Survey. The AMA and Mathematica's decision to group together more specialties is a consequential decision alone, therefore, we displayed the estimated specialty-level impacts that would result from mapping the current PE/HR data to the updated specialty groupings reported in the new PPI and CPI Surveys. To do so, we calculated direct and indirect PE/HR values using the existing data (which primarily comes from the 2007–08 PPI Survey) and volume-weighted averages of these existing PE/HR values within each of the new specialty groupings. While this is not an alternative we considered implementing, we believe it is important to display the redistributive impacts of mapping the old PE/HR information to the new specialty groupings for interested parties to consider.

For purposes of displaying impacts for these alternatives considered, we used the estimated impacts from the CY 2025 PFS final rule as a base and comparison rather than the proposed CY 2026 impacts due to the significant redistributive impacts of the policy proposals for CY 2026. We believe that displaying these alternatives considered relative to CY 2025 provides a more stable base to isolate changes related to the alternatives themselves and allows the public to meaningfully comment on the alternatives considered, as opposed to the interaction of these alternatives with the redistributions attributable to the CY 2026 policy proposals.

Table D–B23 illustrates the estimated specialty-specific impacts under each

alternative considered, relative to the CY 2025 PFS final rule estimated impacts as a baseline. The following is an explanation of the information represented in Table D–B23.

- *Column A (Specialty)*: Identifies the specialty for which data are shown.
- *Column B (Setting)*: Identifies the facility or nonfacility setting for which data are shown.
- *Column C (Allowed Charges)*: The aggregate estimated PFS allowed charges for the specialty based on CY 2023 utilization and CY 2024 rates. Reminder: CY 2025 Estimated Impacts are used as a baseline for these alternatives considered, therefore, this column matches Column C of Table D–B23 in the CY 2025 PFS final rule (89 FR 98503 through 98507).
- *Column D (Combined Impact)*: This column shows the estimated CY 2025 combined impact on total allowed charges of all the changes finalized for CY 2025. Reminder: this column matches Column D of Table D–B23 in the CY 2025 PFS final rule (89 FR 98503 through 98507).
- *Column E (Combined Impact)*: This column shows the estimated CY 2025 combined impact on total allowed charges that would result from mapping the current PE/HR data to the updated specialty groupings reported in the new PPI and CPI Surveys.
- *Column F (Combined Impact)*: This column shows the estimated CY 2025 combined impact on total allowed charges that would result if we implemented the new PE/HR data from the new PPI and CPI Surveys. Because these changes are solely within practice expense, there would be no impact to the estimated conversion factor and would result only in the redistribution of PE RVUs.
- *Column G (Combined Impact)*: This column shows the estimated CY 2025 combined impact on total allowed charges that would result if we implemented updated cost share weights as reported by the AMA, to adjust the RVUs to match the PE share from the surveys, relative to the impacts for the CY 2025 PFS final rule, while maintaining the current PE/HR data. This results in changes to the work RVU pool, and therefore, yields a different estimated conversion factor.
- *Column H (Combined Impact)*: This column shows the estimated CY 2025 combined impact on total allowed charges that would result if we implemented updated cost share weights derived by CMS from the AMA's PPI and CPI Surveys, weighted by Medicare RVUs, to adjust the RVUs to match the PE share from the surveys, relative to the impacts for the CY 2025

⁴⁸⁴ Burgette, Lane F., Jodi L. Liu, Benjamin M. Miller, Barbara O. Wynn, Stephanie Dellva, Rosalie Malsberger, Katie Merrell, et al. “Practice Expense Methodology and Data Collection Research and Analysis.” RAND Corporation, April 11, 2018. https://www.rand.org/pubs/research_reports/RR2166.html.

PFS final rule, while maintaining the current PE/HR data. This results in changes to the work RVU pool, and

therefore, yields a different estimated conversion factor.

TABLE D-B23: CY 2025 PFS ESTIMATED IMPACT ON TOTAL ALLOWED CHARGES BY SPECIALTY UNDER THREE ALTERNATIVES CONSIDERED FOR CY 2026

As stated previously, the AMA's new specialty groupings in the updated PPI and CPI Surveys result in consequential redistributions shown in Column E, with estimated specialty-level impacts ranging from -13 percent (facility-

based Radiation Oncology and Radiation Therapy Centers) to +7 percent (Nurse Anesthetist, and non-facility Nephrology).

Relative to the CY 25 PFS final rule baseline, adopting the PE/HR data from

the new PPI and CPI Surveys would result in large specialty-level impacts shown in Column F. New data such as these would typically be phased in over multiple years to reduce year-on-year changes. After fully phasing in the

changes, adopting the new PPI/CPI data would result in specialty-level impacts with negative impacts as low as -16 percent for facility-based.

Radiation Oncology and Radiation Therapy Centers and increases as large as +18% non-facility Oral/Maxillofacial Surgery. Of note, the AMA did not provide updated PE/HR data for the IDTF specialty, so this scenario retains the current PE/HR values for that specialty.

In addition to updated PE/HR data for PFS ratesetting, the information from the PPI and CPI Surveys could be used to develop new cost share weights to adjust the aggregate pools of PE RVUs and the relativity adjustment to reflect more recent data, to reach the proportions of work, PE, and MP reported in the new surveys. The AMA has reported work, PE, and MP shares of 60.8 percent, 37.0 percent, and 2.3 percent, respectively, in the new PPI Survey data.⁴⁸⁵ As discussed in detail in section II.B. of this final rule, we have numerous concerns with the cost shares as reported by the AMA in the PPI Survey data. It is our understanding that these PPI Survey cost shares ignore non-physician specialties that were surveyed in the CPI Survey, even though those specialties are included in PFS ratesetting, and therefore derive payment from the same pools of work, PE, and MP as the physician specialties included in the PPI Survey.

Additionally, it seems that the AMA calculated specialty-level shares and averaged these shares across specialties, which is mathematically different than estimating the share of total work, PE, and MP across all specialties. (That is, the average of shares does not need to equal shares of the total.) This represents a change from how the cost shares are currently calculated by the MEI and we believe this methodology runs counter to the goal of adjusting the aggregate pools of PE RVUs and the relativity adjustment to reach the proportions of work, PE, and MP. Despite our concerns, we are displaying the specialty-level impacts of incorporating these new cost shares, as directly reported by the AMA, in column G, which would result in specialty impacts ranging from -7 percent (facility-setting Hand Surgery) to +18 percent (for facility-setting Clinical Social Worker).

Due to our concerns with the AMA's methodology for reporting cost shares, we developed cost shares that account for both the PPI and CPI Survey data into an estimate of total shares across

physician and non-physician specialties using weights from Medicare volumes. Using either PFS RVUs or physician time file time-weighted shares yields similar results, with an estimated 54.4 percent or 54.8 percent work share, respectively. To do this, we multiplied the specialty-level estimates of work, PE, and MP by, for example, total PFS RVUs for the specialty grouping, added these amounts across specialty groupings, and calculated the shares of these sums. As a result, we calculate cost shares of total work, PE, and MP to be 54.4 percent, 43.8 percent, and 1.7 percent, respectively, when using PFS RVUs to weight the specialty-level values reported in the PPI and CPI Surveys. We displayed the specialty-level impacts of using these cost shares derived by through this methodology, while retaining current PE/HR values results, in Column H, which range from -9 percent to 11 percent (for non-facility Interventional Radiology and facility-setting Clinical Social Worker specialties, respectively).

Because of the significant redistributive effects of all the alternatives considered, as well as the concerns with the underlying PPI and CPI Survey data, we proposed to delay these adjustments to allow public comments on the PPI and CPI Surveys discussed in section II.B. of this final rule, and to maintain use of the current 2006-based MEI cost share weights. Because there are significant concerns with the PPI and CPI Survey data, outlined in detail in section II.B. of this final rule, and significant time has elapsed since the last recalibration of the cost share weights, we believe it is important to allow public comment on the use of the PPI and CPI Survey data, as well as the updated 2017-based MEI, discussed in detail in the CY 2023 PFS final rule, before we incorporate any updated cost shares into PFS ratesetting. Of note, the 2017-based MEI cost shares, the PPI Survey cost shares as reported by the AMA, and the cost shares derived by CMS from the PPI and CPI Survey data result in drastically different PE shares, and the current 2006-based MEI cost shares fall in the middle of the them, therefore, we continued to believe that proposing to delay the implementation of any alternative cost share weights is consistent with our efforts to balance payment stability and predictability with incorporating new data through more routine updates. Similarly, we proposed to delay the implementation of any updated cost share weights for use in the practice expense (PE) Geographic Practice Cost Index (GPCI) for CY 2026 to solicited

public comment on all considerations before we incorporate any updated cost share weights into the PE GPICs. We refer readers to the section below, and section II.N. of this final rule for more discussion on alternatives considered regarding this proposal.

3. Alternatives Considered for the Practice Expense (PE) Geographic Practice Cost Index (GPCI)

As discussed in section II.N. of this final rule, we use the MEI cost share weights to weight the four components of the PE GPCI: employee wages, office rent, purchased services, and medical equipment, supplies, and other miscellaneous expenses. As the MEI cost shares are updated, we have historically updated the GPCI cost share weights to make them consistent with the most recent update to the MEI. Due to the concurrent GPCI update and rebasing and revision of the MEI for CY 2023, we proposed to maintain the use of the current 2006-based MEI cost share weights for the CY 2023 GPICs instead of the updated 2017-based MEI, to allow interested parties the opportunity to review and comment on the rebased and revised MEI cost share weights. Similarly, we proposed to delay the implementation of any updated cost share weights for the CY 2026 GPICs due to the consideration of the AMA's PPI and CPI Survey data.

Additionally, we received data from the AMA's PPI and CPI Surveys, however, these data lack the specific breakdown of practice expense that we would need to consider its use to weight the four components of the PE GPCI for CY 2026, including Office Rent and Purchased Services, which are not explicitly described in the PPI and CPI Survey data. Because the Survey data lacks constituent components of the PE GPCI, we considered possible derivations of weights from the PPI and CPI Survey for use in the PE GPCI for consideration in possible future rulemaking. Because the derivation of these weights required mapping and methodology proposals discussed below, we did not consider their use in the CY 2026 PE GPCI update and did not develop CY 2026 PE GPICs based on these weights for display purposes but are displaying the derived weights for possible consideration in future rulemaking. We did not believe it would be beneficial to display the resulting CY 2026 PE GPICs from these derived weights because the PE GPCI values would inevitably look different if/when we proposed to update the weights due to the underlying updated data.

For the derived weights, we started with a possible mapping of the PPI and

⁴⁸⁵ <https://www.ama-assn.org/system/files/table-1-results-from-ppi.pdf>.

CPI Survey direct (labor, supplies and equipment) and indirect PE

(administrative, overhead, information technology and other) data to the four

components of the PE GPCI based, as shown below in Table D–B24.

TABLE D-B24: PROPOSED MAPPING FOR PPI AND CPI SURVEY DATA CATEGORIES TO THE PE GPCI COMPONENTS

	PE GPCI Component			
	Employee Wages	Purchased Services	Office Rent	Supplies and Equipment
Clinical Labor	100%	0%	0%	0%
Supplies	0%	0%	0%	100%
Equipment	0%	0%	0%	100%
Administrative	0%	50%	50%	0%
Overhead	0%	50%	50%	0%
Information Technology	0%	100%	0%	0%
Other	0%	50%	50%	0%

Secondly, we combined the PPI and CPI Survey data and weighted the data by RVUs to develop a combined PPI and CPI Survey “All” line, analogous to the AMA’s PPI Survey results “All” line,⁴⁸⁶

which was not provided for the CPI Survey data.⁴⁸⁷ We then used the calculated direct and indirect totals from the PPI and CPI Survey data (weighted them by total RVUs) for each

PE GPCI element based on the proposed mapping for the 4 PE GPCI components above to derive new weights for each of the 4 PE GPCI components, as shown below in Table D–B25.

TABLE D-B25: ALTERNATIVE DERIVED WEIGHTS FROM THE PPI AND CPI SURVEY DATA

Proposed Map to PE Shares*	Calculated Direct/Indirect Total	Weights of the Four PE GPCI Components		
		New Weights Derived from PPI and CPI Surveys	Current Weights under the 2006-based MEI	Weights under the 2017-based MEI
Employee Wages	38.78	25.476%	36.917%	49.776%
Purchased Services	53.76	35.317%	18.053%	26.345%
Office Rent	46.33	30.449%	22.799%	11.117%
Supplies & Equipment**	13.34	8.764%	22.231%	12.862%
Total	152.21	100%	100%	100%

*Weighted by total RVUs

**CMS assumes a national market for each item and therefore assigns a value of 1.00 for this equipment in each PFS locality. Therefore, a decrease in its share of the PE GPCI would possibly lead to more variation in the resulting PE GPCI across payment areas.

We solicited comments on the weights displayed in Table D–B25, and any alternative methodologies to weight and or map the PPI and CPI Survey data to derive weights used to weight the four components of the PE GPCI for possible consideration in future rulemaking. Because any alternative derivation or weighting methodology for the PPI and CPI Survey data will result in different shares than displayed above, we do not believe that displaying the resulting CY 2026 PE GPCI based on these shares would be beneficial until we provide opportunity for the public to comment on this methodology. Additionally, because CY 2026 is a GPCI update, there would be a confounding

effect of these updated shares due to the implementation of updated data required for a triennial GPCI update.

4. Alternatives Considered for Changes Related to Medicare Part B Payment for Skin Substitutes When Used During a Covered Application Procedure in the Non-Facility Setting

As discussed in detail in section II.K.D. of this final rule, starting January 1, 2026, we proposed to pay for the provision of certain groups of skin substitute products used during a covered application procedure (CPT codes 15271 through 15278) as supplies. These skin substitutes will be paid as incident-to supplies under the PFS in

the non-facility setting in accordance with section 1861(s)(2)(A) of the Act. While costs associated with supplies are usually bundled into the PE RVUs for particular services in non-facility settings, these products have been paid separately for many years in the non-facility setting, where the majority of these products are currently used.

CMS considered several alternative approaches to calculate changes in spending. Each alternative relies on the same underlying data on skin substitute product volume—2024 volume measured in billing units for skin product HCPCS codes included in analysis as described above. The alternatives and corresponding

⁴⁸⁶ <https://www.ama-assn.org/system/files/table-1-results-from-ppi.pdf>.

⁴⁸⁷ <https://www.ama-assn.org/system/files/table-1-results-from-cpi-final.pdf>.

spending change estimates vary in terms of the rate(s) applied to this fixed volume. Each alternative results in a corresponding saving estimate relative to the status quo spending at 2024 volumes and payment rates of \$10.3B.

All alternatives considered by CMS share some common features. Quarterly 2024 rates start with the ASP for skin substitute product HCPCS codes included in the October 2024 ASP pricing file or, for other codes, the OPPI geometric mean cost for the HCPCS code prior to OPPI packaging rules or, for all other codes, the average payment per billing unit in calendar year 2024 professional claims. These values were then applied to volume shares calculated in different ways to calculate annual rates.

We estimate that under this proposal, which assumes a single rate of approximately \$125.38, there would be an estimated savings of \$9.4 billion. The first alternative, which assumes a single rate of \$65.85 calculated using outpatient facility volume shares, yields savings of \$9.79 billion, or a 95 percent reduction from the status quo. Finally, another approach applies the PMA-based rate (\$259.47) and another rate, \$125.38, calculated using data from HCT/P products and outpatient facility volume shares only, to HCT/P and 510(k) products. Savings under this approach were \$9.29 billion, a 90 percent reduction in spending relative to the status quo.

5. Alternatives Considered for the Quality Payment Program

For purposes of the payment impact on the Quality Payment Program, we view the performance threshold as a critical factor affecting the distribution of payment adjustments. In section IV.A.4.g.(2).(c). of this final rule, we proposed to set the performance threshold to 75 points for the CY 2026 MIPS performance period/CY 2028 MIPS payment year through CY 2028 MIPS performance period/CY 2030 MIPS payment. We refer readers to section IV.B.2.b.(2). of this final rule for discussion of this policy and alternatives considered.

6. Alternatives Considered Related to the Ambulatory Specialty Model

In section III.D of this final rule, we discussed the proposed mandatory ASM. As proposed, we would test whether ASM leads to improved chronic condition management, higher quality care, and reduced costs by

incentivizing ASM participants with the opportunity for positive payments adjustments to Medicare Part B covered professional services payments based on their performance on data reported on quality, cost, improvement activities, and CEHRT interoperability.

Throughout this final rule, we have identified our proposed policies and alternatives that we have considered and provided information as to the effects of these alternatives and the rationale for each of the proposed policies. This final rule provides descriptions of the requirements that we would mandate, identifies the payment methodology to be tested, and presents rationales for our decisions and, where relevant, alternatives that we considered. For example, we considered defining an ASM participant as a subgroup within a TIN comprised of NPIs that individually meet the proposed ASM participant eligibility criteria for a given ASM performance year and will report the required measures and activities as a subgroup within the TIN. Another example is that we considered an alternative scoring approach where each of the four proposed ASM performance categories would be weighted to produce a final score, instead of the proposed negative scoring adjustments to the final score computed from quality and cost ASM performance category scores based on performance within the improvement activities and Promoting Interoperability ASM performance categories.

We noted that the impact estimates summarized in this section of this final rule are based on the proposed policies identified throughout the rule.

We solicited comments on our proposals and on the alternatives that we have identified in this rule.

H. Impact on Beneficiaries

1. Medicare Shared Savings Program Provisions

As noted previously in the CY 2025 PFS final rule (89 FR 98551), the health equity benchmark adjustment finalized in that rule (in this rule being renamed the “population adjustment”) will mainly provide upwards adjustments to benchmarks for—and likely draw increased participation from—new ACOs with particular focus on coordinating care for beneficiaries in underserved communities. New ACOs of this type are therefore projected to ultimately increase assignment to Shared Savings Program ACOs by roughly 500,000 beneficiaries per year,

ranging from 50,000 to 1.0 million at the low and high ends of this projection range. Beyond retaining this impact via the “population adjustment,” the renaming of the benchmark adjustment being finalized in this rule is not expected to have a material net impact on overall program participation or the number of beneficiaries receiving care management from ACOs.

ACOs have been found to perform better on certain patient-experience and performance measures than physician groups participating in MIPS (as shown in Table D–B26). In performance year 2024, ACOs scored better than comparable MIPS groups⁴⁸⁸ on all three eCQMs in the APP quality measure set, and the difference was statistically significant for Quality ID: 134 Preventive Care and Screening: Screening for Depression and Follow-Up Plan ($p < .001$) and Quality ID: 236 Controlling High Blood Pressure ($p < .01$). ACOs also performed better than comparable MIPS groups on two of the three MIPS CQMs in the APP quality measure set and the difference was statistically significant for Quality ID: 236 Controlling High Blood Pressure ($p < .01$). Additionally, ACOs performed better than comparable MIPS groups on five of the ten patient experience survey measures that contribute to Quality ID: 321 Consumer Assessment of Healthcare Providers and Systems (CAHPS) for MIPS, and for one of these summary survey measures the difference was statistically significant: CAHPS–1 Getting Timely Care, Appointments ($p < .01$).

We note there are key differences between the Shared Savings Program and MIPS that limit our analysis of ACOs’ performance on the eCQMs/MIPS CQMs and the CAHPS for MIPS Summary Survey Measures compared to MIPS groups. Specifically, Shared Savings Program ACOs are required to report the eCQMs/MIPS CQMs included in the APP quality measure set; whereas MIPS groups can choose which eCQMs and MIPS CQMs they report on and tend to choose those they will perform well on. Shared Savings Program ACOs are required to administer the CAHPS for MIPS Survey, while it is optional for MIPS groups. A large number of MIPS groups do not administer the CAHPS for MIPS Survey as they are less likely to meet the minimum sample size required to administer the survey, coupled with the tendency of MIPS groups to choose measures they will perform well on.

⁴⁸⁸ Quality Payment Program measurement data are for MIPS groups that have 16 or more clinicians.

The mean number of beneficiaries for MIPS groups with 16 or more clinicians is 10,741.

TABLE D-B26: PY 2024 QUALITY MEASURES THAT SHARED SAVINGS PROGRAM ACOs PERFORMED BETTER ON THAN COMPARABLE MIPS GROUPS

Quality #	Measure Title	Difference in Mean ACO and MIPS Group Performance Rates for PY 2024 (%) ¹
eCQMs		
001	Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)	-1.75 ²
134	Preventive Care and Screening: Screening for Depression and Follow-Up Plan	0.11 ⁴
236	Controlling High Blood Pressure	1.34 ³
MIPS CQMs		
001	Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)	-7.63 ²
236	Controlling High Blood Pressure	8.54 ³
521	CAHPS for MIPS	0.08
CAHPS-1	Getting Timely Care, Appointments, and Information	2.47 ³
CAHPS-5	Health Promotion and Education	0.84
CAHPS-6	Shared Decision Making	0.08
CAHPS-7	Health Status and Functional Status	0.11
CAHPS-11	Stewardship of Patient Resources	0.17
Administrative Claims		
484	Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions	-0.59 ²

Notes:

¹ The numbers in this column represent the mean ACO performance rate minus the mean MIPS group performance rate for each measure.² This is an inverse measure, and lower number indicates better quality performance.³ Indicates statistically significant differences between ACOs and comparable MIPS groups ($p < 0.01$).⁴ Indicates statistically significant differences between ACOs and comparable MIPS groups ($p < 0.001$).

Additionally, ACOs showed improvement for 7 of the 10 CMS Web Interface measures and statistically

significant improvement for 2 out of the 10 measures, in performance year 2024

relative to performance year 2023 (as shown in Table D-B27).

TABLE D-B27: CMS WEB INTERFACE MEASURES WITH IMPROVEMENT AMONG SHARED SAVINGS PROGRAM ACOS BETWEEN PY 2023 AND PY 2024

Quality #	Measure Title	Difference in Mean ACO Performance Rates between PY 2023 and PY 2024 (%) ¹
001	Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%)	-0.42 ²
112	Breast Cancer Screening	0.57
113	Colorectal Cancer Screening	0.67
134	Preventive Care and Screening: Screening for Depression and Follow-Up Plan	0.49
226	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention	0.69
236	Controlling High Blood Pressure	1.60 ³
370	Depression Remission at Twelve Months	0.77

Notes:

¹The numbers in this column represent the mean ACO performance rate in PY 2024 minus the mean ACO performance rate in PY 2023 for each measure.

²This is an inverse measure, and lower number indicates better quality performance.

³Indicates statistically significant differences between ACOs' mean performance rates between PY 2023 and PY 2024 ($p < 0.01$).

⁴Indicates statistically significant differences between ACOs' mean performance rates between PY 2023 and PY 2024 ($p < 0.001$).

Based on ACOs' quality performance results historically (as shown in Tables D-B26 and D-B27), we anticipate that the policies finalized in this final rule will enable ACOs to continue to improve the quality of care for the beneficiaries they serve.

Increased participation in the Shared Savings Program would extend ACO care coordination to additional beneficiaries which can help improve the quality of care they receive.

2. Quality Payment Program

There are several changes in this final rule that are expected to have a positive effect on beneficiaries. In general, we believe that many of these changes, including the MVP and subgroup provisions, will lead to meaningful feedback to beneficiaries on the type and scope of care provided by clinicians. Additionally, beneficiaries could use the publicly reported information on clinician performance in subgroups to identify and choose clinicians in multispecialty groups relevant to their care needs. Consequently, we anticipated the policies in this final rule will improve the quality and value of care provided to Medicare beneficiaries.

For example, several of the new quality measures include patient-reported outcome-based measures, which could be used to help patients make more informed decisions about treatment options. Patient-reported outcome-based measures provide

information on a patient's health status from the patient's point of view and could also provide valuable insights on factors such as quality of life, functional status, and overall disease experience, which will not otherwise be available through routine clinical data collection. Patient-reported outcome-based measures are factors frequently of interest to patients when making decisions about treatment.

3. Ambulatory Specialty Model

We anticipated that ASM will have no impact on cost to beneficiaries. Like MIPS, ASM payment adjustments would not affect Medicare beneficiary coinsurance amounts. The coinsurance will be calculated based on the Medicare allowed amounts before any ASM payment adjustment multipliers are applied to Medicare Part B payments for covered professional services.

I. Estimating Regulatory Familiarization Costs

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this rulemaking, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume that the total number of unique commenters on this rule will be the number of reviewers of this year's proposed rule. We acknowledge that this assumption may understate or

overstate the costs of reviewing this rulemaking. It is possible that not all commenters will review this rule in detail, and it is also possible that some reviewers will choose not to comment on this rule. For these reasons, we believe that the number of commenters will be a fair estimate of the number of reviewers of this year's rule.

Using the wage information from the BLS for medical and health service managers (Code 11-9111), we estimated that the cost of reviewing this rulemaking is \$113.42, including overhead and fringe benefits https://www.bls.gov/oes/current/oes_nat.htm. Assuming an average reading speed, we estimate that it would take approximately 8.0 hours for the staff to review half of this final rule. For each facility that reviews the rule, the estimated cost is \$907.36 (8.0 hours × \$113.42). Therefore, we estimated that the total cost of reviewing this regulation is \$12,239,821 (\$907.36 × 13,549 reviewers on this year's proposed rule).

J. Accounting Statement

As required by OMB Circular A-4 (available at <https://www.reginfo.gov/public/jsp/Utilities/a-4.pdf>), in Tables 113 through 115 (Accounting Statements), we have prepared an accounting statement. This estimate includes growth in incurred benefits from CY 2025 to CY 2026 based on the FY 2026 President's Budget baseline.

TABLE D-B28: ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES

CATEGORY	TRANSFERS
CY 2026 Annualized Monetized Transfers	Estimated increase in expenditures of \$0.4 billion for PFS CF update.
Bearers of Transfer Gain	Federal Government to physicians, other practitioners and providers and suppliers who receive payment under Medicare

TABLE D-B29: ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED COSTS, TRANSFER, AND SAVINGS

CATEGORY	TRANSFER
CY 2026 Annualized Monetized Transfers of beneficiary cost coinsurance.	\$0.1 billion
Bearers of Transfer Gain	Beneficiaries to Federal Government.

TABLE D-B30: ACCOUNTING STATEMENT FOR PROVISIONS FOR MEDICARE SHARED SAVINGS PROGRAM (CYS 2026 to 2035) (\$ MILLIONS)

Category	Primary Estimate	Minimum Estimate	Maximum Estimate	Source Citation
BENEFITS				
Annualized monetized. Discount rate: 3%	-\$2.2 million	-\$70.1 million	\$72.9 million	Tables D-B11 and D-B12; summarized in total in Table D-B13
Annualized monetized. Discount rate: 7%	-\$2.5 million	-\$66.2 million	\$67.5 million	Tables D-B11 and D-B12; summarized in total in Table D-B13

Notes: Negative values reflect a reduction in Federal net cost resulting from cost management by ACOs. Estimates may be a combination of benefits and transfers. To the extent that the incentives created by Medicare payments change the amount of resources society uses in providing medical care, the more accurate categorization of effects would be as costs (positive values) or benefits/cost savings (negative values), rather than as transfers.

K. Conclusion

The analysis in the previous sections, together with the remainder of this final rule, provided an initial Regulatory Flexibility Analysis. The previous analysis, together with the preceding portion of this rule, provides an RIA. In accordance with the provisions of Executive Order 12866, this regulation was reviewed by the Office of Management and Budget.

VII. Waiver of 60-Day Delay in the Effective Date

In the absence of an appropriation for CY 2026 or a Continuing Resolution, there was a lapse in funding, which began on October 1, 2025, and is ongoing at the time of drafting this final rule. During that time, only excepted operations have continued. Accordingly, most of the work on this final rule was not completed in accordance with our usual schedule for final CY payment rules, which aims for an issuance date of November 1 followed by an effective date of January

1 to ensure that the policies are effective at the start of the calendar year to which they apply.

We ordinarily provide a 60-day delay in the effective date of final rules after the date they are issued. The 60-day delay in effective date can be waived, however, if the agency finds for good cause that the delay is impracticable, unnecessary, or contrary to the public interest, and the agency incorporates a statement of the findings and its reasons in the rule issued. We believe it would be contrary to the public interest to delay the effective date of the MPFS portions of this final rule. In accordance with section 1848(b)(1) of the statute, the MPFS is a calendar-year payment system. We typically issue the final rule by November 1 of each year to comply with section 1848(b)(1) of the statute and to ensure that the payment policies for the system are effective on January 1, the first day of the calendar year to which the policies are intended to apply. If the effective date of this final rule is delayed by 60 days, the MPFS for

CY 2026 adopted in this final rule will not be effective at the beginning of the payment year. In this final rule, we review and revise values for specific services, and adopt or revise other policies that relate to the MPFS for CY 2026 or future years. Section 1848(c)(2)(B)(ii)(II) of the Act requires that adjustments to relative values under the MPFS be made in a budget neutral manner. We believe that, in order to preserve budget neutrality as required by statute and to promote an orderly transition to a new payment year, it is in the public interest for all of these MPFS policies to take effect in conjunction with the statutory update to the CF for CY 2026, and we find that it would be contrary to the public interest to do otherwise. We are finalizing the MPFS in this CY 2026 final rule and, in order to adhere to the statutory requirements that an adjusted CF apply to services furnished on or after January 1, 2026, and that budget neutrality be maintained, this final rule must be effective on that date.

Therefore, we find good cause to waive the 60-day delay in the effective date for this final rule as explained above. We note that our waiver of the delayed effective date only applies to the provisions noted above that are being adopted in this final rule.

Mehmet Oz, Administrator of the Centers for Medicare & Medicaid Services, approved this document on October 31, 2025.

List of Subjects

42 CFR Part 405

Administrative practice and procedure, Diseases, Health facilities, Health professions, Medical devices, Medicare, Reporting and recordkeeping requirements, Rural areas, and X-rays.

42 CFR Part 410

Diseases, Health facilities, Health professions, Laboratories, Medicare, Reporting and recordkeeping requirements, Rural areas, X-rays.

42 CFR Part 414

Administrative practice and procedure, Biologics, Diseases, Drugs, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 424

Emergency medical services, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 425

Administrative practice and procedure, Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 427

Administrative practice and procedure, Biologics, Inflation rebates, Medicare, Prescription drugs.

42 CFR Part 428

Administrative practice and procedure, Biologics, Inflation rebates, Medicare, Prescription drugs.

42 CFR Part 495

Administrative practice and procedure, Health facilities, Health maintenance organizations (HMO), Health professions, Health records, Medicaid, Medicare, Penalties, Privacy, and Reporting and recordkeeping requirements.

42 CFR Part 512

Administrative practice and procedure, Health care, Health facilities, Health insurance, Intergovernmental relations, Medicare, Penalties, Privacy,

Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare & Medicaid Services amends 42 CFR chapter IV as set forth below:

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

■ 1. The authority citation for part 405 continues to read as follows:

Authority: 42 U.S.C. 263a, 405(a), 1302, 1320b-12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k).

■ 2. Section 405.2401(b) is amended by adding the definition of “Direct Supervision” in alphabetical order to read as follows:

§ 405.2401 Scope and definitions.

* * * * *

(b) * * *

* * * * *

Direct supervision means that the physician (or other supervising practitioner) must be present in the RHC or FQHC and immediately available to furnish assistance and direction throughout the performance of the service. It does not mean that the physician (or other supervising practitioner) must be present in the room when the service is performed. The presence of the physician (or other practitioner) includes virtual presence through audio/video real-time communications technology (excluding audio-only).

* * * * *

■ 3. Section 405.2463 is amended by revising paragraph (b)(3) to read as follows:

§ 405.2463 What constitutes a visit.

* * * * *

(b) * * *

(3) *Visit-Mental health.* A mental health visit is a face-to-face encounter or an encounter furnished using interactive, real-time, audio and video telecommunications technology or audio-only interactions in cases where the patient is not capable of, or does not consent to, the use of video technology for the purposes of diagnosis, evaluation or treatment of a mental health disorder. On or after October 1, 2025, in the case of mental health visits furnished via interactive, real-time, audio and video telecommunications technology or audio-only interactions, within 6 months prior to the furnishing of the telecommunications service and that an in-person mental health service (without the use of telecommunications technology) must be provided at least every 12 months while the beneficiary

is receiving services furnished via telecommunications technology for diagnosis, evaluation, or treatment of mental health disorders, unless, for a particular 12-month period, the physician or practitioner and patient agree that the risks and burdens outweigh the benefits associated with furnishing the in-person item or service, and the practitioner documents the reasons for this decision in the patient’s medical record, between an RHC or FQHC patient and one of the following:

* * * * *

■ 4. Section 405.2464 is amended by—

■ a. Revising paragraph (c)(2);

■ b. Adding paragraph (c)(8); and

■ c. Revising paragraph (e);

The revisions and addition read as follows:

§ 405.2464 Payment rate.

* * * * *

(c) * * *

* * * * *

(2) For psychiatric collaborative care model (CoCM) services furnished between January 1, 2018, and December 31, 2025, payment is based on the average of the national non-facility PFS payment rate set for each psychiatric CoCM service and updated annually based on the PFS amounts.

* * * * *

(8) For CoCM services furnished on or after January 1, 2026, payment is based on the PFS national non-facility payment rate.

* * * * *

(e) *Payment for communication technology-based and remote evaluation services.*

(1) For communication technology-based and remote evaluation services furnished between January 1, 2019, and December 31, 2025, payment to RHCs and FQHCs is at the rate set for each of the RHC and FQHC payment codes for communication technology-based and remote evaluation services.

(2) For communication technology-based services furnished on or after January 1, 2026, payment to RHCs and FQHCs is based on the PFS national non-facility payment rate.

(3) For remote evaluation services furnished on or after January 1, 2026, payment to RHCs and FQHCs is based on the PFS national non-facility payment rate.

* * * * *

§ 405.2469 [Amended]

■ 6. Section 405.2469 is amended in paragraph (d) by removing the phrase “Additionally, beginning January 1, 2025,” and adding in its place the phrase “On or after October 1, 2025,”.

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

■ 7. The authority citation for part 410 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

■ 8. Section 410.15 is amended by revising paragraph (a), the definition for “First annual wellness visit providing personalized prevention plan services” and “Subsequent annual wellness visit providing personalized prevention plan services” to read as follows:

§ 410.15 Annual wellness visits providing Personalized Prevention Plan Services: Conditions for and limitations on coverage.

* * * * *

First annual wellness visit providing personalized prevention plan services *

(xiii) At the discretion of the health professional and beneficiary, furnish a Physical Activity and Nutrition Risk Assessment that is standardized and evidence-based.

* * * * *

Subsequent annual wellness visit providing personalized prevention plan services * * *

(xi) At the discretion of the health professional and beneficiary, furnish a Physical Activity and Nutrition Risk Assessment that is standardized and evidence-based.

* * * * *

■ 9. Section 410.26 is amended by revising paragraphs (a)(2) and (c)(2) to read as follows:

§ 410.26 Services and supplies incident to a physician's professional services: Conditions.

(a) * * *

(2) *Direct supervision* means, except as provided in paragraphs (a)(2)(i) and (ii) of this section, the level of supervision by the physician (or other practitioner) of auxiliary personnel as defined in § 410.32(b)(3)(ii). The presence of the physician (or other practitioner) required for direct supervision may include virtual presence through audio/video real-time communications technology (excluding audio-only) for services without a 010 or 090 global surgery indicator.

* * * * *

(c) * * *

(2) Physical therapy, occupational therapy and speech-language pathology services provided incident to a physician's professional services are subject to the provisions established in §§ 410.59(a)(3)(iii), 410.60(a)(3)(iii), and 410.62(a)(3)(iii).

■ 10. Section 410.32 is amended by revising paragraph (b)(3)(ii) to read as follows:

§ 410.32 Diagnostic x-ray tests, diagnostic laboratory tests, and other diagnostic tests: Conditions.

* * * * *

(b) * * *

(3) * * *

(ii) Direct supervision in the office setting means that the physician (or other supervising practitioner) must be present in the office suite and immediately available to furnish assistance and direction throughout the performance of the service. It does not mean that the physician (or other supervising practitioner) must be present in the room when the service is performed. The presence of the physician (or other practitioner) required for direct supervision may include virtual presence through audio/video real-time communications technology (excluding audio-only) for services without a 010 or 090 global surgery indicator.

* * * * *

■ 11. Section 410.62 is amended by revising paragraph (a) to read as follows:

§ 410.62 Outpatient speech-language pathology services: Conditions and exclusions.

(a) *Basic rule.* Except as specified in paragraph (a)(3)(iii) of this section, Medicare Part B pays for outpatient speech-language pathology services only if they are furnished by an individual who meets the qualifications for a speech-language pathologist in § 484.115 of this chapter and only under the following conditions:

* * * * *

■ 12. Section 410.79 is amended—

■ a. In paragraph (b) by—

■ i. Revising the definitions of “Extended flexibilities period” and “Online;”

■ ii. Adding the definitions of “Live Coach interaction,” “Online delivery period” and “Online session;” in alphabetical order.

■ b. Revising paragraphs (c)(1)(ii) and (e)(3)(iii)(C); and

■ c. Adding paragraph (f).

The revisions and additions read as follows:

§ 410.79 Medicare Diabetes Prevention Program expanded model: Conditions of coverage.

* * * * *

(b) * * *

Extended flexibilities period refers to the 6-year period (January 1, 2024 to December 31, 2029) for the Extended flexibilities to apply.

* * * * *

Live Coach interaction refers to the bi-directional communication between the Coach and beneficiary.

* * * * *

Online means sessions that are delivered 100 percent through the internet via phone, tablet, or laptop in an asynchronous (non-live) classroom where participants are experiencing the content on their own time without a live (including non-artificial intelligence (AI)) Coach teaching the content.

Online delivery period refers to the 4-year period (January 1, 2026 to December 31, 2029) to test an asynchronous delivery modality of the Set of MDPP services. During this time, MDPP suppliers may deliver the Set of MDPP services through the Online modality.

Online session refers to an MDPP session that is not furnished in person or via distance learning and that is furnished in a manner consistent with the DPRP standards for Online sessions.

* * * * *

(c) * * *

(1) * * *

(ii) Weight measurements used to determine the achievement or maintenance of the required minimum weight loss must be taken in person by an MDPP supplier during an MDPP session or reflected in the beneficiary's medical record dated within 5 calendar days of the MDPP session.

(e) * * *

(3) * * *

(iii) * * *

(C) Self-reported weight measurements from the digital scale of the MDPP beneficiary. Self-reported weights must be obtained during live, synchronous Online video technology, such as video chatting or video conferencing, wherein the MDPP Coach observes the beneficiary weighing themselves and views the weight indicated on the digital scale, or the MDPP supplier receives two date-stamped photos or a video recording of the beneficiary's weight, with the beneficiary visible on the scale, submitted by the MDPP beneficiary to the MDPP supplier. Photo or video must clearly document the weight of the MDPP beneficiary as it appears on the digital scale on the date associated with the billable MDPP session. If choosing to submit two photos, one photo must show the beneficiary's weight on the digital scale, the second photo must show the beneficiary visible in their home or other reasonable location outside of an in-person delivery site, and both photos must be date-stamped.

* * * * *

(d) * * *

(1) An MDPP supplier may offer a make-up session to an MDPP beneficiary who missed a regularly scheduled session. MDPP make-up sessions may only use In-person, Distance learning, or Online delivery. If an MDPP supplier offers one or more make-up sessions to an MDPP beneficiary, each session must be furnished in accordance with the following requirements:

- (i) * * *
- (ii) * * *
- (iii) * * *

* * * * *

(f) *MDPP Online delivery.*

(1) Notwithstanding paragraphs (a) through (e) of this section, the policies described in this paragraph (f) apply during the Online delivery period.

(2) During the Online delivery period, MDPP suppliers are not required to maintain in-person delivery capabilities of the Set of MDPP services, as applicable during the Online delivery period.

(i) Online sessions must be furnished in a manner consistent with the DPRP Standards regarding program format, Coach interaction, and program intensity and duration to qualify for payment. Online sessions must be delivered 100 percent through the internet via phone, tablet, or laptop in an asynchronous (non-live) classroom where participants are experiencing the content on their own time without a live (including non-artificial intelligence (AI)) Coach teaching the content.

(A) Live Coach interaction must be offered to each participant during weeks when the beneficiary has engaged with content. Emails and text messages can count toward the requirements for Live Coach interaction if there is bi-directional communication (that is, organizations may not simply send out an announcement via text or email and count that as live Coach interaction; the beneficiary must have the ability to respond to and get support from the live Coach) between the Coach and participant. Chat bots and AI forums do not count as live Coach interaction. Coaches are required to track participant engagement and completion of online modules. Proactive outreach must be used to encourage Online session completion and beneficiary weight reporting.

(1) MDPP suppliers may not require that beneficiaries initiate interactions with the Coach and MDPP suppliers may not use AI or Machine Learning (ML) to replace Live Coach interaction.

(2) [Reserved]

(B) Beneficiaries must submit weight measurements on the date in which the

Online session is completed. MDPP suppliers must ensure safeguards are in place to ensure the accuracy of beneficiary weight measurements.

(C) For MDPP beneficiaries, MDPP suppliers may not bill for Online Sessions as well as In-Person or Virtual Sessions during the Online delivery period. The Set of MDPP services must be delivered to individual beneficiaries as Online sessions or fully synchronously (that is, In-person, Distance learning, or In-person with a distance learning component), inclusive of make-up sessions.

(D) MDPP suppliers must ensure that MDPP beneficiaries engage with and understand the content of each Online session. MDPP suppliers may use one or more of the following to ensure engagement and understanding: videos/presentations, email, video conferencing; knowledge checks (multiple choice or short answer); participant contributions to group discussions on a community board; or beneficiary responses to the Coach via email, text message, or in-app messaging.

(ii) [Reserved]

* * * * *

PART 414—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 13. The authority citation for part 414 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395hh, and 1395rr(b)(1).

■ 14. Section 414.84 is amended by—

- a. Revising paragraphs (b)(1) introductory text and (b)(2) introductory text;
- b. Redesignating paragraphs (c)(3) and (c)(4) as paragraphs (c)(4) and (c)(5);
- c. Adding new paragraph (c)(3); and
- d. Revising newly redesignated paragraph (c)(4)(ii).

The revisions and addition read as follows:

§ 414.84 Payment for MDPP services.

* * * * *

(b) * * *

(1) *Performance Goal 1: Achieves the required minimum 5-percent weight loss.* CMS makes a performance payment to an MDPP supplier for an MDPP beneficiary who achieves the required minimum weight loss as measured in accordance with § 410.79(c)(ii) or described in § 410.79(e)(3)(iii) during a core session or core maintenance session furnished by that supplier. The amount of this performance payment is determined as follows:

* * * * *

(2) *Performance Goal 2: Achieves 9-percent weight loss.* CMS makes a performance payment to an MDPP supplier for an MDPP beneficiary who achieves at least a 9-percent weight loss as measured in accordance with § 410.79(c)(ii) or described in § 410.79(e)(3)(iii) during a core session or core maintenance session furnished by that supplier. The amount of this performance payment is determined as follows:

* * * * *

(c) * * *

(3) For the duration of Online delivery described in § 410.79(f), the Online HCPCS G-code applies for any Set of MDPP services that are delivered Online, as described in § 410.79(b).

(4) Medicare pays for up to 22 sessions in a 12-month period. The amount of this payment is determined as follows:

(i) * * *

(ii) For a core session or core maintenance session furnished January 1, 2026 through December 31, 2026, \$18.

(5) Current Procedural Terminology (CPT) Modifier 76 (repeat services by same physician) must be appended to any claim for G9886, G9887, or G9871 to identify a MDPP make-up session that was held on the same day as a regularly scheduled MDPP session.

* * * * *

§ 414.610 Basis of payment.

■ 15. Section 414.610 is amended by—

- a. Revising paragraph (c)(1)(ii) introductory text; and
- b. In paragraph (c)(5)(ii) removing the date “December 31, 2024” and adding in its place the date “September 30, 2025”.

* * * * *

(c) * * *

(1) * * *

(ii) For services furnished during the period July 1, 2008 through September 30, 2025, ambulance services originating in.

* * * * *

■ 16. Section 414.802 is amended by—

- a. Adding a definition of biological in alphabetical order;
 - b. Adding the definition of bundled arrangement in alphabetical order; and
- These additions and revision read as follows:

§ 414.802 Definitions.

* * * * *

Biological means a product licensed under section 351 of the Public Health Service Act.

Bundled arrangement means an arrangement regardless of physical

packaging under which the rebate, discount, or other price concession is conditioned upon the purchase of the same drug or biological or other drugs or biologicals or another product or some other performance requirement (for example, the achievement of market share, inclusion or tier placement on a formulary), or where the resulting discounts or other price concessions are greater than those which would have been available had the bundled drugs or biologicals been purchased separately or outside the bundled arrangement.

* * * * *

- 17. Section 414.804 is amended by—
 ■ a. Adding paragraphs (a)(2)(iii) and (iv); and
 ■ b. Revising paragraph (a)(5).

The additions and revision read as follows:

§ 414.804 Basis of payment.

(a) * * *

(2) * * *

* * * * *

(iii) The discounts in a bundled arrangement as defined at § 414.802, including those discounts resulting from a contingent arrangement, are allocated proportionately to the dollar value of the units of all drugs or products sold under the bundled arrangement.

(iv) For bundled arrangements where multiple drugs are discounted, the aggregate value of all the discounts in the bundled arrangement must be proportionally allocated across all the drugs or products in the bundle.

* * * * *

(5) *Submission requirements.* Manufacturers must submit the following to CMS within 30 days of the close of the quarter: The manufacturer's average sales price must be calculated by the manufacturer every calendar quarter and submitted to CMS within 30 days of the close of the quarter. The first quarter submission must be submitted by April 30, 2004. Subsequent reports are due not later than 30 days after the last day of each calendar quarter.

(i) The manufacturer's average sales price, which must be calculated by the manufacturer every calendar quarter. The first quarter submission must be submitted by April 30, 2004.

(ii) Effective January 1, 2026, reasonable assumptions for calculations of the manufacturer's ASP, consistent with the general requirements and intent of the Act, Federal regulations, and its customary business practices including documentation of the methodology used to determine fair market value.

(iii) Effective January 1, 2026, certification letter from the recipient of

a bona fide service fee as evidence that the fee is not passed on in whole or in part to a client or customer of the recipient of the fee, whether or not the entity takes title to the drug.

* * * * *

- 18. Section 414.902 is amended by adding the definition of "biological" in alphabetical order to read as follows:

§ 414.902 Definitions.

* * * * *

Biological means a product licensed under section 351 of the Public Health Service Act.

* * * * *

- 19. Section 414.1305 is amended by—
 ■ a. Revising paragraph (6) of the definition for "Attribution-eligible beneficiary";

■ b. Adding the definitions "Covered professional service attribution-eligible beneficiary" and "E/M attribution-eligible beneficiary".

■ c. In the definition of "high priority measure", the phrase "care coordination, opioid, or health equity-related quality measure." is removed and added in its place is the phrase "care coordination or opioid-related quality measure.";

■ d. Revising the definitions of "Multispecialty group", "MVP participant", and "Single specialty group".

The revisions read as follows:

§ 414.1305 Definitions.

Attribution-eligible beneficiary means a beneficiary who, through the 2025 QP Performance Period:

- (1) Is not enrolled in Medicare Advantage or a Medicare cost plan;
- (2) Does not have Medicare as a secondary payer;
- (3) Is enrolled in both Medicare Parts A and B;
- (4) Is at least 18 years of age;
- (5) Is a United States resident; and
- (6) Has a minimum of one claim for evaluation and management services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period or, for an Advanced APM that does not base attribution on evaluation and management services and for which attributed beneficiaries are not a subset of the attribution-eligible beneficiary population based on the requirement to have at least one claim for evaluation and management services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period, the attribution basis determined by CMS based upon the methodology the Advanced APM uses for attribution, which may include

a combination of evaluation and management and other services.

* * * * *

Covered professional service attribution-eligible beneficiary means a beneficiary who, starting with the 2026 QP Performance Period:

- (1) Is not enrolled in Medicare Advantage or a Medicare cost plan;
- (2) Does not have Medicare as a secondary payer;
- (3) Is enrolled in both Medicare Parts A and B;
- (4) Is at least 18 years of age;
- (5) Is a United States resident; and
- (6) Has a minimum of one claim for a Covered Professional Service furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period.

* * * * *

E/M attribution-eligible beneficiary means a beneficiary who, starting with the 2026 QP Performance Period:

- (1) Is not enrolled in Medicare Advantage or a Medicare cost plan;
- (2) Does not have Medicare as a secondary payer;
- (3) Is enrolled in both Medicare Parts A and B;
- (4) Is at least 18 years of age;
- (5) Is a United States resident; and
- (6) Has a minimum of one claim for evaluation and management services furnished by an eligible clinician who is in the APM Entity for any period during the QP Performance Period.

* * * * *

Multispecialty group means a group as defined at § 414.1305 that consists of clinicians in two or more specialty types or clinicians involved in multiple foci of care.

MVP participant means an individual MIPS eligible clinician, multispecialty group, single-specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories. For the CY 2026 performance period/2028 MIPS payment year and future years, MVP Participant means an individual MIPS eligible clinician, single-specialty group, multispecialty group that meets the requirements of a small practice, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories.

* * * * *

Single specialty group means a group that consists of one specialty type or consists of clinicians involved in a single focus of care.

* * * * *

- 19. Section 414.1305 is amended by—
 ■ a. Revising paragraph (6) of the definition for "Attribution-eligible beneficiary";

■ b. In the definition of “high priority measure”, removing the phrase “care coordination, opioid, or health equity-related quality measure.” and adding in its place the phrase “care coordination or opioid-related quality measure”; and

■ c. Revising the definitions of “Multispecialty group”, “MVP participant”, and “Single specialty group.”

The revisions read as follows:

§ 414.1305 Definitions.

Attribution-eligible beneficiary

(6) Has a minimum of one claim for any covered professional service furnished by an eligible clinician who is on the Participation List for an Advanced APM Entity at any determination date during the QP Performance Period.

* * * * *

Multispecialty group means a group that consists of clinicians in two or more specialty types or clinicians involved in multiple foci of care.

MVP participant means an individual MIPS eligible clinician, multispecialty group, single-specialty group, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories. For the CY 2026 performance period/2028 MIPS payment year and subsequent years, MVP Participant means an individual MIPS eligible clinician, single-specialty group, multispecialty group that meets the requirements of a small practice, subgroup, or APM Entity that is assessed on an MVP in accordance with § 414.1365 for all MIPS performance categories.

* * * * *

Single specialty group means a group that consists of clinicians in one specialty type or clinicians involved in a single focus of care.

* * * * *

■ 20. Section 414.1355 is amended by revising paragraph (c)(7) to read as follows:

§ 414.1355 Improvement activities performance category

* * * * *

(c) * * *

(7) Advancing health and wellness, such as MIPS eligible clinicians demonstrating involvement in preventive care and health promotion.

* * * * *

■ 21. Section 414.1365 is amended by adding paragraph (b)(2)(iv) to read as follows:

§ 414.1365 MIPS Value Pathways.

* * * * *

(b) * * *

(2) * * *

(iv) *Self-attestation requirement.*

Beginning with the CY 2026 performance period/2028 MIPS payment year, to report an MVP, a group must attest to being either a single-specialty group or a multispecialty group that meets the requirements of a small practice.

* * * * *

■ 22. Section 414.1380 is amended by—

■ a. Revising paragraphs (b)(1)(i) introductory text, (b)(1)(ii)(D), and (b)(2)(iii) introductory text;

■ c. Adding paragraph (b)(2)(vi);

■ d. Revising paragraph (b)(4)(ii)(C); and

■ e. Adding paragraph (b)(4)(iii).

The revisions and additions read as follows:

§ 414.1380 Scoring.

* * * * *

(b) * * *

(1) * * *

(i) *Measure achievement points.* For the CY 2017 through 2022 performance periods/2019 through 2024 MIPS payment years, MIPS eligible clinicians receive between 3 and 10 measure achievement points (including partial points) for each measure required under § 414.1335 on which data is submitted in accordance with § 414.1325 that has a benchmark at paragraph (b)(1)(ii) of this section, meets the case minimum requirement at paragraph (b)(1)(iii) of this section, and meets the data completeness requirement at § 414.1340 and for each administrative claims-based measure that has a benchmark at paragraph (b)(1)(ii) of this section and meets the case minimum requirement at paragraph (b)(1)(iii) of this section. Except as provided under paragraph (b)(1)(i)(C) of this section, beginning with the CY 2023 performance period/2025 MIPS payment year, MIPS eligible clinicians receive between 1 and 10 measure achievement points (including partial points) for each such measure. Except as specified otherwise under paragraph (b)(1)(ii) of this section, the number of measure achievement points received for each such measure is determined based on the applicable benchmark decile category and the percentile distribution. MIPS eligible clinicians receive zero measure achievement points for each measure required under § 414.1335 on which no data is submitted in accordance with § 414.1325. MIPS eligible clinicians that submit data in accordance with § 414.1325 on a greater number of measures than required under § 414.1335 are scored only on the required measures with the greatest

number of measure achievement points. Beginning with the CY 2019 performance period/2021 MIPS payment year, MIPS eligible clinicians that submit data in accordance with § 414.1325 on a single measure via multiple collection types are scored only on the data submission with the greatest number of measure achievement points.

(ii) * * *

(D) *Administrative claims-based quality measure benchmark.*

(1) Beginning with the CY 2023 performance period/2025 MIPS payment year, CMS calculates a benchmark for an administrative claims quality measure using the performance on the measures during the current performance period.

(2) Beginning with the CY 2025 performance period/2027 MIPS payment year, for each administrative claims-based quality measure, CMS determines 10 benchmark ranges based on the median performance rate of all MIPS eligible clinicians scored on the measure, plus or minus standard deviations.

(i) CMS awards achievement points based on which benchmark range a MIPS eligible clinician's performance rate for an administrative claims-based quality measure corresponds; and

(ii) CMS awards achievement points equivalent to 10 percent of the performance threshold for a MIPS eligible clinician whose performance rate is equal to the median performance for all MIPS eligible clinicians scored on the measure.

(2) * * *

(iii) Excluding cost measure scores calculated for informational-only purposes as provided in paragraph (b)(2)(vi) of this section, the cost performance category score is the sum of the following, not to exceed 100 percent:

* * * * *

(vi) Beginning with the 2028 MIPS payment year, CMS calculates a score for each new cost measure in accordance with the scoring policy set forth in this paragraph (b)(2) of this section for informational-only purposes during the measure's informational-only feedback period.

(A) For the purposes of this paragraph (b)(2)(vi) of this section, the following terms have the following meanings.

(1) *New cost measure* means a measure that CMS has newly specified for the MIPS cost performance category for a performance period under § 414.1350 beginning with the 2028 MIPS payment year. This term excludes any cost measures that CMS has

specified for the MIPS cost performance category prior to the 2028 MIPS payment year or CMS modifies at any time.

(2) *Informational-only feedback period* means a 2-year period beginning with the first day of the first performance period and ending with the final day of the second performance period for the two applicable MIPS payment years for which CMS initially has specified the new cost measure.

(B) During a new cost measure's informational-only feedback period, CMS does not include any scores for the new cost measure calculated for informational-only purposes under paragraph (b)(2)(vi) of this section in CMS's calculation of a MIPS eligible clinician's cost performance category score under paragraph (b)(2)(iii) of this section or a MIPS eligible clinician's MIPS final score under paragraph (c) of this section.

(C) During a new cost measure's informational-only feedback period, CMS confidentially provides each MIPS eligible clinician their measure score under paragraph (b)(2)(vi) of this section for informational-only purposes. CMS also provides performance feedback to the MIPS eligible clinician in accordance with section 1848(q)(12) of the Act.

(D) Upon completion of a new cost measure's informational-only feedback period, CMS includes its calculation of any scores for the cost measure in CMS's calculation of a MIPS eligible clinician's cost performance category score under paragraph (b)(2)(iii) of this section and a MIPS eligible clinician's MIPS final score under paragraph (c) of this section.

(3) * * *

(4) * * *

(ii) * * *

(C)(1) For the 2019 performance period/2021 MIPS payment year through the 2022 performance period/2024 MIPS payment year, each optional measure is worth 5 or 10 bonus points, as specified by CMS.

(2) For the 2023 performance period/2025 MIPS payment year and subsequent years, each optional measure is worth 5 bonus points, as specified by CMS.

(3) Beginning with the CY 2026 performance period/2028 MIPS payment years, the total number of bonus points available to be earned when reporting one bonus measure, more than one bonus measure, or all bonus measures is a total of 5 bonus points.

(iii) Beginning with the CY 2026 performance period/2028 MIPS payment year, if certain circumstances

occur that impact CMS' assessment of the performance of MIPS eligible clinicians on a measure specified for the Promoting Interoperability performance category under § 414.1375(b), CMS may, in its sole discretion, suppress the affected measure by excluding it from CMS' assessment of performance while allocating the maximum points available or providing full credit for the affected measure as long as the affected measure is reported, resulting in a suppressed measure contributing to the Promoting Interoperability performance category objective score under paragraph (b)(4) of this section; or excluding it from the determination of a meaningful EHR user if the affected measure is not scored. CMS determines whether certain circumstances exist warranting suppression of a measure based on CMS' consideration of one or more of the following factors:

(A) The nature, breadth, and duration of the circumstances' effect on MIPS eligible clinicians' ability to fulfill the measure requirement.

(B) The availability of certified health IT modules to fulfill the measure.

(C) The circumstance affects the measure such that calculating the measure score would lead to misleading or inaccurate results, which may include performance or compliance.

(D) Out-of-date or conflicting technical standards.

(E) Technical and operational capacity of required partners.

(F) Other factors as determined by CMS.

* * * * *

■ 23. Section 414.1400 is amended by—

■ a. Revising paragraph (b)(1)(ii);

■ b. In paragraph (d)(3) introductory text, removing the phrase “including:” and adding in its place the phrase “including all of the following:”;

■ c. Revising paragraph (d)(3)(i);

■ d. In paragraphs (d)(3)(ii) and (iii), removing the “;” and adding in its place “.”;

■ e. Redesignating paragraphs (d)(3)(iv) through (vi) as paragraphs (d)(3)(iv) through (vi) introductory text;

■ f. Adding paragraphs (d)(3)(iv)(A) and (B), (d)(3)(v)(A) and (B), (d)(3)(vi)(A) and (B), and (d)(3)(vii).

■ g. Revising paragraph (d)(8); and

■ h. Adding paragraphs (d)(9) and (d)(10).

The revisions and additions read as follows:

§ 414.1400 Third party intermediaries.

* * * * *

(b) * * *

(1) * * *

(ii)(A) Beginning with the CY 2023 performance period/2025 MIPS

payment year through the CY 2025 performance period/2027 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participant on whose behalf they submit MIPS data.

(B) Beginning with the CY 2026 performance period/2028 MIPS payment year, QCDRs and qualified registries must support MVPs that are applicable to the MVP participant on whose behalf they submit MIPS data no later than 1 year after finalization of the MVP in accordance with the current requirement.

(1) QCDRs and qualified registries may also support the APP.

(2) A QCDR or qualified registry must support all measures and activities included in the MVP with the following exceptions:

(i) If an MVP is intended for reporting by multiple specialties, a QCDR or a qualified registry are required to report those measures pertinent to the specialty of its MIPS eligible clinicians.

(ii) If an MVP includes a QCDR measure, it is not required to be reported by a QCDR other than the measure owner.

* * * * *

(d) * * *

(3) * * *

(i) At least 3 years of experience administering surveys in which mail survey administration is followed by survey administration via Computer Assisted Telephone Interview (CATI);

(iv) * * *

(A) Beginning January 1, 2024, in addition to administering the survey in English, entities must administer the Spanish survey translation to Spanish-speaking patients using the procedures detailed in subregulatory guidance to standardize the CAHPS data collection process for MIPS and to make sure the survey data collected across survey vendors are comparable within the program or model;.

(B) [Reserved]

(v) * * *

(A) Beginning January 1, 2027, use equipment, software, computer programs, systems, and facilities that can send survey invitations via email that include a patient-specific hyperlink to a web survey, collect data via web, and track cases from web surveys through telephone follow-up activities.

(B) [Reserved]

(vi) * * *

(A) Beginning January 1, 2027, employ a web survey administrator.

(B) [Reserved]

(vii) Beginning January 1, 2027, at least 3 years of experience administering surveys in which web

survey administration is followed by survey administration via mail survey or Computer Assisted Telephone Interview (CATI).

* * * * *

(8) From January 1, 2019 through December 31, 2025, the entity has sent an interim survey data file to CMS that establishes the entity's ability to accurately report CAHPS data.

(9) Beginning with January 1, 2026, the entity seeking to be a CMS-approved survey vendor must include on its application the range of costs of its third-party intermediary services.

(10) Beginning with the CY 2027 performance period/2029 MIPS payment year, the CMS-approved survey vendor must administer the survey via a web-mail-phone protocol.

* * * * *

■ 24. Section 414.1405 amended by adding paragraph (b)(10)(ii) to read as follows:

§ 414.1405 Payment.

* * * * *

- (b) * * *
- (10) * * *
- (i) * * *

(ii) The performance threshold for the 2028 through 2030 MIPS payment years is 75 points. The prior period used to determine the performance threshold is the 2019 MIPS payment year.

* * * * *

§ 414.1415 [Amended]

■ 25. Section 414.1415 is amended in paragraph (c)(7) by removing the phrase “2023 QP Performance Period, notwithstanding” and adding in its place the phrase “2023 QP Performance Period and ending with the 2025 QP Performance Period, notwithstanding”.

§ 414.1420 [Amended]

■ 26. Section 414.1420 is amended in paragraph (d)(8) by removing the phrase “2023 QP Performance Period, notwithstanding” and adding in its place the phrase “2023 QP Performance Period and ending with the 2025 QP Performance Period, notwithstanding”.

* * * * *

■ 27. Section 414.1425 is amended by—
(a) Adding paragraph (b)(3); and
(b) Revising paragraphs (c)(3), (c)(4), (d)(1), and (2).

The addition and revisions read as follows:

§ 414.1425 Qualifying APM participant determination: In general.

* * * * *

- (b) * * *

(3) For QP Performance Periods beginning with 2026, except for

paragraphs (b)(1) and (b)(2) of this section and as set forth in § 414.1440, for purposes of the QP determinations, CMS performs QP determinations for the eligible clinicians three times during the QP Performance Period using claims data for services furnished from January 1 through each of the respective QP determination dates: March 31, June 30, and August 31. An eligible clinician can be determined to be a QP only if the eligible clinician appears on the Participation List on a date (March 31, June 30, or August 31) CMS uses based on participation in the Advanced APM.

(c) * * *

(3) An eligible clinician is a QP for a year under the Medicare Option if—

(i) Starting with the CY 2017 QP Performance Period and ending with the CY 2025 QP Performance Period, the eligible clinician is in an APM Entity group that achieves a Threshold Score that meets or exceeds the corresponding QP payment amount threshold or QP patient count threshold for that QP Performance Period as described in § 414.1430(a)(1) and (3). An eligible clinician is a QP for the year under the All-Payer Combination Option if the eligible clinician individually, or as part of an APM Entity group, achieves a Threshold Score that meets or exceeds the corresponding QP payment amount threshold or QP patient count threshold for that QP Performance Period as described in § 414.1430(b)(1) and (3).

(ii) Beginning with the CY 2026 QP Performance Period, the eligible clinician individually, or as part of an APM Entity group, achieves a Threshold Score that meets or exceeds the corresponding QP payment amount threshold or QP patient count threshold for that QP Performance Period as described in § 414.1430(a)(1) and (3). An eligible clinician is a QP for the year under the All-Payer Combination Option if the eligible clinician individually, or as part of an APM Entity group, achieves a Threshold Score that meets or exceeds the corresponding QP payment amount threshold or QP patient count threshold for that QP Performance Period as described in § 414.1430(b)(1) and (3).

(4) Starting with the CY 2017 QP Performance Period and ending with the CY 2025 QP Performance Period, notwithstanding paragraph (c)(3) of this section, an eligible clinician is a QP for a year if—

(i) The eligible clinician is included in more than one APM Entity group and none of the APM Entity groups in which the eligible clinician is included meets the QP payment amount threshold or the QP patient count threshold, or the

eligible clinician is an Affiliated Practitioner; and

(ii) CMS determines that the eligible clinician individually achieves a Threshold Score that meets or exceeds the QP payment amount threshold or the QP patient count threshold.

* * * * *

(d) * * *

(1) An eligible clinician is a Partial QP for a year under the Medicare Option if:

(i) Starting with the CY 2017 QP Performance Period and ending with the CY 2025 QP Performance Period, the eligible clinician is in an APM Entity group that achieves Threshold Score that meets or exceeds the corresponding Partial QP payment amount threshold or Partial QP patient count threshold for that QP Performance Period as described in § 414.1430(a)(2) and (4). An eligible clinician is a Partial QP for the year under the All-Payer Combination Option if the eligible clinician achieves individually, or as part of an APM Entity group, a Threshold Score that meets or exceeds the corresponding Partial QP payment amount threshold or Partial QP patient count threshold for that QP Performance Period as described in § 414.1430(b)(2) and (4).

(ii) Beginning with the CY 2026 QP Performance Period, the eligible clinician individually, or as part of an APM Entity group, achieves a Threshold Score that meets or exceeds the corresponding Partial QP payment amount threshold or Partial QP patient count threshold for that QP Performance Period as described in § 414.1430(a)(2) and (4). An eligible clinician is a Partial QP for the year under the All-Payer Combination Option if the eligible clinician achieves individually, or as part of an APM Entity group, a Threshold Score that meets or exceeds the corresponding Partial QP payment amount threshold or Partial QP patient count threshold for that QP Performance Period as described in § 414.1430(b)(2) and (4).

(2) Starting with the CY 2017 QP Performance Period and ending with the CY 2025 QP Performance Period, notwithstanding paragraph (d)(1) of this section, an eligible clinician is a Partial QP for a year if—

(i) The eligible clinician is included in more than one APM Entity group and none of the APM Entity groups in which the eligible clinician is included meets the corresponding QP or Partial QP threshold, or the eligible clinician is an Affiliated Practitioner; and

(ii) CMS determines that the eligible clinician individually achieves a Threshold Score that meets or exceeds the corresponding Partial QP Threshold.

* * * * *

■ 28. Section 414.1435 is revised to read as follows:

§ 414.1435 Qualifying APM participant determination: Medicare option.

* * * * *

(a) *Payment amount method.* For QP performance periods through 2025, the Threshold Score for an APM Entity or eligible clinician is calculated as a percent by dividing the value described under *paragraph (a)(1)* of this section by the value described under *paragraph (a)(2)* of this section.

(1) *Numerator.* The aggregate of payments for Medicare Part B covered professional services furnished by the APM Entity group to attributed beneficiaries during the QP Performance Period.

(2) *Denominator.* The aggregate of payments for Medicare Part B covered professional services furnished by the APM Entity group to all attribution-eligible beneficiaries during the QP Performance Period.

(3) *Claims and adjustments.* In the calculations under *paragraphs (a)(1)* and *(2)* of this section, CMS compiles claims and treats claims adjustments, supplemental service payments, and alternative payment methods in the same manner as described in § 414.1450.

(b) *Patient count method.* For QP performance periods through 2025, the Threshold Score for each eligible clinician in an APM Entity group is calculated as a percent under the patient count method by dividing the value described under *paragraph (b)(1)* of this section by the value described under *paragraph (b)(2)* of this section.

(1) *Numerator.* The number of attributed beneficiaries to whom the APM Entity group furnishes Medicare Part B covered professional services or services by a Rural Health Clinic (RHC) or Federally-Qualified Health Center (FQHC) during the QP Performance Period.

(2) *Denominator.* The number of attribution-eligible beneficiaries to whom the APM Entity group or eligible clinician furnish Medicare Part B covered professional services or services by a Rural Health Clinic (RHC) or Federally-Qualified Health Center (FQHC) during the QP Performance Period.

(3) *Unique beneficiaries.* For each APM Entity group, a unique Medicare beneficiary is counted no more than one time for the numerator and no more than one time for the denominator.

(4) *Beneficiaries count multiple times.* Based on attribution under the terms of an Advanced APM, a single Medicare beneficiary may be counted in the

numerator or denominator for multiple different APM Entity groups.

(2) When operationally feasible, this attributed beneficiary list will be the final beneficiary list used for reconciliation purposes in the Advanced APM.

(3) When it is not operationally feasible to use the final attributed beneficiary list, the attributed beneficiary list will be taken from the Advanced APM's most recently available attributed beneficiary list at the end of the QP Performance Period.

(c) *Covered Professional Service Payment amount method.* Starting with the 2026 QP performance period, the Threshold Score for an APM Entity or eligible clinician is calculated as a percent by dividing the value described under *paragraph (c)(1)* of this section by the value described under *paragraph (c)(2)* of this section.

(1) *Numerator.* The aggregate of payments for Medicare Part B covered professional services furnished by the APM Entity group to attributed beneficiaries during the QP Performance Period.

(2) *Denominator.* The aggregate of payments for Medicare Part B covered professional services furnished by the APM Entity group to all Covered Professional Service attribution-eligible beneficiaries during the QP Performance Period.

(3) *Claims and adjustments.* In the calculations under *paragraphs (c)(1)* and *(2)* of this section, CMS compiles claims and treats claims adjustments, supplemental service payments, and alternative payment methods in the same manner as described in § 414.1450.

(d) *Covered Professional Service Patient count method.* Starting with the 2026 QP performance period the Threshold Score for each eligible clinician in an APM Entity group is calculated as a percent under the patient count method by dividing the value described under *paragraph (e)(1)* of this section by the value described under *paragraph (d)(2)* of this section.

(1) *Numerator.* The number of attributed beneficiaries to whom the APM Entity group furnishes Medicare Part B covered professional services or services by a Rural Health Clinic (RHC) or Federally-Qualified Health Center (FQHC) during the QP Performance Period.

(2) *Denominator.* The number of Covered Professional Service attribution-eligible beneficiaries to whom the APM Entity group or eligible clinician furnish Medicare Part B covered professional services or services by a Rural Health Clinic (RHC) or

Federally-Qualified Health Center (FQHC) during the QP Performance Period.

(3) *Unique beneficiaries.* For each APM Entity group, a unique Medicare beneficiary is counted no more than one time for the numerator and no more than one time for the denominator.

(4) *Beneficiaries count multiple times.* Based on attribution under the terms of an Advanced APM, a single Medicare beneficiary may be counted in the numerator or denominator for multiple different APM Entity groups.

(e) *E/M Payment amount method.* Starting with the 2026 QP performance period, the Threshold Score for an APM Entity or eligible clinician is calculated as a percent by dividing the value described under *paragraph (e)(1)* of this section by the value described under *paragraph (e)(2)* of this section.

(1) *Numerator.* The aggregate of payments for Medicare Part B covered professional services furnished by the APM Entity group to attributed beneficiaries during the QP Performance Period.

(2) *Denominator.* The aggregate of payments for Medicare Part B covered professional services furnished by the APM Entity group to all E/M attribution-eligible beneficiaries during the QP Performance Period.

(3) *Claims and adjustments.* In the calculations under *paragraphs (e)(1)* and *(2)* of this section, CMS compiles claims and treats claims adjustments, supplemental service payments, and alternative payment methods in the same manner as described in § 414.1450.

(f) *E/M Patient count method.* Starting with the 2026 QP performance period, the Threshold Score for each eligible clinician in an APM Entity group is calculated as a percent under the patient count method by dividing the value described under *paragraph (f)(1)* of this section by the value described under *paragraph (f)(2)* of this section.

(1) *Numerator.* The number of attributed beneficiaries to whom the APM Entity group furnishes Medicare Part B covered professional services or services by a Rural Health Clinic (RHC) or Federally-Qualified Health Center (FQHC) during the QP Performance Period.

(2) *Denominator.* The number of E/M attribution-eligible beneficiaries to whom the APM Entity group or eligible clinician furnish Medicare Part B covered professional services or services by a Rural Health Clinic (RHC) or Federally-Qualified Health Center (FQHC) during the QP Performance Period.

(3) *Unique beneficiaries.* For each APM Entity group, a unique Medicare beneficiary is counted no more than one time for the numerator and no more than one time for the denominator.

(4) *Beneficiaries count multiple times.* Based on attribution under the terms of an Advanced APM, a single Medicare beneficiary may be counted in the numerator or denominator for multiple different APM Entity groups.

(g) *Attribution.*

(1) Attributed beneficiaries are determined from each Advanced APM Entity's attributed beneficiary lists generated by each Advanced APM's specific attribution methodology except as set forth in *paragraph (g)(1)* of this section.

(i) Beneficiaries who have been prospectively attributed to an APM Entity for a QP Performance Period will be excluded from the attribution-eligible beneficiary count for any other APM Entity that is participating in an APM where that beneficiary would be ineligible to be added to the APM Entity's attributed beneficiary list.

(ii) [Reserved]

(2) When operationally feasible, this attributed beneficiary list will be the final beneficiary list used for reconciliation purposes in the Advanced APM.

(3) When it is not operationally feasible to use the final attributed beneficiary list, the attributed beneficiary list will be taken from the Advanced APM's most recently available attributed beneficiary list at the end of the QP Performance Period.

(h) *Use of methods.* CMS calculates Threshold Scores for an APM Entity or eligible clinician as provided by § 414.1425(b) under all payment amount and patient count methods for each QP Performance Period. CMS then assigns to the eligible clinicians included in the APM Entity group or to the eligible clinician the score that results in the greater QP status. QP status is greater than Partial QP status, and Partial QP status is greater than no QP status.

* * * * *

■ 29. Section 414.1455 is amended by revising paragraph (b)(3)(ii) and (vi) to read as follows:

§ 414.1455 Limitation on review.

* * * * *

(b) * * *

(3) * * *

(ii) All requests for targeted review must be submitted during the targeted review request submission period as described at § 414.1385(a)(2). The targeted review request submission

period may be extended as specified by CMS.

* * * * *

(vi) A request for targeted review may include additional information in support of the request at the time it is submitted. CMS may also request additional information from the requestor. If CMS requests additional information relating to the eligible clinician or the APM Entity group that is the subject of a request for targeted review, responsive information must be provided and received by CMS within 15 days of the request. If CMS does not receive a timely response to a request for additional information, CMS may make a final decision on the targeted review request based on the information available.

* * * * *

PART 424—CONDITIONS FOR MEDICARE PAYMENT

■ 30. The authority citation for part 424 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 31. Section 424.205 amended by revising paragraphs (c)(10), (f)(2)(i), and (f)(5) to read as follows:

§ 424.205 Requirements for Medicare Diabetes Prevention Program suppliers.

* * * * *

(c) * * *

(10) Except as allowed under paragraph (d)(8) of this section, the MDPP supplier must offer an MDPP beneficiary no fewer than all of the following:

(i) 16 in-person, distance learning, or Online core sessions no more frequently than weekly for the first 6 months of the MDPP services period, which begins on the date of attendance at the first core session.

(ii) One in-person, distance learning, or Online core maintenance session each month during months 7 through 12 (6 months total) of the MDPP services period.

* * * * *

(f) * * *

(1) * * *

(ii) Basic beneficiary information for each MDPP beneficiary in attendance, including but not limited to beneficiary name, MBI, and age.

* * * * *

(2) * * *

(i) Documentation of the type of session (in-person, distance learning, or Online).

* * * * *

(5) The MDPP supplier's records must include an attestation from the MDPP supplier that, as applicable, the MDPP

beneficiary for which it is submitting a claim—

(i) Has achieved required minimum weight loss as measured in accordance with § 410.79(e)(3)(iii) of this chapter during a core session or core maintenance session furnished by that supplier, if the claim submitted is for a performance payment under § 414.84(b)(1) of this chapter.

(ii) Has achieved required minimum weight loss as measured in accordance with § 410.79(c)(ii) during a core session or core maintenance session furnished by that supplier, if the claim submitted is for a performance payment under § 414.84(b)(1) of this chapter.

(iii) Has achieved at least a 9-percent weight loss percentage as measured in accordance with § 410.79(e)(3)(iii) of this chapter during a core session or core maintenance session furnished by that supplier, if the claim submitted is for a performance payment under § 414.84(b)(2) of this chapter.

(iv) Has achieved at least a 9-percent weight loss percentage as measured in accordance with § 410.79(c)(ii) during a core session or core maintenance session furnished by that supplier, if the claim submitted is for a performance payment under § 414.84(b)(2) of this chapter.

* * * * *

PART 425—MEDICARE SHARED SAVINGS PROGRAM

■ 32. The authority citation for part 425 continues to read as follows:

Authority: 42 U.S.C. 1302, 1306, 1395hh, and 1395jjj.

■ 33. Section 425.20 is amended by revising paragraph (1)(ii) in the definition of “Beneficiary eligible for Medicare CQMs” to read as follows:

§ 425.20 Definitions.

* * * * *

Beneficiary eligible for Medicare CQMs * * *

(1) * * *

(ii)(A) For performance year 2024, had at least one claim with a date of service during the measurement period from an ACO professional who is a primary care physician or who has one of the specialty designations included in § 425.402(c), or who is a physician assistant, nurse practitioner, or clinical nurse specialist.

(B) For performance year 2025 and subsequent performance years, had at least one primary care service with a date of service during the applicable performance year from an ACO professional who is a primary care physician or who has one of the

specialty designations included in § 425.402(c), or who is a physician assistant, nurse practitioner, or clinical nurse specialist.

* * * *

■ 34. Section 425.110 is amended by revising paragraph (a)(2) and adding paragraph (a)(3) to read as follows:

§ 425.110 Number of ACO professionals and beneficiaries.

(a) * * *

(2) For agreement periods beginning before January 1, 2027, CMS deems an ACO to have initially satisfied the requirement to have at least 5,000 assigned beneficiaries as specified in paragraph (a)(1) of this section if 5,000 or more beneficiaries are historically assigned to the ACO participants in each of the 3 benchmark years, as calculated using the assignment methodology set forth in subpart E of this part. In the case of the third benchmark year, CMS uses the most recent data available to estimate the number of assigned beneficiaries.

(3) For agreement periods beginning on or after January 1, 2027, CMS determines whether an ACO has 5,000 or more beneficiaries historically assigned to the ACO participants in each of the 3 benchmark years, as calculated using the assignment methodology set forth in subpart E of this part. In the case of the third benchmark year, CMS uses the most recent data available to estimate the number of assigned beneficiaries.

(i) CMS deems an ACO to have initially satisfied the requirement to have at least 5,000 assigned beneficiaries as specified in paragraph (a)(1) of this section if 5,000 or more beneficiaries are historically assigned to the ACO participants in the third benchmark year.

(ii) If an ACO has fewer than 5,000 assigned beneficiaries in either the first benchmark year, the second benchmark year, or both, the ACO may only participate under the BASIC track in accordance with § 425.600(h)(3).

* * * *

■ 35. Section 425.118 is amended by—

■ a. Redesignating paragraph (b)(3) as paragraph (b)(4);

■ b. Adding new paragraph (b)(3); and

■ c. In newly redesignated paragraph (b)(4) adding paragraph (b)(4)(iii).

The additions read as follows:

§ 425.118 Required reporting of ACO participants and ACO providers/suppliers.

* * * *

(b) * * *

(3) *Change of ownership for ACO participant.* No later than 30 days after

an ACO participant has undergone a change of ownership that has resulted in a change to its Medicare enrolled TIN, whereby the surviving Medicare enrolled TIN has no Medicare billing claims history, the ACO must submit a change request to CMS.

(i) The change request and supporting documentation must be submitted in the form and manner specified by CMS.

(ii)(A) CMS has sole discretion to approve the change request.

(B) If CMS approves the change request, the ACO participant TIN is updated in the ACO participant list in the form and manner specified by CMS.

(4) * * *

(iii) In alignment with changes approved under paragraph (b)(3) of this section, CMS adjusts the ACO's assignment, performance year financial calculations, and the requirement that the ACO submit quality data under § 425.508 and § 425.510 on behalf of eligible professionals that bill under the TIN of an ACO participant. When processed during applicable Quality Payment Program snapshot dates for the relevant Performance Period, the adjustment includes the surviving Medicare enrolled TIN with no Medicare billing claims history on the ACO participant list as the change becomes effective during the performance year.

* * * *

■ 36. Section 425.224 is amended by revising paragraph (b)(1)(ii)(A) to read as follows:

§ 425.224 Application procedures for renewing ACOs and re-entering ACOs.

* * * *

(b) * * *

(1) * * *

(ii) * * *

(A) Whether the ACO demonstrated a pattern of failure to meet both the quality performance standard and alternative quality performance standard (if applicable) or met any of the criteria for termination under § 425.316(c)(1)(ii), (c)(2)(ii), or (c)(3)(ii).

* * * *

■ 37. Section 425.316 is amended by revising paragraph (c)(2) introductory text and adding paragraph (c)(3) to read as follows:

§ 425.316 Monitoring of ACOs.

* * * *

(c) * * *

(2) *For performance years beginning on or after January 1, 2021 and before January 1, 2026.*

* * * *

(3) *For performance years beginning on or after January 1, 2026.*

(i) If the ACO fails to meet both the quality performance standard and the alternative quality performance standard, CMS may take one or more of the actions prior to termination specified in § 425.216. Depending on the nature and severity of the noncompliance, CMS may forgo pre-termination actions and may immediately terminate the ACO's participation agreement under § 425.218.

(ii) CMS terminates an ACO's participation agreement under any of the following circumstances:

(A) The ACO fails to meet both the quality performance standard and the alternative quality performance standard for 2 consecutive performance years within an agreement period.

(B) The ACO fails to meet both the quality performance standard and the alternative quality performance standard for any 3 performance years within an agreement period, regardless of whether the years are in consecutive order.

(C) A renewing ACO or re-entering ACO fails to meet both the quality performance standard and the alternative quality performance standard for the last performance year of the ACO's previous agreement period and this occurrence was either the second consecutive performance year of failed quality performance or the third nonconsecutive performance year of failed quality performance during the previous agreement period.

(D) A renewing ACO or re-entering ACO fails to meet both the quality performance standard and the alternative quality performance standard for 2 consecutive performance years across 2 agreement periods, specifically the last performance year of the ACO's previous agreement period and the first performance year of the ACO's new agreement period.

* * * *

■ 38. Section 425.400 is amended by revising paragraph (c)(1)(ix) introductory text and adding paragraph (c)(1)(x) to read as follows:

§ 425.400 General.

* * * *

(c) * * *

(1) * * *

(ix) For the performance year starting on January 1, 2025, as follows:

* * * *

(x) For the performance year starting on January 1, 2026, and subsequent performance years as follows:

(A) CPT codes:

(1) 96160 and 96161 (codes for administration of health risk assessment).

(2) 96202 and 96203 (codes for caregiver behavior management training).

(3) 97550, 97551, and 97552 (codes for caregiver training services).

(4) 98016 (code for virtual check-in).

(5) 99201 through 99215 (codes for office or other outpatient visit for the evaluation and management of a patient).

(6) 99304 through 99318 (codes for professional services furnished in a nursing facility; professional services or services reported on an FQHC or RHC claim identified by these codes are excluded when furnished in a skilled nursing facility (SNF)).

(7) 99319 through 99340 (codes for patient domiciliary, rest home, or custodial care visit).

(8) 99341 through 99350 (codes for evaluation and management services furnished in a patient's home).

(9) 99354 and 99355 (add-on codes, for prolonged evaluation and management or psychotherapy services beyond the typical service time of the primary procedure; when the base code is also a primary care service code under this paragraph (c)(1)(x)).

(10) 99406 and 99407 (codes for smoking and tobacco-use cessation counseling services).

(11) 99421, 99422, and 99423 (codes for online digital evaluation and management).

(12) 99424, 99425, 99426, and 99427 (codes for principal care management services).

(13) 99437, 99487, 99489, 99490 and 99491 (codes for chronic care management).

(14) 99439 (code for non-complex chronic care management).

(15) 99452 (code for interprofessional consultation service).

(16) 99483 (code for assessment of and care planning for patients with cognitive impairment).

(17) 99484, 99492, 99493 and 99494 (codes for behavioral health integration services).

(18) 99495 and 99496 (codes for transitional care management services).

(19) 99497 and 99498 (codes for advance care planning; services identified by these codes furnished in an inpatient setting are excluded).

(B) HCPCS codes:

(1) G0019 and G0022 (codes for community health integration services).

(2) G0023 and G0024 (codes for principal illness navigation services).

(3) G0101 (code for cervical or vaginal cancer screening).

(4) G0136 (code for physical activity and nutritional assessment services).

(5) G0317, G0318, and G2212 (codes for prolonged office or other outpatient

visit for the evaluation and management of a patient).

(6) G0402 (code for the Welcome to Medicare visit).

(7) G0438 and G0439 (codes for the annual wellness visits).

(8) G0442 (code for alcohol misuse screening service).

(9) G0443 (code for alcohol misuse counseling service).

(10) G0444 (code for annual depression screening service).

(11) G0463 (code for services furnished in electing teaching amendment (ETA) hospitals).

(12) G0506 (code for chronic care management).

(13) G0537 and G0538 (codes for cardiovascular risk assessment and risk management services).

(14) G0539 and G0540 (codes for individual behavior management/modification caregiver training services).

(15) G0541, G0542, and G0543 (codes for direct care caregiver training services).

(16) G0544 (code for post-discharge telephonic follow-up contacts intervention).

(17) G0556, G0557, and G0558 (codes for advanced primary care management services).

(18) G0560 (code for safety planning interventions).

(19) G0568 and G0569 (codes for behavioral health integration add-on when furnished with advanced primary care management services).

(20) G0570 (code for psychiatric collaborative care model add-on when furnished with advanced primary care management services).

(21) G2010 (code for the remote evaluation of patient video/images).

(22) G2012 and G2252 (codes for virtual check-in).

(23) G2058 (code for non-complex chronic care management).

(24) G2064 and G2065 (codes for principal care management services).

(25) G2086, G2087, and G2088 (codes for office-based opioid use disorder services).

(26) G2211 (code for visit complexity inherent to evaluation and management services add-on).

(27) G2214 (code for psychiatric collaborative care model).

(28) G3002 and G3003 (codes for chronic pain management).

(C) Primary care service codes include any CPT code identified by CMS that directly replaces a CPT code specified in paragraph (c)(1)(x)(A) of this section or a HCPCS code specified in paragraph (c)(1)(x)(B) of this section, when the assignment window or expanded window for assignment (as defined in

§ 425.20) for a benchmark or performance year includes any day on or after the effective date of the replacement code for payment purposes under FFS Medicare.

* * * * *

■ 39. Section 425.512 is amended by—

■ a. In paragraph (a)(3)(i), removing the phrase “quality performance score” and adding in its place the phrase “quality score”;

■ b. In paragraphs (a)(4)(i)(A), (a)(5)(i)(A)(1), (a)(5)(i)(B)(1), (a)(5)(i)(C)(1), and (a)(7), removing the phrase “health equity adjusted quality performance score” and adding in its place the phrase “quality score”;

■ c. Revising and republishing paragraph (b);

■ d. Revising paragraph (c)(1) introductory text;

■ e. Adding paragraph (c)(1)(iii);

■ f. In paragraphs (c)(2)(i), (c)(2)(ii), and (c)(3)(i), removing the phrase “quality performance score” and adding in its place the phrase “quality score”; and

■ g. In paragraphs (c)(3)(ii), (c)(3)(iii), and (c)(3)(iv), removing the phrase “health equity adjusted quality performance score” and adding in its place the phrase “quality score”.

The revisions and addition read as follows:

§ 425.512 Determining the ACO quality performance standard for performance years beginning on or after January 1, 2021.

* * * * *

(b) *Calculation of an adjustment to an ACO's quality score for performance years 2023 through 2025—*

(1) *For performance year 2023.* For an ACO that reports the three eCQMs/MIPS CQMs in the APP quality measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all three eCQMs/MIPS CQMs, and administers the CAHPS for MIPS survey, CMS calculates the ACO's quality score as the sum of the ACO's MIPS Quality performance category score for all measures in the APP quality measure set and the ACO's population and income adjustment bonus points calculated in accordance with paragraph (b)(4) of this section. The sum of these values may not exceed 100 percent.

(2) *For performance year 2024.* For an ACO that reports the three eCQMs/MIPS CQMs/Medicare CQMs in the APP quality measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all three eCQMs/MIPS CQMs/Medicare CQMs, and administers the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), CMS calculates the ACO's quality score as the sum of the ACO's

MIPS Quality performance category score for all measures in the APP quality measure set and the ACO's population and income adjustment bonus points calculated in accordance with paragraph (b)(4) of this section. The sum of these values may not exceed 100 percent.

(3) *For performance year 2025.* For an ACO that reports all of the required measures in the APP Plus quality measure set, meeting the data completeness requirement at § 414.1340 of this subchapter for all of the required measures in the APP Plus quality measure set, and administers the CAHPS for MIPS survey (except as specified in § 414.1380(b)(1)(vii)(B) of this subchapter), CMS calculates the ACO's quality score as the sum of the ACO's MIPS Quality performance category score for all measures in the APP Plus quality measure set and the ACO's population and income adjustment bonus points calculated in accordance with paragraph (b)(4) of this section. The sum of these values may not exceed 100 percent.

(4) *Calculation of ACO's population and income adjustment bonus points.* CMS calculates the ACO's bonus points as follows:

(i) For each measure that an ACO is required to report for the applicable performance year, CMS groups an ACO's performance into the top, middle, or bottom third of ACO measure performers by reporting mechanism.

(ii) CMS assigns values to the ACO for its performance on each measure as follows:

(A) Values of four, two, or zero for each measure for which the ACO's performance places it in the top, middle, or bottom third of ACO measure performers, respectively.

(B) Values of zero for each measure that CMS does not evaluate because the measure is unscored or the ACO does not meet the case minimum or the minimum sample size for the measure.

(iii) CMS sums the values assigned to the ACO according to paragraph (b)(4)(ii) of this section, to calculate the ACO's measure performance scaler.

(iv) CMS calculates a multiplier for the ACO.

(A) (1) CMS determines the proportion ranging from zero to one of the ACO's assigned beneficiary population for the performance year based on the highest of either of the following:

(i) The proportion of the ACO's assigned beneficiaries residing in a census block group with an Area Deprivation Index (ADI) national percentile rank of at least 85. An ACO's assigned beneficiaries without an available numeric ADI national

percentile rank are excluded from the calculation of the proportion of the ACO's assigned beneficiaries residing in a census block group with an ADI national percentile rank of at least 85.

(ii) The proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D low-income subsidy (LIS); or are dually eligible for Medicare and Medicaid.

(2) CMS calculates the proportions specified in paragraph (b)(4)(iv)(A)(1)(ii) of this section as follows:

(i) For performance year 2023, the proportion of the ACO's assigned beneficiaries who are enrolled in the Medicare Part D LIS or are dually eligible for Medicare and Medicaid divided by the total number of the ACO's assigned beneficiaries' person years.

(ii) For performance years 2024 and 2025, the proportion of the ACO's assigned beneficiaries with any months enrolled in the Medicare Part D LIS or are dually eligible for Medicare and Medicaid divided by the total number of the ACO's assigned beneficiaries.

(B) If the proportion determined in accordance with paragraph (b)(4)(iv)(A) of this section is lower than 20 percent, the ACO is ineligible for bonus points.

(v) Except as specified in paragraph (b)(4)(iv)(B) of this section, CMS calculates the ACO's bonus points as the product of the measure performance scaler determined under paragraph (b)(4)(iii) of this section and the multiplier determined under paragraph (b)(4)(iv) of this section. If the product of these values is greater than 10, the value of the ACO's bonus points is set equal to 10.

(5) *Use of ACO's quality score.* The ACO's quality score, determined in accordance with paragraphs (b)(1) through (4) of this section, is used as follows:

(i) In determining whether the ACO meets the quality performance standard as specified under paragraphs (a)(4)(i)(A), (a)(5)(i)(A)(1), (a)(5)(i)(B), and (a)(7) of this section.

(ii) In determining the final sharing rate for calculating shared savings payments under the BASIC track in accordance with § 425.605(d), and under the ENHANCED track in accordance with § 425.610(d), for an ACO that meets the alternative quality performance standard by meeting the criteria specified in paragraph (a)(4)(ii) or (a)(5)(ii) of this section.

(iii) In determining the shared loss rate for calculating shared losses under the ENHANCED track in accordance with § 425.610(f), for an ACO that meets the quality performance standard established in paragraphs (a)(2), (a)(4)(i),

and (a)(5)(i) of this section or the alternative quality performance standard established in paragraph (a)(4)(ii) or (a)(5)(ii) of this section.

(iv) In determining the quality score for an ACO affected by extreme and uncontrollable circumstances as described in paragraphs (c)(3)(ii) through (iv) of this section (as applicable).

(c) * * *

(1) CMS determines the ACO was affected by an extreme and uncontrollable circumstance based on any of the following:

* * * * *

(iii) For performance year 2025 and subsequent performance years, the ACO, as defined at § 425.20, is affected by an extreme and uncontrollable circumstance due to a cyberattack, including ransomware/malware, as determined by the Quality Payment Program.

* * * * *

■ 40. Section 425.600 is amended by—

■ a. In paragraph (a)(4)(i)(C)(1), removing the phrase “paragraph (g)(1) of this section” and adding in its place the phrase “paragraphs (g)(1) or (h)(1) of this section”;

■ b. In paragraph (a)(4)(i)(C)(2)(iii), removing the phrase “paragraph (h)(2)(i) of this section” and adding in its place the phrase “paragraph (i)(2)(i) of this section”;

■ c. In paragraph (a)(4)(ii), removing the phrase “paragraph (d) or paragraph (g)(2) of this section” and adding in its place the phrase “paragraphs (d), (g)(2) or (h) of this section”;

■ d. Revising paragraph (g) introductory text;

■ e. Redesignating paragraph (h) as paragraph (i); and

■ f. Adding new paragraph (h).

The revision and addition read as follows:

§ 425.600 Selection of risk model.

* * * * *

(g) For agreement periods beginning on or after January 1, 2024 and before January 1, 2027, CMS determines an ACO's eligibility for the Shared Savings Program participation options specified in paragraph (a) of this section as follows:

* * * * *

(h) For agreement periods beginning on or after January 1, 2027, CMS determines an ACO's eligibility for the Shared Savings Program participation options specified in paragraph (a) of this section as follows:

(1) If an ACO is determined to be inexperienced with performance-based risk Medicare ACO initiatives, the ACO

may enter either the BASIC track's glide path at any of the levels of risk and potential reward under paragraphs (a)(4)(i)(A)(1) through (5) of this section, or the ENHANCED track under paragraph (a)(3) of this section, except as otherwise specified in paragraph (h)(3) of this section.

(i) An ACO that is inexperienced with performance-based risk Medicare ACO initiatives may participate under the BASIC track's glide path for a maximum of one agreement period, as specified in paragraph (a)(4)(i)(C) of this section.

(ii) An ACO that enters an agreement period under the BASIC track's glide path at any of the levels of risk and potential reward available under paragraphs (a)(4)(i)(A)(1) through (5) of this section is deemed to have completed one agreement period under the BASIC track's glide path. For the purpose of determining the ACO's prior participation in the BASIC track's glide path, CMS considers whether the ACO satisfies either of the following:

(A) The ACO is the same legal entity as a current or previous ACO that previously entered into a participation agreement for participation in the BASIC track's glide path.

(B) For a new ACO identified as a re-entering ACO, the ACO in which the majority of the new ACO's participants were participating previously entered into a participation agreement for participation in the BASIC track's glide path.

(iii) An ACO determined to be inexperienced with performance-based risk Medicare ACO initiatives but is not eligible to enter the BASIC track's glide path, in accordance with this paragraph, may enter BASIC track Level E under paragraph (a)(4)(i)(A)(5) of this section for all performance years of the agreement period, or the ENHANCED track under paragraph (a)(3) of this section, except as otherwise specified in paragraph (h)(3) of this section.

(2) If an ACO is determined to be experienced with performance-based risk Medicare ACO initiatives, the ACO may enter either the BASIC track Level E under paragraph (a)(4)(i)(A)(5) of this section for all performance years of the agreement period, or the ENHANCED track under paragraph (a)(3) of this section, except as otherwise specified in paragraph (h)(3) of this section.

(3) If an ACO is determined to have fewer than 5,000 assigned beneficiaries in either the first benchmark year, the second benchmark year, or both, in accordance with § 425.110(a)(3), the ACO may only enter the BASIC track. The ACO may enter a level of risk and potential reward under the BASIC track

in accordance with the requirements of this paragraph, as follows:

(i) An ACO determined to be inexperienced with performance-based risk Medicare ACO initiatives may enter the BASIC track's glide path at any of the levels of risk and potential reward available under paragraphs (a)(4)(i)(A)(1) through (5) of this section (if eligible in accordance with paragraph (h)(1) of this section), or BASIC track Level E under paragraph (a)(4)(i)(A)(5) of this section for all performance years of the agreement period.

(ii) An ACO determined to be experienced with performance-based risk Medicare ACO initiatives may enter BASIC track Level E under paragraph (a)(4)(i)(A)(5) of this section for all performance years of the agreement period.

* * * * *

■ 41. Section 425.605 is amended by—

■ a. In paragraph (b)(2)(ii)(E), removing the reference “§ 425.600(h)(2)” and adding in its place the reference “§ 425.600(i)(2)”;

■ b. In paragraph (d)(1) introductory text, removing the references “§ 425.600(d) or § 425.600(g)” and adding in its place the references “§ 425.600(d), (g), or (h)”;

■ c. In paragraphs (d)(1)(i)(A)(3)(ii), (d)(1)(i)(A)(4)(ii), (d)(1)(ii)(A)(3)(ii), (d)(1)(ii)(A)(4)(ii), (d)(1)(iii)(A)(3)(ii), (d)(1)(iii)(A)(4)(ii), (d)(1)(iv)(A)(3)(ii), (d)(1)(iv)(A)(4)(ii), (d)(1)(v)(A)(3)(ii), and (d)(1)(v)(A)(4)(ii), removing the phrase “health equity adjusted quality performance score calculated according to § 425.512(b)” and adding in its place the phrase “quality score calculated according to § 425.512”;

■ d. Revising paragraph (d)(2);

■ e. Adding paragraph (f)(2)(ii);

■ f. Revising paragraph (f)(3) introductory text;

■ g. Removing the punctuation “; and” at the end of paragraph (f)(3)(i) and adding in its place a period;

■ h. Adding paragraph (f)(3)(iii);

■ i. Redesignating paragraph (f)(4) as paragraph (f)(5);

■ j. Adding new paragraph (f)(4); and

■ k. Adding paragraphs (h)(1)(v) and (i).

The revisions and additions read as follows:

§ 425.605 Calculation of shared savings and losses under the BASIC track.

* * * * *

(d) * * *

(2) If the ACO enters the BASIC track at Level E as specified under § 425.600(d), (g), or (h), the level of risk and reward specified in paragraph (d)(1)(v) of this section applies to all

performance years of an ACO's agreement period.

* * * * *

(f) * * *

(2) * * *

(ii) For performance year 2025 and subsequent performance years, for an ACO as defined at § 425.20 that is determined to be affected by an extreme and uncontrollable circumstance due to a cyberattack, including ransomware/malware, for any month of the performance year that is affected, CMS considers 100 percent of the ACO's assigned beneficiaries to reside in an affected area.

(3) CMS applies determinations made under the Quality Payment Program with respect to all of the following (as applicable):

* * * * *

(iii) The time period during which the ACO was affected by a cyberattack, including ransomware/malware.

(4) CMS determines the time period during which an ACO is affected by a cyberattack, including ransomware/malware, as follows:

(i) CMS uses the start and end date indicated on an ACO's application to the Quality Payment Program for an extreme and uncontrollable circumstance exception due to a cyberattack, including ransomware/malware, or the start date indicated on the application and an end date subsequently provided by the ACO in the form and manner as specified by CMS.

(ii) Except as specified in paragraph (f)(4)(iii) of this section, if no end date is indicated on the ACO's application or otherwise provided to CMS in a form and manner specified by CMS, described in paragraph (f)(4)(i) of this section, CMS applies a 90-day duration for purposes of determining the time period during which the ACO was affected by the extreme and uncontrollable circumstance.

(iii) If the start date indicated on the ACO's application described in paragraph (f)(4)(i) of this section is less than 90 days before the end of the performance year and no end date is indicated on the ACO's application or otherwise provided to CMS in the form and manner specified by CMS, described in paragraph (f)(4)(i) of this section, CMS applies an end date of December 31st of the performance year for purposes of determining the time period during which the ACO was affected by the extreme and uncontrollable circumstance.

* * * * *

(h) * * *

(1) * * *

(v) For agreement periods beginning on or after January 1, 2027, the ACO has at least 5,000 assigned beneficiaries in each of the ACO's benchmark years.

* * * * *

(i) Calculation of performance payment limit and loss recoupment limit.

(1) The performance payment limit is a percentage of the ACO's updated benchmark, as determined under § 425.601 or § 425.652.

(i) CMS calculates the performance payment limit as follows, except as specified in paragraph (i)(1)(ii) of this section:

(A) Calculates the value for total benchmark expenditures as the product of an ACO's per capita updated benchmark expenditures for the performance year and an ACO's assigned beneficiary person years for the performance year.

(B) Calculates the product of the percentage specified in paragraph (d)(1)(i)(B)(2), (d)(1)(ii)(B)(2), (d)(1)(iii)(B)(2), (d)(1)(iv)(B)(2), and (d)(1)(v)(B)(2) of this section, as applicable, and the ACO's total benchmark expenditures calculated according to paragraph (i)(1)(i)(A) of this section.

(ii) For agreement periods beginning on or after January 1, 2027, if the ACO has fewer than 5,000 assigned beneficiaries in benchmark year (BY) 1, BY2 or BY3, in conducting financial reconciliation for each performance year, CMS determines whether to apply an alternative performance payment limit, rather than the performance payment limit specified in paragraph (d)(1)(i)(B)(2), (d)(1)(ii)(B)(2), (d)(1)(iii)(B)(2), (d)(1)(iv)(B)(2), and (d)(1)(v)(B)(2) of this section, as applicable, as follows:

(A) CMS calculates the value for total benchmark expenditures as the product of an ACO's per capita updated benchmark expenditures for the performance year and an ACO's assigned beneficiary person years for the benchmark year with the lowest number of assigned beneficiaries.

(B) CMS calculates the product of the percentage specified in paragraph (d)(1)(i)(B)(2), (d)(1)(ii)(B)(2), (d)(1)(iii)(B)(2), (d)(1)(iv)(B)(2), and (d)(1)(v)(B)(2) of this section, as applicable, and the ACO's total benchmark expenditures calculated according to paragraph (i)(1)(ii)(A) of this section.

(C) The performance payment limit is set to the lesser of the amount calculated under paragraph (i)(1)(i)(B) of this section and the alternative amount calculated under paragraph (i)(1)(ii)(B) of this section.

(2) The loss recoupment limit is a percentage of total Medicare Parts A and B fee-for-service revenue of the ACO participants in the ACO (revenue-based loss recoupment limit) not to exceed a percentage of the ACO's updated benchmark as determined under § 425.601 or § 425.652 (benchmark-based loss recoupment limit).

(i) CMS calculates the benchmark-based loss recoupment limit as follows, except as specified in paragraph (i)(2)(ii) of this section:

(A) Calculates the value for total benchmark expenditures as the product of an ACO's per capita updated benchmark expenditures for the performance year and an ACO's assigned beneficiary person years for the performance year.

(B) Calculates the product of the percentage used to calculate the benchmark-based loss recoupment limit specified in paragraph (d)(1)(iii)(D)(2), (d)(1)(iv)(D)(2), and (d)(1)(v)(D)(2) of this section, as applicable, and the ACO's total benchmark expenditures calculated according to paragraph (i)(2)(i)(A) of this section.

(ii) For agreement periods beginning on or after January 1, 2027, if the ACO has fewer than 5,000 assigned beneficiaries in BY1, BY2 or BY3, in conducting financial reconciliation for each performance year, CMS determines whether to apply an alternative loss recoupment limit, as follows:

(A) CMS calculates an alternative benchmark-based loss recoupment limit:

(1) CMS calculates the value for total benchmark expenditures as the product of an ACO's per capita updated benchmark expenditures for the performance year and an ACO's assigned beneficiary person years for the benchmark year with the lowest number of assigned beneficiaries.

(2) CMS calculates the product of the percentage used to calculate the benchmark-based loss recoupment limit specified in paragraph (d)(1)(iii)(D)(2), (d)(1)(iv)(D)(2), and (d)(1)(v)(D)(2) of this section, as applicable, and the ACO's total benchmark expenditures calculated according to paragraph (i)(2)(ii)(A)(1) of this section.

(B) The loss recoupment limit is set to the revenue-based loss recoupment limit specified in paragraph (d)(1)(iii)(D)(1), (d)(1)(iv)(D)(1), or (d)(1)(v)(D)(1) of this section, as applicable, not to exceed the lower of the benchmark-based loss recoupment limit amount calculated under paragraph (i)(2)(i)(B) of this section or the alternative benchmark-based loss recoupment limit amount calculated under paragraph (i)(2)(ii)(A)(2) of this section.

■ 42. Section 425.610 is amended by—

■ a. In paragraphs (d)(3)(ii), (d)(4)(ii), (f)(3)(i)(A), and (f)(4)(i)(A), removing the phrase “health equity adjusted quality performance score calculated according to § 425.512(b)” and adding in its place the phrase “quality score calculated according to § 425.512”;

■ b. Adding paragraph (i)(2)(ii);

■ c. Revising paragraph (i)(3) introductory text;

■ d. Removing the punctuation “; and” at the end of paragraph (i)(3)(i) and adding in its place a period;

■ e. Adding paragraph (i)(3)(iii);

■ f. Redesignating paragraph (i)(4) as paragraph (i)(5); and

■ g. Adding new paragraphs (i)(4) and (l).

The revisions and additions read as follows:

§ 425.610 Calculation of shared savings and losses under the ENHANCED track.

* * * * *

(i) * * *

(2) * * *

(ii) For performance year 2025 and subsequent performance years, for an ACO as defined at § 425.20 that is determined to be affected by an extreme and uncontrollable circumstance due to a cyberattack, including ransomware/malware, for any month of the performance year that is affected, CMS considers 100 percent of the ACO's assigned beneficiaries to reside in an affected area.

(3) CMS applies determinations made under the Quality Payment Program with respect to all of the following (as applicable):

* * * * *

(iii) The time period during which the ACO was affected by a cyberattack, including ransomware/malware.

(4) CMS determines the time period during which an ACO is affected by a cyberattack, including ransomware/malware, as follows:

(i) CMS uses the start and end date indicated on an ACO's application to the Quality Payment Program for an extreme and uncontrollable circumstance exception due to a cyberattack, including ransomware/malware, or the start date indicated on the application and an end date subsequently provided by the ACO in the form and manner as specified by CMS.

(ii) Except as specified in paragraph (i)(4)(iii) of this section, if no end date is indicated on the ACO's application or otherwise provided to CMS in a form and manner specified by CMS, described in paragraph (i)(4)(i) of this section, CMS applies a 90-day duration for purposes of determining the time period during which the ACO was

affected by the extreme and uncontrollable circumstance.

(iii) If the start date indicated on the ACO's application described in paragraph (i)(4)(i) of this section is less than 90 days before the end of the performance year and no end date is indicated on the ACO's application or otherwise provided to CMS in the form and manner specified by CMS, described in paragraph (i)(4)(i) of this section, CMS applies an end date of December 31st of the performance year for purposes of determining the time period during which the ACO was affected by the extreme and uncontrollable circumstance.

* * * * *

(l) *Calculation of performance payment limit and loss recoupment limit.*

(1) The performance payment limit and the loss recoupment limit are a percentage of the ACO's updated benchmark.

(2) CMS calculates the performance payment limit and loss recoupment limit as follows, except as specified in paragraph (l)(3) of this section:

(i) Calculates the value for total benchmark expenditures as the product of an ACO's per capita updated benchmark expenditures for the performance year and an ACO's assigned beneficiary person years for the performance year.

(ii) Calculates the product of the percentage used to calculate the performance payment limit specified in paragraph (e)(2) of this section or the loss recoupment limit specified in paragraph (g) of this section and the ACO's total benchmark expenditures calculated according to paragraph (l)(2)(i) of this section.

(3) For agreement periods beginning on or after January 1, 2027, if the ACO has fewer than 5,000 assigned beneficiaries in BY1, BY2 or BY3, in conducting financial reconciliation for each performance year, CMS determines whether to apply an alternative performance payment limit or alternative loss recoupment limit, rather than the performance payment limit specified in paragraph (e)(2) of this section or the loss recoupment limit specified in paragraph (g) of this section, as follows:

(i) CMS calculates the value for total benchmark expenditures as the product of an ACO's per capita updated benchmark expenditures for the performance year and an ACO's assigned beneficiary person years for the benchmark year with the lowest number of assigned beneficiaries.

(ii) CMS calculates the product of the percentage used to calculate the

performance payment limit specified in paragraph (e)(2) of this section or the loss recoupment limit specified in paragraph (g) of this section and the ACO's total benchmark expenditures calculated according to paragraph (l)(3)(i) of this section.

(iii) The performance payment limit or loss recoupment limit is set to the lesser of the amount calculated under paragraph (l)(2)(ii) of this section or the alternative amount calculated under paragraph (l)(3)(ii) of this section.

■ 43. Section 425.612 is amended by revising paragraph (a)(1)(i)(B) to read as follows:

§ 425.612 Waivers of payment rules or other Medicare requirements.

- (a) * * *
(1) * * *
(i) * * *

(B)(1) A list of SNFs, including the Medicare-enrolled TIN and the CCN, with whom the ACO will partner along with executed written SNF affiliate agreements between the ACO and each listed SNF.

(2) An ACO must notify CMS no later than 30 days after the change of ownership of a SNF affiliate, identified in accordance with paragraph (a)(1)(i)(B)(1) of this section, that has resulted in a change to the Medicare enrolled TIN of the SNF affiliate. Such notice and supporting documentation must be submitted in the form and manner specified by CMS.

* * * * *

§ 425.652 [Amended]

■ 44. Section 425.652 is amended by—
■ a. In paragraph (a)(8)(ii)(A), removing the phrase “health equity benchmark adjustment (HEBA)” and adding in its place the phrase “population adjustment”;

■ b. In paragraphs (a)(8)(ii)(B) introductory text, (a)(8)(ii)(B)(2), and (a)(9)(vi), removing the phrase “HEBA” and adding in its place the phrase “population adjustment”; and

■ c. In paragraph (a)(9)(v), removing the phrase “HEBA scaler used in calculating the HEBA under § 425.662(b)(2)” and adding in its place the phrase “scaler used in calculating the population adjustment under § 425.662(b)(2)”.

§ 425.658 [Amended]

■ 45. Section 425.658 is amended in paragraph (d) by removing the phrase “HEBA” and adding in its place the phrase “population adjustment”.

■ 45. Section 425.662 is amended by—

■ a. Revising the section heading and paragraph (a);

■ b. In paragraph (b) introductory text, removing the phrase “health equity

benchmark adjustment” and adding in its place the phrase “population adjustment”;

■ c. In paragraph (b)(2), removing the phrase “Calculates the HEBA scaler” and adding in its place the phrase “Calculates a scaler”; and

■ d. Revising paragraphs (b)(3), (b)(4), and (c).

The revisions read as follows:

§ 425.662 Calculating the population adjustment to the historical benchmark.

(a) *General.* For agreement periods beginning on January 1, 2025, and in subsequent years, CMS calculates the population adjustment to the historical benchmark.

(b) * * *

(3) Determines the ACO's eligibility for the population adjustment based on the proportion of the ACO's assigned beneficiaries for the performance year who are enrolled in the Medicare Part D low-income subsidy (LIS) or dually eligible for Medicare and Medicaid. An ACO is only eligible for the population adjustment if this proportion is greater than or equal to 15 percent. An ACO with a proportion less than 15 percent is ineligible to receive the population adjustment.

(4) Calculates the population adjustment. If the ACO is eligible for the population adjustment as determined in paragraph (b)(3) of this section, the adjustment is equal to the product of the scaler calculated in paragraph (b)(2) of this section and the proportion of the ACO's assigned beneficiaries for the performance year who are enrolled in the Medicare Part D LIS or dually eligible for Medicare and Medicaid.

(c) *Applicability of the population adjustment.* CMS compares the population adjustment determined in paragraph (b)(4) of this section with the regional adjustment, expressed as a single value as described in § 425.656(d), and the per capita prior savings adjustment determined in § 425.658(c), if any, to determine the adjustment, if any, that will be applied to the ACO's benchmark in accordance with § 425.652(a)(8)(ii).

§ 425.672 [Amended]

■ 47. Section 425.672 is amended in paragraph (c)(2)(iv) by removing the phrase “and calculating the HEBA scaler” and adding in its place the phrase “and calculating the scaler”.

PART 427—MEDICARE PART B DRUG INFLATION REBATE PROGRAM

■ 48. The authority citation for part 427 continues to read as follows:

Authority: 42 U.S.C. 1395w–3a(i), 1302, and 1395hh.

■ 49. Section 427.20 is amended by removing the definition of “Billing and payment code FDA approval or licensure date”.

■ 50. Section 427.302 is amended by—
 ■ a. Revising paragraphs (c) introductory text and (c)(5);
 ■ b. Adding paragraph (c)(6); and
 ■ c. Revising paragraphs (d)(1).

The revisions and addition to read as follows:

§ 427.302 Calculation of the per unit Part B rebate amount.

(c) *Identification of the payment amount benchmark quarter.* For each Part B rebatable drug, CMS identifies the applicable payment amount benchmark quarter as set forth in paragraphs (c)(1) through (3) of this section, as applicable, subject to paragraphs (c)(4) through (6) of this section, using the earliest first marketed date of any NDC ever marketed under any FDA application under which any NDCs that have ever been assigned to the billing and payment code as of the applicable calendar quarter have been marketed, and using the earliest approval or licensure date of any FDA application under which any NDCs that have ever been assigned to the billing and payment code as of the applicable calendar quarter have been marketed.

(5) If the data needed to calculate the payment amount in the payment amount benchmark quarter described in and determined under § 427.302(d)(1) are not available, CMS uses the third full calendar quarter after a drug is assigned a billing and payment code as the payment amount benchmark quarter, no earlier than the calendar quarter beginning July 1, 2021, or the third full calendar quarter after the drug's first marketed date, whichever is later.

(6) For a Part B rebatable drug that is a selected drug (as defined in section 1192(c) of the Act) with respect to a price applicability period (as defined in section 1191(b)(2) of the Act), in the case of a Part B rebatable drug that is no longer considered to be a selected drug, for each applicable quarter beginning after the price applicability period with respect to the drug, the payment amount benchmark quarter is the calendar quarter beginning January 1 of the last year during the price applicability period with respect to the selected drug.

(d) * * *
 (1) For a Part B rebatable drug, subject to paragraphs (d)(1)(i) and (ii) of this section and except as provided in paragraph (d)(2) of this section, CMS identifies the payment amount in the

payment amount benchmark quarter using the published payment limit for the billing and payment code for the applicable payment amount benchmark quarter.

(i) If a published payment limit is not available for the applicable payment amount benchmark quarter, CMS calculates the payment amount in the payment amount benchmark quarter using positive ASP or positive WAC data from the ASP Data Collection System.

(ii) If a published payment limit is not available and neither positive ASP nor positive WAC data are available in the ASP Data Collection System, CMS calculates the payment amount in the payment amount benchmark quarter using WAC data from other public sources.

* * * * *

■ 51. Section 427.501 is amended by adding paragraph (c)(3) to read as follows:

§ 427.501 Rebate Reports and reconciliation.

* * * * *

(c) * * *

(3) The manufacturer's rebate amount due is reported as a dollar amount rounded to the nearest cent.

* * * * *

■ 52. Section 427.502 is amended by revising paragraph (c)(1)(ii) to read as follows:

§ 427.502 Rebate Reports for applicable calendar quarters in calendar years 2023 and 2024.

* * * * *

(c) * * *

(1) * * *

(ii) Within 9 months after issuance of the single Rebate Report, CMS performs one regular reconciliation for the applicable calendar quarters in calendar year 2024 in order to include revisions to the information used, determined under § 427.501(b)(1), to calculate the rebate amount. The reconciliation is as determined under § 427.501(d) inclusive of a preliminary reconciliation and a report with the reconciled rebate amount.

PART 428—MEDICARE PART D DRUG INFLATION REBATE PROGRAM

■ 53. The authority citation for part 428 continues to read as follows:

Authority: 42 U.S.C. 1395w–114b, 1302, and 1395hh.

■ 54. Section 428.401 is amended by adding paragraph (c)(3) to read as follows:

§ 428.401 Rebate Reports and reconciliation.

* * * * *

(c) * * *

(3) The manufacturer's rebate amount due is reported as a dollar amount rounded to the nearest cent.

§ 428.402 [Amended]

■ 55. Section 428.402 is amended by—

■ a. In paragraph (c)(1)(ii), removing the phrase “will be reconciled 21 months” and adding in its place the phrase “is reconciled within 21 months”; and
 ■ b. In paragraph (c)(2)(ii) removing the phrase “will be reconciled 9 months after the Rebate Report and 33 months after” and adding in its place the phrase “within 9 months after the Rebate Report and within 33 months after”.

§ 428.405 [Amended]

■ 56. Section 428.405 is amended in paragraph (a)(1) introductory text by removing the phrase “30 calendar days” and adding in its place the phrase “30th calendar day”.

PART 495—PAYMENT FOR PART B MEDICAL AND OTHER HEALTH SERVICES

■ 58. The authority citation for part 495 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 59. Section 495.24 by adding paragraph (f)(3) to read as follows:

§ 495.24 Stage 3 meaningful use objectives and measures for EPs, eligible hospitals and CAHs for 2019 and subsequent years.

* * * * *

(f) * * *

(3) Beginning with the EHR reporting period in CY 2026, if certain circumstances occur that impact CMS's assessment of the performance of eligible hospitals and CAHs on a measure selected as described in paragraph (f)(1)(i)(A) of this section, CMS may, in its sole discretion, suppress the affected measure by excluding it from CMS' assessment of performance while allocating the maximum points available or providing full credit for the affected measure as long as the affected measure is reported, resulting in a suppressed measure contributing to the Medicare Promoting Interoperability Program objective score in paragraph (f)(1)(i)(D) of this section; or excluding it from the determination of a meaningful EHR user if the affected measure is not scored. CMS determines whether certain circumstances exist warranting suppression of a measure based on CMS' consideration of one or more of the following factors:

(i) The nature, breadth, and duration of the circumstance's effect on eligible hospitals' and CAHs' ability to fulfill the measure requirement.

(ii) The availability of certified health IT modules to fulfill the measure.

(iii) The circumstance affects the measure such that calculating the measure score would lead to misleading or inaccurate results, which may include performance or compliance.

(iv) Out-of-date or conflicting technical standards.

(v) Technical and operational capacity of required partners.

(vi) Other factors as determined by CMS.

* * * * *

PART 512—STANDARD PROVISIONS FOR MANDATORY INNOVATION CENTER MODELS AND SPECIFIC PROVISIONS FOR THE RADIATION ONCOLOGY MODEL AND THE END-STAGE RENAL DISEASE TREATMENT CHOICES MODEL

■ 60. The authority citation for part 512 continues to read as follows:

Authority: 42 U.S.C. 1302, 1315a, and 1395hh.

■ 61. Adding subparts F and G to part 512 to read as follows:

Subpart F—[Reserved]

Subpart G—Ambulatory Specialty Model (ASM)

General

512.700 Basis and scope.

512.705 Definitions.

512.710 Participant eligibility and selection.

Performance Categories and Scoring

512.715 Overview of performance assessment.

512.720 Data submission requirements.

512.725 Quality ASM performance category.

512.730 Cost ASM performance category.

512.735 Improvement activities ASM performance category.

512.740 Promoting Interoperability ASM performance category.

512.745 Final scoring.

Payment and Timely Error Notice Process

512.750 Payment adjustment.

512.755 Timely error notice.

Data Sharing, Waivers, Safe Harbor, and Compliance

512.760 Data sharing with ASM participants.

512.765 Application of the CMS-sponsored model arrangements and patient incentives safe harbor.

512.770 ASM beneficiary incentives.

512.771 Collaborative care arrangements.

512.775 Medicare program waivers.

512.780 Extreme and uncontrollable circumstances.

Subpart G—Ambulatory Specialty Model (ASM)

§ 512.700 Basis and scope of subpart.

(a) *Basis.* This subpart implements the test of the Ambulatory Specialty Model (ASM) under section 1115A of the Act.

(b) *Scope.* This subpart sets forth the following:

(1) The method for selecting ASM participants.

(2) The methodology for ASM participant performance assessment and scoring for purposes of the improvement activities ASM performance category, quality ASM performance category, cost ASM performance category, and Promoting Interoperability ASM performance category, including beneficiary inclusion and episode-based cost measures.

(3) Data submission for applicable ASM performance categories.

(4) The schedule and methodologies for payment adjustments.

(5) Appeals process.

(6) Data sharing with ASM participants.

(7) ASM beneficiary incentives.

(8) Collaborative care arrangements.

(9) Application of the CMS-sponsored model arrangements and patient incentives safe harbor.

(10) Medicare program waivers.

(11) Except as specifically noted in this subpart, the regulations under this subpart do not affect the applicability of other provisions affecting providers and suppliers under Medicare fee for service, including the applicability of provisions regarding payment, coverage, or program integrity.

(c) *Applicability.* Except as otherwise specified in this subpart, ASM participants are subject to the standard provisions for Innovation Center models specified in subpart A of this part 512 and in subpart K of part 403 of this chapter.

§ 512.705 Definitions.

For purposes of this part, the terms in this part have the same meanings as 42 CFR 512.110 and 414.1300 unless otherwise stated.

ASM beneficiary means a Medicare FFS beneficiary who is being treated by an ASM participant for a targeted chronic condition.

ASM cohort means a group of ASM participants who treat the same ASM targeted chronic condition, specifically the ASM heart failure cohort and the ASM back pain cohort.

ASM data sharing agreement means an agreement between the ASM participant, and CMS that includes the terms and conditions for any beneficiary-identifiable data being

shared with the ASM participant under § 512.760(e).

ASM heart failure cohort refers to all ASM heart failure participants.

ASM heart failure participant means an ASM participant who meets the ASM participant eligibility criteria related to heart failure.

ASM incentive pool means a fixed percentage of the total amount of Medicare Part B covered professional services claims paid to ASM participants with final scores within an ASM cohort during an ASM performance year that would be distributed in the form of scaled payment adjustments during an ASM payment year. CMS calculates an ASM incentive pool for each ASM cohort for each ASM payment year as described at § 512.750(c)(1)(iii).

ASM low back pain cohort refers to all ASM low back pain participants.

ASM low back pain participant means an ASM participant who meets the ASM participant eligibility criteria related to low back pain.

ASM participant means an individual clinician who, for at least one ASM performance year, satisfies the ASM participant eligibility criteria and has been selected for participation in the model as described at § 512.710(g).

ASM participant eligibility criteria means the set of criteria defined at § 512.710(b) that CMS uses to determine whether a clinician is selected to participate in ASM.

ASM payment adjustment factor means a percent value based on an ASM participant's final score as described at § 512.750(c)(1) that CMS uses in calculating adjustments to the ASM participant's Medicare Part B payments for covered professional services during an ASM payment year.

ASM payment multiplier means the numerical value equal to 1 plus the ASM payment adjustment factor determined for an ASM participant for an applicable ASM payment year as described at § 512.750(c).

ASM payment year means a calendar year in which CMS applies the ASM payment multiplier to Medicare Part B payments based on the final score achieved by that ASM participant for the ASM performance year 2 years prior.

ASM performance category means a group of applicable measures or activities used to assess ASM participant's performance on quality, cost, improvement activities, or Promoting Interoperability.

ASM performance category score means the assessment of each ASM participant's performance on the applicable measures and activities for a performance category during an ASM

performance year based on the performance standards described at §§ 512.715, 512.725, 512.730, 512.735, and 512.740.

ASM performance report means the notification that CMS provides to the ASM participant for each ASM performance year, which contains the information specified at § 512.745(b).

ASM performance year means a 12-month period beginning on January 1 and ending on December 31 of each year during the first 5 calendar years of ASM test period.

ASM redistribution percentage means a percentage of Medicare Part B covered professional services payments to ASM participants during an ASM performance year that CMS distributes in the form of payment adjustment to ASM participants during an ASM payment year as described at § 512.750(c)(1)(iii).

ASM risk level means the magnitude of the maximum positive or negative net payment adjustment percentage to which an ASM participant would be subject to during an ASM payment year as described at § 512.750(c)(1)(i).

ASM targeted chronic condition means a medical condition that is a core focus of ASM; that is, heart failure or low back pain.

ASM test period means the 7-year period from January 1, 2027, to December 31, 2033, that includes all ASM performance years and ASM payment years.

ASTP/ONC stands for the Assistant Secretary for Technology Policy/Office of the National Coordinator on Health Information Technology.

CY means calendar year.

CEHRT stands for Certified Electronic Health Records Technology that meets the requirements set forth in § 414.1305 of this chapter, except all instances of references to Merit-based Incentive Payment System (MIPS) are to be replaced with references to ASM.

Clinician has the same meaning as “eligible professional” as defined in section 1848(k)(3) of the Act, as identified by a unique TIN and NPI combination.

CMS EHR Certification ID means the identification number that represents the combination of Certified Health Information Technology that is owned and used by providers and hospitals to provide care to their patients and is generated by the Certified Health IT Product List.

Collaborative care arrangement means an arrangement that meets all of the requirements set forth in § 512.771.

Core Based Statistical Area (CBSA) means a statistical geographic area, based on the definition as identified by

the Office of Management and Budget in the OMB Bulletin 23–01 issued on July 21, 2023, with a population of at least 10,000, which consists of a county or counties anchored by at least one core (urbanized area or urban cluster), plus adjacent counties having a high degree of social and economic integration with the core (as measured through commuting ties with the counties containing the core).

Covered entity has the meaning set forth at 45 CFR 160.103.

Covered professional services means “covered services” and has the meaning set forth in § 512.110 of this chapter.

CQM stands for Clinical Quality Measures.

Days means calendar days unless otherwise specified by CMS.

Dual eligible proportion means the share of a participant’s beneficiaries who are dually eligible Medicare beneficiaries

Dually eligible Medicare beneficiary means a beneficiary enrolled in both Medicare and full Medicaid benefits.

eCQM stands for electronic clinical quality measures.

EBCM stands for episode-based cost measure and means the standardized Medicare-allowed cost for the items and services furnished to a patient during an episode of care, based on FFS claims and Medicare Part D claims data.

EHR stands for Electronic Health Record and means a “Base EHR,” as defined at 45 CFR 170.102.

Exchange function means the function used to translate an ASM participant’s final score into an ASM payment adjustment factor as described at § 512.750(c)(1)(ii).

Episode means all the relevant health care services a patient receives during a specified period for the treatment of a physical or behavioral health condition.

FFS stands for fee-for-service.

Final score means a composite assessment (using a scoring scale of zero to 100) for each ASM participant for an ASM performance year determined using the methodology for assessing the total performance of an ASM participant according to performance standards for applicable measures and activities for each ASM performance category as described in § 512.745.

HCC risk score stands for Hierarchical Condition Category risk score and means the risk score assigned to a Medicare beneficiary in accordance with the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act.

Health-related social need means an unmet, adverse social condition that can contribute to poor health outcomes and is a result of underlying social

determinants of health, which refer to the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.

Improvement activities mean activities relating to care coordination, integration of specialty and primary care, and addressing health-related social needs of patients.

Mandatory geographic area means a CBSA or metropolitan division as defined by the Office of Management and Budget and selected by CMS under the terms of § 512.710(f).

Meaningful EHR user means an ASM participant who possesses CEHRT, uses the functionality of CEHRT, reports on applicable objectives and measures specified for the Promoting Interoperability ASM performance category for a performance period in the form and manner specified by CMS, does not knowingly and willfully take action (such as to disable functionality) to limit or restrict the compatibility or interoperability of CEHRT, and engages in activities related to supporting providers with the performance of CEHRT.

Measure achievement points mean numerical values assigned to an ASM participant’s reported performance data, that CMS uses to calculate an ASM performance category score.

Metropolitan division means—(1) A county or group of counties (or equivalent entities) delineated within a larger metropolitan statistical area, provided that the larger metropolitan statistical area contains a single core with a population of at least 2.5 million and other criteria are met; and

(2) Consists of one or more main or secondary counties that represent an employment center or centers, plus adjacent counties associated with the main/secondary county or counties through commuting ties.

Metropolitan statistical area means the county or counties (or equivalent entities) associated with at least one urban area of at least 50,000 population, plus adjacent counties having a high degree of social and economic integration with the core as measured through commuting ties.

MIPS stands for the Merit-based Incentive Payment System.

NPI stands for National Provider Identifier.

ONC-ACB stands for ONC-Authorized Certification Bodies.

Physician has the meaning set forth in section 1861(r) of the Act.

Primary care services has the meaning set forth in section 1842(i)(4) of the Act.

Risk indicator refers to hierarchical condition category (HCC) risk scores under the HCC risk adjustment model established by CMS under section 1853(a)(1) of the Act or the proportion of beneficiaries with dual eligible status used in calculating the complex patient scoring adjustment as defined at § 512.745(a)(3).

SAFER stands for Safety Assurance Factors for EHR Resilience.

Scaling factor means a numerical value calculated by CMS to ensure that the total estimated payment adjustments in an ASM payment year are equal to the ASM incentive pool for the applicable ASM payment year as described at § 512.750(c)(1)(iv).

Small practice means a practice consisting of 15 or fewer clinicians at the time we identify ASM participants for an ASM performance year as described at § 512.710(g).

Specialty type means a medical specialty as determined by the specialty code indicated on the plurality of a clinician's Medicare Part B claims.

Solo practitioner means a practice consisting of 1 clinician at the time we identify ASM participants for an ASM performance year as described at § 512.710(g).

Submission type means the mechanism by which the ASM submitter submits data to CMS in the form and manner specified by CMS, including, but not limited to all of the following:

- (1) Direct.
- (2) Log in and upload.
- (3) Log in and attest.

Third-party intermediary has the meaning set forth in § 414.1305 of this chapter.

TIN stands for Taxpayer Identification Number.

Topped out measure has the meaning of either topped out process measure or topped out non-process measure set forth in § 414.1305 of this chapter.

U.S. Territories has the meaning set forth in § 512.110 of this chapter.

§ 512.710 Participant eligibility and selection.

(a) Mandatory ASM participation.

(1) Unless otherwise specified, any clinician who meets all ASM participant eligibility criteria as specified in paragraph (b) of this section and furnishes covered services during any applicable ASM performance year within the ASM test period is considered an ASM participant for the duration of the model.

(i) 2027 ASM performance year: ASM participants—

(A) Are measured for performance and exempted from MIPS participation, if applicable, during CY 2027;

(B) Report and are scored during CY 2028; and

(C) Receive payment adjustments for CY 2027 performance in CY 2029.

(ii) 2028 ASM performance year: ASM participants—

(A) Meeting ASM eligibility criteria for the 2028 performance year are measured for performance and exempted from MIPS participation, if applicable, during CY 2028;

(B) Report and are scored during CY 2029; and

(C) Receive payment adjustments for CY 2028 performance in CY 2030.

(iii) 2029 ASM performance year: ASM participants—

(A) Meeting ASM eligibility criteria for the 2029 performance year are measured for performance and exempted from MIPS participation, if applicable, during CY 2029;

(B) Report and are scored during CY 2030; and

(C) Receive payment adjustments for CY 2029 performance in CY 2031.

(iv) 2030 ASM performance year: ASM participants—

(A) Meeting ASM eligibility criteria for the 2030 performance year are measured for performance and exempted from MIPS participation, if applicable, during CY 2030;

(B) Report and are scored during CY 2031; and

(C) Receive payment adjustments for CY 2030 performance in CY 2032.

(v) 2031 ASM performance year: ASM participants—

(A) Meeting ASM eligibility criteria for the 2031 performance year are measured for performance and exempted from MIPS participation, if applicable, during CY 2031;

(B) Report and are scored during CY 2032; and

(C) Receive payment adjustments for CY 2031 performance in CY 2033.

(2)(i) For any ASM performance year within the ASM test period that an ASM participant does not meet the criteria for mandatory participation set forth in this section, the ASM participant is not subject, for the applicable ASM performance year, to §§ 512.715, 512.720, 512.745, and 512.750.

(ii) For a ASM performance year described in paragraph (a)(2)(i) of this section, the ASM participant is no longer eligible for the waivers as described at § 512.775 and is instead subject to MIPS reporting obligations, if applicable.

(b) *ASM participant eligibility criteria.* CMS uses the following set of criteria to determine whether a clinician is an ASM participant:

(1) Is a clinician who bills claims under the Medicare Physician Fee Schedule.

(2) Is identified by TIN/NPI as a selected specialty type as described in paragraph (d) of this section.

(3) Meets the EBCM episode volume threshold applicable to an ASM targeted chronic condition as described at paragraph (e) of this section.

(4) Is located in one of the mandatory geographic areas selected in accordance with paragraph (f) of this section.

(c) *Participant exclusion due to change in TIN during an ASM performance year.*

(1) An ASM participant who stops assigning billing rights to the TIN used to identify the ASM participant and begins assigning billing rights to a new TIN during an applicable ASM performance year must notify CMS of the change in a form and manner determined by CMS within 30 days of the change.

(2)(i) An ASM participant who notifies CMS of a change in TIN during an ASM performance year is not subject, for the applicable ASM performance year, to §§ 512.715, 512.720, 512.745, and 512.750.

(ii) The ASM participant described in paragraph (c)(2)(i) of this section is no longer eligible for the waivers as described at § 512.775 and is instead subject to MIPS reporting obligations, if applicable.

(d) *Specialty type.* ASM participants have one of the following Medicare Part B specialty codes indicated on the plurality of their Medicare Part B claims:

- (1) Heart failure specialty type ³/₄
 - (i) Cardiology.
 - (ii) [Reserved]
- (2) Low back pain specialty type ³/₄
 - (i) Anesthesiology.
 - (ii) Interventional Pain Management.
 - (iii) Neurosurgery.
 - (iv) Orthopedic Surgery.
 - (v) Pain Management.
 - (vi) Physical Medicine and Rehabilitation.

(e) *EBCM episode volume.* To determine if a clinician meets the ASM participant eligibility criterion defined in paragraph (b)(3) of this section, CMS uses the volume of EBCM episodes related to ASM targeted chronic conditions that are attributed to a clinician using the applicable EBCM specifications and attribution methodology.

(1) *Heart failure EBCM.* Clinicians who have a specialty designation type described at § 512.710(d)(1) and 20 or more heart failure EBCM episodes attributed in accordance with the heart failure episode-based cost measure as specified under MIPS during the calendar year 2 years prior to the applicable ASM performance year meet

the ASM participant eligibility criterion defined in paragraph (b)(3) of this section.

(2) *Low back pain EBCM.* Clinicians who have a specialty designation type described at § 512.710(d)(2) and 20 or more low back pain EBCM episodes attributed in accordance with the low back pain episode-based cost measure as specified under MIPS during the calendar year 2 years prior to the applicable ASM performance year meet the ASM participant eligibility criterion defined in paragraph (b)(3) of this section.

(f) *Mandatory geographic areas.* CMS uses a stratified random sampling methodology described in paragraphs (f)(2) and (f)(3) of this section to select CBSA and metropolitan divisions (in cases where OMB divides large metropolitan statistical areas into metropolitan divisions) from which CMS identifies clinicians for participation in ASM.

(1) *Exclusions.* CMS excludes from the selection of CBSAs and metropolitan divisions applicable areas that meet any of criteria described in paragraph (f)(1)(i) or (f)(2)(ii) of this section.

(i) Areas that do not meet the criteria described in paragraphs (f)(1)(i)(A) and (f)(1)(i)(B) of this section:

(A) Have at least one clinician with a specialty designation type described at § 512.710(d)(1) with 20 or more heart failure EBCM episodes attributed between January 1, 2024 and December 31, 2024.

(B) Have at least one clinician with a specialty designation type described at § 512.710(d)(2) with 20 or more low back pain EBCM episodes attributed between January 1, 2024 and December 31, 2024.

(ii) Areas located entirely in U.S. Territories.

(2) *CBSA and metropolitan division stratification process.* Prior to sampling CBSAs and metropolitan divisions, CMS stratifies CBSAs and metropolitan divisions, excluding those described in paragraph (f)(1) of this section, into six mutually exclusive strata based on three CBSA/metropolitan division-level characteristics (average total Part A and Part B episode spending, volume of eligible episodes, and metropolitan division status) as described in paragraphs (f)(2)(i) through (vi) of this section. “Average total episode spending” as the term is used in paragraphs (f)(2)(i) through (vi) of this section, is measured using the average total Part A and Part B episode spending using claims data from January 1, 2024 to December 31, 2024 relating to heart failure and low back pain episodes, as specified under the episode-based cost

measures described in § 512.710(e).

Values below the median are characterized as “Low” average total episode spending. Values at or above the median are characterized as “High” average total spending. “Eligible episode volume” as the term is used in paragraphs (f)(2)(i) through (vi) of this section, is measured as the total count of eligible heart failure and low back pain episodes, as specified under the episode-based cost measures described in § 512.710(e), in a CBSA between January 1, 2024 and December 31, 2024. CMS categorizes CBSAs with values below the median as “Low;” CBSAs at-or-above the median and below the 95th percentile as “High;” and CBSAs at-or-above the 95th percentile as “Very High.”

(i) CBSAs with “Low” average total episode spending and “Low” eligible episode volume.

(ii) CBSAs with “Low” average total episode spending and “High” eligible episode volume.

(iii) CBSAs with “High” average total episode spending (as defined below) and “Low” eligible episode volume.

(iv) Eligible CBSAs with “High” average total episode spending and “High” eligible episode volume.

(v) Eligible CBSAs with “Very High” eligible episode volume.

(vi) Eligible metropolitan divisions.

(3) *Sampling of CBSAs and metropolitan divisions.* CMS selects approximately 40 percent of CBSAs and metropolitan divisions from each stratum to select the mandatory geographic areas. If 40 percent of a given stratum does not result in a whole number of CBSAs or metropolitan divisions, CMS rounds up to the next whole number to ensure that at least 40 percent of areas from each stratum are selected.

(4) *Assignment of CBSA or metropolitan division code to clinicians.* CMS assigns a CBSA or a metropolitan division code to every TIN/NPI with attributed EBCM episodes related to ASM targeted chronic conditions for the applicable calendar year as described in paragraph (e) of this section to determine ASM participation eligibility for an applicable ASM performance year:

(i) CMS assigns each attributed EBCM episode a ZIP Code, which represents the service location where the attributed TIN/NPI encounters the beneficiary attributed to the episode the most, based on the plurality of Part B claims used to construct the episode. If the ZIP Codes representing service location where the attributed TIN/NPI appears in equal number in the Part B claims used to construct the episode, then CMS assigns

the ZIP Code based on the ZIP Code that represents the Part B claim with—

(A) The highest total cost indicated by the total standardized allowed amount; or

(B) Most recent date.

(ii) CMS assigns each attributed EBCM episode a CBSA or metropolitan division code based on the ZIP Code assigned to the episode as described in paragraph (f)(4)(i) of this section. If the ZIP Code assigned to the EBCM episode is in multiple CBSAs or metropolitan divisions, then CMS assigns the EBCM episode the CBSA or metropolitan division code where the ZIP Code has the highest proportion of—

(A) Total addresses; or

(B) Business addresses.

(iii) CMS assigns each TIN/NPI combination a single CBSA or metropolitan division code based on the most common CBSA or metropolitan division code assigned to episodes attributed to the TIN/NPI as described in paragraph (f)(4)(ii) of this section. If the TIN/NPI has equal number of episodes across multiple CBSAs or metropolitan divisions, then CMS assigns the TIN/NPI a CBSA or metropolitan division with the CBSA or metropolitan division that has either of the following:

(A) The highest total risk-adjusted episode spending across all episodes assigned to the CBSA or metropolitan division.

(B) Episodes with more recent dates.

(g) *Selection and notification process for ASM participants.* For each ASM performance year, CMS identifies all clinicians furnishing covered services using the ASM participant eligibility criteria specified in paragraph (b) of this section and applicable data from 2 calendar years prior to each ASM performance year. Any clinician selected for participation for any year of the model is considered an ASM participant for the remainder of the ASM test period.

(1) *2027 ASM performance year only—*

(i) *Preliminarily eligible ASM participants.* Using applicable data from calendar year 2024, CMS identifies all clinicians who meet the ASM participant eligibility criteria for participation starting in the 2027 ASM performance year/2029 ASM payment year. The clinicians identified as preliminarily eligible ASM participants are made public in a form and manner determined by CMS.

(ii) *Final ASM participants.* CMS identifies the final ASM participants selected for participation starting in the 2027 ASM performance year/2029 ASM payment year by confirming that the

preliminarily eligible ASM participants identified under paragraph (g)(1)(i) of this section meet the ASM participant eligibility criteria using applicable data from CY 2025. The clinicians selected as ASM participants starting the 2027 ASM performance year/2029 ASM payment year is made public in a form and manner determined by CMS.

(2) *2028 ASM performance year and subsequent years.*

(i) Beginning with the 2028 ASM performance year/2030 ASM payment year, CMS determines if the previously selected ASM participants continue to meet the ASM participant eligibility criteria for the upcoming ASM performance year/ASM payment year using applicable data from the calendar year 2 years prior to the applicable ASM performance year. An ASM participant who does not meet the ASM participant eligibility criteria for the upcoming ASM performance year/ASM payment year is not subject to provisions described at §§ 512.715, 512.720, and 512.745 and must, if applicable, participate in MIPS. The final ASM participants selected for participation for each applicable ASM performance year is made public in a form and manner determined by CMS.

(ii) Beginning with the 2028 ASM performance year/2030 ASM payment year and prior to the start of each ASM performance year, CMS determines if additional clinicians not previously identified as ASM participants meet the ASM participant eligibility criteria for the upcoming ASM performance year/ASM payment year using applicable data from the calendar year 2 years prior to the applicable ASM performance year. The final ASM participants selected for participation for each applicable ASM performance year is made public in a form and manner determined by CMS.

§ 512.715 Overview of performance assessment.

(a) *General.* As further described in §§ 512.725, 512.730, 512.735, and 512.740:

(1) An ASM participant receives a specific number of points for its performance on each measure or activity within an ASM performance category.

(2) CMS assigns the total amount of points an ASM participant may receive for its performance on a measure or activity.

(3) CMS calculates a final score as described at § 512.745 using the points received across all four ASM performance categories.

(b) *Data sources.*

(1) CMS uses Medicare claims data and Medicare administrative data

reported to calculate measure scores included in the quality and cost ASM performance categories under §§ 512.725 and 512.730.

(2) CMS uses model-specific data reported under § 512.720 to calculate applicable measure or activity scores for the quality, improvement activities, and Promoting Interoperability ASM performance categories under §§ 512.725, 512.735, and 512.740.

§ 512.720 Data submission requirements.

(a) *Applicable performance categories and data submission requirements.*

(1) Except as provided in paragraph (a)(2) of this section, as applicable, ASM participants must submit data on measures and activities for the quality, improvement activities, and Promoting Interoperability ASM performance categories described in §§ 512.725(b) and (c), 512.735(b), and 512.740 in accordance with this section. The data may also be submitted on behalf of the ASM participant by a third-party intermediary.

(i) For the quality ASM performance category, a data submission must—

(A) Include numerator and denominator data for at least one applicable quality measure described in § 512.725(b) or (c) that is not an administrative claims-based collection type and meets the data completeness requirement as specified at § 512.725(f) and

(B) Be submitted at the TIN/NPI level, unless the ASM participant is excepted under paragraph (f) of this section.

(ii) For the improvement activities ASM performance category, a data submission must—

(A) Include an attestation of meeting the specifications of each required improvement activity described in § 512.735(c); and

(B) Be submitted at the TIN level;

(iii) For the Promoting Interoperability ASM performance category, a data submission must do all of the following:

(A) Include all of the following elements:

(1) Performance data, including any claim of an applicable exclusion, for the measures in each objective, as specified by CMS at § 512.740(b).

(2) Required attestation statements, as specified by CMS at § 512.740(b).

(3) CMS EHR Certification ID (CEHRT ID) from the Certified Health IT Product List (CHPL).

(4) The start date and end date for the applicable performance period as set forth in § 512.740(a).

(B) Be submitted at the TIN level.

(2) There are no data submission requirements for the cost ASM

performance category measures and activities described under § 512.730(b) or administrative claims-based quality measures as described in § 512.725(b) or (c). Performance in the cost ASM performance category and administrative claims-based quality measures are calculated by CMS using administrative claims data, which includes claims submitted with dates of service during the applicable performance period that are processed no later than 60 days following the close of the applicable performance period.

(b) *Data submission types for ASM participants.* An ASM participant must submit their data using the following:

(1) For the quality ASM performance category, the direct and login and upload submission types.

(2) For the improvement activities and Promoting Interoperability ASM performance categories, the direct, login and upload, or login and attest submission types.

(c) *Use of multiple data submission types.* ASM participants may submit their data using multiple data submission types for any ASM performance category described in paragraph (a)(1) of this section provided that the ASM participant uses the same identifier for all ASM performance categories and all data submissions.

(d) *Data submission deadlines.* The data submission deadline is March 31st of the calendar year following the close of the applicable ASM performance year or a later date as specified by CMS for the direct, login and upload, and login and attest submission types.

(e) *Treatment of multiple data submissions.*

(1)(i) For multiple data submissions received in the quality and improvement activities ASM performance categories in accordance with paragraphs (a)(1)(i) and (ii) of this section for an individual ASM participant from submitters in multiple organizations (for example, qualified registry, practice administrator, or EHR vendor), CMS calculates and scores each submission received and assign the highest of the scores.

(ii) For multiple data submissions received for an individual ASM participant from one or multiple submitters in the same organization, CMS scores the most recent submission.

(2) For multiple data submissions received for the Promoting Interoperability ASM performance category in accordance with paragraph (a)(1)(iii) of this section, CMS calculates a score for each data submission received and assigns the highest of the scores.

(f) *Small practice quality measures submission.* ASM participants who are part of a small practice may report quality measures in the quality ASM performance category at the TIN level.

§ 512.725 Quality ASM performance category.

(a) *ASM performance year for quality measures.* Beginning with 2029 ASM payment year, the ASM performance year for quality measures is the full calendar year from January 1 to December 31 that occurred 2 years prior to the applicable ASM payment year, except as otherwise specified for administrative claims-based measures.

(b) *Quality measures for ASM heart failure cohort.* CMS uses the following quality measures, as specified by CMS for the MIPS quality performance category unless otherwise stated, to assess performance for ASM heart failure participants in the quality ASM performance category:

(1) Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System (MIPS Q492).

(2) Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD) (MIPS Q008).

(3) Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Nephrilysin Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD) (MIPS Q005).

(4) Controlling High Blood Pressure (MIPS Q236).

(5) Functional Status Assessments for Heart Failure (MIPS Q377).

(c) *Quality measures for ASM low back pain cohort.* CMS uses the following quality measures, as specified by CMS for the MIPS quality performance category unless otherwise stated, to assess performance for ASM low back pain participants in the quality ASM performance category:

(1) Use of High-Risk Medications in Older Adults (MIPS Q238).

(2) Preventive Care and Screening: Screening for Depression and Follow-Up Plan (MIPS Q134).

(3) Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (MIPS Q128).

(4) Functional Status Change for Patients with Low Back Impairments (MIPS Q220).

(d) *Removal, addition, and maintenance of technical specifications of quality measures.* CMS uses notice-and-comment rulemaking to communicate any updates or changes to the quality measure sets described in paragraphs (b) and (c) of this section.

(e) *Data submission criteria for the quality ASM performance category.*

(1) CMS uses quality measures as described in paragraphs (b) and (c) of this section with the following data collection types:

(i) MIPS CQMs.

(ii) eCQMs.

(iii) Administrative claims-based.

(2) *Data submission requirements.*

(i) An ASM heart failure participant must submit data on all quality measures specified in paragraph (b) of this section using MIPS CQMs or eCQMs.

(ii) An ASM low back pain participant must submit data on all quality measures specified in paragraph (c) of this section using MIPS CQMs or eCQMs, unless otherwise stated.

(iii) For eCQMs, the submission of data requires the utilization of CEHRT, as defined at § 414.1305.

(3) An ASM participant is not required to submit data for the calculation of administrative claims-based measures so long as data submission requirements as specified at § 512.720(a)(1)(i) are met.

(f) *Data completeness requirement for the quality ASM performance category.*

(1) Except as specified at paragraph (e)(3) of this section and for each required measure specified in paragraphs (b) or (c) of this section, ASM participants must submit data on at least 75 percent of the ASM participant's patients that meet the measure's denominator criteria, regardless of payer.

(2) ASM participants receive zero measure achievement points for each measure required in paragraphs (b) or (c) of this section that does not meet the data completeness requirement, as specified at paragraph (f)(1) of this section.

(3) CMS excludes from an ASM's participant total measure achievement points and total available measure achievement points any measures required under paragraphs (b) or (c) of this section that meet the respective measure's data completeness requirement, but do not have a benchmark.

(g) *Minimum case requirements.*

(1) Unless otherwise specified by CMS, the minimum case requirement for each quality measure required in paragraphs (b) or (c) of this section is 20 cases.

(2) CMS excludes from an ASM's participant total measure achievement points and total available measure achievement points any measures required under paragraphs (b) or (c) of this section that meet the respective measure's data completeness

requirement as specified at paragraph (f)(1) of this section but do not meet the measure's case minimum requirement as specified at paragraph (g)(1) of this section.

(h) *Quality measure achievement points and quality ASM performance category scoring.* Unless a different scoring weight is assigned by CMS, performance in the quality ASM performance category comprises of 50 percent of a ASM participant's final score for each ASM payment year.

(1) *Measure achievement points.*

(i) For each ASM performance year, ASM participants receive between 1 and 10 measure achievement points (including partial points) for each required measure as specified in paragraphs (b) or (c) of this section on which data is submitted in accordance with paragraph (e) of this section that does all of the following:

(A) Has a benchmark specified in paragraph (h)(2) of this section.

(B) Meets the case minimum requirements specified in paragraph (g) of this section.

(C) Meets the data completeness criteria specified in paragraph (f) of this section.

(D) For each administrative claims-based measure with a benchmark as described at paragraph (h)(2)(iii) of this section and meets the case minimum requirement at paragraph (g) of this section.

(ii) The number of ASM measure achievement points received for each measure is determined based on the applicable benchmark decile category and the percentile distribution.

(iii) ASM participants receive zero ASM measure achievement points for each measure required in paragraphs (b) or (c) of this section on which no data is submitted in accordance with § 512.720.

(iv) ASM participants who submit data in accordance with paragraphs (e) through (g) of this section on a single required measure via multiple applicable collection types are scored only on the data submission with the greatest number of measure achievement points.

(2)(i) *Benchmarks.* Except as provided in paragraph (h)(2)(iii) of this section, CMS bases benchmarks on an ASM participant's performance by collection type, from one following data sources:

(A) Reported by ASM participants, to the extent feasible, during the ASM performance year.

(B) A previous ASM performance year, if available.

(C) Another period determined by CMS.

(ii) Each benchmark must have a minimum of 20 ASM participants who reported the measure having met the following criteria:

(A) The case minimum requirements in paragraph (g) of this section.

(B) The data completeness requirement as specified in paragraph (f) of this section.

(C) A performance rate that is greater than zero.

(iii) CMS calculates a benchmark for an administrative claims quality measure using the performance on the measure during the current ASM performance year.

(iv) CMS determines a benchmark using decile categories based on the applicable period of data used to determine the measure's benchmark.

(3) *Topped out measures.* CMS identifies topped out measures in the benchmarks for each ASM performance year based on within-model performance on each measure.

(4) *Calculation of the quality ASM performance category score.*

(i) Unless otherwise specified by CMS, an ASM participant's quality ASM performance category score is the sum of all measure achievement points assigned for the applicable measures for the quality ASM performance category.

(A) The sum is divided by the total available measure achievement points.

(B) The quality ASM performance category score cannot exceed 100 percentage points.

(ii) For each measure that is submitted, if applicable, and impacted by significant changes or errors prior to the applicable data submission deadline at § 512.720(d), performance is based on data for 9 consecutive months of the applicable ASM performance year.

(A) Significant changes or errors means changes to or errors in a measure that are outside the control of the clinician and its agents and that CMS determines may result in patient harm or misleading results. Significant changes or errors include, but are not limited to the following:

(1) Changes to codes (such as ICD-10, CPT, or HCPCS codes) or the active status of codes.

(2) The inadvertent omission of codes or inclusion of inactive or inaccurate codes.

(3) Changes to clinical guidelines or measure specifications.

(B) CMS publishes a list of all measures scored in a form and manner specified by CMS.

(C) If the data are not available or CMS determines that they may result in patient harm or misleading results, the measure is excluded from an ASM participant's total measure achievement

points and total available measure achievement points.

(iii) An ASM participant does not receive a quality ASM performance category score if the ASM participant meets the quality ASM performance category data submission requirements specified at § 512.720(a)(1)(i) but does not meet the case minimum requirements specified in paragraph (g) of this section for any required quality ASM performance category measure specified in paragraphs (b) or (c) of this section, as applicable, that has a benchmark as specified in paragraph (h)(2) of this section.

§ 512.730 Cost ASM performance category.

(a) *ASM performance year for cost performance measures.* Beginning with the 2029 ASM payment year, the ASM performance year for cost measures is the full calendar year from January 1 to December 31 that occurred 2 years prior to the applicable ASM payment year.

(b) *Cost measures.* For purposes of assessing performance of ASM participants on the cost ASM performance category, CMS—

(1) For ASM heart failure participants, assess and score the participants on the Heart Failure EBCM (COST_HF_1), as specified under MIPS.

(2) For ASM low back pain participants, assess and score the participants on the Low Back Pain EBCM (COST_LBP_1), as specified under MIPS.

(c) *Adding or removing cost measures.* CMS may add new cost measures to, or remove existing cost measures from, the cost ASM performance category through notice and comment rulemaking.

(d) *Minimum case requirements.* Unless otherwise specified by CMS, the minimum case requirement for each cost measure is 20 cases.

(1) Each cost measure is attributed at the TIN/NPI level according to the measure specification for the applicable ASM performance year.

(2) An ASM participant must meet the minimum case volume to be scored on a cost measure.

(e) *Cost measure achievement points and cost ASM performance category scoring.* Unless a different scoring weight is assigned by CMS, performance in the cost ASM performance category comprises 50 percent of an ASM participant's final score for each ASM performance year.

(1) *ASM measure achievement points.*

(i) For each cost measure attributed to an ASM participant, the ASM participant receives one to ten achievement points (including partial points) based on the ASM participant's

performance on the cost measure during the ASM performance year compared to the cost measure's benchmark.

(i) Achievement points are awarded based on which benchmark range the ASM participant's performance on the measure is in.

(2) *Benchmarks*

(i) CMS bases cost measure benchmarks on cost measure performance during the ASM performance year.

(A) Each benchmark must have a minimum of 20 ASM participants who meet the minimum case volume specified in paragraph (d) of this section for CMS to determine a benchmark for the cost measure.

(B) If a benchmark is not determined for a cost measure, then the measure is not scored.

(ii) CMS determines 10 benchmark ranges based on the median cost of all ASM participants attributed the measure, plus or minus standard deviations. CMS awards achievement points based on which benchmark range an ASM participant's measure score corresponds.

(3) *Calculation of the cost ASM performance category score.* Except as otherwise specified in paragraph (e)(3)(i) of this section, the cost ASM performance category score is the sum of the total number of achievement points earned by the ASM participant divided by the total number of available achievement points, not to exceed 100 percent.

(i) An ASM participant does not receive a cost ASM performance category score if the ASM participant is not attributed the required cost measure for the ASM performance year specified in paragraph (b) of this section because the ASM participant has not met the case minimum specified in paragraph (d) of this section for the required cost measure or if a benchmark has not been created for a required cost measure as specified in paragraph (e)(2) of this section.

(ii) If data used to calculate a score for a cost measure are impacted by significant changes or errors affecting the ASM performance year, such that calculating the cost measure score would lead to misleading or inaccurate results, then the affected cost measure is excluded from the ASM participant's cost ASM performance category score and a cost ASM performance category score is not calculated.

(A) Significant changes or errors means changes to or errors in a measure that are outside the control of the clinician and its agents, and that CMS determines may result in patient harm or misleading results.

(B) Significant changes or errors include, but are not limited to, changes to codes (such as ICD–10, CPT, or HCPCS codes) or the active status of codes, the inadvertent omission of codes or inclusion of inactive or inaccurate codes, or changes to clinical guidelines or measure specifications.

(C) CMS empirically assesses the affected cost measure to determine the extent to which the changes or errors impact the calculation of a cost measure score such that calculating the cost measure score would lead to misleading or inaccurate results that negatively impact the measure's ability to reliably assess performance.

§ 512.735 Improvement activities ASM performance category.

(a) *ASM performance year for improvement activities.* Beginning with the 2029 ASM payment year, the ASM performance year for improvement activities is a minimum of a continuous 90-day period within the calendar year that occurs 2 years prior to the applicable ASM payment year, up to and including the full calendar year.

(b) *Improvement activities.* CMS uses the improvement activities specified in paragraph (c) of this section to evaluate performance of ASM participants in the improvement activities ASM performance category.

(c) *Improvement activities specifications.*

(1) *Improvement Activity 1 (IA–1): Connecting to Primary Care and Ensuring Completion of Health-Related Social Needs Screening.* An ASM participant must have evidence of processes, workflows, or technology that require the ASM participant to do all of the following:

(i) Confirm the ASM beneficiary has access to primary care services and, if not, assist the ASM beneficiary in finding a clinician who provides primary care services.

(ii) Communicate relevant information back to the ASM beneficiary's primary care provider following the ASM beneficiary's visit with the ASM participant.

(iii) Determine whether the ASM beneficiary has received an annual health-related social needs screening in the primary care setting and, if not, encourage the primary care services provider to conduct the screening or allow the ASM participant to conduct the health-related social needs screening.

(2) *Improvement Activity 2 (IA–2): Establishing Communication and Collaboration Expectations with Primary Care using Collaborative Care*

Arrangements. An ASM participant must do all of the following:

(i) Have at least one executed collaborative care arrangement between a primary care practice with which the ASM participant shares ASM beneficiaries.

(ii) The collaborative care arrangement must include collaborative efforts related to at least three of the following five elements:

(A) Data sharing, which includes setting expectations for bi-directional sharing of patient information between the parties to the collaborative care arrangement, including but not limited to test results, treatment plans, and follow-up recommendations.

(B) Co-management, which includes defining co-management approaches, where the parties to the collaborative care arrangement work together to furnish complementary care for patients with complex or chronic conditions.

(C) Transitions in care planning, which includes defining protocols for seamless transitions of care between ASM participants, the primary care practice, or different care settings.

(D) Closed-loop communication, such as clearly articulated processes enforcing parameters on how ASM beneficiaries may be referred between the parties to the collaborative care arrangement.

(E) Care coordination integration comprised of structured processes to embed care coordination processes into the ASM participant's practice workflow.

(d) *Scoring for improvement activities ASM performance category.*

(1) *ASM measure achievement points.* ASM participants receive 10 ASM measure achievement points for attesting “yes” for each improvement activity specified in paragraph (c) in compliance with the data submission requirements at § 512.720.

(2) *Calculation of the improvement activities ASM performance category score.* Unless otherwise specified by CMS, CMS sums the total achievement points for all submitted improvement activities and divides this sum by the total number of available achievement points for the required improvement activities as specified in paragraph (c) of this section, not to exceed 100 percent.

§ 512.740 Promoting Interoperability ASM performance category.

(a) *ASM performance year for the Promoting Interoperability ASM performance category.* Beginning with the 2029 ASM payment year, the ASM performance year for Promoting Interoperability measures is the minimum of a continuous 180-day

period within the calendar year that occurs 2 years prior to the applicable ASM payment year, up to and including the full calendar year.

(b) *Reporting for the Promoting Interoperability ASM performance category.* To earn an ASM performance category score greater than zero for the Promoting Interoperability ASM performance category for inclusion in the final score, an ASM participant must be a meaningful EHR user and meet the following criteria:

(1) *CEHRT.* Use CEHRT as defined at § 414.1305 for the ASM performance year.

(2) *ASM Promoting Interoperability objectives and measures.* Report on the following MIPS Promoting Interoperability measures, as specified by CMS through rulemaking:

(i) An ASM Participant must report both of the following measures or claim an exclusion or exclusions to fulfill the e-Prescribing objective:

(A) e-Prescribing (Measure ID #: PI_EP_1).

(B) Query of PDMP (Measure ID # PI_EP_2).

(ii) An ASM Participant must fulfill the Health Information Exchange objective through one of the following three options:

(A) Report the Support Electronic Referral Loops by Sending Health Information (Measure ID # PI_HIE_1) and Support Electronic Referral Loops by Receiving and Reconciling Health Information (Measure ID # PI_HIE_4).

(B) Health Information Exchange (HIE) Bi-Directional Exchange (Measure ID # PI_HIE_5).

(C) Enabling Exchange Under the Trusted Exchange Framework and Common Agreement (TEFCA) (Measure ID # PI_HIE_6).

(iii) An ASM Participant must fulfill the Provider to Patient Exchange objective by reporting the Provide Patients Electronic Access to Their Health Information measure (Measure ID # PI_PEA_1).

(iv) An ASM Participant must fulfill the Public Health and Clinical Data Exchange objective by reporting both measures:

(A) Immunization Registry Reporting (Measure ID # PI_PHCDRR_1).

(B) Electronic Case Reporting (Measure ID PI_PHCDRR_3).

(3) *Reporting ASM Promoting Interoperability objectives and measures.* Comply with the following reporting requirements:

(i) For each measure under paragraph (b)(2) of this section, report—

(A) The numerator (of at least one) and denominator;

(B) Yes/no statement; or

(C) An exclusion that includes an option for the exclusion.

(ii) Report that the ASM participant completed the actions included in the MIPS Promoting Interoperability Security Risk Analysis measure (Measure ID # PI_PPHI_1) within the calendar year of the ASM performance year.

(iii) Submit an affirmative attestation regarding the ASM participant's completion of the annual self-assessment checklist under the MIPS Promoting Interoperability High Priority Practices Guide of the SAFER Guides measure (Measure ID # PI_PPHI_2) within the calendar year of the ASM performance year.

(4) *Supporting use of CEHRT.* ASM participants must support the use of CEHRT by fulfilling the following requirements:

(i) *Supporting the use and performance of CEHRT.* To fulfill ASM requirements to engage in activities related to supporting clinicians with the performance of CEHRT, the ASM participant:

(A) Must attest by providing all of the following:

(1) Acknowledgement of the requirement to cooperate in good faith with ONC direct review of the ASM participant's health information technology certified under the ONC Health IT Certification Program if a request to assist in ONC direct review is received.

(2) If requested, cooperation in good faith with ONC direct review of the ASM participant's health information technology certified under the ONC Health IT Certification Program as authorized by 45 CFR part 170, subpart E, to the extent that the technology meets, or can be used to meet, the definition of CEHRT, including by permitting timely access to the technology and demonstrating its capabilities as implemented and used by the ASM participant in the field.

(B) May attest to the following objectives and measures:

(1) Acknowledgement of the option to cooperate in good faith with ONC-ACB surveillance of his or her health information technology certified under the ONC Health IT Certification Program if a request to assist in ONC-ACB surveillance is received.

(2) If requested, cooperation in good faith with ONC-ACB surveillance of the ASM participant's health information technology certified under the ONC Health IT Certification Program as authorized by 45 CFR part 170, subpart E, to the extent that the technology meet, or can be used to meet, the definition of CEHRT, including by

permitting timely access to the technology and demonstrating its capabilities as implemented and used by the ASM participant in the field.

(ii) Actions to limit or restrict the compatibility or interoperability of CEHRT. To fulfill ASM requirements for activities related to limiting or restricting the compatibility or interoperability of CEHRT, the ASM participant must not knowingly and willfully take action, such as to disabling functionality, to limit or restrict the compatibility or interoperability of CEHRT.

(c) *Scoring the Promoting Interoperability ASM performance category.*

(1) *ASM measure achievement points.*

(i) An ASM participant earns a score for each measure by fulfilling the reporting requirements specified at paragraph (b) of this section. Score amounts are set forth in the MIPS measure specifications.

(ii) If an exclusion is reported for a measure, the points available for that measure are redistributed to another measure as set forth in the MIPS measure specifications.

(2) *Promoting Interoperability ASM performance category score.* Unless otherwise specified by CMS, CMS sums the scores for each of the required measures and divides this sum by the total number of available Promoting Interoperability points. The Promoting Interoperability ASM performance category score cannot exceed 100 percent.

§ 512.745 Final scoring.

(a) *Final score calculation.* CMS calculates a final score of zero to 100 points using the formula specified at paragraph (a)(5) of this section for each ASM participant that meets the requirements to receive a final score as specified in paragraph (a)(2) of this section.

(1) *ASM performance category weights and scoring adjustments.* CMS calculates the final score using the ASM performance category weights and scoring adjustments as follows:

(i) Quality ASM performance category weight is 50 percent.

(ii) Cost ASM performance category weight is 50 percent.

(iii) The improvement activities ASM performance category has a scoring adjustment that is applied to the final score without weighting.

(A) ASM participants that achieve a 100 percent score for the improvement activities ASM performance category do not receive an improvement activities ASM performance category scoring adjustment to final score.

(B) ASM participants that receive a 50 percent improvement activities ASM performance category score receive an improvement activities ASM performance category scoring adjustment of negative 10 points to the final score.

(C) ASM participants that receive a zero percent improvement activities ASM performance category score receive an improvement activities ASM performance category scoring adjustment of negative 20 points to the final score.

(iv) The Promoting Interoperability ASM performance category has a scoring adjustment that is applied to the final score without weighting.

(A) To determine the Promoting Interoperability ASM performance category scoring adjustment as described in paragraph (a)(1)(iv) of this section, the Promoting Interoperability ASM performance category score is multiplied by 100, the product is then subtracted from 100 and divided by the maximum negative Promoting Interoperability ASM performance category scoring adjustment of 10 points.

(B) The maximum Promoting Interoperability ASM performance category scoring adjustment is negative 10 points.

(2) *Requirements to receive a final score.* Except as described at § 512.780(c)(1), CMS determines whether an ASM participant receives a final score for the applicable ASM performance year depending on the data submitted by the ASM participant.

(i) Except as described in paragraph (a)(2)(iii) of this section, CMS calculates a final score greater than zero but not exceeding 100 as described in paragraph (a) of this section for the applicable ASM performance year for all ASM participants that meet the quality ASM performance category data submission requirements as specified at § 512.720(a)(1)(i).

(ii) CMS assigns a final score of zero for the applicable ASM performance year to all ASM participants who do not meet the quality ASM performance category data submission requirements as specified at § 512.720(a)(1)(i).

(iii) CMS does not assign a final score for the applicable ASM performance year to ASM participants who do all of the following:

(A) Meet the quality ASM performance category data submission requirements as specified at § 512.720(a)(1)(i).

(B)(1) Do not receive a quality ASM performance category score under § 512.725(h)(4)(iii); or

(2) Do not receive a cost ASM performance category score under § 512.730(e)(3)(i).

(3) *Complex patient scoring adjustment.* CMS adds a complex patient scoring adjustment to the final score for the ASM performance year, if applicable, if an ASM participant meets the requirements to receive a final score greater than zero as described in paragraph (a)(2)(i) of this section and the criteria defined in paragraph (a)(3)(i) of this section for the applicable ASM performance year.

(i) The complex patient scoring adjustment is limited to ASM participants with a risk indicator at or above the risk indicator calculated median for their ASM cohort. To determine the median for the respective risk indicator (HCC and dual eligible proportion) for each ASM cohort, risk indicators associated to an ASM participant in the corresponding ASM cohort from the calendar year preceding the applicable ASM performance year, for all ASM participants within an ASM cohort who meet the data submission requirements for the quality ASM performance category at § 512.725(a)(1)(i) are used.

(ii) Beginning with the 2027 ASM performance year, for ASM participants, the complex patient scoring adjustment components are calculated as follows for the specific risk indicators:

(A) Medical complex patient scoring adjustment component = $1.5 + 4 \times$ associated HCC standardized score calculated with the average HCC risk score assigned to beneficiaries (under the HCC risk adjustment model established by CMS in accordance with section 1853(a)(1) of the Act) seen by the ASM participant.

(B) Social complex patient scoring adjustment component = $1.5 + 4 \times$ associated dual proportion standardized score.

(C) The components specified in paragraphs (a)(3)(ii)(A) and (B) of this section are added together to calculate one overall complex patient scoring adjustment. A standardized score for each risk indicator is determined based on the mean and standard deviation of the raw risk indicator score and provides a standardized measurement of how far each risk score is from the mean: (raw risk indicator score – risk indicator mean)/risk indicator standard deviation.

(iii) The complex patient scoring adjustment cannot exceed 10 and cannot be below zero.

(4) *Small practice scoring adjustment.*

(i) *Scoring adjustment for an ASM participant that is in a small practice and is not a solo practitioner.* CMS add

10 points to the final score of an ASM participant that meets all of the following:

(1) Is in a small practice.

(2) Is not a solo practitioner.

(3) Meets the requirements to receive a final score greater than zero as described in paragraph (a)(2)(i) of this section for an applicable ASM performance year.

(ii) *Scoring adjustment for ASM participant that is a solo practitioner.* CMS adds 15 points to the final score of an ASM participant that is a solo practitioner and meets the requirements to receive a final score greater than zero as described in paragraph (a)(2)(i) of this section for an applicable ASM performance year.

(5) *Final score formula.* Final score = [quality ASM performance category score $\times$ quality ASM performance category weight] + (cost ASM performance category score $\times$ cost ASM performance category weight) $\times$ 100 + improvement activities ASM performance category scoring adjustment + Promoting Interoperability ASM performance category scoring adjustment + complex patient scoring adjustment + small practice scoring adjustment. The final score cannot be below zero points or exceed 100 points.

(b) *ASM performance report.* For each ASM performance year, CMS provides each ASM participant with an ASM performance report, in a form and manner determined by CMS, containing all of the following:

(1) The ASM participant's score for each ASM performance category.

(2) The ASM participant's complex patient scoring adjustment under paragraph (a)(3) of this section, as applicable.

(3) The ASM participant's small practice or solo practitioner scoring adjustment under paragraph (a)(4) of this section, as applicable.

(4) The ASM participant's final score, as applicable.

(5) The ASM payment adjustment factor under § 512.750(c)(1).

(6) The ASM payment multiplier under § 512.750(c).

§ 512.750 Payment adjustment.

(a) *General.* Except as described in paragraph (f) of this section, for covered professional services furnished by an ASM participant during an ASM payment year, CMS, in accordance with paragraph (d) of this section, multiplies the amount otherwise paid under Part B for the covered professional services by the ASM payment multiplier calculated for the ASM participant calculated under paragraph (c) of this section for the corresponding ASM performance year.

(b) *Comparison of ASM participant performance.* For the purpose of determining ASM payment adjustment factors and ASM payment multipliers applicable to adjustments to Part B payments for covered professional services in the corresponding ASM payment year, CMS separately compares final scores of ASM participants in each ASM cohort for the corresponding ASM performance year.

(c) *ASM payment multiplier.* Unless otherwise specified under paragraph (d) of this section, for each ASM participant within an ASM cohort for the applicable ASM payment year, CMS calculates an ASM payment multiplier as 1 plus the ASM payment adjustment factor determined under paragraph (c)(1) of this section.

(1) *ASM payment adjustment factor.* For each ASM participant with a final score greater than zero as described at § 512.745(a)(2)(i) within an ASM cohort for the applicable ASM performance year, CMS calculates an ASM payment adjustment factor using the formula: ASM payment adjustment factor = [(ASM risk level as described in paragraph (c)(1)(i) of this section) $\times$ (ASM participant's transformed final score as described in paragraph (c)(1)(ii) of this section) $\times$ (scaling factor applicable to the ASM incentive pool as described in paragraph (c)(1)(iv) of this section)]—ASM risk level as described in paragraph (c)(1)(i) of this section. For each ASM participant with a final score equal to zero as described at § 512.745(a)(2)(ii) within an ASM cohort for the applicable ASM payment year, CMS calculates an ASM payment adjustment factor equal to the negative of the applicable ASM level risk level as described in paragraph (c)(1)(i) of this section.

(i) *ASM risk level.* CMS sets an ASM risk level that is the magnitude of the maximum downside and upside risk to which an ASM participant would be subject to during an ASM payment year.

(A) For the 2029 ASM payment year, the ASM risk level is 9 percent.

(B) For the 2030 ASM payment year, the ASM risk level is 9 percent.

(C) For the 2031 ASM payment year, the ASM risk level is 10 percent.

(D) For the 2032 ASM payment year, the ASM risk level is 11 percent.

(E) For the 2033 ASM payment year, the ASM risk level is 12 percent.

(ii) *Exchange function and transformed final score.* CMS uses a logistic exchange function with a midpoint set at the median final score of the applicable ASM cohort from the applicable ASM performance year to transform each ASM's participant final score into a numerical value.

(iii) *Incentive pool.* CMS calculates an ASM incentive pool for each ASM cohort for an applicable ASM payment year using the formula: ASM incentive pool = (Sum of Medicare Part B payments for covered professional services paid to ASM participants with final scores in an ASM cohort during the applicable ASM performance year) $\times$ (ASM risk level as defined in paragraph (c)(1)(i) of this section) $\times$ (ASM redistribution percentage). The ASM redistribution percentage is set at 85 percent.

(iv) *Scaling factor.* CMS calculates a scaling factor for each ASM incentive pool for the applicable ASM payment year that ensures the estimated total payment adjustments would equal the ASM incentive pool. The scaling factor is calculated by dividing the total amount in the ASM incentive pool by the sum of all ASM participant's transformed final scores, multiplied by their respective total Medicare Part B covered professional services payments from the applicable ASM performance year and the applicable ASM risk level as specified under paragraph (c)(1)(i) of this section.

(2) [Reserved]

(d) *No payment adjustments.* CMS assigns an ASM payment adjustment factor of 0 and an ASM payment multiplier of 1 for the applicable ASM payment year that results in no payment adjustment to an ASM participant who does not receive a final score under § 512.745(a)(2)(iii) for the corresponding ASM performance year.

(e) *Notification of ASM payment adjustments to ASM participants.* CMS notifies each ASM participant of their ASM payment adjustment factor and corresponding ASM payment multiplier for the applicable ASM payment year in the ASM performance report under § 512.745(b) provided to each ASM participant for the applicable ASM performance year.

(f) *Change in ASM participant TIN affiliation after ASM performance year and before the end of corresponding ASM payment year.*

(1) CMS adjusts payments to the different TIN using the ASM payment multiplier calculated for the ASM participant based on their performance in the corresponding ASM performance year for an NPI who meets all of the following:

(i) Is an ASM participant with a final score for an ASM performance year.

(ii) Submits Part B covered professional service claims during an ASM payment year using a different TIN than the TIN CMS identified them as an ASM participant for that ASM performance year and to which the ASM

participant began assigning billing rights after the applicable ASM performance year but before the end of the corresponding ASM payment year.

(2) CMS adjusts claims using the highest ASM payment multiplier from all the TIN and NPI combinations that identified the NPI as an ASM participant for the corresponding ASM performance year for an NPI who meets all of the following:

(i) CMS identifies as an ASM participant under multiple TINs for a given ASM performance year.

(2) Submits Part B covered professional service claims during an ASM payment year under a TIN by which CMS did not identify the ASM participant and to which the ASM participant began assigning billing rights after the applicable ASM performance year but before the end of the corresponding ASM payment year.

§ 512.755 Timely error notice process.

(a) *General.* Subject to the limitations on review in § 512.170, an ASM participant may submit a written timely error notice for one or more calculations made and issued by CMS within the ASM performance report if the ASM participant believes an error occurred in calculations due to data quality, misapplication of methodology, or other issues.

(b) *Requirements.* If an ASM participant believes the ASM performance report contains a calculation error as described in paragraph (a) of this section, the ASM participant must submit a written timely error notice, in a form and manner specified by CMS, documenting the calculation error within 30 calendar days of issuance of the ASM performance report, unless specified by CMS.

(1) If the ASM participant does not provide written timely error notice in accordance with paragraph (a) of this section, then the ASM performance report is deemed final 30 calendar days after its issuance.

(2) Only an ASM participant may submit a written timely error notice described in this section.

(3) *Sufficiency of information in written timely error notice.*

(i) CMS determines if the written timely error notice meets the requirements of this section and contains sufficient information to substantiate the request.

(ii) If the request is not compliant with the requirements of this section or requires additional information—

(A) CMS follows up with the ASM participant to request additional

information in a form and manner as specified by CMS;

(B) The ASM participant must respond within 10 calendar days of CMS' request for additional information in a form and manner as specified by CMS; and

(C) If an ASM participant does not respond in accordance with paragraph (b)(3)(ii)(B) of this section, then the ASM performance report is deemed final.

(c) *Process.* (1) If CMS receives a written timely error notice within 30 calendar days of the issuance of the ASM performance report that CMS determines meets the requirements of paragraph (b) of this section, CMS issues an initial determination in writing within 30 calendar days of receipt to either confirm that there was an error in the calculation or verify that the calculation is correct.

(2) CMS reserves the right to extend the time for providing its initial final determination upon written notice to the ASM participant.

(d) *Reconsideration request.* An ASM participant who wishes to dispute an initial determination made in accordance with paragraph (c) of the section may invoke the reconsideration review process under § 512.190.

§ 512.760 Data sharing with ASM participants.

(a) *General.* CMS shares certain beneficiary-identifiable data as described in paragraphs (b), (c), and (e) of this section and certain aggregate data as described in paragraph (d) of this section with ASM participants regarding ASM beneficiaries and performance under the model.

(b) *Beneficiary-identifiable data.* CMS shares beneficiary-identifiable data with ASM participants as follows:

(1) CMS makes available certain beneficiary-identifiable data described in paragraph (b)(5) of this section for ASM participants to request for purposes of conducting health care operations work that falls within the first or second paragraph of the definition of health care operations at 45 CFR 164.501 on behalf of their patients who are ASM beneficiaries.

(2) An ASM participant that wishes to receive beneficiary-identifiable data for its ASM beneficiaries must do all of the following:

(i) Submit a formal request for the data, on at least an annual basis in a manner and form and by a date specified by CMS, which identifies the data being requested and attests that—

(A) The ASM participant is requesting this beneficiary-identifiable data as part

of a covered entity, as defined at 45 CFR 160.103;

(B) The ASM participant's request reflects the minimum data necessary, as set forth in paragraph (c) of this section, for the ASM participant to conduct activities described in the first or second paragraph of the definition of health care operations at 45 CFR 164.501; and

(C) The ASM participant's use of beneficiary-identifiable data is limited to developing processes and engaging in appropriate activities related to coordinating care, improving the quality and efficiency of care, and conducting population-based activities relating to improving health or reducing health care costs that are applied uniformly to all ASM beneficiaries under the care of the ASM participant, and that these data are not to be used to reduce, limit or restrict care for specific Medicare beneficiaries.

(ii) To the extent practicable, limit the request to ASM beneficiaries whose claims were used to determine the requesting ASM participant's eligibility for ASM participation or to whom the requesting ASM participant provided care during an applicable ASM performance year.

(iii) Sign and submit a data sharing agreement with CMS as set forth in paragraph (e)(1) of this section.

(3) CMS shares beneficiary-identifiable data with an ASM participant on the condition that the ASM participant and other individuals or entities performing functions or services related to the ASM participant's activities, including but not limited to non-ASM participant parties in collaborative care arrangements with ASM participants, comply with all applicable laws addressing the appropriate use of data and the confidentiality and privacy of individually identifiable health information and the terms of the data sharing agreement described in paragraph (e)(1) of this section.

(4) CMS omits from the beneficiary-identifiable data any information that is subject to the regulations in 42 CFR part 2 governing the confidentiality of substance use disorder patient records.

(5) The beneficiary-identifiable data includes, when available, the following information:

(i) Unrefined (raw) Medicare Parts A, B, and D beneficiary-identifiable claims data used to determine ASM participant eligibility for an applicable ASM performance year; and

(ii) Unrefined (raw) Medicare Parts A, B, and D beneficiary-identifiable claims data for ASM beneficiaries who trigger an applicable EBCM episode with the

ASM participant during the applicable ASM performance year.

(c) *Minimum necessary data.* The ASM participant must limit its request for beneficiary-identifiable data under paragraph (b) of this section to the minimum necessary to accomplish the permitted use of the data. The minimum necessary Medicare Parts A, B, and D data elements may include, but are not limited to the following:

(1) Medicare beneficiary identifier (ID).

(2) Procedure code.

(3) Sex.

(4) Diagnosis code.

(5) Claim ID.

(6) The from and through dates of service.

(7) The provider or supplier ID.

(8) The claim payment type.

(9) Date of birth and death, if applicable.

(10) Tax identification number.

(11) National provider identifier.

(d) *Aggregated data feedback.* CMS shares aggregated data on one or more select indicators of the ASM participant's performance, de-identified in accordance with 45 CFR 164.514(b), in a form and manner to be specified by CMS, when available, with ASM participants.

(e) *ASM data sharing agreement.*

(1) To retrieve the beneficiary-identifiable data specified in paragraphs (b) and (c) of this section, the ASM participant must complete and submit, on at least an annual basis, a signed ASM data sharing agreement, to be provided in a form and manner and by a date specified by CMS, under which the ASM participant agrees, at a minimum to do all of the following:

(i) Comply with the requirements for use and disclosure of this beneficiary identifiable data that are imposed on covered entities by the HIPAA regulations, including but not limited to 45 CFR part 164, subparts A and E, and the requirements of ASM set forth in this part.

(ii) Comply with additional privacy, security, breach notification, and data retention requirements specified by CMS in the ASM data sharing agreement.

(iii) Contractually bind any and all downstream recipients of this beneficiary identifiable data, such as other individuals or entities performing functions or services related to the ASM participant's data sharing activities, including those that meet the definition of a business associate as defined at 45 CFR 160.103 and non-ASM participant parties to collaborative care arrangements described at § 512.771, to the same terms and conditions to which

the ASM participant is itself bound in its data sharing agreement with CMS as a condition of the business associate's or non-ASM participant parties' receipt of the beneficiary-identifiable data obtained by the ASM participant.

(iv) That if the ASM participant or any downstream recipient misuses or discloses the beneficiary-identifiable data in a manner that violates any applicable statutory or regulatory requirements or that is otherwise non-compliant with the provisions of the data sharing agreement, CMS may do any or all of the following:

(A) Deem the ASM participant ineligible to obtain the beneficiary-identifiable data under paragraph (b) of this section for any amount of time.

(B) Subject the ASM participant to additional sanctions and penalties available under applicable law.

(v) An ASM participant must comply with all applicable laws and the terms of the data sharing agreement to obtain beneficiary-identifiable data.

(2) CMS shares beneficiary-identifiable data with an ASM participant on the condition that the ASM participant and other individuals or entities performing functions or services related to the ASM participant's data sharing activities, including business associates as defined at 45 CFR 160.103 of the ASM participant and non-ASM participant parties to collaborative care arrangements described at § 512.771, comply with all relevant laws governing the use of data and the privacy and security of individually identifiable health information and the terms of the data sharing agreement described in paragraph (e)(1) of this section.

(f) *Data custodian.* An ASM participant must designate and provide the contact information for, in a form and manner identified by CMS, a data custodian who is responsible for ensuring compliance with privacy and security requirements, including all applicable laws and terms of the ASM data sharing agreement, and for notifying CMS of any incidents relating to unauthorized disclosures of beneficiary-identifiable data.

§ 512.765 Application of the CMS-sponsored model arrangements and patient incentives safe harbor.

(a) *Application of the CMS-sponsored model arrangements safe harbor.* CMS has determined that the Federal anti-kickback statute safe harbor for CMS-sponsored model arrangements (§ 1001.952(ii)(1)) is available to protect remuneration furnished in accordance with the collaborative care arrangements

that meet all safe harbor requirements set forth in §§ 1001.952(ii) and 512.771.

(b) *Application of the CMS-sponsored model patient incentives safe harbor.* CMS has determined that the Federal anti-kickback statute safe harbor for CMS-sponsored model patient incentives (§ 1001.952(ii)(2)) is available to protect remuneration furnished in ASM in the form of ASM beneficiary engagement incentives that meet all safe harbor requirements set forth in §§ 1001.952(ii) and 512.770.

§ 512.770 ASM beneficiary incentives.

(a) *ASM beneficiary incentives.* ASM participants may choose to provide in-kind patient engagement incentives, including but not limited to items of technology or services, to ASM beneficiaries, subject to the following conditions:

(1) *Provision of incentive.*

(i) The incentive must be provided directly by the ASM participant or by an agent of the ASM participant under the ASM participant's direction and control to an ASM beneficiary who is an established patient of the ASM participant.

(ii) The ASM participant must be solely responsible for any costs associated with the provision of the incentive, including but not limited to, the retail value of the item or services offered as the ASM beneficiary incentive.

(2) The item or service provided must be reasonably connected to medical care provided by the ASM participant to an ASM beneficiary for an ASM targeted chronic condition.

(3) The item or service must be a preventive care item or service or an item or service that advances a clinical goal, as specified in paragraph (d) of this section, for an ASM beneficiary by engaging the ASM beneficiary in better managing an ASM targeted chronic condition.

(4) The item or service must not be tied to the receipt of items or services outside the services furnished by the ASM participant to the ASM beneficiary.

(5) The item or service must not be tied to the receipt of items or services from a particular provider or supplier.

(6) The availability of the items or services must not be advertised or promoted, except that an ASM beneficiary may be made aware of the availability of the items or services at the time the ASM beneficiary could reasonably benefit from them.

(7) The cost of the items or services must not be shifted to any Federal health care program, as defined at section 1128B(f) of the Act.

(8) The totality of items or services, including technology as described at paragraph (b) of this section, provided to an ASM beneficiary may not exceed \$1,000 in retail value for any one ASM beneficiary.

(b) *Technology provided to an ASM beneficiary.* ASM beneficiary incentives involving technology are subject to the following additional conditions:

(1) Items or services involving technology provided to an ASM beneficiary must be the minimum necessary to advance a clinical goal, as listed in paragraph (d) of this section, for an ASM beneficiary.

(2) Items of technology exceeding \$75 in retail value must—

(i) Remain the property of the ASM participant; and

(ii) Be retrieved from the ASM beneficiary—

(A) Upon the end of their care relationship with the ASM participant, with documentation of the ultimate date of retrieval. The ASM participant must document all retrieval attempts.

(1) In cases when the item of technology is not able to be retrieved, the ASM participant must determine why the item was not retrievable.

(2) If it was determined that the item was misappropriated, then the ASM participant must take steps to prevent future beneficiary incentives for that ASM beneficiary.

(3) Following this process, documented, diligent, good faith attempts to retrieve items of technology is deemed to meet the retrieval requirement; or

(B) If the provided technology breaks or is otherwise rendered unusable for its intended purposes, with documentation of the ultimate date of retrieval. The ASM participant may replace the unusable unit with the same or similar technology, to the extent practicable, that meets the requirements of paragraphs (a) and (b) of this section.

(c) *Documentation of ASM beneficiary incentives.* In addition to requirements at § 512.135 of this part ASM participants must do all of the following:

(1) Maintain documentation of items and services furnished as beneficiary incentives that exceed \$75 in retail value.

(2) The documentation must be established contemporaneously with the provision of the items and services with a record established and maintained to include at least the following:

(i) The date the incentive is provided.

(ii) The identity of the ASM beneficiary to whom the item or service was provided.

(3) The documentation regarding items of technology exceeding \$75 in

retail value must also include contemporaneous documentation of any attempt to retrieve technology at the end of an episode, or why the items were not retrievable, as described in paragraph (b)(2)(ii) of this section.

(4) The ASM participant must retain and provide access to the required documentation.

(d) *Clinical goals of ASM.* The following are the clinical goals of ASM, which may be advanced through ASM beneficiary incentives:

(1) Promoting preventive care through improved management of ASM targeted chronic conditions.

(2) Empowering patients to actively participate and be accountable for quality and whole health outcomes.

(3) Facilitating meaningful and efficient coordination between specialists and primary care providers to increase independent physician participation in value-based payment programs.

§ 512.771 Collaborative care arrangements.

(a) *General.* Collaborative care arrangements must meet all of the following:

(1) Be in writing, signed by both parties, and contain the effective date of the arrangement.

(2) Be exclusively between the ASM participant and the primary care practice with whom the ASM participant shares at least one established patient who is an ASM beneficiary.

(3) The collaborative care arrangement must be entered into for the purpose of either of the following:

(i) Furthering the ASM participant's performance in the improvement activities ASM performance category at § 512.735.

(ii) Advancing the clinical goals of ASM as described in paragraph (b) of this section.

(4) Participation in a collaborative care arrangement must be voluntary and without penalty for nonparticipation.

(5) Both parties to the collaborative care arrangement must comply with all applicable statutes, regulations, and guidance, including without limitation the following:

(i) Federal criminal laws.

(ii) The False Claims Act (31 U.S.C. 3729 *et seq.*).

(iii) The anti-kickback statute (42 U.S.C. 1320a-7b(b)).

(iv) The civil monetary penalties law (42 U.S.C. 1320a-7a).

(v) The physician self-referral law (42 U.S.C. 1395nn).

(6) The opportunity to enter into a collaborative care arrangement, and the

amount of any payment under a collaborative care arrangement, must not be conditioned directly or indirectly on the volume or value of past or anticipated referrals or business generated by, between, or among the parties to the collaborative care arrangement or any other person.

(7) Any payment between the parties set forth in a collaborative care arrangement must not exceed the sum total of the payment adjustments made to an ASM participant's claims for a given ASM performance year as a result of the application of the ASM payment adjustment factor to the ASM participant's Medicare Part B payments for covered professional services during an ASM payment year.

(8) Any payment or other remuneration set forth in the collaborative care arrangement must be solely between the parties to the arrangements. Any payment between the parties must be made by check, electronic funds transfer, or another traceable cash transaction.

(9) Both parties to the collaborative care arrangement must retain the ability to make decisions in the best interests of ASM beneficiaries, including the selection of clinicians, devices, supplies, and treatments.

(10) The collaborative care arrangement must not do either of the following:

(i) Induce any party to reduce or limit medically necessary services to any Medicare beneficiary.

(ii) Reward the provision of items and services that are medically unnecessary.

(11) ASM participants must maintain contemporaneous documentation, in accordance with § 512.135, regarding all collaborative care arrangements entered into, including the following:

(i) The relevant written agreements.

(ii) The date and amount of any payments between the parties.

(iii) A description of the methodology and accounting formula for determining the amount of any payments between the parties.

(12) The collaborative care arrangement must stipulate that any non-ASM participant party is considered a downstream recipient for CMS data sharing purposes, and must require the non-ASM participant party to comply with applicable data sharing requirements at § 512.760.

(13) Any non-ASM participant party to a collaborative care arrangement must be a downstream participant subject to the standard provisions for Innovation Center models specified in subpart A of this part 512.

(b) *Clinical goals of ASM.* The following are the clinical goals of ASM,

which may be advanced through collaborative care arrangements:

(1) Promoting preventive care through improved management of ASM targeted chronic conditions.

(2) Empowering patients to actively participate and be accountable for quality and whole health outcomes.

(3) Facilitating meaningful and efficient coordination between specialists and primary care providers to increase independent physician participation in value-based payment programs.

(c) *Collaborative care arrangement exclusions.* An ASM participant may not enter into a collaborative care arrangement with a party that is excluded from participation in any Federal health care programs by the Inspector General.

§ 512.775 Medicare program waivers.

(a) *Medicare payment waivers.* Unless otherwise specified in § 512.710(a)(2), CMS waives the requirements of section 1848(q) of the Act, and its implementing regulations, for an ASM participant for each ASM performance year that the ASM participant meets the ASM eligibility criteria set forth in § 512.710(b)(1).

(b) *Waiver of certain telehealth requirements.*

(1) *Waiver of the geographic site requirements.* Except for the geographic site requirements for a face-to-face encounter for home health certification, CMS waives the geographic site requirements of section 1834(m)(4)(C)(i)(I) through (III) of the Act for ASM participants and ASM beneficiaries solely for services that—

(i) May be furnished via telehealth under existing Medicare program requirements; and

(ii) Are medically appropriate for treatment of an ASM targeted chronic condition.

(2) *Waiver of the originating site requirements.* Except for the originating site requirements for a face-to-face encounter for home health certification, CMS waives the originating site requirements under section 1834(m)(4)(I)(ii)(I) through (VIII) of the Act for episodes to permit a telehealth visit to originate in the beneficiary's home or place of residence solely for services that—

(i) May be furnished via telehealth under existing Medicare program requirements; and

(ii) Are medically appropriate for treatment of an ASM targeted chronic condition.

(3) *Waiver of selected payment provisions.* CMS waives payment requirements as follows:

(i) Under section 1834(m)(2)(A) of the Act so that the facility fee normally paid by Medicare to an originating site for a telehealth service is not paid if the service is originated in the beneficiary's home or place of residence.

(ii) Under section 1834(m)(2)(B) of the Act to allow the distant site payment for telehealth home visit HCPCS codes unique to ASM.

(4) *Other requirements.* All other requirements for Medicare coverage and payment of telehealth services continue to apply, including the list of specific services approved to be furnished by telehealth.

§ 512.780 Extreme and uncontrollable circumstances.

(a) *General rule.* Except as specified in paragraph (b) of this section, CMS—

(1) Applies determinations made under the Quality Payment Program for whether an extreme and uncontrollable circumstance has occurred and the affected area during the ASM performance year; and

(2) Has sole discretion to determine the period during which an extreme and uncontrollable circumstance occurred.

(b) *Additional criteria.*

(1) CMS has sole discretion to determine, based on information known to the agency prior to the beginning of the relevant ASM payment year, that data for an ASM participant are inaccurate, unusable, or otherwise compromised due to circumstances outside of the control of the clinician and its agents, including third-party intermediaries.

(2) CMS notifies ASM participants of the following:

(i) Its determination that the circumstances described at paragraph (b)(1) of this section exist; and

(ii) The impact of the circumstances described in paragraph (b)(1) of this section upon scoring methodology for affected ASM participants in a form and manner determined by CMS.

(c) *Impact on final scores.*

(1) Except as described in paragraph (c)(2) of this section, an ASM participant who CMS identified as having been affected by a circumstance described in paragraphs (a) or (b) of this section is exempt from meeting data submission requirements identified at § 512.720 and does not receive a final score, resulting in a neutral payment adjustment for the corresponding ASM payment year.

(2) In the event that an ASM participant who CMS identified as having been affected by a circumstance described in paragraph (a) or (b) of this section submits data in accordance with the data submission requirements at

§ 512.720, CMS assigns the ASM participant a final score using the methodology described at § 512.745 for the applicable ASM performance year.

Robert F. Kennedy, Jr.,
Secretary, Department of Health and Human Services.
BILLING CODE 4120-01-P

Note: The following Appendices will not appear in the Code of Federal Regulations.

APPENDIX 1: MIPS QUALITY MEASURES

NOTE: Except as otherwise noted in this final rule, previously finalized measures and specialty measure sets will continue to apply for the CY 2026 performance period/2028 MIPS payment year and future years. Previously finalized measures and specialty sets are in the CY 2017 through CY 2025 PF5 final rules: 81 FR 77358 through 77816, 82 FR 33966 through 34174, 83 FR 61097 through 60285, 84 FR 63265 through 63513, 85 FR 85043 through 85369, 86 FR 65687 through 65968, 87 FR 70250 through 70633, 88 FR 79556 through 79964, and 89 FR 98599 through 98957. In addition, electronic clinical quality measures (eCQMs) that are endorsed by a Consensus-Based Entity (CBE) are shown in Table A of this Appendix as follows: CBE #/CBE / eCQM/CBE #.

Table Group A: New MIPS Quality Measures Finalized for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years

A.1. Patient Reported Falls and Plan of Care	
Category	Description
CBE #/ eCQM/CBE #:	N/A / N/A
Quality ID:	413
Description:	Percentage of patients (or caregivers as appropriate) with an active diagnosis of a movement disorder, multiple sclerosis, a neuromuscular disorder, dementia, or stroke who reported a fall occurred and those that fell had a plan of care for falls documented at every visit.
Measure Steward:	American Academy of Neurology
Numerator:	1. Patients (or caregivers as appropriate) that reported a fall occurred since the last visit and 2. Patients who had a falls plan of care documented at every visit.
Denominator:	1. Patients with an active diagnosis of a movement disorder, multiple sclerosis, a neuromuscular disorder, dementia, or stroke 2. Patients with an active diagnosis of a movement disorder, multiple sclerosis, a neuromuscular disorder, dementia, or stroke who reported (or caregiver as appropriate) a fall occurred since last visit
Exclusions:	None
Measure Type:	Process
High Priority Measure:	Yes
Collection Type:	MIPS-CQM
Measure-Specific Case Minimum/Performance Period:	N/A

Category	Description
Rationale	We proposed this process measure because it addresses patient safety in an at-risk population by ensuring patients with a clinical diagnosis of a neurological disorder are screened for falls and have a falls plan of care established. Studies that focus on the rate of falls for common neurological conditions indicate falls are an issue for neurology patients with symptomology that affects movement and balance, necessitating the need to ensure these patients are screened for falls and an appropriate plan of care is established. According to the World Health Organization (WHO), falls are the second leading cause of mortality worldwide.^{171,172} Studies have revealed that patients with neurodegenerative conditions face deterioration of cognitive impairment have a 2–8-fold higher chance of falls when compared to those with normal cognition.^{173,174} Additionally, patients with Parkinson's disease (PD) have a five times higher risk of fall-related injuries.¹⁷⁵ Fall incidence is reported 2–4 times higher in patients with neurological disorders than in healthy subjects of similar age, and 46 percent of neurological patients reveal having had one or more falls per year.^{176,177,178} This measure is predicated on evidence-based clinical guidelines that recommend exercise interventions to prevent falls in community-dwelling adults 65 years or older who are at an increased risk for falls.¹⁷⁹ The measure will enhance compliance with the clinical guidelines by incentivizing clinicians to assess falls and develop an appropriate care plan to help reduce fall incidence, thereby improving patient safety and outcomes. The Patient-Reported Falls and Plan of Care measure was recommended by the Patient-Reported Falls and Plan of Care Measure Review (PRMR) Clinical Recommendation Committee, which has been fully developed and tested at the clinical level with high reliability, good inter-rater scores, and adequate face validity. Testing of measure performance indicated a gap in care, with a median performance rate of 89 percent, which allows room for improvement among clinicians treating this patient population. This measure was previously included in MIPS as a QIC measure (A01043), which was in the previously finalized Neurodegenerative Conditions MIPS, and substitutes the new falls for implementation in MIPS. This measure is not currently CPE endorsed. Although CPE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure satisfying the requirement set forth in section 1848(a)(2)(D)(i) of the Act stating that the measure selected for inclusion in MIPS also is not endorsed by a CPE, shall have a facility as evidence-based. This measure could be added to the Quality Care for Patients with Neurologic Conditions MIPS in the future and will fill a critical quality measure unmet gap within the neurological clinical topic area. Additionally, it will provide a specialty-specific measure for the MIPS Neurology specialty set under Table B.23 of this Appendix. Note: Refer to the PRMR Clinical Recommendation Committee Spreadsheet of Final Recommendations to CPE and MIPS at https://pam.org/sites/default/files/2025-02/PRMR_2024-2025_kilic_-_Recommendations_Report_Final.pdf.

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses:

Comment: Several commenters supported the proposed addition of the Patient-Reported Falls and Plan of Care measure. A commenter noted it aligns with the occupational therapy scope of practice, including risk evaluation and individualized care planning. Another commenter supported the measure because it targets a narrower patient population with neurological

conditions than measure Q155: Falls Plan of Care. Commenters emphasized falls are common in this population and often cause preventable hospitalizations, loss of independence, and higher mortality. Clinicians play an essential role in developing care plans and connecting patients with appropriate services to prevent falls. A commenter encouraged broader adoption across specialties.

Response: We thank the commenters for supporting this new measure in MIPS.

Comment: A commenter supported this new measure as an optimal measure of MIPS and agreed it is appropriate for attribution to neurologists. The commenter recommended that CMS and the measure steward ensure the definition of "plan of care" remains flexible and clinically appropriate, allowing physicians to tailor interventions based on individual patient needs, preferences, and risk factors. The commenter urged CMS to consider the following issues: administrative burden, e-car attribution to neurologists, visit frequency, and caregiver involvement. The commenter encouraged CMS to refine the new measure to ensure it is practical, equitable, and aligned with clinical practice.

Response: We thank the commenter for supporting this new measure. The current measure specification provides a definition of what a plan of care for falls must include. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. The measure will contain coding specific to the diagnoses included in the denominator consistent with patients cared for by neurologists and is determined to be low burden to report. The measure is to be reported at each visit as falls within this patient population are common, and the intent is for ongoing assessment by clinicians as well as collaboration with other clinicians and professionals who participate in implementation of the plan of care.

Comment: A commenter emphasized the need to account for varying patient populations and care contexts and recommended that CMS continue to assess measure specifications and risk adjustment methodologies to ensure that this new measure, in addition to other outcome-based measures, reflects differences in patient acuity and resource needs.

Response: We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. In addition, CMS completes measure analysis annually to determine potential measure updates for future performance periods. This measure was not tested with any risk adjustment variables, and the measure developer did not recommend stratification at this time. We also note that process measures are not typically risk-adjusted.⁴¹¹

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 32574 through 32575), we are finalizing the *Patient Reported Falls and Plan of Care* measure as proposed for the CY 2026 performance period 2028 MIPS payment year and future years.

A.2. Prevalent Standardized Kidney Transplant Waitlist Ratio (PSWR)⁵⁴²

Category	Description
UOE #	N/A
ACQHEF #	
Quality ID	512
Description	The number of prevalent dialysis patients in a practitioner group who are under the age of 75 and are listed on the United Kidney-pancreas transplant waitlist or received a living donor transplant. The practitioner group is inclusive of physicians and advanced practice providers. The measure is the ratio observed number of waitlist events in a practitioner group to its expected number of waitlist events. The measure uses the expected waitlist events calculated from a Cox model, which is adjusted for age, patient comorbidities, and other risk factors at the time of dialysis.
Measure Steward	Centers for Medicare & Medicaid Services
Numerator	Numerator 1 = "Patients who were on dialysis and listed on the organ donor status at the end of the year." Numerator 2 = "The ratio of the observed number of waitlist events in a practitioner group to the model-based expected number of waitlist events."
Denominator	Denominator 1 = "Patients age less than 75 years who are on dialysis during the performance period prior." Denominator 2 = "The denominator for the Prevalent Standardized Waitlist Ratio (PSWR) is the total number of patients on dialysis under the age of 75 in the practitioner group according to each patient's treatment history each year."
Exclusions	Patients admitted to a skilled nursing facility (SNF) during the period of evaluation. Patients in hospice at the year before or during the period of evaluation. Patients with a diagnosis for dementia in the year before or during the period of evaluation. The noted exclusions represent conditions for which transplant waitlist candidacy is highly unlikely, and which can be identified readily with available data. Patients who were admitted to dialysis in a practitioner group with fewer than 11 patients or 2 expected events are not excluded from the measure. If a provider cannot be matched to a TIN, patients will be grouped into a separate "unl" TIN and will be included in the models but are not submitted to any valid individual TINs. All patients who meet the denominator threshold criteria are included and used to model a given dialysis practitioner group's expected waitlist ratio. If a dialysis practitioner group has fewer than 11 patients or 2 expected events, then the dialysis practitioner group is excluded from reporting outcomes.
Measure Type	Process
High Priority Measure	No
Collection Type	MIPS C/M
Measure/Specific Use Minimum Performance Period	N/A

⁵⁴² The measure link was revised from the MERIT submission to include "kidney transplant" for clinics.

Rationale:	Starting with the CY 2025 performance period/2025 MIPS payment year, we finalized measure Q510: First Year Standardized Kidney Transplant Waitlist Removal CY25 and measure Q511: Percentage of Pre-emptive Patients Waitlisted for Kidney Transplant (PPPW) and Percentage of Pre-emptive Patients Waitlisted for Kidney Transplant in Active Status (APPPW) (Q510 and Q511) through Q523). Both measures track dialysis patients who are under the age of 75 in a pre-emptive group and on the kidney or kidney-pancreas transplant waitlist (all patients or patients in active status). Measure Q510 tracks the initial placement on the kidney or kidney-pancreas transplantation waitlist or receipt of a living donor transplant for patients within the first year after dialysis initiation, with the objective of providing access to kidney transplant in a timely manner within that first year after starting dialysis, which is associated with improved outcomes. Measure Q511 tracks the number of patients on the kidney or kidney-pancreas transplantation waitlist or receipt of a living donor transplant for all dialysis patients at a dialysis practitioner or group practice to encourage ongoing attention to transplantation as a treatment option. Measure Q511 also assesses the waitlist every month for active status of patients on the kidney transplant waitlist, which encourages ongoing optimization of health to maintain active status and ensure patients are ready to accept a kidney when a match becomes available. Measure Q511 works in tandem with measure Q510 to assess both initial and on-going care. We proposed the P5WB process measure for the CY 2026 performance period/2026 MIPS payment year because it builds on the previous measures Q510 and Q511 by assessing new placement on the kidney or kidney-pancreas transplant waitlist or receipt of a living donor transplant for all dialysis patients. End-stage renal disease (ESRD) affects nearly 750,000 Americans, and dialysis for ESRD patients represents a significant portion of national healthcare expenditures.¹¹⁷ While dialysis is a treatment for ESRD, it is associated with increased mortality and lower quality of life for ESRD patients when compared to kidney transplant.¹¹⁸ This measure assesses whether patients who are on dialysis and found to be an expected waitlist event based upon the Cox model were placed on either the kidney or kidney-pancreas transplant waitlist or received a living donor kidney transplant. Data submitted by the measure developer indicates a performance gap for a process that can be directly linked to improved patient outcomes. National and large regional studies provide strong empirical support for the association between processes within the clinical scope and control of dialysis practitioners followed by subsequent patient transplant waitlisting. For example, clinical assessments, processes and materials made by a dialysis practitioner are contributing factors for consideration in patient transplant wait listing. In one large regional study conducted on facilities in the State of California, a standardized analysis facility referral status was developed, adjusted for age, demographics, and comorbidities.¹¹⁹ There was substantial variability across facilities in referral rates and a significant correlation performed between making up the referral rate and dialysis facility waitlist rates resulting in a significant ($\alpha=0.35$, $p=0.001$).¹²⁰ A national study using registry data (United States Renal Data System) from 2005–2007 evaluated the association between whether patients were informed about kidney transplantation based on reporting on the Medical Expenditure Form 2728 (https://www.cms.gov/Medicare/CMS-Forms/CMS-Forms/Downloads/CMS2728.pdf) and subsequent access to kidney transplantation as a listing or receipt of a live donor transplant.¹²¹ Approximately 30 percent of patients were uninformed about kidney transplantation, which was associated with half the rate of access to transplantation compared to patients who were informed.¹²² In a related survey study of 568 hemodialysis patients, whether they are on or informed about transplantation by nephrologists or dialysis staff seemed to be directly correlated with patients' perception of such information was associated with a nearly threefold increase in the likelihood of waitlisting.¹²³ The measure P5WB measure is to track the initial placement on the kidney or kidney-pancreas transplantation waitlist or receipt of a living donor transplant for patients on dialysis, with the objective of improving their overall health. Being waitlisted or receiving a living donor kidney transplant represents a desirable change in health status for patients on dialysis, indicating achievement of a health care team objective to kidney transplantation. Waitlisting is a first step in the process of transplantation which drives quality by progressing patients towards the goal of transplantation and better health outcomes. A measure focusing on the outcome of waitlisting is appropriate for several reasons. First, in preparing patients for waitlisting, dialysis practitioners optimize their health and functional status, improving their overall health state. Second, waitlisting is a necessary step prior to potential receipt of a deceased donor kidney transplant (receipt of a living donor kidney is also accounted for in the measure) which is known to be beneficial for survival and quality of life.¹²⁴ Third, dialysis practitioners can substantially cut down the processes that result in waitlisting. This includes proper education of dialysis patients on the option for transplant, referral of appropriate patients to a transplant center for evaluation and assessing patients with completion of the transplant as a unified process in order to increase their candidacy for transplant waitlisting. These types of practices are included as part of the conditions to coverage for Medicare certification of ESRD dialysis facilities. Finally, state, regional and facility variations in waitlisting rates highlight substantial room for improvement for this measure.^{125,126,127,128} Additionally, this measure focuses specifically on the population of pre-emptive patients on dialysis, examining for the occurrence of new waitlisting or living donor transplant events. This will evaluate and encourage rapid attention from dialysis practitioners' practice to the optimization of health of patients to ensure early access to the waitlist, which has been demonstrated to be particularly beneficial.^{129,130,131}

Category	Description
	Given that many persons may not be ready for transplant candidacy immediately following initiation of dialysis, this measure encourages ongoing attention to transplant candidacy throughout a patient's time on dialysis. The PRMR did not match criteria for this measure with concerns regarding exclusions for patients opting out of transplant and initiation. Although LOI endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure satisfying the requirement set forth at section 1348(q)(2)(B)(v) of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBO shall have a firm basis that is evidence based. As discussed above, studies suggest a significant positive correlation between the clinician activities and the addition of patients to a transplant waitlist, which are necessary for patients to receive the improved outcomes associated with kidney transplants. Note: Refer to the PRMR Clinician Recommendations Committee Spreadsheet of Final Recommendations to CMS and HHS at https://p4qm.org/sites/default/files/2025-02/PRMR-2024-2025-MUC-Recommendations-Report-Final.pdf

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses:

Comment: A commenter supported the proposed addition of the Proposed Standardized Kidney Transplant Waitlist Rate (PSWTR) measure to MIPS. The commenter noted this measure will build on the previous transplant measures to also successful placement on the kidney or kidney-potential transplant waitlist or receipt of a living donor transplant. This will help payers understand if clinicians are connecting patients who have ESRD with the additional care and support they need to prepare for organ transplant. These measures could help ensure clinicians are working with patients to help them access transplant specialists and if facilities are proactively reaching out to patients on the waitlist and helping them achieve transplantation.

Response: We thank the commenter for supporting this new measure in MIPS.

<https://doi.org/10.2215/CJN.01100605>

Comment: A few commenters opposed the addition of the PSWR measure, explaining that waitlisting decisions are made primarily by transplant centers and patients (not nephrologists), making the measure inappropriate at the clinician group level. Commenters noted that the measure has not received CBE endorsement and was not recommended in the 2024–2025 PRMR due to concerns with validity, insufficient exclusions, and risk of incorrect attribution. The commenters warned that linking the measure to accountability programs could pressure patients into enrolling and create disparities given variable transplant center criteria. One of the commenters added that because MIPS benchmarking assumes 100 percent performance, a measure designed to identify outliers (or a measure not expected to achieve full performance) should not be included in MIPS. Another commenter suggested that CMS instead adopt measures that better reflect nephrologists' roles, such as referral or initiation of the evaluation process.

Response: We thank the commenters for their feedback. While we acknowledge there are aspects of this measure that are not directly in the clinician group's control, the outcome can be in the reach through coordination of care, strong communication with transplant centers, and advocacy for patients and optimization of a patient's overall health and comorbid conditions.³¹⁴ While determining transplantation candidacy is complex and multidisciplinary, the referring nephrologist remains cardinal in this process as the most significant barrier to pre-emptive kidney transplantation is timely referral to the transplantation program.³¹⁵ It is incumbent on all caregivers involved in the care of a patient to work towards the goals of transplant referral if deemed by the patient, successful completion of the transplant evaluation resulting in waitlisting, and maintenance on the waitlist or remain eligible to receive a kidney. In regard to an exclusion for patients who chose not to consider transplantation, we recognize the decision to pursue kidney transplant as a kidney replacement modality is a multifaceted, individual decision. However, it is difficult to account for patient choice in the measure given the measure's construction and risk adjustment methodology. Based on the literature, we expect this to be a small number of patients who may be found across analysis centers, thus affecting each at a similar rate and being an area of great interest for future work.^{322–323}

While we agree CBE endorsement is preferred, this measure should nonetheless be added to MIPS as it meets the statutory standard for inclusion as a non-endorsed measure. Section 1849(a)(2)(C) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidence-based. Being added to and maintained on the waitlist for kidney transplantation is the culmination of a variety of preceding preparatory activities and the continuation of patient advocacy and health optimization, which may include education of patients about the options of transplantation, referral of patients to a transplant center for evaluation, completion of the evaluation process, and optimizing the overall health of the patient while on dialysis. There is a significant association between the clinician activities described in this measure and the addition and maintenance of patients to a transplant waitlist, which is necessary for patients to receive the improved health outcomes associated with kidney transplant.³²⁴ Inclusion of this measure in MIPS also aligns with the USRO Quality Incentive Program as indicated in a prior response. The benchmark for this measure will be based on the ratio of the observed number of waitlist events in a practitioner group to the model-based expected number of waitlist events. All data reported will be used to create the benchmark for scoring purposes, and clinicians will be assessed based upon this benchmark.

After consideration of public comments, and for the reasons stated above and in the proposed rule (40 FR 32876 through 32879), we are finalizing the *Patient-Specific Kidney Transplant Waitlist Ratio (PSWR)* measure as proposed for the CY 2026 performance period (2026 MIPS payment year and future years).

A.3. Diagnostic Delay of Venous Thromboembolism in Primary Care

Category	Description
CBE #:	Item #3749
eCQM CBE #:	
Quality #:	514
Description:	Percentage of episodes for patients 18 years of age and older with documented Venous Thromboembolism (VTE) symptoms in the primary care setting and who had a diagnosis of VTE that occurs >24 hours and within 30 days following the index primary care visit where symptoms for the VTE were first present.
Measure Steward:	Bingham and Women's Hospital
Numerator:	All qualified VTE encounters in which the VTE diagnosis occurs prior to 24 hours and within 30 days following the index PCP visit.
Denominator:	All Qualified VTE Encounters in which the patient was aged 18 or older at the start of the Qualified VTE Encounter.
Exclusions:	Exclude qualified VTE encounter with a hospice care service documented within previous 90 Days. Exclude qualified VTE encounter with a palliative care service documented within previous 90 Days. Exclude qualified VTE encounter with another qualified VTE encounter documented within previous 6 months.
Measure Type:	Intermediate Outcome
High Priority Measure:	Yes
Collection Type:	eCQM
Measure-Specific Case Minimum/Performance Period:	This eCQM is intended to be reported by integrated health systems with access to both ambulatory and inpatient documentation.

Category	Description
Rationale	We proposed this intermediate outcome measure because measuring and reporting delayed VTE diagnosis rates will inform health care providers and facilities about opportunities to improve care. Streamlined measures for quality improvement, and ultimately improve the quality of care received by patients. This measure has the potential to lower health care costs associated with VTE by providing ongoing patient outcome data that can be used to improve VTE diagnostic performance and to reduce complications associated with delayed diagnosis and treatment. This eYOM is intended to be reported for integrated health systems with access to both laboratory and implicit documentation. VTE is a serious, preventable public health problem affecting approximately 100,000–600,000 individuals in the U.S. each year.¹²⁷ Without timely and adequate treatment, the likelihood of significant complications increases.¹²⁸ VTE (pulmonary embolism and deep vein thromboses) has a 30-day mortality rate as high as 23 percent^{129, 130} and hemodynamic and structural VTE can be non-specific, timely diagnosis of VTE is difficult, leading to missed VTE diagnosis. Two studies of outpatients in large hospitals found that 9–12 percent had VTE, and 24–41 percent were undiagnosed at the time of death.^{131, 132} In addition to concerns over patient safety, VTE events are costly to healthcare systems. Our study estimated that costs associated with VTE complications ranged from \$426–\$41,157 across scenarios, imposing a financial burden on healthcare systems.¹³³ Timely diagnosis of VTE events may prevent resulting adverse events from occurring, with the potential to save healthcare costs and reduce the mortality rate. Empirical evidence supports a marked difference in mortality between patients who receive immediate diagnosis and treatment of VTE and those who are left undiagnosed.¹³⁴ VTEs are associated with a high 30-day mortality rate¹³⁵ and delays in VTE diagnosis are associated with higher rates of complications and an increased risk of mortality.¹³⁶ Earlier diagnosis of VTE may reduce the morbidity and mortality associated with the dangerous condition^{137, 138} and could promote positive patient outcomes. This evidence supports this measure by highlighting the increased morbidity and mortality associated with the delayed diagnosis of VTE, which affirms the potential value of this measure to reduce any delay in VTE diagnosis. This measure could be added to the Value at Primary Care (VPC) in the future and could be a potential addition to the MIPS Family Medicine, Geriatrics, and Internal Medicine specialties under Tables B-13, B-16, and B-19 of this Appendix. The PRMR Clinical Recommendations Committee recommended this measure with the condition that implementation burden be addressed for facilities with less sophisticated EHRs. This measure was endorsed by the CHS as CHS 37496. While concerns were discussed regarding EHR implementation, we have determined the measure is feasible for implementation in MIPS systems. Only integrated health systems and this measure is an important clinical topic for primary care clinicians to facilitate timely diagnosis of VTE. Now Refer to the PRMR Clinical Recommendations Committee Spreadsheet of Final Recommendations to CHS and CHS at https://p4qm.org/sites/default/files/2025-02/PRMR-2024-2025-MQC-Recommendations-Report-Final.pdf

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: A commenter supported the proposed addition of the Diagnostic Delay of Venous Thromboembolism in Primary Care measure in MIPS to promote prompt diagnosis and referral to a venous thromboembolism (VTE) specialist for appropriate treatment. The commenter suggested CMS further underscore the dire consequences of VTE in the rationale section by adding the following language: VTE is the third leading cause of cardiovascular death, after heart attack and stroke.¹¹ Another commenter supported this new measure, stating that it reflects ongoing movement toward interoperability and more timely performance data.

Response: We thank the commenters for supporting this new measure in MIPS.

Comment: Several commenters opposed this new measure citing the following reasons:

- **Applicability and Scope:** The commenters stated that the measure should extend beyond primary care settings, such as urgent care, given workforce shortages and the wide range of patient entry points. They added that the measure would be better suited for internal quality improvement initiatives at integrated delivery networks rather than being applied within MIPS or other value-based programs.
- **Clinical Feasibility and Fairness:** The commenters expressed concern that the measure could unfairly penalize clinicians who do not have access to rapid (within 24 hours) ultrasound services, noting that this time interval is impractical in many settings. They added that the measure may also penalize clinicians for diagnostic delays that are clinically reasonable.
- **Risk of Overuse/Defensive Medicine:** A commenter cautioned that the measure could incentivize overuse of VTE diagnostics, lead to unnecessary emergency department visits, and encourage defensive medicine, ultimately increasing healthcare costs.
- **Measure Design Concerns:** The commenters stated that the measure lacks risk stratification and includes an overly broad symptom list (for example, cough) that overlaps with many conditions, making timely and accurate diagnosis challenging. They also noted that the denominator requires several symptoms or codes in the same encounter, which may exclude legitimate cases, such as when a primary care clinician makes the diagnosis, but imaging is performed elsewhere. In addition, commenters indicated that the definitions of “qualified VTE encounters” and “index primary care visit” are unclear, and the measure lacks sufficient evidence to attribute delays to clinicians based on a single symptom.
- **Measure Specifications:** The commenters noted that ICD, CPT, and RxNorm codes must all appear within the same encounter. The measure appears to restrict the denominator to emergency department–diagnosed cases while excluding situations where a primary care clinician initiates the diagnosis and subsequent imaging or anticoagulation occurs later. They also raised questions about the consequences for reporting if a diagnosis is initially missed.
- **Testing and Reliability Issues:** The commenters noted that reliability fell below the threshold (40 percent of encounters). Signal-to-noise ratio at the group level was 0.87512 (minimum) and 0.9303 (median), which are both below the acceptable 0.7 threshold. Data element validity testing of the measure is limited to one EHR system and is not completed across multiple vendors. Some testing data overlapped with the COVID-19 Public Health Emergency (PHE), raising concerns about representativeness.
- **Implementation and Burden:** The commenters emphasized that many systems lack the Natural Language Processing (NLP) tools required for eCQM implementation, which would add both cost and administrative burden. They noted that this complexity is particularly challenging for ancillary care clinicians in integrated systems, who may face added burden since hospital eCQMs track problems but not diagnosis timeliness.
- **General Recommendations:** The commenters recommended prioritizing decision support tools over performance measures and urged CMS to further refine the measure specifications with additional stakeholder input before finalization. They also requested clarification on expectations for how diagnoses should be established within integrated health systems.

Response:

- **Applicability and Scope:** The measure is currently specified for primary care and intended for use in integrated health care settings. This measure will not be appropriate for some settings or locations, however, there may be potential to expand the measure to other settings in the future through the rulemaking process.
- **Clinical Feasibility and Fairness:** The 24-hour time frame was evaluated and deemed appropriate per the measure developer’s technical expert panel and literature review. The measure would be optional to report, as clinicians have choice of which MIPS quality measures they choose to report; therefore, clinicians will not be penalized for selecting another measure to report in the event clinician systems or resources are not adequate.
- **Risk of Overuse/Defensive Medicine:** Regarding the unintended consequence of overuse, the measure steward recognizes that overuse of VTE diagnostic resources to avoid a high Diagnostic Delay of Venous Thromboembolism (DDVTE) rate can be avoided in two ways: first by promoting the use of low-cost tools like D-dimer tests to rule out a VTE prior to ordering imaging, and second by using clinical decision support (CDS) tools built into the EHR.

¹¹ Office of the Surgeon General (U.S.). National Heart, Lung, and Blood Institute (U.S.). (2008). The Surgeon General’s Call to Action to Prevent Deep Vein Thrombosis and Pulmonary Embolism. Available from <https://www.ncbi.nlm.nih.gov/books/NBK44178/>.

- **Measure Design Concerns and Measure Specifications:** The measure developer assessed variation between sub-samples and found no significant differences by race, ethnicity, sex, insurance, and age. In literature, there are minimal to no differences in hospital length of stay (LOS) between men and women hospitalized for VTE, and no significant differences in mortality between men and women diagnosed with VTE.^{14,15} Although there are some disparities in the individuals who experience VTEs, there should not be disparities in the delayed diagnosis of VTE following the onset of symptoms noted by a clinician. The measure developer noted they are currently conducting a study to further investigate potential disparities. Regarding the list of symptoms included in the measure denominator, all of the symptoms included relate to either lower extremity venous thromboembolism (LVEVT) or pulmonary embolism (PE). However, most patients included in the eCQM measure developer testing data presented to primary care with a combination of signs/symptoms which appear within 30 days of the index primary care visit. There are no symptoms specific to VTE, and the measure developer selected the list of VTE-related signs/symptoms using a combination of literature review and qualitative methods (for example, interviews with clinicians with experience in treating VTE patients). Along with these signs/symptoms, this eCQM requires an ICD-10 diagnosis code, CPT imaging code, and RxNorm treatment code to accurately identify a patient with VTE, which adds specificity to denominator identification. The measure requires both VTE symptoms and a subsequent VTE diagnosis to be included in the denominator but does not specify or require any particular diagnostic testing. Additionally, if a patient is diagnosed during a primary care visit and goes elsewhere for imaging, they are not included in the denominator.

With regard to diagnosis and definition of the criteria for an eligible VTE event, the measure developer provided the following guidance:

- Patient is aged 18 years or older on the date of the primary care visit.
- The patient received a diagnosis of a lower limb VTE within 30 days of their primary care visit. For a patient to have a VTE diagnosis, they must have all of the following VTE-related codes within the same encounter:
 - ICD-10-CM (clinical modification) code for VTE.
 - CPT codes for an imaging scan for VTE linked to the same encounter as the ICD-10-CM code.
 - RxNorm order for therapeutic anticoagulants placed in the same encounter as the imaging scan.
- The patient must have no eligible VTE events within 6 months prior to the qualifying VTE event.
- **Testing and Reliability Issues:** Regarding testing concerns, the measure developer indicated additional data element testing is in progress for EHR systems. While CMS does not have a minimum threshold for reliability, additional testing data provided by the measure developer shows higher reliability at the group level, reinforcing our rationale for implementation at the group level. While the measure developer acknowledges lower sample sizes due to part of data collection occurring during the COVID-19 PHE, there was sufficient data to complete testing, and the measure is CBP endorsed.
- **Implementation and Burden:** The measure developer noted the NLP is optional and is intended to be used in cases where symptoms are not otherwise documented using the codes in the value set. Free NLP license sources may be located online. The measure developer confirmed the NLP model has been tested successfully in different health systems.
- **General Recommendations:** The measure has been determined to be implementable as a MIPS eCQM at the group level as part of an integrated health system. The measure will undergo review as part of the annual update process to evaluate any potential or recommended changes to the measure specifications, including additional guidance for implementation.

After consideration of public comments, and for the reasons stated above, and in the proposed rule 190 FR 17880 through 17881, we are finalizing the *Diagnostic Delay of Venous Thromboembolism in Primary Care* measure as proposed for the CY 2026 performance period 2028 MIPS payment year and future years.

A.4. Screening for Abnormal Glucose Metabolism in Patients at Risk of Developing Diabetes

Category	Description
CDE # / eCQM CRE #:	K04 / S02
Quality #:	515
Description:	Percentage of adult patients with risk factors for type 2 diabetes who are due for glycemic screening for whom the screening process was completed during the measurement period.
Measure Standard:	Amendable Clinical Assessment
Numerator:	Patients who had a glycemic screening test performed during the measurement period
Denominator:	All patients with at least two outpatient clinical encounters or one preventive clinical encounter during the measurement period who have the following risk factors for type 2 diabetes: - Most recent BMI ≥ 25 kg/m² (BMI ≥ 23 kg/m² for Asian patients) during measurement period, AND - Age 35-70 at start of measurement period
Exclusions:	- Patient's pregnancy overlaps measurement period. - Patient with diagnosis of advanced illness or limited life expectancy overlaps measurement period. - Patient with diagnosis of diabetes overlaps 2-year look-back period. - Patient with diagnosis of prediabetes overlaps 2-year look-back period - Patient with glycemic screening performance during 2-year look-back period.
Measure Type:	Process
High Priority Measure:	No
Collection Type:	eCQM
Measure-Specific Case Minimum/Performance Period:	N/A

Category	Description
Rationale	We proposed this eQOL measure to capture a critical process to identify patients with prediabetes who may benefit from interventions to prevent type 2 diabetes and patients with undiagnosed type 2 diabetes. Regular glycaemic screening is a critical first step to identifying patients with prediabetes and helping patients avoid the disability and costs associated with progression to type 2 diabetes. The Centers for Disease Control and Prevention (CDC) estimates that approximately 98 million Americans have prediabetes.¹⁴ They note that more than 80 percent of adults with prediabetes are not aware that they have the condition.¹⁵ This measure aligns with current United States Preventive Services Task Force (USPSTF) clinical guidelines for prediabetes screening, which recommends screening for prediabetes and type 2 diabetes in adults aged 35 to 70 years who are overweight or obese.¹⁶ An estimated 13 percent of all U.S. adults 18 years or older have diabetes, and 34.5 percent meet criteria for prediabetes. Diabetes is the leading cause of kidney failure and new cases of blindness among adults in the U.S. It is also associated with increased risks of cardiovascular disease, nonalcoholic fatty liver disease, and nonalcoholic steatohepatitis and was estimated to be the seventh leading cause of death in the U.S. in 2017. Screening for prediabetes and type 2 diabetes may allow for earlier detection, diagnosis, and treatment, with the goal of improving health outcomes.¹⁷ This fully tested and developed measure will fill a gap in MIPS, which does not have any related measures that evaluate the rate of screening for abnormal glucose metabolism in patients at risk for diabetes. This measure will ensure timely identification of patients with prediabetes for early intervention and may be a potential more addition to the Value in Primary Care MIPS. The PRMR Clinical Recommendations Committee recommended this measure. Although CBE endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure, satisfying the requirement set forth at section 4348(g)(1) DWS of the Act, stating that any measure selected for inclusion in MIPS that is not endorsed by a CBE still have a focus on evidence-based. As mentioned previously, this measure aligns with USPSTF evidence-based clinical guidelines.¹⁸ The measure was final during the MEPT submission process to be testable as an eQOL in the characteristics with high levels of agreement for data element testing of a similar non-MIPS eQOL. Additionally, measure testing demonstrates adequate measure score reliability, high face validity, and median performance scores that indicate significant room for improvement among clinicians. Note: Refer to the PRMR Clinical Recommendations Committee Spreadsheet of Final Recommendations to CMS and HHS at https://p4qm.org/sites/default/files/2025-02/PRMR-2024-2025-MUC-Recommendations-Report-Final.pdf.

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses:

Comment: Several commenters supported the proposed addition of the Screening for Abnormal Glucose Metabolism in Patients at Risk of Developing Diabetes measure. A commenter noted that the measure aligns with the Administration's focus on disease prevention and empowering individuals to make lifestyle changes that support overall wellness. The commenters emphasized that implementing measures to facilitate diabetes screening would reinforce the CDC National Diabetes Prevention Program, which already requires providers under its cooperative agreement to ensure physicians screen and refer patients to community-based lifestyle programs. Finalizing the measure for use in MIPS would therefore align CMS, CDC, and broader prevention efforts. The measure also received unanimous support during the Pre-Review Measure Review process. Commenters looked forward to continuing to educate and increase awareness about the Medicare Diabetes Prevention Program as an evidence-based treatment for patients with prediabetes. Another commenter supported this new measure, stating that it reflects ongoing movement toward interoperability and more timely performance data.

Response: We thank the commenters for supporting this new measure in MIPS.

Comment: A commenter supported adding the measure as an optional MIPS measure and provided recommendations for improvement. They urged CMS and the measure steward to ensure flexibility in test selection based on clinical appropriateness, avoid necessitating unnecessary or overly frequent screening in low-risk patients, and provide clear guidance on ending end

¹⁹ See footnote USPSTF et al. (2021).

documentation on reduce administrative burden. The commenter also requested that the measure steward seek CBE endorsement. Add (general recommendations included) revising the measure to accept data from Continuous Glucose Monitors (including a placebo intervention indication); investigating a modification to assess disparities in screening rates by race, ethnicity, and socioeconomic status; clarify the appropriate rescreening interval for patients with normal results; and ensuring the measure does not penalize practices that emphasize shared decision-making and individually tailored care plans.

Response: The measure is currently tested and specified to utilize fasting plasma glucose, glucose tolerance test or hemoglobin A1c; however, we thank the commenters for these suggestions and encourage the commenters to reach out to the measure steward to discuss revisions for possible implementation in future years. While we agree CBE endorsement is preferred, this measure should nonetheless be added to MIPS as it meets the statutory standard for inclusion as a non-endorsed measure. Section 1849(g)(2)(D) of the Act requires, in relevant part, that any measure selected for inclusion in MIPS that is not endorsed by a CBE shall have a focus that is evidence-based. The measure is based on current clinical guidelines for prediabetes screening for patients who are overweight or obese as determined by their Body Mass Index (BMI).⁵⁰ The clinical guideline recommends glycemic screening in the denominator population because they determined that there is high certainty that the net benefit of screening is moderate or there is moderate certainty that the net benefit is moderate to substantial. Therefore, the risk of unintended consequences from implementing this measure is low. During measure testing the developer determined the measure is not recommended to be stratified. With regard to screening interval, there are exclusions to account for the patients for whom glucose metabolism screening is not appropriate and will guarantee overscreening, and while there is not an exclusion for patient refusal, this should affect all clinicians reporting the measure equally and all MIPS eligible clinicians have choice in what measures they choose to report.

After consideration of public comments and for the reasons stated above and in the proposed rule (90 FR 32882 through 32883), we are finalizing the *Screening for Elevated Glucose Metabolism in Patients at Risk of Developing Diabetes* measure as proposed to the CY 2026 performance period (2025 MIPS payment year and future years).

⁵⁰ See Kothuri USPSTF et al. 2021.

A.5. Hepatitis C Virus (HCV): Sustained Virological Response (SVR)	
Category	Description
CER #	N/A
eCOMCBE #:	
Quality ID:	516
Description:	Percentage of persons aged greater than or equal to 18 years with active hepatitis C (HCV) with negative/undetectable HCV ribonucleic acid (RNA) at least 20 weeks to 12 months after positive/detectable HCV RNA test result.
Measuring Significance:	American College of Gastroenterology Association
Numerator:	All persons aged greater than or equal to 18 years at the time of the eligible encounter with an eligible encounter and positive/detectable HCV RNA test result in the denominator identification period who have a subsequent negative/undetectable HCV RNA test result 20 weeks to 12 months after first positive/detectable HCV RNA test result identified in the denominator identification period.
Denominator:	All persons aged ≥ 18 years with active Hepatitis C Virus diagnosis at the time of the eligible encounter within the denominator identification period with a positive/detectable Hepatitis C Virus or qualitative RNA test Result.
Exclusions:	Patients never at large in a palliative care or who died during the measurement period.
Measure Type:	Outcome
High Priority Measure:	Yes
Collection Type:	MIPS, QIP
Measure-Specific Case Adjustment/Performance Period:	N/A
Rationale:	We proposed this outcome measure because achieving SVR is the first step toward reducing future HCV morbidity and mortality. Once achieved, SVR is associated with long-term clearance of HCV infection, which is regarded as a virologic cure,¹⁴ as well as with improved mortality and mortality. Patients who achieve SVR usually have an improvement in liver histology and clinical outcomes. This measure is supported by American Association for the Study of Liver Diseases (Infectious Diseases Society of America (AASLD)-IDSA HCV Guidance Panel clinical guidelines that strongly recommend universal direct-acting antiviral treatment for all persons with chronic or acute HCV infection.¹⁵ Additional evidence from cohort studies evaluated the association between SVR after antiviral therapy and mortality, complications of chronic HCV infection, SVR was associated with decreased risk for all-cause mortality, liver-related mortality, and other complications of end-stage liver disease versus no SVR.¹⁶ This measure could be added to the Gastroenterology Care and Prevention and Treatment of Infectious Diseases including Hepatitis and HIV, MIPS in the future and will fill a current quality measure inventory gap within the Hepatitis Clinical impact area. In addition, it will provide a specialty-specific outcome measure for the AASLD, Gastroenterology and Infectious Diseases specialty sub-center Tables B.14 and B.18 of the Appendix. The PRMR Clinical Recommendation Committee recommended this measure without conditions. Testing was completed at the clinician level with a small sample size due to unavailability of data. Although full endorsement is preferred, it is still recommended this measure be added to MIPS because it is an evidence-based measure satisfying the requirement set forth in section 4300001 of the Act, stating that any measure selected for inclusion in MIPS that is endorsed by a CBE shall have a focus that is evidence-based. As mentioned previously, this measure aligns with AASLD-IDSA HCV guidance panel evidence-based clinical guidelines. The measure was found during the PRMR submission process to be feasible at the clinician level, and data elements necessary were completed showing overall a consensus agreement value of 92 percent, indicating moderate reliability. Note: Refer to the PRMR Clinical Recommendation Committee Appendix of Final Recommendations to CBEs and MIPS at https://pdqm.org/sites/default/files/2025-02/PRMR-2024-2025-MUC-Recommendations-Report-Final.pdf.

We received public comments on this proposed measure. The following is a summary of the comments we received and our responses.

Comment: Several commenters supported the proposed addition of the Hepatitis C Virus (HCV): Sustained Virological Response (SVR) Quality Measure, emphasizing its importance in advancing national HCV elimination goals. They explained that SVR, defined as undetectable HCV RNA 12 weeks after treatment, is the gold standard for determining cure and serves as a meaningful outcome measure. With the availability of point-of-care HCV RNA testing, pan-genotype antivirals, and cure rates exceeding 95 percent, the measure supports state-of-the-art strategies, improves linkage to care and treatment rates, and helps identify gaps in the care continuum. Commenters also highlighted that the measure promotes evidence-based practice improvements, demonstrates the value of infectious diseases physicians, and provides key data on both clinical and economic

AASLD-IDSA Recommendations for Testing, Managing, and Treating Hepatitis C Virus Infection. *Clinical Infectious Diseases*. doi:10.1093/cid/cia119. Publication of the Infectious Diseases Society of America, 202519. Advance online publication. <https://doi.org/10.1093/cid/cia119>

¹⁵ Cron, R., Dana, T., Fu, R., Zoller, B., Wagner, J., Ramirez, S., Grunewald, S., & Jau, J. H. (2020). Screening for Hepatitis C Virus Infection in Adolescents and Adults: A Systematic Review Update for the U.S. Preventive Services Task Force. Agency for Healthcare Research and Quality, 11, 55.

impacts of HCV care. A commenter further noted that this measure is included in the CQMC HIV-Hepatitis C core measure set. Another commenter indicated finalization of this measure could further motivate Medicare Advantage plans to include similar performance measures to have a standard set of reportable metrics to inform disease detection and elimination efforts.

Response: We thank the commenters for supporting this new measure in MIPS.

Comment: A commenter supported the new measure, noting that while direct-acting antivirals (DAAs) are highly effective at achieving SVR, they are not 100 percent effective and may be slightly less effective in patients with HIV or Hepatitis B (HBV) coinfection. The commenter explained that HBV is generally treated before HCV due to the risk of flare. The commenter pointed out that although the measure excludes patients who do not undergo repeat HCV DNA testing for reasons such as concomitant infection, it does not exclude individuals with concomitant infection from the denominator. The commenter recommended that the measure steward consider adding exceptions for these patients as well as for patients who decline treatment.

Response: We thank the commenter for supporting this new measure and for the exclusion suggestions. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. Patient refusal of treatment typically affects all MIPS eligible clinicians who report the measure equally, and we would expect clinicians to take the opportunity to educate patients on appropriate treatment for this chronic condition.

Comment: A commenter supported the goal of increasing Hepatitis C treatment but raised concerns that an SVR-focused quality measure could lead clinicians to prioritize patients more likely to return for post-SVR testing while excluding marginalized populations, such as people who use drugs or are experiencing homelessness. The commenter stated that an SVR measure would not accurately capture cure rates, as many cured patients may not undergo SVR testing. The commenter recommended instead using measure #400: One-Time Screening for Hepatitis C Virus (HCV) and Treatment Initiation to assess Hepatitis C-related care quality, which would better promote equitable care.

Response: We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years as some concerns may be addressed with a denominator exception for lack of follow-up. However, we would expect clinicians to take the opportunity to educate patients on appropriate treatment and follow-up for this chronic condition. Clinicians also have choice in which measures they choose to report in MIPS. With regards to accurate capture of cure rates, the patient would require a positive Hepatitis C Virus Quantitative or Qualitative RNA Test Result to be included in the denominator and measure testing indicated high face validity and adequate measure score reliability.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 52834), we are finalizing the *Hepatitis C Virus (HCV) Sustained Virological Response (SVR)* measure as proposed for the CY 2026 performance period (2028 MIPS payment year and future years).

Table Group B: Modifications to Previously Finalized Specialty Measure Sets Finalized for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years

In the CY 2026 PFS proposed rule (40 FR 32885), we proposed modifying the previously finalized specialty measure sets based upon review of updates made to existing quality measure specifications, the proposed addition of new measures for inclusion in MIPS, and feedback provided by specialty societies. There may be instances where the existing measures within a specialty set remain static, but the individual measures have proposed substantive changes in Table Group D of this Appendix. In the first column, existing measures with substantive changes described in Table Group D of this Appendix are noted with an asterisk (*). Core measures that align with Core Quality Measure Collaborative (CQMC) core measure sets are noted with the symbol (C), and high-priority measures are noted with an evaluation point (†). The indicator column includes a “high-priority type” in parentheses after each high-priority indicator (†) to represent the regulatory definition of high-priority measures. Additionally, eQIMs that are enforced by a CDE are shown in Table Group B of this Appendix as follows: (CDE #) of QM CDE #.

Under § 414.1305, as finalized in this final rule under Section IV.A.4.3 (b), a high-priority measure means an outcome (including intermediate-outcome and patient-reported outcome), appropriate use, patient safety, efficiency, patient experience, care coordination, or equal quality measure.¹⁶ Further details of these types of measures may be found in the CMS Measures Management System Hub (<https://mmshub.cms.gov/>).

NOTE:

- Updates to measure titles and/or measure descriptions under Table Group B in this final rule may or may not be considered substantive in nature, therefore may not be proposed or updated under Table Group D. If the change was considered substantive in nature, it was finalized under Table Group D.
- Under Table Group B, we responded to comments related to new measures that were proposed for addition to measure sets, as well as measures proposed for removal. Any comments received on previously finalized measures that have no substantive changes are out of scope and not included in this final rule. Commenters who requested additions or removals of quality measures to specific specialty sets should use the Stakeholder Solicitation for Specialty Sets process as these updates must be proposed through rulemaking.
- For each specialty set, measures in the Previously Finalized tables and any new measures finalized under applicable Addition tables will be available for reporting in CY 2026.

We requested comments on proposed measure additions and/or proposed measure removals under applicable specialty sets in Table Group B of this Appendix. Previously finalized measures that had no substantive changes were not open for comment under the proposed rule.

The following specialty sets were not open for comment as they had no proposed modifications (addition and/or removal tables) and no proposed substantive changes to previously finalized measures for the CY 2026 performance period/2028 MIPS payment year: Electrophysiology, Cardiac Specialist, Dentistry, Diagnostic Radiology, and Pathology.

The following specialty sets had no proposed modifications but had proposed substantive changes to previously finalized measures that were open for comment under Table Group D of this Appendix: Hospitalists, Radiation Oncology, and Optometry.

The remaining specialty sets had proposed modifications and were open for comment.

¹⁶ Note that under Section IV.A.4.3 (b) of this final rule, the term “health equity” is being used for removal from the definition of a high-priority measure.

B.1. Allergy/Immunology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Allergy/Immunology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ALLERGY/IMMUNOLOGY SPECIALTY SET							
Note: In this final rule, we are removing the following measure(s) below from this specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBF # / eCQM CBEU	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	48*	N/A	MIPS CQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, wage difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	49*	N/A	MIPS CQM	Process	Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, wage help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCIN	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	50*	N/A	MIPS CQM	Process	Adult COVID-19 Vaccination Status: Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (90 FR 32888), we are finalizing the above measure(s) for removal from the *Allergy/Immunology Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.2. Anesthesiology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Anesthesiology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

National Committee for Quality Assurance

B.3. Audiology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE AUDIOLOGY SPECIALTY SET							
Note: In this final rule, we are removing the following measures (set below) from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CMS # / eCQM ID / CDE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	487	N/A	MIPS eCQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS eCQM	Process	Connection to Community Service Provider: Percent of patients 18 years or older who were screened for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least 1 of these HRSNs within 60 days after screening.	ACHIN	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (90 FR 32893), we are finalizing the above measure(s) for removal from the *Audiology Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.4a. Cardiology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Cardiology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinical types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE CARDIOLOGY SPECIALTY SET							
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	322	N/A	MIPS (QMI)	Efficiency	Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Preoperative Evaluation in Low-Risk Surgery Patients: Percentage of stress single-photon emission computed tomography (SPECT), myocardial perfusion imaging (MPI), stress echocardiogram (ECHEC), multigated acquisition scan (MUGA), cardiac computed tomography angiography (CCTA), or cardiac magnetic resonance (CMR) performed in low-risk surgery patients 18 years or older for preoperative evaluation during the 12-month submission period.	American College of Cardiology Foundation	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	487	N/A	MIPS (QMI)	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	408	N/A	MIPS (QMI)	Process	Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	CHS HHS	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	708	N/A	MIPS (QMI)	Process	Adult COVID-19 Vaccination Status: Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received public comments on the measure(s) proposed for removal from this specialty set. The following is a summary of the comments we received and our responses.

Commenter: A commenter did not support removal of measure Q322: Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Preoperative Evaluation in Low-Risk Surgery Patients but acknowledged CMS' rationale for proposing removal due to topped-out performance. They cautioned against eliminating one of the few cardiology-specific efficiency measures without a replacement, stressing that cardiac imaging remains an important policy and practice issue and that the measure serves as a signal of appropriate use. While not opposing retirement, the commenter urged CMS to pair it with a broader imaging overuse measure covering echocardiography, nuclear stress testing, and coronary CTA in clearly low-value scenarios. They further recommended refining specifications to capture clinical purpose across settings, leveraging EHR-based clinical decision support to reduce inappropriate testing, granting Improvement Activity credit for CDS use and feedback to ordering clinicians, and using claims data to identify high-outlier sites for targeted outreach.

Response: We thank the commenter for their feedback. As discussed under Table C.4 of this Appendix, measure Q322 is extremely topped out, which demonstrates it has become a standard of care. We acknowledge that removal of this measure decreases the number of available measures for this specialty; however, there are policies in place, such as Eligible Measure Applicability (EMA) and denominator reduction to account for this when working to meet MIPS quality performance category requirements. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement and focus on specialty sets on areas with greater room for improvement to drive more meaningful gains in quality of care. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped-out status would limit the score awarded per the 2025 Benchmark File.

We encourage the commenter to reach out to measure developers/steers to develop new outcome/high priority measures for submission to the Call for Measures for possible future implementation.

Commenter: Regarding measure Q487: Social Drivers of Health, a commenter stated that many cardiology practices, particularly in ACOs or integrated care models, are beginning to embed social determinants of health screening into routine workflows. ACOs operate under value-based payment arrangements, which incentivizes them to improve patient outcomes and control costs. Removing this measure may discourage continued advancement in this area. If CMS proceeds with removal from the cardiology set, the commenter urged its retention in primary care-aligned or multispecialty MVPs to ensure continued attention to social risk factors to improve outcomes across specialties.

Response: As discussed under Table C.8 of this Appendix, measure Q487 is a process measure that no longer addresses a priority area and will no longer be considered a high-priority measure. As explained in the removal rationale, removing this measure aligns with the CMS Quality Measure Development Plan through maintaining a quality measure inventory that focuses on high-priority and outcome-based measures that align across programs and payers.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 32899), we are finalizing the above measure(s) for removal from the *Cardiology Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.4b. Electrophysiology Cardiac Specialist

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Electrophysiology Cardiac Specialist specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set had no proposed changes.

N/A / N/A	40%	N/A	MIPS eCQM	Process	Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility bill needs, or interpersonal safety and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 90 days after screening.	COCHIM	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (90 FR 32903 through 32904), we are finalizing the above measure(s) for removal from the *Certified Nurse Midwife Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.6. Chiropractic Medicine

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Chiropractic Medicine specialty set takes additional criteria into consideration, which includes but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinical codes. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal as applicable.

MEASURES FINALIZED FOR ADDITION TO THE CLINICAL SOCIAL WORK SPECIALTY SET								
Indicator	CBE # / # of QMs / CBE #	Quality #	CMS #/QML ID	Collection Type	Measure Type	Measure Title and Description	Measure Keyword	Rationale for Inclusion
1 (Outcome)	3665 / N/A	405	N/A	AIIPS CQM	Patient-Reported Outcome Measure	Antibiotic Palliative Care Patients' Experience of Feeling Heard and Understood: The percentage of top-free responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit.	American Academy of Hospice and Palliative Medicine (AAHPM)	We proposed including this measure in the Clinical Social Work specialty set as we agree with increased parties' feedback that this measure is clinically relevant to this clinician type. Palliative care has expanded rapidly in recent years across inpatient, ambulatory, home-based, and facility settings. ¹⁴ Inclusion of this measure can help ensure that more specialized types are equipped to better manage seriously ill patients' access to high-quality palliative care. This patient-reported outcome measure will help fill a gap for patients receiving palliative care by ensuring the patient's voice and experience of care is assessed, communicated, and shared between making with his or her clinician. Patients feeling heard and understood adds an important dimension to the care planning for this unique patient population, commonly cared for by clinicians with specialty. This measure is published on existing guidelines and conceptual models ¹⁵ and is specified to allow non-palliative care specialists who treat patients with serious illness to report the measure and encourages more comprehensive care. Increasing the clinician's focus on minimizing the experiences of patients, families, and caregivers is critical to achieving person-centered care and will promote more universal adoption of best practices to support shared decision making. ¹⁶ Studies have shown that adding palliative care to the plan of care for patients with serious illness results in better symptom management and communication with health care providers, as well as

MEASURES FINALIZED FOR ADDITION TO THE CLINICAL SOCIAL WORK SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
								decreased within or family members or other caregivers. ²⁵ The measure being added to this specialty set was contingent on the inclusion of applying coding by the end of the CY 2026 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported adding measure Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood to this specialty set. One of the commenters recommended CMS consider adding this measure to all specialty sets.

Response: We thank the commenters for supporting the addition of this measure to the Clinical Social Worker specialty set. We encourage the commenter to request this measure be added to other specialty sets through the Solicitation for Specialty Sets process.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 32913 through 32914), we are finalizing the above measure(s) for addition to the Clinical Social Worker Specialty Set as proposed for the CY 2026 performance period/2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.7. Clinical Social Work

PREVIOUSLY FINALIZED MEASURE(S) FINALIZED FOR REMOVAL FROM THE CLINICAL SOCIAL WORK SPECIALTY SET							
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by Specialty Societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	487	N/A	MIPS eCQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and caregiver/safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2026 MIPS payment year. See Table Group C of this Appendix for rationale.

B.7. Clinical Social Work

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE CLINICAL SOCIAL WORK SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CER # / eCQM Code	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	498	N/A	MIPS eCQM	Process	Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	CCHM	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received public comments on the measure(s) proposed for removal from this specialty set. The following is a summary of the comments we received and our responses.

Comment: A commenter did not support the proposed removal of measures Q487: Screening for Social Drivers of Health and Q498: Connection to Community Service Provider from this specialty set. The commenter stated that screening for social drivers of health is essential to identify unmet medical factors—such as housing, food, and transportation—that significantly affect mental health and substance use, and highlighted that without these measures, accountability for addressing patient needs would be reduced. The commenter recommended that if CMS proceeds with removal, alternative approaches should leverage existing data sources and workflows to avoid added administrative burden.

Response: As discussed under Tables C.8 and C.9 of this Appendix, measures Q487 and Q498 are process measures that no longer address a priority area and will no longer be considered high-priority measures. As explained in the removal rationale, removing these measures aligns with the CMS Quality Measure Development Plan through maintaining a quality measure inventory that focuses on high-priority and outcomes-based measures that align across programs and payers. We encourage the commenter to reach out to measure developers/stewards to develop new outcome/high priority measures for submission to the Call for Measures for possible future implementation.

After consideration of public comments, and for the reasons stated above and in the proposed rule (49 FR 32914), we are finalizing the above measure(s) for removal from the *Clinical Social Work Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.5. Dentistry

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Dentistry specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set had no proposed changes.

B.5. Dentistry

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE DERMATOLOGY SPECIALTY SET							
Note: In this final rule, we are removing the following measures below from this specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCOM CBE #	Quality #	CMS eCOM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	407	N/A	MIPS/CQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, social difficulties, and interpersonal safety. Community to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, social help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	408	N/A	MIPS/CQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, social help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	ACHA	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (90 FR 32918), we are finalizing the above measures for removal from the *Dermatology Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.10. Diagnostic Radiology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Diagnostic Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set had no proposed changes.

MEASURES FINALIZED FOR ADDITION TO THE FAMILY MEDICINE SPECIALTY SET								
Indicator	CBE # / eCOM CBE #	Quality #	CMS eCOM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward	Rationale for Inclusion
1 (Electronic)	N/A / 37408	114	CM SH 7.61	eCOM	Intermediate Outcome	Diagnostic Delay of Venous Thromboembolism in Primary Care: Percentage of episodes for patients 18 years of age and older with documented Venous Thromboembolism (VTE) symptoms in the primary care setting and who had a diagnosis of VTE that occurs >24 hours and within 30 days following the index primary care visit where symptoms for the VTE were first present.	Regina and Women's Hospital	We proposed including this measure in the Family Medicine specialty set as this measure is clinically relevant to this collection type. Family physicians provide preventive care, diagnose and treat acute and chronic illness, and manage chronic diseases. ¹⁴⁵ Venous thromboembolism (VTE) is a serious and preventable health problem that requires timely diagnosis and treatment in order to reduce morbidity and mortality. ¹⁴⁶ Due to this specialist's broad scope of care, patients often present to them first with non-specific symptoms prior to being diagnosed. ¹⁴⁷ This measure is currently specified for primary care and extended to improve early recognition which can reduce adverse patient outcomes. The measure addresses a gap in care for the treatment of patients with venous thromboembolism, specifically the commonly missed or delayed diagnosis in primary care requiring timely and adequate treatment. Including this measure in this specialty set can potentially improve diagnostic performance leading to a reduction in patient complications, decreased patient mortality and morbidity, and lowered health care costs. ¹⁴⁸ Enhancing the family medicine related measure inventory could help to ensure better specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within the set and adding this measure to this specialty set will elevate the importance of VTE diagnosis and treatment. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

B.13 Family Medicine

MEASURES FINALIZED FOR ADDITION TO THE FAMILY MEDICINE SPECIALTY SET								
Indicator	CBE# / eCQM CREA	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Scenario	Rationale for Inclusion
	N/A / N/A	515	CM 511 540.1	eCQM	Process	Screening for Abnormal Glucose Metabolism in Patients at Risk of Developing Diabetes: Percentage of adult patients with risk factor for type 2 diabetes who are due for glycemic screening for whom the screening process was completed during the measurement period	American Medical Association	We proposed including this measure in the Family Medicine specialty set as this measure is clinically relevant to this specialty type. Family medicine clinicians are likely the most frequent point of contact for many patients as their scope of care is extensive and inclusive of many different patient populations and conditions. This measure focuses on patients with risk factors for developing type 2 diabetes and encourages early detection and prevention of diabetes. Regular glycemic screening is an important first step in identifying patients with prediabetes and help patients avoid the disability and the cost associated with progression to type 2 diabetes.¹⁷ This measure aligns with national USPSTF guidelines and recommendations of screening for prediabetes and type 2 diabetes in adults aged 35 to 70 years who have overweight or obesity.¹⁸ Nearly 98 million people have prediabetes, but more than 8 in 10 adults do not know they have it.¹⁹ Emphasizing the importance of identifying patients with prediabetes and identifying patients with undiagnosed type 2 diabetes. Emphasizing the family medicine related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to close any within this specialization. This measure complements other measures within their set and adding this measure to this specialty set will elevate the importance of glucose screening in patients at risk for diabetes. The measure being added to this specialty set was contingent on the measure's applicability coding by the time of the CY 2026 PFS rollout, in the event appropriate coding was not included in the final specification this measure would not have been included for inclusion within this specialty measure set.

B.13. Family Medicine

MEASURES FINALIZED FOR ADDITION TO THE FAMILY MEDICINE SPECIALTY SET								
Indicator	CBE # / eCOM CBE #	Quality #	CMS eCOM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward	Rationale For Inclusion
1 (Electronic)	N/A / N/A	#16	N/A	MIPS CQM	Outcome	Hepatitis C Virus (HCV) Sustained Virological Response (SVR): Percentage of patients aged greater than or equal to 18 years with active hepatitis C (HCV) with negative/undetectable HCV ribonucleic acid (RNA) at least 24 weeks to 12 months after positive/detectable HCV RNA test result	American Gastroenterological Association	We proposed including this measure in the Family Medicine specialty set as this measure is clinically relevant to this clinical type. Family medicine clinicians are likely the most frequent point of contact for many patients as their scope of care is extensive and inclusive of many different patient populations. Family physicians diagnose and treat some illnesses, provide preventive care, and manage chronic illness. ³⁴ Due to their broad scope of care, this specialty may treat patients with active hepatitis C (HCV) and assist in managing the disease. This quality measure aligns with clinical guidelines of the U.S. Preventive Services Task Force (USPSTF) and achieving Sustained Virological Response (SVR) is the first step toward reducing future HCV morbidity and mortality. ³⁵ The American Academy of Family Physicians have advocated for increased management of HCV within primary care along with family medicine residency program directors working over the past 5 years to build capacity for HCV treatment within the specialty by training future generations of family medicine physicians. ³⁶ Enhancing the family medicine related measure inventory could help to create broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure can identify other measures within their set and adding this measure to the specialty set will elevate the importance to proper management of patients with HCV. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the end of the CY 2026 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received public comments on the measure(s) proposed for addition on this specialty set. The following is a summary of the comments we received and our responses.

Comment: A commenter supported adding the new Screening for Abnormal Glucose Metabolism in Patients at Risk of Developing Diabetes as an optional measure. This commenter did not support adding the new Diagnostic Delay of Venous Thromboembolism in Primary Care measure to this specialty set as currently specified. See complete comments under Table Group A (Tables A-3 and A-4) of this Appendix.

Response: We appreciate the commenter's feedback on adding new measures to the Family Medicine specialty set.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 32546 through 32950), we are finalizing the above measure(s) for addition to the Family Medicine Specialty Set as proposed for the CY 2026 performance period (2028 MIPS payment year and future years). Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.13. Family Medicine

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE FAMILY MEDICINE SPECIALTY SET

Note: In this final rule, we are removing the following measures (set below) from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CRE # / eCQM CODE	Quality #	CHS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	445	N/A	MIPS eCQM	Process	Not Recommended: Cervical Cancer Screening in Adolescent Females: The percentage of adolescent females 16-20 years of age who were screened unnecessarily for cervical cancer.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	48*	N/A	MIPS eCQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing availability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS eCQM	Process	Communication Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing availability, transportation needs, utility help needs, or interpersonal safety and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	CCHIN	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	506	N/A	MIPS eCQM	Process	Adult COVID-19 Vaccination Status: Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received public comments on the measure(s) proposed for removal from this specialty set. The following is a summary of the comments we received and our responses.

Comment: A commenter supported the removal of measures Q443: Non-Recommended Cervical Cancer Screening in Adolescent Females; Q487: Screening for Sexual Drivers of Health; Q498: Connection to Community Service Provider; and Q508: Adult COVID-19 Vaccination Status from this specialty set. The commenter looks forward to working with CMS on its future plans to address health disparities through other mechanisms.

Response: We thank the commenter for supporting the removal of these four measures from the Family Medicine specialty set.

After consideration of public comments and for the reasons stated above and in the proposed rule (90 FR 52951), we are finalizing the above measure(s) for removal from the *Family Medicine Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.14. Gastroenterology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Gastroenterology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

B.14. Gastroenterology

PREVIOUSLY FINALIZED MEASURES IN THE GASTROENTEROLOGY SPECIALTY SET

1 (Outcome)	2483 / N/A	503	N/A	ADPS eCQM	Patient- Reported Outcome- Based Performance Measure	Gains in Patient Activation Measure (PAM) Scores at 12 Months The Patient Activation Measure (PAM) is a 10- or 13-item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation: from low (1) to high (4). The PAM is performance measure. (PAMs-PN) is the change in score on the PAM from baseline to follow-up measurement.	Insighta Health LLC a wholly owned subsidiary of Pfizer Inc.

B.14. Gastroenterology

MEASURES FINALIZED FOR ADDITION TO THE GASTROENTEROLOGY SPECIALTY SET								
Indicator	CBE # of QM (CBE #)	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Keyword	Rationale for Inclusion
Outcome 1	N/A/ N/A	516	N/A	MIIPS eCQM	Outcome	Hepatitis C Virus (HCV): Sustained Virological Response (SVR) Percentage of patients aged greater than or equal to 18 years with acute hepatitis C (HCV) with negative/undetect- able HCV ribonucleic acid (RNA) at least 24 weeks to 12 months after positive/detectable HCV RNA test result.		We proposed including this measure in the Gastroenterology specialty set as we agreed with interested parties that this measure is clinically relevant to this specialty area. The measure is supported by the American Gastroenterological Association and its addition to this specialty set will be feasible given the high rates that this specialty supports, and manages, detect and affect the organs in the digestive system, including the liver. ³¹ Therefore, the gastroenterology-related measure inventory could help to ensure final specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within this specialty set and its addition will elevate the importance of providing standard care to patients living with the Hepatitis C (HCV) liver disease. ³² The measure is based on evidence-based guidance for HCV management and will help ensure patients with HCV are receiving the best possible care, thus improving patient safety, and reducing future HCV morbidity and mortality. ³³ The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (90 FR 32955), we are finalizing the above measure(s) for addition to the Gastroenterology Specialty Set as proposed for the CY 2026 performance period/2026 MIIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIIPS.

National Committee for Quality Assurance
1 (Outcome)	3663 / N/A	495	N/A	MIPS, CQM	Patient-Reported Outcome-Based Performance Measure	Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood: The percentage of positive responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit.	American Academy on Hospice and Palliative Medicine (AAHPM)
1 (Outcome)	2483 / N/A	500	N/A	MIPS, CQM	Patient-Reported Outcome-Based Performance Measure	Gains in Patient Activation Measure (PAM) Score at 12 Months: The Patient Activation Measure® (PAM®) is a 10- or 13-item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 4-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.	Insignia Health, LLC, a wholly owned subsidiary of Pwera

B.16. Geriatrics

MEASURES FINALIZED FOR ADDITION TO THE GERIATRICS SPECIALTY SET								
Indicator	CERES / EQUAL CERES	Quality %	CERES/COM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
2	NA / NA	95%	CERES 8-14	Medicare Part B Measure, CC/M, MIPS, COM	Process	Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention: Percentage of patients aged 12 years and older who were screened for tobacco use one or more times during the measurement period AND who received tobacco cessation intervention during the measurement period or in the six months prior to the measurement period (identified as a tobacco user)	National Committee on Quality Assurance	We proposed including this measure in the Geriatrics specialty set as this measure is clinically relevant to this clinical type. Tobacco use is the leading preventable cause of disease disability, and deaths in the U.S. cigarette smoking results in more than 480,000 preventable deaths each year and accounts for approximately 1 in every five deaths. ¹¹¹ There was increase in smoking-related deaths in people over the age of 60 years, where this population's smoking-related mortality is largely caused by lung cancer. ¹¹² Smoking can also reduce efficacy of vaccines and increase the risk for infections in the older resident population. ¹¹³ Older adults who quit smoking experience positive effects on their health such as reduced cognitive decline and better quality of life. ¹¹⁴ Due to the harmful effect tobacco use can have on patients, health care workers should engage with their patients to screen for tobacco use and, if positive, provide tobacco cessation counseling promptly. ¹¹⁵ This measure was previously included in this specialty set and removed beginning with the CY 2021 performance period (2020 MIPS payment year) due to being included as a component of the previously finalized MIPS quality measure 497: Preventive Care and Wellness component making them duplicative. However, we agreed with increased patient feedback that not all components of measure 497 apply in this patient population, most specifically the Wellness component. We proposed adding this component measure to this specialty set due to the importance of the clinical concept to this specialty where the complete composite measure will not be applicable. Enhancing the geriatrics-related measure inventory could help to ensure total specialty coverage by having measures available that are robust and clinically relevant in structures within this specialization. This measure to implement other measures within their set and adding this measure to this specialty set will elevate the importance of preventive care and screening for tobacco use.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: A commenter supported adding measure Q22b, Preventive Care and Screening, Tobacco Use: Screening and Cessation Intervention to this specialty set given tobacco's impact on health, complications, and outcomes. The commenter noted importance of access to cessation resources and barriers in low-income and rural areas where resources are limited or costly, making cessation harder for those needing product support.

Response: We thank the commenter for supporting the addition of this measure to the Cigarettes specialty set.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 32464 through 32465) we are finalizing the above measures for addition to the Cigarettes Specialty Set as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.16. Geriatrics

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE GERIATRICS SPECIALTY SET							
Note: In this final rule, we are removing the following measures below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Setting	Rationale for Removal
N/A N/A	487	N/A	MIPS/QQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties and interpersonal safety.	Clinics for Medicare & Medicaid Services	This measure was proposed for removal beginning with the FY 2026 performance period 2028 MIPS payment year. See Table Group C of the Appendix for rationale.
N/A N/A	497	N/A	MIPS/QQM	Process	Preventive Care and Wellness (Composite): Percentage of patients who received age- and sex-appropriate preventive screenings and wellness services. This measure is a composite of seven component measures that are based on recommendations for preventive care by the U.S. Preventive Services Task Force (USPSTF), Advisory Committee on Immunization Practices (ACIP), American Association of Clinical Endocrinology (AACE), and American College of Endocrinology (ACE).	Clinics for Medicare & Medicaid Services	We proposed removing this measure from the Geriatrics specialty set as we received with increased patient feedback that the age and sex appropriate preventive screenings included in all the components of this composite measure are not applicable to this patient population. Specifically, we agreed with their concern that the parameters within this composite measure's body mass index (BMI) component may not be appropriate for use in older adults. ¹¹ Observational studies suggest that older adults with BMI in the 27-32 range are at lowest risk of adverse outcomes. ¹² Additionally, an older adult's higher BMI classification may be associated with lower mortality risks, demonstrating the potential need for age-specific BMI cut-points in older adults. ¹³

B.16. Geriatrics

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE GERIATRICS SPECIALTY SET							
Note: In this final rule, we are removing the following measures below from this specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBEA et QM Code	Quality ID	CMS et QM ID	Collection Type	Measure Type	Measure Title And Description	Measure Source	Rationale for Removal
N/A / N/A	498	N/A	MIPS COM	Process	Connection to Community Service Providers: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HHSNs): food insecurity, housing instability, transportation needs, utility bill needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HHSNs within 60 days after screening.	OCHIN	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	508	N/A	MIPS CQM	Process	Adult COVID-19 Vaccination Status: Percentage of patients aged 18 years and older seen for visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicine & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received public comments on the measure(s) proposed for removal from this specialty set. The following is a summary of the comments we received and our response:

Comment: A commenter supported removing measure Q497: Preventive Care and Wellness (composed from this specialty set). They agreed that clinicians should actively address preventive care and wellness to support overall patient health but stated that a composite measure may not effectively encourage adherence to the individual preventive care activities it covers, or account for the unique circumstances of older adults that may make certain preventive measures inappropriate.

Response: We thank the commenter for supporting the removal of measure Q497 from the Geriatrics specialty set.

Comment: A commenter opposed removal of measures from this specialty set. The commenter stated that measure Q487: Screening for Social Drivers of Health is critical to patient well-being and supports a comprehensive approach to disease prevention and health promotion. The commenter opposed removal of measure Q498: Connection to Community Service Provider measure and recommended keeping the measure and ensuring interventions are evidence-based and tracked to improve access. The commenter opposed removal of measure Q508: Adult COVID-19 Vaccination Status and noted recent FDA approval of updated vaccines. The commenter also recommended annual reevaluation and updates to new evidence changes.

Response: As discussed under Tables C-8, C-9, and C-10 of this Appendix, measures Q487, Q498, and Q508 are process measures that no longer address a priority area and will no longer be considered high-priority measures. As explained in the removal rationale, removing these measures aligns with the CMS Quality Measure Development Plan through maintaining a quality measure inventory that focuses on high-priority and outcome-based measures that align across programs and payers. We encourage the commenter to reach out to measure developers and to develop new outcome-high priority measures for submission to the Call for Measures for possible future implementation.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 32946 through 32967), we are finalizing the above measure(s) for removal from the Geriatrics Specialty Set as proposed for the CY 2026 performance

period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.17. Hospitalists

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Hospitalists specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set had no measures proposed for addition or removal. Measures with substantive changes as marked with an asterisk (*) are addressed under Table Group D).

B.18. Infectious Disease

MEASURES FINALIZED FOR ADDITION TO THE INFECTIOUS DISEASE SPECIALTY SET								
Indicator	CBE # of QM CBEs	Quality #	CMS eQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward	Rationale for Inclusion
1 Outcome B	N/A, Type A	516	N/A	MIPS eQM	Outcome	Hepatitis C Virus (HCV): Sustained Virological Response (SVR): Percentage of patients aged greater than or equal to 18 years with acute hepatitis C (HCV) with negative undetectable HCV ribonucleic acid (RNA) at least 26 weeks to 12 months after post-treatment HCV RNA test result.	American Gastroenterology Association	We proposed including this measure in the Infectious Disease specialty set as this measure is clinically relevant to this specialty type. Clinicians in this specialty are skilled in the diagnosis, treatment, and management of acute and chronic infections. Enhancing the infectious disease-related measure inventory could help to ensure better specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within this specialty set, and its addition will elevate the importance of providing specialized care to patients having acute hepatitis C (HCV) liver disease. ⁵² This measure is based on evidence-based guidance for HCV management and will help ensure patients with HCV are receiving the best possible care, thus improving patient safety and reducing future HCV morbidity and mortality. ⁵³ The measure being added to this specialty set is not contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty domain set.

We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (94 FR 32973), we are finalizing the above measure(s) for addition to the *Infectious Disease Specialty Set* as proposed for the CY 2026 performance period (2028 MIPS payment year and future years). Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

⁵² See footnote Bhattacharya et al., 2023.

⁵³ See footnote Bhattacharya et al., 2023.

	N/A / N/A	505	CMS 5451	eCQM	Process	Screening for Abnormal Glucose Metabolism in Patients at Risk or Developing Diabetes: Percentage of adult patients with risk factors for type 2 diabetes who are due for glucose screening for whom the screening process was completed during the measurement period	American Medical Association	We proposed including this measure in the Internal Medicine specialty set as this measure is clinically relevant to this specialty type. Internal medicine clinicians treat a broad and comprehensive scope of illnesses affecting adults, specializing in health promotion, disease prevention, and diagnosis and treatment of chronic illness, including patients with diabetes. ¹²¹ One of their broad scope of care, this specialty can be crucial in early detection of patients at risk for developing type 2 diabetes. ¹²² Regular glycemic screening and timely identification of prediabetes helps patients avoid the disability and the cost associated with progression to type 2 diabetes. ¹²³ This measure aligns with national USPSTF evidence-based guidelines and recommendations of screening for prediabetes and type 2 diabetes in adults aged 35 to 70 years who have no history of diabetes. ¹²⁴ Nearly 98 million people have prediabetes, but more than 8 in 10 adults do not know they have it, ¹²⁵ reinforcing the importance of identifying patients with prediabetes and closely up patients with undiagnosed type 2 diabetes. Enhancing the level of medicine-related measure inventory could help to ensure broad specialty coverage by using measures available that are robust and clinically relevant to all practices within this specialization. This measure complements other measures within their set and adding this measure to this specialty set will elevate the importance of glucose screening in patients at risk for

								diabetes. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been included for inclusion within this specialty measure set.
Chronic	N/A: N/A	516	42A	HIPA QOM	Outcome	Hepatitis C Virus (HCV), Sustained Virological Response (SVR): Percentage of patients aged 18 years or older with acute hepatitis C (HCV) with negative/undetectable HCV ribonucleic acid (RNA) at week: 24 weeks to 12 months after positive/detectable HCV RNA test results	American Gastroenterology Association	We proposed including this measure in the Internal Medicine specialty set as this measure is clinically relevant to this clinical type. Internal medicine clinicians are likely the most frequent point of contact for many patients as their scope of care is extensive and includes many different patient populations. Internal medicine clinicians diagnose and treat acute illness, provide preventive care, and manage chronic illness. ⁵¹ Due to their broad scope of care, this specialty may treat patients with acute hepatitis C (HCV) and assist in managing the disease. This quality measure aligns with clinical guidelines of the USGSIF and achieving Sustained Virological Response (SVR) is the first step toward reducing future HCV morbidity and mortality. ⁵² Enhancing the internal medicine-related measure inventory could help to ensure that specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within their set and adding this measure to this specialty set will elevate the importance of proper management of patients with HCV. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 PFS final rule. In the event appropriate coding was not included in the final

⁵¹ See Section ACP 2025.⁵² See Exhibit USPSTF 2026.

B.19. Internal Medicine

MEASURES FINA L I Z E D F O R A D D I T I O N T O T H E I N T E R N A L M E D I C I N E S P E C I A L T Y S E T								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
								specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received no public comments on the measures proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (90 FR 32991 through 32993), we are finalizing the above measures for addition to the Internal Medicine Specialty Set as proposed for the CY 2026 performance period 2028 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B-19. Internal Medicine

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE INTERNAL MEDICINE SPECIALTY SET							
Note: In this final rule, we are removing the following measures (set below) from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CRF # / eCQM Code	Quality #	CHS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	445	N/A	MIPS eCQM	Process	Non-Recommended Cervical Cancer Screening in Adolescent Females: The percentage of adolescent females 16–20 years of age who were screened unnecessarily for cervical cancer.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	48*	N/A	MIPS eCQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS eCQM	Process	Communication Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	COCHIN	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	506	N/A	MIPS eCQM	Process	Adult COVID-19 Vaccination Status: Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (90 FR 32994), we are finalizing the above measure(s) for removal from the *Internal Medicine Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.20. Interventional Radiology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Interventional Radiology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

B.20. Interventional Radiology

PREVIOUSLY FINALIZED MEASURES IN THE INTERVENTIONAL RADIOLOGY SPECIALTY SET							
Indicator	CMS / eCQM CBE #	Quantity	CMS eCQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward
† (Patient Safety)	N/A / N/A	143	N/A	Medicare Part B Claims Measure MIPS eCQM	Process	Radiology Exposure Dose Indices Reported for Procedures Using Fluoroscopy: Final reports for procedures using fluoroscopy that document radiation exposure indices	American College of Radiology
* † (Care Coordination)	N/A / N/A	374	CMS 340044	eCQM, MIPS eCQM	Process	Closing the Referral Loop: Receipt of Specialist Report: Percentage of patients with referrals, regardless of age, for which the referring clinician receives a report from the clinician to whom the patient was referred.	Centers for Medicare & Medicaid Services
† (Outcome)	N/A / N/A	413	N/A	MIPS eCQM	Intermediate Outcome	Door-to-Puncture Time for Endovascular Stroke Treatment: Percentage of patients undergoing endovascular stroke treatment who have a door-to-puncture time of 90 minutes or less.	Society of Interventional Radiology
* † (Outcome)	N/A / N/A	420	N/A	MIPS eCQM	Patient Reported Outcome-Based Performance Measure	Varicose Vein Treatment with Saphenous Ablation: Outcome Survey. Percentage of patients treated for varicose veins (CEAP C2-5) who are treated with saphenous ablation (with or without adjunctive tributary treatment) that report an improvement on a disease-specific patient-reported outcome survey measured after treatment.	Society of Interventional Radiology
	N/A / N/A	421	N/A	MIPS eCQM	Process	Appropriate Assessment of Retrievable Inferior Vena Cava (IVC) Filters for Removal: Percentage of patients in whom a retrievable IVC filter is placed who, within 3 months post-placement, have a documented assessment for the appropriateness of continued filtration, device removal or the inability to contact the patient with at least two attempts.	Society of Interventional Radiology
† (Patient Safety)	N/A / N/A	465	N/A	MIPS eCQM	Process	Uterine Artery Embolization Techniques: Documentation of Angiographic Endpoints and Interrogation of Ovarian Arteries: The percentage of patients with documentation of angiographic endpoints of embolization AND the documentation of embolization strategies in the presence of unilateral or bilateral absent uterine arteries.	Society of Interventional Radiology

B.20. Interventional Radiology

MEASURES FINALIZED FOR ADDITION TO THE INTERVENTIONAL RADIOLOGY SPECIALTY SET								
Indicator	CBE # / eCOHI CBE #	Quality #	CMS eCOHI ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
1 1 (Core (Annual mm)	N/A / N/A	024	N/A	Medicare Part B Claims Measure MIPS CQM	Process	Communication with the Physician or Other Clinician Managing On-Gang Care Post-Fracture for Men and Women Aged 50 Years and Older: Percentage of patients aged 50 years and older treated for a fracture with documentation of communication between the physician managing the fracture and the physician or other clinician managing the patient's on-going care, that a fracture occurred and that the patient was or should be considered for osteoporosis treatment or testing. This measure is submitted by the physician who treats the fracture and who therefore is held accountable for the communication.	National Committee for Quality Assurance	We proposed including this measure in the Interventional Radiology (IR) specialty set as this measure is clinically relevant to this specialty type. We agreed with interested parties' feedback that this measure is highly relevant to this specialty as they often play a critical role in treating fractures, including vertebral compression fractures associated with osteoporosis. Effective communication with the physician managing ongoing care ensures a seamless transition from procedural intervention to long-term management, optimizing recovery and preventing complications.⁴⁴ Additionally, osteoporosis management is directly connected to many fracture conditions treated by interventional radiologists, ensuring appropriate post-fracture care, including evaluation and treatment for osteoporosis, helps reduce the risk of recurrent fractures.⁴⁵ This specialty has become increasingly involved in management of fractures that result from benign conditions like osteoporosis by using interventional techniques such as image-guided osteoplasty and cement-augmented osteosyntheses.⁴⁶ Ensuring the IR-related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to elements within this specialization. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2026 IP's final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

B.20. Interventional Radiology

MEASURES FINALIZED FOR ADDITION TO THE INTERVENTIONAL RADIOLOGY SPECIALTY SET								
Identifier	CBE F eCQM CBE F	Quality e	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
* S I Patient Safety	N/A / N/A	100	CMS 568 v15	eCQM MIPS C10K	Process	Documentation of Current Medications in the Medical Record: Percentage of visits for which the eligible clinician attests to documenting a list of current medications using all up-to-date resources available on the date of the encounter	Centers for Medicare & Medicaid Services	We proposed including this measure in the Interventional Radiology (IR) specialty set as this measure is clinically relevant to this specialty type. We agreed with interested parties' feedback that this quality measure is highly relevant to IR because accurate medication documentation is crucial for ensuring patient safety during minimally invasive procedures. Many IR procedures, such as angiography, biopsy, or ablation, require careful consideration of a patient's current medications to assess risks like bleeding or contrast allergies. ¹⁰ This specialty also often admits patients and needs to ensure they receive their home medications while admitted. Enhancing the IR-related measure methodology could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event, appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

B-20. Interventional Radiology

MEASURES FINALIZED FOR ADDITION TO THE INTERVENTIONAL RADIOLOGY SPECIALTY SET								
Indicator	CBE # / eCOM CBE #	Quality #	CMS eCOM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
8 ! (Outcome) 2	N/A / N/A	155	N/A	MIPS CQM	Outcome	(Unplanned) Reoperation within the 30-Day Postoperative Period: Percentage of patients aged 18 years and older who had any unplanned reoperation within the 30-day postoperative period.	American College of Surgeons	We proposed including this measure in the Interventional Radiology (IR) specialty set as this measure is clinically relevant to this specialty type. We agreed with interested parties' feedback that this quality measure is highly relevant to IR as it reflects important facets of procedural success and patient safety. This measure directly addresses procedure-specific outcomes, particularly for complex interventions such as embolization or vascular access. Adding this measure to the specialty set can support positive outcomes for IR procedures. Enhancing the IR-related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

B.20. Interventional Radiology

MEASURES FINALIZED FOR ADDITION TO THE INTERVENTIONAL RADIOLOGY SPECIALTY SET								
Indicator	CDE # / eCQM CDE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
1 Hypotension	N/A / N/A	156	N/A	MIPS eCQM	Outcome	Unplanned Hospital Readmission within 30 Days of Principal Procedure: Percentage of patients aged 18 years and older who had an unplanned hospital readmission within 30 days of principal procedure.	American College of Surgeons	We proposed including this measure in the Interventional Radiology (IR) specialty set as this measure is clinically relevant to this specialty type. We agreed with interested parties' feedback that interventional radiologists commonly complete surgical procedures where appropriate management through supportive care can help decrease an avoidable 30-day reoperation due to surgical complications. This measure reflects important facets of procedural success and patient safety directly addressing procedure-specific outcomes particularly for complex interventions such as catheterization of vascular access. This measure will help encourage appropriate management and avoidance of unnecessary and costly procedures. Enhancing the IR-related measure portfolio could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within the specialization. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

B.20. Interventional Radiology

MEASURES FINALIZED FOR ADDITION TO THE INTERVENTIONAL RADIOLOGY SPECIALTY SET								
Indicator	CRF # of QM CBE #	Quality #	CMS of QM ID	Collection Type	Measure Type	Measure Title And Description	Measure Standard	Rationale for Inclusion
+ Outcome I	N/A N/A	353	N/A	nHFS COM	Outcome	Surgical Site Infection (SSI): Percentage of patients aged 18 years and older who had a surgical site infection (SSI).	American College of Surgeons	We reviewed including this measure in the Interventional Radiology (IR) specialty set as the measure is clinically relevant to this specialty type. We agreed with interested parties, regardless that this quality measure is important for this specialty as it impacts patient safety and procedural success. This quality measure ensures proper precautions are taken to minimize infection risk, such as thorough proper skin preparations, sterile techniques, and pre-procedural antibiotics, considering the importance of these interventions. To help keep complications to a minimum, it is crucial for all radiologists to understand and adhere to sterile techniques for proper patient care. By following strict aseptic and sterile techniques, radiologists can minimize IR procedure complications. ¹⁴⁷ Enhancing the IR-related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within the specialization. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the July 2026 FFS final rule. In the event appropriate coding was not included in the first specification, this measure would not have been included for inclusion within this specialty measure set.

B.20. Interventional Radiology

MEASURES FINALIZED FOR ADDITION TO THE INTERVENTIONAL RADIOLOGY SPECIALTY SET								
Indicator	CBE # of QM CBEs	Quality %	CMS of QM ID	Collection Type	Measure Type	Measure Title And Description	Measure Standard	Rationale for Inclusion
1 Patient Experience	N/A - N/A	35%	N/A	MRPS CQMI	Process	Patient-Centered Surgical Risk Assessment and Communication: Percentage of patients who underwent a non-emergency surgery who had their personalized risks of postoperative complications assessed by their surgical team prior to surgery using a clinical data-based patient-specific risk calculator and who received personal discussion of those risks with the surgeon	American College of Surgeons	We reviewed including this measure in the Interventional Radiology IR specialty set as this measure is clinically relevant to this specialty to be. We agreed with interested parties' feedback that this quality measure is key to this specialty to ensure proper risk assessment and communication are prioritized prior to IR procedures. Patients undergoing IR procedures should receive a thorough preoperative evaluation. The addition of this measure to the specialty set helps ensure clinicians adhere to these practices to guide them to implement the most appropriate management plan, avoid unnecessary procedures and prevent complications to achieve a successful outcome. This will help ensure personalized risks of postoperative complications are appropriately assessed prior to procedures using a clinical data-based patient-specific risk calculator and discussed with the patient. Enhancing the IR-related measure history could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. The measure being added to the specialty set was contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within the specialty measure set.

B.20. Interventional Radiology

MEASURES FINALIZED FOR ADDITION TO THE INTERVENTIONAL RADIOLOGY SPECIALTY SET								
Indicator	CER # or QM CBE #	Quality A	CMS or QM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
1	0051 - N/A	41%	N/A	Medicare Part D Claims Measure MIPS CQKI	Process	Osteoporosis Management in Women With Distal Fracture: The percentage of women 65-85 years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis in the 180 days after the fracture.	National Committee for Quality Assurance	We proposed including this measure in the interventional radiology (IR) specialty set as this measure is clinically relevant to this specialty type. We agreed with intersector parties' feedback that this measure is highly relevant to this specialty as they often play a critical role in treating fractures, including vertebral compression fractures associated with osteoporosis. Effective communication with the physician managing ongoing care ensures a seamless transition from procedural intervention to long-term management, optimizing recovery and preventing complications. ¹⁰⁰ Additionally, osteoporosis management is directly connected to many fracture conditions treated by interventional radiologists, ensuring appropriate post-fracture care, including evaluation and treatment, for osteoporosis, helps reduce the risk of subsequent fractures. ¹⁰¹ This specialty has become increasingly involved in management of fractures that result from benign conditions like osteoporosis by using interventional techniques, such as image-guided vertebroplasty and screw-mediated osteotomies. ¹⁰² Expanding the IR-related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. As the most appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

¹⁰⁰ See Ippolito-Cazzato et al., 2023.¹⁰¹ See Ippolito-Cazzato et al., 2023.¹⁰² See Ippolito-Cazzato et al., 2023.

We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (90 FR 32996 through 33002), we are finalizing the above measure(s) for addition to the *Interventional Radiology Specialty Set* as proposed for the CY 2026 performance period, 2028 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.10. Interventional Radiology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE INTERVENTIONAL RADIOLOGY SPECIALTY SET							
Note: In this final rule, we are removing the following measure(s) below from this specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CHS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	48*	N/A	MIPS eCQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period, 2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	49*	N/A	MIPS eCQM	Process	Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	CCIMN	This measure was proposed for removal beginning with the CY 2026 performance period, 2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (90 FR 33003), we are finalizing the above measure(s) for removal from the *Interventional Radiology Specialty Set* as proposed for the CY 2026 performance period, 2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.21. Mental/Behavioral Health and Psychiatry

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Mental/Behavioral Health and Psychiatry specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

American Psychiatric Association

B.21. Mental/Behavioral Health and Psychiatry

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE MENTAL/BEHAVIORAL HEALTH AND PSYCHIATRY SPECIALTY SET							
Note: In this final rule, we are removing the following measures listed below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CDE # / eCOM CDE #	Quality #	CMS eCOM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	48*	N/A	MIPS eCOM	Process	Screening for Adult Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	49*	N/A	MIPS eCOM	Process	Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	CCCHIN	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (90 FR 33009), we are finalizing the above measures for removal from the *Mental/Behavioral Health and Psychiatry Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.21. Nephrology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Nephrology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

B.22. Nephrology

						75 and were listed on the kidney or kidney-pancreas transplant waitlist or received a living donor transplant. The practice group is inclusive of physicians and advanced practice providers. The measure is the number of number of waitlist events in a practice group to its expected number of waitlist events. The measure uses the expected number events calculated from a Cox model, which is adjusted for age, patient comorbidities and other risk factors at the time of dialysis.		transplantation. ⁷⁵ This measure focuses specifically on the outcome of waiting for patients on dialysis and is appropriate to this specialty as nephrologists are at the forefront of caring for this patient population. Nephrologists exert substantial control over processes that result in waitlist and optimizing the health of patients to ensure early access to the waitlist, which has been demonstrated to be particularly beneficial. ⁷⁶ These processes include proper education of dialysis patients on the option for transplant, referral of appropriate patients to a transplant center for evaluation, and assisting patients with completion of the transplant evaluation process. ⁷⁷ These activities address the specific healthcare needs of patients on dialysis and are directed by dialysis practitioners aiming to achieve suitability for kidney transplantation. ⁷⁸ Enhancing the nephrology-related measure inventory could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within this set and adding this measure to this specialty set will elevate the importance of appropriate treatment for patients on dialysis. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2026 PCS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received no public comments on the measure(s) proposed for addition to this specialty set. For the reasons stated above and in the proposed rule (90 FR 33013 through 33014), we are finalizing the above measure(s) for addition to the Nephrology

⁷⁵ See Fontana, Mueck-Knossche et al., 2002.

The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM6 Performance Incentive (PAM6-PI) is the change in score on the PAM6 from baseline to follow-up measurement.	Insignia Health, LLC is wholly owned subsidiary of Pfizer Inc.

B.23. Neurology

MEASURES FINALIZED FOR ADDITION TO THE NEUROLOGY SPECIALTY SET								
Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Standard	Rationale for Inclusion
1 (Outcome)	3665 / N/A	495	N/A	MIPS eCQM	Patient-Reported Outcome-Based Performance Measure	Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood: The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (60 days) of the ambulatory palliative care visit.	American Academy of Hospice and Palliative Medicine (AAHPM)	We proposed including this measure in the Neurology specialty set as we agreed with interested parties' feedback that this measure is clinically relevant to this clinician type. Palliative care has expanded rapidly in recent years across inpatient, ambulatory, home-based, and facility settings. ¹³ Inclusion of this measure can help ensure that more specialist types are equipped to better manage seriously ill patients' access to high-quality palliative care. This patient-reported outcome measure will help fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with his or her clinician. Patients feeling heard and understood adds an important dimension to the care planning for this unique patient population community cared for by clinicians in this specialty. This measure is predicated on existing guidelines and conceptual models ¹⁴ and is specified to allow non-palliative care specialists who treat patients with serious illness to report the measure and encourages more comprehensive care, facilitating the clinician's focus on managing the experiences of patients, families, and caregivers is critical to advancing person-centered care and will promote more universal adoption of best practices to support shared decision making. ¹⁵ Studies have shown that adding palliative care to the plan of care for patients with serious illness results in better symptom management and communication with health care providers, as well as decreased strain on family members or other caregivers. ¹⁶ The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2026 PFS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

B.23. Neurology

MEASURES FINALIZED FOR ADDITION TO THE NEUROLOGY SPECIALTY SET								
Indicator	CER A eCQM CER A	Quality A	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
1 (Safety)	N/A / N/A	5D	N/A	MIPS eCQM	Process	Patient Reported Falls and Plan of Care: Percentage of patients for caregivers as appropriate with an active diagnosis of a movement disorder, multiple sclerosis, a neuromuscular disorder, dementia, or stroke who reported a fall occurred and those that fell had a plan of care for falls documented at 45.3 x 54	American Academy of Neurology	We proposed including this measure in the neurology specialty set as this measure is clinically relevant to the clinical type. Neurologists are medical doctors who specialize in diagnosing and treating patients with neurologic disorders whose incidence of falls is reported as 2 to 4 times higher than in healthy subjects of similar age. ¹⁰⁰ Several studies address the negative impact falls have on existing neurologic conditions and slowing progress toward recovery. ¹⁰¹ Falls can negatively impact quality of life. This stresses the importance of prioritizing falls assessment and promoting strategies that aim at preventing or reducing the incidence of falls in the neurologic patient population ¹⁰² enhancing the neurology related measure steward could help to ensure broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization. This measure complements other measures within their set and will elevate the importance of addressing a patient's increased falls risk when diagnosed with a neurologic condition.

We received public comments on the measures proposed for addition to this specialty set. The following is a summary of the comments we received and our responses:

Comment: A few commenters supported adding measure Q495, Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood to this specialty set. One of the commenters requested adding this measure to all specialty sets.

Response: We thank the commenters for supporting the addition of this measure to the Neurology specialty set. We encourage the commenter to request this measure be added to other specialty sets through the Solicitation for Specialty Sets process.

After consideration of public comments, and for the reasons stated above and in the proposed rule (96 FR 33019 through 33021), we are finalizing the above measures for addition to the Neurology Specialty Set as proposed for the CY 2026 performance period 2028 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.23. Neurology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE NEUROLOGY SPECIALTY SET							
Note: In this final rule, we are removing the following measure(s) below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CDE # / eCQM / CDE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	293	N/A	MIPS eCQM	Process	Assessment of Mood Disorders and Psychosis for Patients with Parkinson's Disease: Percentage of all patients with a diagnosis of Parkinson's Disease (PD) who were assessed for depression, anxiety, apathy, and psychosis during the measurement period.	American Academy of Neurology	This measure was proposed for removal beginning with the CY 2026 performance period: 2025 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	419	N/A	MIPS eCQM	Process	Overview of Imaging for the Evaluation of Primary Headache: Percentage of patients for whom imaging of the head (CT or MRI) is ordered for the evaluation of primary headache when clinical indications are not present.	American Academy of Neurology	This measure was proposed for removal beginning with the CY 2026 performance period: 2025 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	487	N/A	MIPS eCQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period: 2025 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	494	N/A	MIPS eCQM	Process	Connection to Community Services Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 90 days after screening.	ACHA	This measure was proposed for removal beginning with the CY 2026 performance period: 2025 MIPS payment year. See Table Group C of this Appendix for rationale.

We received public comments on the measures proposed for removal from this specialty set. The following is a summary of the comments we received and our responses.

Comment: A commenter proposed removal of measures Q290: Assessment of Mood Disorders and Psychosis for Patients with Parkinson's Disease and Q419: Overview of Imaging for the Evaluation of Primary Headache from this specialty set, indicating removal of these measures would leave a gap in measures for neurology.

The commenter also proposed removal of measures Q487: Screening for Social Drivers of Health and Q498: Connection to Community Services Provider from all proposed specialty sets. See Table C.8 of this Appendix for further information.

Response: We acknowledge the concerns expressed by the commenter. As mentioned in Tables C.3 and C.5 of this Appendix, measures Q290 and Q419 are extremely top-performing, which demonstrates they have become a standard of care. By removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement and focus specialty sets on areas with greater room for improvement to drive more in quality of care and quality of care. We acknowledge that removal of these measures decreases the number of available measures for this specialty; however, there are policies in place, such as Eligible Measure Applicability (EMA) and denominator reduction to account for this when working to

meet MIPS quality performance category requirements. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's stopped-out status would limit the score awarded per the 2025 Benchmark File. We encourage the commenters to reach out to measure developers/sponsors to develop new outcome/high priority measures for submission to the Call for Measures for possible future implementation.

As discussed under Tables C-8 and C-9 of this Appendix, measures Q487 and Q498 are process measures that no longer address a priority area and will no longer be considered high-priority measures. As explained in the removal rationale, removing these measures aligns with the CMS Quality Measure Development Plan through maintaining a quality measure inventory that focuses on high-priority and outcome-based measures that align across programs and payers.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 13022), we are finalizing the above measures for removal from the *Neurology Specialty Set* as proposed for the CY 2026 performance period 2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.24. Neurosurgical

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Neurosurgical specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

MEASURES FINALIZED FOR ADDITION TO THE NUTRITION/DIETITIAN SPECIALTY SET								
Indicator	CBE # / eCQM / CBEA	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward	Rationale for Inclusion
1. Care Coordination	N/A / N/A	288	N/A	HIPs QDM	Process	Dementia: Education and Support of Caregivers for Patients with Dementia: Percentage of patients with dementia whose caregivers were provided with education on dementia disease management and health behaviors. Patients AND were referred to additional resources for support in the last 12 months.	American Academy of Gerontology / American Psychiatric Association	We proposed including this measure in the Nutrition/Dietician specialty set as this measure is clinically relevant to this clinical type. We agreed with interested parties (notably that Registered Dietician Nutritionists (RDNs) are uniquely qualified to offer essential education and support to caregivers regarding feeding, availability, managing behavior challenges related to food, and addressing palliative food and fluid needs especially with patients diagnosed with dementia. ¹⁰⁰ RDNs can also help caregivers recognize declines in a patient's physical capacity and advise them on identifying malnutrition risks, developing tailored interventions that support both the patient and caregiver, and assist in planning appropriate adjustments to nutritional capabilities and feeding techniques as the disease progresses. ¹⁰¹ This specialty is integral to the process of formulating the quality of life and nutritional status of older adults through individualized assessment approaches. ¹⁰² RDNs act as a critical conduit in dementia care and can establish symptoms and increase mortality rates. ¹⁰³ These efforts align with best practices in dementia care, ensuring comprehensive and compassionate management. ¹⁰⁴ Given RDNs' role in educating and supporting caregivers in dementia care, their involvement ensures a holistic approach to care by addressing both the nutritional and behavioral needs of patients, ultimately improving the quality of life for individuals.

MEASURES FINALIZED FOR ADDITION TO THE NUTRITION/DIETITIAN SPECIALTY SET								
Identifier	CER # or QM CER #	Quality #	CAP or QM ID	Collection Type	Measure Type	Measure Title And Description	Measure Standard	Rationale for Inclusion
								with dementia.” ¹⁰⁰ Enhancing the nutrition/dietitian-related measure inventory could help to ensure rural specialty coverage by having measures available that are robust and clinically relevant to clinicians within the specialization. This measure complements other measures within their set and adding the measure to this specialty set will elevate the importance of assessing and addressing another challenge experienced by patients with dementia. The measure being added to this specialty set is contingent on the inclusion of applicable coding by the time of the CY 2026 PPV final rule. In the event appropriate coding was not included in the final specification, this measure would not have been targeted for inclusion within this specialty measure set.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported adding measure Q788: Dementia: Education and Support of Caregivers for Patients with Dementia to this specialty set.

Response: We thank the commenters for supporting the addition of this measure to the Nutrition/Dietitian specialty set.

After consideration of public comments and for the reasons stated above and in the proposed rule (90 FR 33028 through 33029), we are finalizing the above measure(s) for addition to the *Nutrition/Dietitian Specialty Set* as proposed, for the CY 2026 performance period, 2023 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.26. Obstetrics/Gynecology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE OBSTETRICS/GYNECOLOGY SPECIALTY SET							
Note: In this final rule, we are removing the following measures from this specialty specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CMS eCQM ID / CDE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Seward	Rationale for Removal
N/A / N/A	443	N/A	MIPS eCQM	Process	Non-Recommended Cervical Cancer Screening in Adolescent Females: The percentage of adolescent females 12–20 years of age who were screened unnecessarily for cervical cancer.	National Committee for Quality Assurance	This measure was proposed for removal beginning with the CY 2026 performance period 2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	487	N/A	MIPS eCQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period 2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS eCQM	Process	Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (food insecurity, housing instability, transportation needs, utility needs, or interpersonal safety), and link connect with a Community Service Provider (CSP) for at least one of their needs within 60 days after screening.	ULIHN	This measure was proposed for removal beginning with the CY 2026 performance period 2026 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	508	N/A	MIPS eCQM	Process	Adult COVID-19 Vaccination Status: Percentage of patients aged 18 years and older who have a visit during the performance period that includes documentation of COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations of current vaccination.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period 2026 MIPS payment year. See Table Group C of this Appendix for rationale.

We received public comments on the measures proposed for removal from this specialty set.

Comment: A commenter recommended that if measure Q443: Non-Recommended Cervical Cancer Screening in Adolescent Females is removed from this specialty that it be replaced with a similar cervical screening measure such as NCCQA's Cervical Cancer Screening measure.

The commenter also requested that measures Q487: Screening for Social Drivers of Health, Q498: Connectivity to Community Service Provider, and Q508: Adult COVID-19 Vaccination Status not be removed from this specialty set.

Response: We thank the commenter for their comment and note that NCCQA's Cervical Cancer Screening measure is already in MIPS and previously finalized within this specialty set with an eCQM collection type and measure ID: Q409C, N/A-124314.

As discussed under Tables C.8, C.9, and C.10 of this Appendix, measures Q487, Q498, and Q508 are process measures that no longer address a priority area and will no longer be considered high-priority measures. As explained in the removal rationale,

removing these measures aligns with the CMS Quality Measure Development Plan through maintaining a quality measure inventory that focuses on high-priority and outcome-based measures that align across programs and payers.

After consideration of public comments and for the reasons stated above and in the proposed rule (90 FR 33637), we are finalizing the above measures for removal from the *Obstetrics Gynecology Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.27a. Oncology/Hematology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Oncology/Hematology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE ONCOLOGY/HEMATOLOGY SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specialty specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	48*	N/A	MIPS COM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, wage difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	49*	N/A	MIPS COM	Process	Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, wage help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCIHM	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	50*	N/A	MIPS COM	Process	Adult COVID-19 Vaccination Status: Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (90 FR 33043), we are finalizing the above measure(s) for removal from the *Oncology/Hematology Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.27b. Radiation Oncology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Radiation Oncology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set had no measures proposed for addition or removal. Measures with substantive changes are marked with an asterisk (*) and are addressed under Table Group D.

B.27b. Radiation Oncology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE OPHTHALMOLOGY SPECIALTY SET							
Note: In this final rule, we are removing the following measure(s) below from this specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	48*	N/A	MIPS CQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period 2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	49*	N/A	MIPS CQM	Process	Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a community service provider (CSP) for at least one of their HRSNs within 60 days after screening.	CCHEM	This measure was proposed for removal beginning with the CY 2026 performance period 2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (90 FR 33051), we are finalizing the above measure(s) for removal from the *Ophthalmology Specialty Set* as proposed for the CY 2026 performance period 2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B-29. Optometry

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Optometry specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set. This specialty set had no measures proposed for addition or removal. Measures with substantive changes as marked with an asterisk (*) are addressed under Table Group D.

B-31. Otolaryngology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE OTOLARYNGOLOGY SPECIALTY SET							
Note: In this final rule, we are removing the following measure(s) below from this specialty specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBF # / eCOM CBF #	Quality #	CMS eCOM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	48*	N/A	MIPS (QM)	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, wage difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	49*	N/A	MIPS (QM)	Process	Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, wage help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCCHN	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	50*	N/A	MIPS (QM)	Process	Adult COVID-19 Vaccination Status: Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (90 FR 33064), we are finalizing the above measure(s) for removal from the *Otolaryngology Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.32. Pathology

In addition to the considerations discussed in the introductory language of Table Group B3 of this Appendix, in this final rule, the Pathology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the ending of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measures tables in this set include previously finalized measures we are maintaining within the set. This specialty set had no proposed changes.

B.32. Pathology

B.33. Pediatrics

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE PEDIATRICS SPECIALTY SET

Note: In this final rule, we are removing the following measures (below) from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CMS # / eCQM ID / CDE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	46*	N/A	MIPS eCQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	468	N/A	MIPS eCQM	Process	Connection to Community Service Provider: Percent of patients 18 years or older who were screened for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	ACHIN	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (90 FR 33073), we are finalizing the above measure(s) for removal from the *Pediatrics Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.34. Physical Medicine

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Physical Medicine specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

Indicator	CBE # eCOM CBE #	Quality A	CMS eCOM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
	N/A / N/A	3/7	CMS N/A N/A	Medicare Part B Claims Measure, eCOM MIPS CQM	Process	Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented Percentage of patient visits for patients aged 18 years and older screening the measured em- panel who were screened for high blood pressure with a recommended follow-up plan as documented as indicated if blood pressure is elevated or hypertensive	Centers for Medicare & Medicaid Services	We proposed including this measure in the Physical Therapy/Occupational Therapy specialty set as we agreed with interested parties' feedback that adding this measure to the specialty set will help us broaden the patient population being screened for high blood pressure. Hypertension (HFN) is among the leading global preventable risk factors for cardiovascular disease and premature mortality. ¹⁰⁰ Early detection and effective management of HFN have demonstrated significant reductions in morbidity, mortality rate, and health care costs, improves detection rates, and medical management. ¹⁰¹ The physical therapy/occupational therapist specialists may serve as the first point of contact into the health care system, thereby necessitating a need for routine blood pressure (BP) monitoring. ¹⁰² Leading physical therapy professional organizations include statements in their guidelines that suggest that physical therapists have a duty to provide a standard of care that protects the safety and optimizes the overall health of patients under their care. ¹⁰³ Interdisciplinary care is vital, and it should be the responsibility of all clinical types to address health promotion and wellness, and prevention, delay, or management of acute or chronic diseases and conditions. Expanding the physical therapy/occupational therapy-related measure inventory could help in ensuring broad specialty coverage by having measures available that are robust and clinically relevant to clinicians within this specialization, LHS.

B.35. Physical Therapy/Occupational Therapy

MEASURES FINALIZED FOR ADDITION TO THE PHYSICAL THERAPY/OCCUPATIONAL THERAPY SPECIALTY SET								
Indicator	CBEA / eCQM / CBEA	Quality #	CMS / CQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Scorecard	Rationale for Inclusion
								measure complements other measures within the set and adding this measure to this specialty set will elevate the importance of early detection of HTN across specialists. The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2026 MIPS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the addition of measure Q117: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented to this specialty set. One of the commenters indicated that inclusion of this measure emphasizes the important role physical therapists play in identifying complexities and comorbidities and establishing a treatment plan that includes appropriate referrals, as well as prescribing interventions that will effectively and safely address the patient in the context of their medical status.

Response: We thank the commenters for supporting the addition of this measure to the Physical Therapy/Occupational Therapy specialty set.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 13064 through 13066), we are finalizing the above measure(s) for addition to the *Physical Therapy/Occupational Therapy Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.35. Physical Therapy/Occupational Therapy

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE PHYSICAL THERAPY/
OCCUPATIONAL THERAPY SPECIALTY SET

Note: In this final rule, we are removing the following measure(s) below from this specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.

CBE# / eCQM CBE#	Quality R	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	187	N/A	MIPS eCQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS eCQM	Process	Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	COCHIN	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (90 FR 33086), we are finalizing the above measure(s) for removal from the *Physical Therapy/Occupational Therapy Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.36. Plastic Surgery

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Plastic Surgery specialty set makes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation: from low (1) to high (4). The PAM4 performance measure (PAM4-PM) is the change in score on the PAM4 from baseline to follow-up measurement.	His 20th Health, LLC, a wholly owned subsidiary of Phreesha

B.38. Preventive Medicine

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE PREVENTIVE MEDICINE SPECIALTY SET							
Note: In this final rule, we are removing the following measure(s) below from this specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBF # / eCQM CBEU	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	48*	N/A	MIPS COM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, wage difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	49*	N/A	MIPS COM	Process	Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, wage help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHEM	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	50*	N/A	MIPS COM	Process	Adult COVID-19 Vaccination Status: Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (90 FR 33098), we are finalizing the above measure(s) for removal from the *Preventive Medicine Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.39. Pulmonology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Pulmonology specialty set makes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical practices, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

MEASURES FINALIZED FOR ADDITION TO THE PULMONOLOGY SPECIALTY SET								
Indicator	CBE # / eCQM / CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward	Rationale for Inclusion
1 (Outcome)	2485 / N/A	405	N/A	MIPS/COMP	Patient-Reported Outcome-Based Performance Measure	Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood: The percentage of top-tier responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (60 day) of the ambulatory palliative care visit.	American Academy of Hospice and Palliative Medicine (AAHPM)	We proposed including this measure in the Pulmonology specialty set as we agreed with interested parties' feedback that this measure is clinically relevant to the clinical type. Palliative care has expanded rapidly in recent years across various ambulatory, home-based, and facility settings. ¹¹¹ Inclusion of this measure can help ensure that more specialist types are equipped to better manage seriously ill patients' access to high-quality palliative care. This patient-reported outcome measure will help fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision-making with his or her clinician. Patients feel heard and understood adds an important dimension to the care planning for this unique patient population, ultimately cared for by clinicians in this specialty. This measure is predicated on existing guidelines and conception models ¹¹² and is specific to allow non-palliative care specialists who treat patients

¹¹¹ See Roberts-Fischel et al., 2012.

¹¹² See Truette-Turn et al., 2014.

B.39. Pulmonology

MEASURES FINALIZED FOR ADDITION TO THE PULMONOLOGY SPECIALTY SET								
Indicator	CBE # /et QM CBE #	Quality #	CMS et QM ID	Collection Type	Measure Type	Measure Title and Description	Measure Seward	Rationale for Inclusion
								In this specialty, efforts to update the measure will encourage more comprehensive care, increasing the clinician's focus on managing the experiences of patients, families, and caregivers is critical to achieving person-centered care and will promote more universal adoption of best practices to support shared decision making.¹⁴⁷ Studies have shown that adding palliative care to the plan of care for patients with serious illness results in better symptom management and communication with health care providers, as well as decreased unnecessary family members or other caregivers.¹⁴⁸ The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2025 MIPS final rule. In the event appropriate coding was not included in the final specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported adding measure Q493, Ambulatory Palliative Care: Patients' Experience of Feeling Heard and Understood to this specialty set. One of the commenters recommended this measure be added to all specialty sets.

Response: We thank the commenters for supporting the addition of this measure to the Pulmonology specialty set. We encourage the commenter to request this measure be added to other specialty sets through the Solicitation for Specialty Sets process.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33101 through 33102), we are finalizing the above measure(s) for addition to the Pulmonology Specialty Set as proposed for the CY 2026 performance period-2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

¹⁴⁷ See Kenline National Consensus Project for Quality Palliative Care, 2018.

¹⁴⁸ See Kenline Master, 2011.

B.39. Pulmonology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE PULMONOLOGY SPECIALTY SET							
Note: In this final rule, we are removing the following measures below from this specialty specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM Code	Quality #	CHS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	48*	N/A	MIPS CQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	49B	N/A	MIPS CQM	Process	Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCIHM	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	50B	N/A	MIPS CQM	Process	Adult COVID-19 Vaccination Status: Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (90 FR 33193), we are finalizing the above measures for removal from the *Pulmonology Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.40. Rheumatology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Rheumatology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

OCIHM	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	50B	N/A	MIPS CQM	Process	Adult COVID-19 Vaccination Status: Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (90 FR 53198), we are finalizing the above measures for removal from the *Rheumatology Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.4.I. Skilled Nursing Facility

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Skilled Nursing Facility specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

B.41. Skilled Nursing Facility

MEASURES FINALIZED FOR ADDITION TO THE SKILLED NURSING FACILITY SPECIALTY SET								
Indicator	CERW or QH CERW	Quality A	CMS ACQ ID	Collection Type	Measure Type	Measure Title And Description	Measure Standard	Rationale for Inclusion
						The percentage of top-box responses among patients aged 18 years and older who had an ambulatory palliative care visit and report feeling heard and understood by their palliative care clinician and team within 2 months (all days) of the ambulatory palliative care visit.		has expanded rapidly in recent years across inpatient, ambulatory, home-based, and facility settings. ⁶¹⁷ Inclusion of this measure can help ensure that more specialist types are equipped to better manage seriously ill patients' access to high-quality palliative care. This patient-reported outcome measure will help fill a gap for patients receiving palliative care by capturing the patient's voice and experience of care by assessing communication and shared decision making with his or her clinician. Patients feeling heard and understood adds an important dimension to the care planning for this unique patient population, who commonly cared for by clinicians in this specialty. This measure is predicated on existing guidelines and conceptual models ⁶¹⁸ and is specified to a few non-palliative care specialists who treat patients with serious illness to report the measure and encourages more comprehensive care, increasing the clinician's focus on integrating the experiences of patients, families, and caregivers is critical to achieving person-centered care and will promote more universal adoption of best practices to support shared decision making. ⁶¹⁹ Studies have shown that adding palliative care to the plan of care for patients with serious illness results in better symptom management and communication with health care providers, as well as decreased strain on family members or other caregivers. ⁶²⁰ The measure being added to this specialty set was contingent on the inclusion of applicable coding by the time of the CY 2026 FFS final rule. In the event appropriate coding was not included in the final

Indicator	CBE # / eCOM CBE #	Quality #	CMS eCOM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Inclusion
								specification, this measure would not have been finalized for inclusion within this specialty measure set.

We received public comments on the measure(s) proposed for addition to this specialty set. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported adding measure Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood to this specialty set. One of the commenters recommended adding this measure to all specialty sets.

Response: We thank the commenters for supporting the addition of this measure to the Skilled Nursing Facility specialty set. We encourage the commenters to request this measure be added to other specialty sets through the Solicitation for Specialty Sets process.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33111 through 33128), we are finalizing the above measure(s) for addition to the *Skilled Nursing Facility Specialty Set* as proposed for the CY 2026 performance period 2026 MIPS payment year and future years. Where applicable, see Table Group A of this Appendix for any comments and responses pertaining to new measures that were proposed for addition to MIPS.

B.41. Skilled Nursing Facility

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE SKILLED NURSING FACILITY SPECIALTY SET							
Note: In this final rule, we are removing the following measure(s) below from this specialty specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBF # / eCQM CBEID	Quality #	CRS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	48*	N/A	MIPS CQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, wage difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	49*	N/A	MIPS CQM	Process	Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health related social needs (HRSNs): food insecurity, housing instability, transportation needs, wage help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHEM	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	50*	N/A	MIPS CQM	Process	Adult COVID-19 Vaccination Status: Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (90 FR 33112), we are finalizing the above measure(s) for removal from the *Skilled Nursing Facility Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.42. Speech Language Pathology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Speech Language Pathology Specialty Set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinical types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

Indicator	CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward
1	N/A / N/A	188	N/A	eCQM, MIPS, CQM	Process	Kidney Health Evaluation: Percentage of patients aged 18-55 years with a diagnosis of diabetes who received a kidney health evaluation defined by an Estimated Glomerular Filtration Rate (eGFR) AND Urine A/B Ratio-Creatinine Ratio (uACR) within the performance period	National Kidney Foundation

B.44. Urgent Care

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE URGENT CARE SPECIALTY SET							
Note: In this final rule, we are removing the following measures below from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title and Description	Measure Steward	Rationale for Removal
N/A / N/A	48*	N/A	MIPS, CQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	498	N/A	MIPS, CQM	Process	Connection to Community Service Provider: Percent of patients 18 years or older who were screened for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 60 days after screening.	OCHIN	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measures proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (90 FR 33121), we are finalizing the above measures for removal from the *Urgent Care Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.45. Urology

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Urology specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

The PAM6 performance measure (PAM6-PM) is the change in score on the PAM6 from baseline to follow-up measurement.	Insulin Health Initiative (voluntary) owned subsidiary of Phreesha

B.45. Urology

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE UROLOGY SPECIALTY SET							
Note: In this final rule, we are removing the following measures (set below) from this specific specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CRR # / eCQM ID / CDE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	48*	N/A	MIPS eCQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety. Connection to Community Service Provider: Percent of patients 18 years and older who were positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a Community Service Provider (CSP) for at least one of their HRSNs within 90 days of screening.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale. This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	49*	N/A	MIPS eCQM	Process	Adult COVID-19 Vaccination Status: Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations on current vaccination.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measures (set proposed for removal from this specialty set) for the reasons stated above and in the proposed rule (90 FR 33127). We are finalizing the above measures for removal from the *Urology Specialty Set* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Note: Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

B.46. Vascular Surgery

In addition to the considerations discussed in the introductory language of Table Group B of this Appendix to this final rule, the Vascular Surgery specialty set takes additional criteria into consideration, which includes, but is not limited to, whether a measure reflects current clinical guidelines, and the coding of the measure includes relevant clinician types. We may reassess the appropriateness of individual measures, on a case-by-case basis, to ensure appropriate inclusion in the specialty set. Measure tables in this set include previously finalized measures we are maintaining within the set, measures proposed to be added, and measures proposed for removal, as applicable.

1 ! (Outcome)	N/A / N/A	281	N/A	MIPS eCOM	Intermediate Outcome	Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control): The IVD All-or-None measure is an outcome measure (optimal control). The measure contains four goals. All four goals within a measure must be reached in order to meet the measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optimal Control) – Using the IVD denominator optimal results include: • Most recent blood pressure (BP) measurement is less than or equal to 130/80 mm Hg -- AND • Most recent tobacco status is Tobacco Free -- AND • [Daily Aspirin or Other Antiplatelet] Unless Contraindicated -- AND • High-Intensity Statin Use Unless Contraindicated	Winthrop Collaborative for Healthcare Quality

B.46. Vascular Surgery

PREVIOUSLY FINALIZED MEASURES FINALIZED FOR REMOVAL FROM THE VASCULAR SURGERY SPECIALTY SET							
Note: In this final rule, we are removing the following measures below from this specialty measure set based upon review of updates made to existing quality measure specifications, the addition of new measures for inclusion in MIPS, and the feedback provided by specialty societies.							
CBE # / eCQM CBE #	Quality #	CMS eCQM ID	Collection Type	Measure Type	Measure Title And Description	Measure Steward	Rationale for Removal
N/A / N/A	48*	N/A	MIPS CQM	Process	Screening for Social Drivers of Health: Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility difficulties, and interpersonal safety.	Centers for Medicare & Medicaid Services	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.
N/A / N/A	49*	N/A	MIPS CQM	Process	Connection to Community Service Provider: Percent of patients 18 years or older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility help needs, or interpersonal safety, and had contact with a community service provider (CSP) for at least one of their HRSNs within 60 days after screening.	CCHEM	This measure was proposed for removal beginning with the CY 2026 performance period/2028 MIPS payment year. See Table Group C of this Appendix for rationale.

We received no public comments on the measure(s) proposed for removal from this specialty set. For the reasons stated above and in the proposed rule (90 FR 33131), we are finalizing the above measure(s) for removal from the Vascular Surgery Specialty Set as proposed for the CY 2026 performance period/2028 MIPS payment year and future years. Next, Where applicable, see Table Group C of this Appendix for any comments and responses pertaining to measures that were proposed for removal from MIPS.

Table Group C: Previously Finalized Quality Measures Finalized for Removal for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years

In this final rule, we are removing 10 previously finalized MIPS quality measures for the CY 2026 performance period/2028 MIPS payment year and future years. These measures are discussed in detail in the removal tables below.

The CY 2019 PFS final rule (83 FR 59763 through 59765) and CY 2020 PFS final rule (84 FR 62957 through 62959) discuss our incremental approach to removing process measures. Further considerations are given in the evaluation of the measure's performance data to determine whether there is or no longer is variation in performance. As discussed in the CY 2019 PFS final rule (83 FR 59761 through 59763), an additional criterion we use for the removal of measures includes extremely topped-out measures, which refers to measures topped out with an average (mean) performance rate between 9%–100 percent. For a measure proposed for removal due to criteria relating to the benchmark and performance data, further information regarding 2025 MIPS benchmarking data can be located at <https://qpp.cms.gov/benchmarks>.

The CY 2019 PFS final rule (83 FR 59763 through 59765) and CY 2020 PFS final rule (84 FR 62957 through 62959) discuss our incremental approach to removing process measures. The criteria used to determine the removal of a quality measure were codified at 484.1330(a) in the CY 2023 PFS final rule (89 FR 98561).

We requested comments on these measure removals.

C.1. Colonoscopy Interval for Patients with a History of Adenomatous Polyps – Avoidance of Inappropriate Use

Category	Description
CHRP/CCQM REF ID:	N/A
Quality ID:	Q185
CHRP/CCQM ID:	N/A
Collection Type:	MLPS (PDI)
Measure Description:	Percentage of patients aged 18 years and older receiving a surveillance colonoscopy with a history of prior adenomatous polyps at previous colonoscopy findings which indicate interval of 3 or more years since their last colonoscopy.
Measure Steward:	American Gastroenterological Association
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MLPS (finalized in 2018 775k through 797 k) because this measure has reached the end of its topped-out life cycle (FR 51640) and has a limited opportunity to improve clinical outcomes. Topped-out process measures are those with a median performance rate of 95 percent or higher (81.1% (228%). This measure's continued topped-out status is based on the current 2025 MLPS benchmarking data located at https://qpp.cms.gov/benchmarks , in addition to previous year MLPS benchmarking data. For more information on benchmarks, see the MLPS 2025 Quality Benchmarks User Guide at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf .
In the Circumstances the Measure Was Retained:	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2026 PFS final rule, it would have been added back into the applicable previously finalized specialty sets (under Table Group B of the Appendix) and the reason for its retention would have been addressed under Table Group C of the Appendix.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses:

Comment: A commenter opposed the removal of measure Q185, Colonoscopy Interval for Patients with a History of Adenomatous Polyps – Avoidance of Inappropriate Use, and urged CMS to use its discretion and maintain the measure in MLPS. The commenter stated this measure is vital to ensuring evidence-based care, reducing unnecessary costs, and supporting preventive health priorities.

The commenter cited the following about measure Q185:

- **Adheres to Evidence-Based Guidelines for Colonoscopy Surveillance:** Ensures patients with adenomatous polyps receive colonoscopies at appropriate 3 to 5-year intervals based on risk, preventing unnecessary procedures, complications, anxiety, and added costs.
- **Reduces Unnecessary Healthcare Costs and Improves Cost-Effectiveness:** Prevents excess of colonoscopies, lowering direct and indirect costs while preserving patient safety and advancing value-based care.
- **Promotes Upstream Drivers of Health and Population Adjustment:** Supports equitable, guideline-based care, reducing inappropriate screenings in vulnerable and underserved populations and addressing disparities in access and adherence.
- **Aligns with CMS' Long-Term Goals for Quality Measurement:** Advances preventive, patient-centered care and efficiencies; removing this measure would undermine efforts to reduce waste, improve outcomes, and support high-value care.

Another commenter requested that Q185 be retained as it will help ensure continued clinician adherence to evidence-based intervals and prevent unnecessary procedures.

Response: We thank the commenters for their feedback. While we agree the concept is important to quality care, the removal of the measure does not preclude the quality action from continuing. Whether the clinician group is assessed for the quality action or not, it should still be completed as a matter of high-quality care. The data shows the measure has reached the end of its topped-out life cycle, which does not allow meaningful benchmarks to be established. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement and focus specialty sets on areas with greater room for improvement to drive more meaningful gains in quality of care. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped-out status would limit the score awarded per the 2025 Benchmark File.

We encourage the commenters to reach out to measure developers/stewards to develop new outcome-high priority measures for submission to the Call for Measures for possible future implementation.

A full consideration of public comments and for the reasons stated above and in the proposed rule (90 FR 33132), we are finalizing the removal of measure Q185 as proposed for the CY 2026 performance period (2026 MLPS payment year and future years).

C.2. Sentinel Lymph Node Biopsy for Invasive Breast Cancer

Category	Description
CURR / eCQM Title:	N/A / N/A
Quality ID:	Q64
CMS eCQM ID:	N/A
Collection Type:	MIPS/QGM
Measure Description:	The percentage of clinically node negative clinical stage T1N0M0 or T2N0M0 breast cancer patients before or after neoadjuvant systemic therapy, who undergo a sentinel lymph node (SLN) procedure.
Measure Steward:	American Society of Breast Surgeons
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS (codified in 81 FR 77338 through 77675) at the measure steward's request because it is not aligned with current clinical guidelines and will no longer be maintained for inclusion.
In the Circumstance the Measure Was Retained:	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2026 P+S final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: A commenter supported CMS' proposal to remove measure Q264: Sentinel Lymph Node Biopsy for Invasive Breast Cancer from MIPS. The commenter explained, as the measure steward, they decided to retire the measure due to declining use and lack of a benchmark since 2021. These trends reflect evolving clinical practice and new evidence showing sentinel lymph node biopsy is not recommended for many patients with early-stage invasive breast cancer, reducing the measure's applicability.

Response: We thank the commenter for supporting the removal of this measure from MIPS.

Comment: A commenter expressed concern that many topped-out measures are oncology- and cancer-specific and removing them without replacement would leave hospitals with limited meaningful reporting options. They warned this would reduce the relevance of the Advancing Cancer Care MVP and weaken alignment between QPP requirements and oncology practice. The commenter urged CMS to ensure that any oncology measures slated for retirement are replaced with suitable alternatives that reflect current standards of care and meaningful outcomes for cancer patients.

Response: We thank the commenter for their comment. We recognize the importance of the clinical area the measure focuses on and do not want to limit measures applicable to oncology within MIPS. However, as noted in the rationale for removal, the measure will no longer be maintained by the measure steward because it is not aligned with current clinical guidelines. We also note the Advancing Cancer Care MVP still contains a good number of meaningful quality and QCDR measures to ensure applicability and clinician choice for selection. We encourage the commenter to reach out to measure developers/stewards to develop new outcome/high priority measures for submission to the Call for Measures for possible future implementation.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33132), we are finalizing the removal of measure Q264 as proposed for the CY 2026 performance period 2028 MIPS payment year and future years.

C.3. Assessment of Mood Disorders and Psychosis for Patients with Parkinson's Disease

Category	Description
CMS eCQM Code:	N/A / N/A
Quality ID:	Q290
CMS eCQM ID:	N/A
Collection Type:	MIPS eCQM
Measure Description:	Percentage of all patients with a diagnosis of Parkinson's Disease (PD) who were assessed for depression, anxiety, quality of life, and psychosis over during the measurement period.
Measure Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS finalized on 8/1/25 (83 FR 77558 through 77675) because the quality action being measured has become a standard of care based upon MIPS performance data and thus has limited opportunity to improve clinical outcomes. The performance on this measure is extremely high and improving, making this measure extremely topped out as discussed in the CY 2026 PFS final rule (83 FR 59761 through 59763). The average performance for this measure is 98.31 percent and as such is considered extremely topped out. The average performance rate is based on the current 2025 MIPS benchmarking data located at https://qpp.cms.gov/benchmarks . For more information on benchmarks see the MIPS 2025 Quality Benchmarks User Guide at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf .
In the Circumstances the Measure Was Retained:	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2026 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix, and the reason for its retention would have been addressed under Table Group C of this Appendix.

We received no public comments on the proposed removal of this measure. For the reasons stated above and in the proposed rule (90 FR 73131), we are finalizing the removal of measure Q290 as proposed for the CY 2026 performance period (2028 MIPS payment year and future years).

C4. Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Preoperative Evaluation in Low-Risk Surgery Patients

Category	Description
CMS eCQM Code:	NA, NA
Quality ID:	322
CMS eCQM ID:	NA
Collection Type:	MIPS eCQM
Measure Description:	Percentage of stress single-photon emission computed tomography (SPECT) myocardial perfusion imaging (MPI), stress echocardiogram (ECHEC), multigated acquisition scan (MUGA), cardiac computed tomography angiography (CCTA), or cardiac magnetic resonance (CMR) performed in low-risk surgery patients 18 years or older for preoperative evaluation during the 12-month submission period.
Measure Steward:	American College of Cardiology Foundation
High Priority Measure:	Yes
Measure Type:	Efficiency
Rationale for Removal:	We proposed the removal of this quality measure from MIPS finalized in 81 FR 77558 (through 77675) because the quality domain being measured has become a standard of care based upon MIPS performance data, and thus has limited opportunity to improve clinical outcomes. The average performance for this inverse measure, 9.6 percent, is extremely high and unvarying, making this measure extremely topped-out as discussed in the CY 2020 PFS final rule (83 FR 30761 (rough 30763)). For an inverse measure, a lower calculated performance rate indicates better clinical care or control. The average performance rate is based on the current 2025 MIPS benchmarking data located at https://qpp.cms.gov/benchmarks . For more information on benchmarks, see the MIPS 2025 Quality Benchmarks User Guide at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf .
In the Circumstance the Measure Was Retained:	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2020 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group 1b of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters did not support removal of measure Q322: Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Preoperative Evaluation in Low-Risk Surgery Patients but acknowledged CMS' rationale for proposing removal of measure Q322 due to topped-out performance. The commenter cautioned against eliminating one of the few cardiology-specific efficiency measures without a replacement. Full comment is under B.4a Removal Table of this Appendix.

Response: We thank the commenter for their feedback and acknowledge that removal of this measure decreases the number of available measures for certain specialists; however, there are policies in place, such as Eligible Measure Applicability (EMA) and denominator reduction to account for this when working to meet MIPS quality performance category requirements. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement and focus specialty sets on measures with greater room for improvement to drive more meaningful gains in quality. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped-out status would limit the score awarded per the 2025 Benchmark File.

We encourage the commenters to reach out to measure developers/stewards to develop new outcome/high priority measures for submission to the Call for Measures for possible future implementation.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 13133), we are finalizing the removal of measure Q322 as provided for in the CY 2026 performance period 2028 MIPS payment year and future years.

C.5. Overuse of Imaging for the Evaluation of Primary Headache

Category	Description
CMS eCQM ID#	N/A/N/A
Quality #:	419
CMS eCQM ID:	N/A
Collection Type:	MIPS eCQM
Measure Description:	Percentage of patients for whom imaging of the head (CT or MRI) is obtained for the evaluation of primary headache when clinical indications are not present.
Measure Steward:	American Academy of Neurology
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS finalized in R1 FR 77558, through 77679 because the quality score being measured has become a standard of care based upon MIPS performance data, and thus has limited opportunity to improve clinical outcomes. The average performance for this measure, 0.55 percent, is extremely high and alarming, making this measure extremely topped out as discussed in the CY 2026 PFS final rule (85 FR 54761 through 54763). For an inverse measure, a lower calculated performance rate indicates better clinical care or control. The average performance rate is based on the current 2025 MIPS benchmarking data located in https://qpp.cms.gov/benchmarks . For more information on benchmarks, see the MIPS 2025 Quality Benchmarks User Guide at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3162/2025-Quality-Benchmarks-User-Guide.pdf .
In the Circumstance the Measure Was Retained:	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2026 PFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix, and the reason for its retention would have been addressed under Table Group C of this Appendix.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment. A commenter did not support removing measure Q419, Overuse of Imaging for the Evaluation of Primary Headache, despite its extremely topped-out status. They explained that for many specialists, such as interventional pain management clinicians who lack quality measures aligned with their specialty, this measure is integral to their quality category contribution. Even though it is topped out, the 7 points it provides is higher than many other measures they report on, and its removal without a comparable replacement would disadvantage clinicians' quality scores. Other commenters also opposed removal of measure Q419, with a commenter stating that this may lead to an overuse of CT and MRI services, which in addition to increasing patient exposure to unnecessary radiation, would also result in higher health system costs.

Response. While we agree that the intent of measure Q419 is to discourage unnecessary use of CT and MRI imaging for evaluation of primary headaches, this measure is extremely topped out, which demonstrates it has become a standard of care not to use CT and MRI imaging for evaluation of primary headaches when clinical indications are not present. We acknowledge that removal of this measure decreases the number of available measures for certain specialists; however, there are policies in place, such as Eligible Measure Applicability (EMA) and denominator reduction to account for this when working to meet MIPS quality performance category requirements. Additionally, these numbers, measure availability, including specialty specific, and scoring, are considered when reviewing the MIPS quality measure inventory. Lastly, we encourage the commenter to reach out to measure developers/stewards to develop new outcome-high priority measures for submission to the Call for Measures for possible future implementation.

After consideration of public comments, and for the reasons stated above and in the proposed rule (40 FR 33131), we are finalizing the removal of measure Q419 as proposed for the CY 2026 performance period 2028 MIPS payment year and future years.

C.6. Perioperative Temperature Management

Category	Description
CLAS of QM ID: N/A	N/A
Quality ID: Q424	424
CLAS of QM ID: N/A	N/A
Conversion Type: MIPS LQM	MIPS LQM
Measure Description:	Percentage of patients, regardless of age, who undergo surgical or therapeutic procedure, under general or neuraxial anesthesia of all minutes duration or longer for whom at least one body temperature greater than or equal to 35.5 degrees Celsius (or 95.9 degrees Fahrenheit) was achieved within the 60 minutes immediately before or 15 minutes immediately after anesthesia end time.
Measure Steward:	American Society of Anesthesiologists
High Priority Measure:	Yes
Measure Type:	Composite
Rationale for Removal:	We proposed the removal of this quality measure from MIPS (finalized at 91 FR 77349 through 77631) because the quality action being measured has become a standard of care, based upon MIPS performance data, and there has limited opportunity to improve clinical outcomes. The average performance on this measure, 98.25 percent, is extremely high and varying, making this measure extremely "topped-out" as discussed in the CY 2016 MIPS final rule (83 FR 59261 through 59761). The average performance rate is based on the current 2025 MIPS benchmarking data located at https://qpp.cms.gov/benchmarks . For more information on benchmarks, see the MIPS 2025 Quality Benchmarks User Guide at https://qpp-cm-prod-content.s3.amazonaws.com/uploads/3152/2025-Quality-Benchmarks-User-Guide.pdf .
In the Circumstance the Measure Was Retained:	There were no substantive changes or specialty set movement proposed for this measure. If the measure was the finished or removed in the CY 2026 MIPS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters opposed removing measure Q424, Perioperative Temperature Management, emphasizing that it is anesthesiologists' only outcome measure in MIPS and represents a critical workflow for preventing patient safety and preventing adverse events, such as perioperative hypothermia and postoperative infections. They noted that most anesthesiology-specific measures are already topped out and removing measure Q424 would make it harder for clinicians to meet reporting requirements, forcing them to rely on less relevant measures. The commenters explained that while QCDRs are working to develop new anesthesiology measures, broadly applicable options remain limited, and eliminating measure Q424 could increase patient harm and create unnecessary burden for anesthesiologists. Another commenter requested the measure be retained for 1 more year to allow time to transition the Normothermia Outcome (ASC-13) measure, used in the Ambulatory Surgical Center Quality Reporting program, into MIPS for 2027. The commenter explained that while ASC-13 is currently submitted via a web-based tool, CMS could enable collection through registries and other electronic resources, and retaining measure Q424 in 2026 would provide time to coordinate with ASCQR staff to adapt the normothermia measure for MIPS reporting.

Response: We thank the commenters for their feedback. While we agree the intent of measure Q424 addresses a critical element in promoting strategies to prevent perioperative hypothermia, removal of the measure does not preclude the quality action from continuing. This measure shows continued high performance, demonstrating these strategies have become a standard of care. Additionally, by removing measures with high performance rates, we are attempting to reduce reporting burden where there is little room for improvement and focus specialty sets on areas with greater room for improvement to drive more meaningful gains in quality care. Removal allows eligible clinicians to maximize their potential quality performance score as this measure's topped-out status would limit the score awarded per the 2025 Benchmark File.

We also acknowledge the removal of this measure decreases the number of available measures for certain specialties; however, there are policies in place, such as Eligible Measure Applicability (EMA) and denominator reduction to account for this when working to meet MIPS quality performance category requirements. Additionally, these nuances, measure availability, including specialty-specific, and scoring, are considered when reviewing the MIPS quality measure inventory.

We encourage the commenters to reach out to the measure developers/stewards to ensure the measure meets MIPS requirements and submit it to the Call for Measures for possible future implementation. We appreciate the suggestion to adapt ASC-13 for MIPS and will consider it for future performance years. We appreciate the potential for alignment across programs if developed for clinicians and deemed appropriate for MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33134), we are finalizing the removal of measure Q424 as proposed for the CY 2026 performance period/2026 MIPS payment year and future years.

C.7. Non-Recommended Cervical Cancer Screening in Adolescent Females

Category	Description
CDEU/eCQM Code:	N/A/N/A
Quality ID:	443
CMS eCQM ID:	N/A
Collection Type:	MIPS eCQM
Measure Description:	The percentage of adolescent females 16–20 years of age who were screened successfully for cervical cancer.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS finalized on 80 FR 77558 through 77675 because the measure steward will no longer maintain the measure.
In the Circumstances the Measure Was Retained:	There were no substitute changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2026 FFS final rule, it would have been added back into the applicable previously finalized specialty set(s) under Table Group B of this Appendix, and the reason for its retention would have been addressed under Table Group C of this Appendix.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: A commenter supported the proposed removal of measure Q443, Non-Recommended Cervical Cancer Screening in Adolescent Females.

Response: We thank the commenter for supporting the removal of this measure from MIPS.

Comment: A commenter recommended that if measure Q443 is removed from MIPS that it be replaced with a similar cervical screening measure such as NQQA's digital Cervical Cancer Screening measure.

Response: We thank the commenter for their comment and note that NQQA's Cervical Cancer Screening measure is already in MIPS with an eCQM collection type and measure ID: Q309/CMS124x14.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 13135), we are finalizing the removal of measure Q443 as proposed for the CY 2026 performance period 2028 MIPS payment year and future years.

C.8. Screening for Social Drivers of Health

Category	Description
CHF# / eCQM / CHF#:	N/A / N/A
Quality ID:	487
CLAS eCQM ID:	N/A
Collection Type:	KLIPS CY202
Measure Description:	Percent of patients 18 years and older screened for food insecurity, housing instability, transportation needs, utility challenges, and interpersonal safety.
Measure Standard:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS finalized in 87 FR 50253 through 50260 because it is a process measure that no longer addresses a priority measure, will no longer be considered a high-priority measure. In the CY 2020 PFS final rule (84 FR 62957) and CY 2019 PFS final rule (83 FR 59763 through 59765) rule, we communicated to stakeholders our desire to reduce the number of process measures within the MIPS quality measure set. In the CY 2019 OPP Final rule (81 FR 37101), we explained that outcome measures are more valuable than clinical process measures and are instrumental to improving the quality of care patients receive. In the CY 2023 PFS final rule (88 FR 9856), we codified under § 414.1200(c) that when CMS uses the following criteria to determine the removal of a quality measure, if the quality measure is a process measure: Additionally, we sought to align with other quality programs. As outlined in the Medicare Program, Hospital Inpatient Prospective Payment System for Acute Care Hospitals (IPPS) and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year (FY) 2026 Rates Changes for the CY 2025 IPPS Rates Due to Cost-Driven Requirements for Quality Programs, and Other Policy Changes, Health Data, Technology, and Interoperability, Electronic Prescribing, Real-Time Prescription Script and Electronic Prior Authorization final rule, the Screening for Social Drivers of Health (SDoH) measure was finalized for removal beginning with the CY 2024 reporting period (FY 2026 payment determination from the Hospital Inpatient Quality Reporting (HIQR) (91 FR 37014) and MIPS) except under Hospital Quality Reporting (HQR) Programs (91 FR 37029). Further alignment is also finalized for the Inpatient Rehabilitation Facility (IRF) and Long-Term Care Hospital (LTCH) settings through final rule removal of SDoH related elements from standardized payment assessment reporting (91 FR 37036). Therefore, removing this measure aligns with the CMS Quality Measure Development Plan²⁴ through consolidating a quality measure inventory and focuses on high-priority and outcome-based measures that align across programs and payers.
In the Circumstance the Measure Was Retained:	There were no substantive changes or specially set threshold proposed for this measure. If the measure was not finalized for removal in the CY 2026 PFS final rule, it would have been added back into the applicable previously finalized specialty group under Table Group E of this appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses. We note that commenters mostly repeated the same points here for measure Q498: Connection to Community Service Provider, which is proposed for removal under Table C.9 of this Appendix.

Comment: A commenter stated they are committed to the importance of identifying and addressing health-related social needs (HRSNs) or upstream drivers of health, however, they supported the proposed removal of measure Q487: Screening for Social Drivers of Health due to concerns regarding lack of health information technology capabilities and interoperability, administrative burden, and lack of community resources. Another commenter supported the intent of the two health equity measures finalized for use in MIPS and MIPS but agreed with CMS' proposal to remove them. They explained it is since the measures were finalized, concerns have been raised about the lack of supporting evidence and uncertainty about whether they would improve patient care. The commenter stated that CMS has not provided sufficient testing data on reliability and validity, with available information limited to two optional screening tools. The commenter also highlighted that clinicians may not be able to meet patient needs due to limited availability of resources, which varies by locality and type of service. The commenter noted that availability of services such as affordable housing and food, varies and depends on factors beyond clinician control.

Response: We thank the commenters for supporting the removal of this measure from MIPS.

Comment: Many commenters opposed removing measure Q487. Key points included:

²⁴ CMS, (2016), CMS Quality Measure Development Plan, Supporting the Transition to the Merit-based Incentive Payment System (MIPS) and Alternative Payment Models (APMs), our government equality initiative equips users across first moments of rule-based programs, measures, and rules final rule.pdf.

- **Broad applicability and clinician flexibility:** Measure Q487 is important for both primary and specialty clinicians, with commenters highlighting its particular value for clinicians who face very few reportable measures within traditional MIPS or eMVPs. A commenter noted that removal of this measure would make it more difficult for entities to transition to MVP reporting.
- **Support for vulnerable populations and chronic disease management:** Commenters stressed its role in addressing social needs for older adults and patients with complex conditions, including screening for food insecurity, housing instability, and related risks. Commenters linked the measures to better management of diabetes, cardiovascular disease, obesity, and other chronic conditions, emphasizing the importance of addressing social and behavioral risk factors.
- **Burden and workflow considerations:** Collecting and using SDOH data is already common practice in healthcare, with electronic health records able to capture this information and the burden of collection minimal, with many practices having spent significant time and resources to construct workflows in order to collect SDOH information.
- **Patient outcomes, system impact, and cost savings:** Eliminating the measure could worsen outcomes, increase emergency department visits and readmissions, and reduce connections to community resources. Engaging community support resources for patients with unmet needs can improve mental health, increase access to care, and lower long-term healthcare costs. SDOH data also enable more accurate analyses of access, cost, and outcomes across populations.
- **Complement to measure Q488 and alignment with CMS priorities:** Several commenters noted that Q487 and Q488 together encourage consistent screening across five domains of social needs, helping clinicians identify where further assessment, services, or care modifications are needed to improve outcomes. Removing both measures would undermine efforts to improve health equity, risk stratification, and prevention of costly health declines. Commenters stated CMS has prioritized social needs and urged more attention to demographic factors affecting access to care.
- **Clinician choice and alternatives:** Commenters urged CMS to preserve measure Q487 as a reporting option to align with ongoing practice priorities and avoid forcing clinicians to use less relevant measures. A commenter suggested adding the Addressing Health-Related Social Needs eCQM in place of measure Q487 as an alternative measure.

Overall, commenters urged CMS to retain measure Q487 or provide alternatives to maintain focus on social drivers of health as essential to patient well-being, disease prevention, and health equity. Commenters recommended refining the measure by combining questions for efficiency, supporting integration of SDOH screening into existing workflows, and ensuring data collection is paired with meaningful referrals to community and social services. They also suggested CMS consider broader strategies, such as new payment models, fee schedule reforms, additional improvement activities or quality measures, and facilitating interoperable data exchange.

Response: We thank the commenters for their feedback. This is a process measure that no longer addresses a priority area and will no longer be considered a high-priority measure. As explained, removing this measure aligns with the CMS Quality Measure Development Plan through maintaining a quality measure inventory that focuses on high-priority and outcome-based measures that align across programs and payers. While we agree that the concept is important to quality care for all, the removal of measure Q487 does not preclude the quality action from continuing. Whether the clinician group is assessed for the quality action or not, it should still be completed as clinically appropriate as deemed by the clinician. Additionally, the removal of these measures is in accordance with already finalized proposals in other CMS programs, such as the Hospital HQR Program, maintaining alignment across programs as feasible. We note that specialty sets and MVPs were reviewed with sufficient measure choice in mind, and sufficient choice is maintained despite removal of this measure. We appreciate practices having workflows put in place to address health care for all. We also note that the Addressing Health-Related Social Needs eCQM is not a MIPS measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 13136), we are finalizing the removal of measure Q487 as proposed for the CY 2026 performance period (2028 MIPS payment year and future years).

C.9. Connection to Community Service Provider

Category	Description
C-BF# and C-MP#	N/A; N/A
Quality ID	Q498
CMS et QM ID	N/A
Collection Type	N/A; CQM
Measure Description:	Types of persons 18 years of older who screen positive for one or more of the following health-related social needs (HRSNs): food insecurity, housing instability, transportation needs, utility bill needs, or interpersonal safety; and had contact with a community service provider (CSP) for at least 1 of them (HRSNs within 60 days prior to screen).
Measure Steward:	IC-HHS
High Priority Measure	Yes
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MIPS finalized in R11R 79574 through 79575 because it was a process measure that no longer addresses a priority area and will no longer be considered a high-priority measure. In the CY 2020 PFS final rule (84 FR 62953) and CY 2019 PFS final rule (83 FR 59764) through 59765, we communicated most health data our desire to reduce the number of process measures within the MIPS quality measure set. In the CY 2017 QPP final rule (81 FR 37101), we explained that outcome measures are more valuable than clinical process measures and are instrumental to improving the quality of care patients receive. In the CY 2025 PFS final rule (90 FR 9560), we modified under § 414.1330(c)(1) that CMS uses the following criteria to determine the removal of a quality measure. If the quality measure is a process measure: Additionally, we sought to align with other quality programs. As indicated in the Medicare Program, Hospital Inpatient Prospective Payment System for Acute Care Hospitals (IPPS) and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year (FY) 2026 Rates, Changes to the FY 2025 IPPS Rates Due to Cost Reduction Requirements for Quality Programs, and Other Policy Changes, Health Data, Technology, and Interoperability, Electronic Prescribing, Foot-Lane Prescription Benefit and Electronic Prior Authorization final rule, the Screen Facility Rate for Social Drivers of Health (SDOH) measure is finalized for removal beginning with the CY 2024 reporting period.⁴⁴ 2026 payment determination from the Hospital Inpatient Quality Reporting (IQR) rule (87 FR 27044) and PPS-Exempt Cancer Hospital Quality Reporting (CQ) HQR) programs (89 FR 37229). Further alignment is also finalized for the Inpatient Rehabilitation Facility (IRF) and Long-Term Care Hospital (LTCH) settings through finalized removal of SDOH-related elements from standardized patient assessment reporting (90 FR 37037). Therefore, removing this measure aligns with the CMS Quality Measure Development plan⁴⁵ through maintaining a quality measure inventory that focuses on high-priority, and outcome-based measures that affect access programs and payers, and reduce clinical burden of data collection as feasible.
In the Circumstance the Measure Was Retained:	There were no substantive changes or specialty set movement proposed for this measure. If the measure was not finalized for removal in the CY 2025 PFS final rule, it would have been added back into the applicable previously finalized specialty sets under Table Group H of this appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: A commenter supported removing measure Q498, Connection to Community Service Provider due to limited health IT capabilities, interoperability challenges, administrative burden, and lack of community resources. Another commenter also supported removal, citing concerns raised since the measure was finalized about not HIEs supporting es device and uncertainty over whether it would improve patient care.

Response: We thank the commenters for supporting the removal of this measure from MIPS.

Comment: Many commenters opposed removing measure Q498, with most repeating the same themes raised for measure Q487, Screening for Social Drivers of Health (see Table C.8 of this Appendix for more detail). In addition, commenters further emphasized that measure Q498 remains a high priority because connecting patients to resources such as nutrition and social support is essential to addressing social factors that affect health and aligns with CMS' prevention goals. They highlighted that measure Q498 complements measure Q487 by confirming whether patients who screen positive for barriers are connected to community service providers, ensuring follow-through and access to clinical resources. Commenters cautioned that removing these measures would undermine progress in chronic disease management, and weaken the infrastructure needed to support

⁴⁴ See Institute (IM) 2016.

vulnerable populations. Given CMS' stated focus on prevention, chronic disease management, nutrition, and wellbeing, commenters urged CMS to retain this measure or provide alternatives that ensure evidence-based interventions and referral pathways are maintained.

Response. We thank the commenters for their feedback. As noted above, this is a process measure that no longer addresses a priority area and will no longer be considered a high-priority measure. As explained, removing this measure aligns with the CMS Quality Measure Development Plan through maintaining a quality measure inventory that focuses on high-priority and outcome-based measures that align across programs and payers. While we agree that the concept is important to quality care for all, the removal of the measure does not preclude the quality action from continuing. Whether the clinician group is assessed for the quality action or not, it should still be completed as clinically appropriate as deemed by the clinician. Additionally, the removal of these measures is in accordance with already finalized proposals in other CMS programs, such as the Hospital IQR Program, maintaining alignment across programs as feasible.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33137), we are finalizing the removal of measure Q498 as proposed for the CY 2026 performance period 2028 MIPS payment year and future years.

C.10. Adult COVID-19 Vaccination Status

Category	Description
CERES and QM CERES:	N/A, N/A
Quality ID:	908
CMS/CQID ID:	N/A
Collection Type:	MLPS 1, QM1
Measure Description:	Percentage of patients aged 18 years and older seen for a visit during the performance period that are up to date on their COVID-19 vaccinations as defined by Centers for Disease Control and Prevention (CDC) recommendations (current vaccination).
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale for Removal:	We proposed the removal of this quality measure from MLPS 1 finalized in RFI R 09608 through 98611 because it is a process measure, and we sought to align with other Medicare programs. In the CY 2020 PFS final rule (84 FR 62957) and CY 2019 PFS final rule (81 FR 59763 through 59765) rule, we communicated to stakeholders our desire to reduce the number of process measures within the MLPS quality measure set. In the CY 2017 QIP final rule (81 FR 37401), we explained that measure measures are more valuable than clinical process measures, and are instrumental to improving the quality of care patients receive. In the CY 2025 PFS final rule (90 FR 9856-1), we codified under § 411.1304(c) that MLPS uses the following criteria to determine the removal of a quality measure. If the quality measure is a process measure: Additionally, we sought to align with other quality programs. As indicated in the Medicare Program, Hospital Inpatient Prospective Payment System for Acute Care Hospitals (IPPS) and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year (FY) 2026 Rates, Changes to the FY 2024 IPPS Rates Due to Cost Review, Requirements for Quality Programs, and Other Policy Changes, Telehealth, Technology, and Interoperability: Electronic Prescribing, Real-time Prescription Benefit and Electronic Prior Authorization final rule, Inpatient measure of COVID-19 Vaccination Coverage Among Healthcare Personnel Measure was finalized for removal (89 FR 50412). This measure was also finalized for removal in the Medicare Program, Inpatient Rehabilitation Facility Prospective Payment System for Federal Fiscal Year 2026 and Updates to the IRF Quality Reporting Program final rule (90 FR 37762). We sought to align with these proposals to streamline clinical topics assessed across Medicare quality reporting programs.
In the Circumstances the Measure Was Retained:	There were no substantive changes or requests for removal proposed for this measure. If the measure was not finalized for removal in the CY 2026 PFS final rule, it would have been added back into the applicable previously finalized specialty survey under Table C, except in this Appendix and the reason for its retention would have been addressed under Table Group C of this Appendix.

We received public comments on the proposed removal of this measure. The following is a summary of the comments we received and our responses.

Comment: A commenter supported the proposed removal of measure Q908: Adult COVID-19 Vaccination Status due to concerns regarding lack of health information technology capabilities and interoperability, administrative burden, and lack of community resources. Another commenter supported removing measure Q908 citing unclear numerator specifications tied to changing CDC recommendations, which undermines reliability and validity. They noted difficulties tracking vaccinations given outside primary care and emphasized the measure lacked support from key review committees. They concluded it should not be included in MLPS until it undergoes sufficient testing with clear specifications and achieves consensus.

Response: We thank the commenters for supporting the removal of this measure from MLPS.

Comment: Several commenters opposed removing measure Q908 because COVID-19 continues to burden adults, especially those with comorbidities or immunocompromised status, making vaccination measurement essential. Commenters cited the following:

- Retaining this measure ensures clinicians assess, recommend, and document vaccination—critical for preventing severe disease, reducing transmission, and protecting public health.
- Removal is premature given ongoing circulation surges and new variants; it risks lowering accountability and signaling vaccination is no longer a priority.
- Measure helps track disparities, protect vulnerable populations, and support rapid response to surges.
- Measure aligns with other adult immunization measures (influenza, pneumococcal) reinforcing vaccination as standard preventive care.
- COVID-19 hospitalizations, long COVID, and costs remain significant, justifying continued prioritization.
- Eliminating the measure would disrupt trend analyses and weaken long-term evaluation.
- Vaccination assessment is a low-cost, high-impact tool that strengthens the health system's response to respiratory illness.

- NQQA's 2026 HEDIS update introduced a COVID-19 indicator for adults 265¹² and commenters urged CMS to update measure Q493: Adult Immunization Status to align with NQQA's latest health plan level specifications to ensure continued vaccination focus for high-risk older adults if measure Q508 was removed.
- Emphasized vaccination's role in reducing morbidity and mortality for older adults and immunocompromised individuals, and noting recent FDA approval of updated vaccines, and recommended annual reevaluation and updates as new evidence emerges.

Regimen: As explained in the rationale above, outcome measures are more instrumental to improving the quality-of-care patients receive than process measures. In the CY 2025 PFS final rule (89 FR 98561), we codified under § 414.133(c)(1)(v) that CMS uses the following criteria to determine the removal of a quality measure: If the quality measure is a process measure, We also communicated to interested parties in the CY 2020 PFS final rule (84 FR 52957) and CY 2019 PFS final rule (83 FR 59263) through 39753 rule set desire to reduce the number of process measures within the MIPS quality measure set. The removal of the measure does not preclude the quality action from continuing. Whether the clinician group is assessed for the quality action or not, it should still be completed as clinically appropriate as deemed by the clinician. Additionally, the removal of these measures is in accordance with already finalized proposals in other CMS programs, such as the Hospital IQR Program, maintaining alignment across programs as possible. We encourage the commenters to reach out to the measure steward to discuss decisions for possible implementation at future years for measure Q493.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 23138), we are finalizing the removal of measure Q508 as proposed for the CY 2026 performance period 2028 MIPS reporting year and future years.

¹² National Committee for Quality Assurance (2023, August 1). *HEDIS by 2026: What's New, What's Changed, What's Retired*. <https://www.nhq.org/files/hedis-by-2026-what-s-new-what-s-changed-what-s-retired>

Table Group D: Finalized and Not Finalized Substantive Changes to Previously Finalized MIPS Quality Measures for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years

The D Tables within this final rule provide the substantive changes finalized and not finalized for the MIPS quality measures in CY 2026. Three measures have finalized substantive changes that will result in a new benchmark. All measures with substantive changes are discussed in detail in the tables below.

We note that some MIPS quality measures available in traditional MIPS and MYPs are adopted by the Medicare Shared Savings Program for utilization in the Alternative Payment Model (APM) Performance Pathway (APP) and/or APP Plus, as finalized in the 2025 PFS final rule (89 FR 98363 through 98371). For such measures, the collection type applicable for purposes of the APP and/or APP Plus (Medicare CQM for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQM)) is also specified as a collection type available for such measures described in Table Group D.

The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2026 may not be identified within this final rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2026 CPT and ICD-10 updates and assessment of these codes' inclusion by the Measure Steward, these changes may be postponed until CY 2027. The 2026 Quality Measure Release Notes provide a comprehensive, detailed reference of exact code changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types on the Quality Payment Program website at <https://qpp.cms.gov>. In addition, eCQMs that are endorsed by a CBC are shown in Table D of this Appendix, as follows: CBE A and QM CBE A.

In addition to the finalized substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but they are important to communicate to interested parties. These changes align with the scope of the current coding, however, though not substantive in nature, these changes will expand or contract the measure's current eligible population. Therefore, please refer to the current year measure specification and the 2026 Quality Measure Release Notes or the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation. Language has been added to all 2026 quality measure specifications in the form of a revised Instructions Note to clearly identify if telehealth encounters are allowed for denominator eligibility regardless of changes in coding or billing practices that may occur. Eligibility of telehealth encounters will be based on the intent of the measure and those settings that are appropriate for inclusion.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the proposed substantive changes, there may be revisions within the logic that are not considered substantive in nature, however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

We requested comments on these substantive changes.

As indicated in the introduction to Table Group H of this Appendix, comments on measures that have substantive changes that are not related to what is proposed are considered out of scope and are not included in this final rule. In addition, requested changes on previously finalized measures that were not proposed under the 2026 PFS proposed rule are also out of scope to this final rule. Any potential new substantive changes need to go through notice and comment rulemaking.

D.1 Primary Open-Angle Glaucoma (POAG): Optic Nerve Evaluation	
CBE #/eCQM CBE #:	N/A / 00Mg
Quality #:	012
CMS eCQM ID:	CMS14314
Current Collection Type:	eCQM
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) who have an optic nerve head evaluation during one or more visits within 12 months
Substantive Change:	The measure description is revised to read: Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) who have an optic nerve head evaluation during one or more visits during the measurement period The measure numerator is revised to read: Patients who have an optic nerve head evaluation during one or more visits during the measurement period
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed revising the measure description and numerator by revising the language from "within 12 months" to "during the measurement period" to clarify the timeframe during which an optic nerve head evaluation should be completed. This clarification will ensure the numerator's quality action is assessed consistently and during the appropriate timeframe.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposed substantive change to measure Q012: Primary Open-Angle Glaucoma (POAG): Optic Nerve Evaluation.

Response: We thank the commenters for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33139), we are finalizing the changes to measure Q012 as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

D.2 Advance Care Plan

	Description
CBE # / CQM CBE #:	03/26 / N/A
Quality #:	047
CMS eCQM ID:	N/A
Current Collection Type:	Medicare Part B Claims Measure / MIPS CQM
Current Measure Description:	Percentage of patients aged 65 years and older who have an advance care plan or surrogate decision maker documented in the medical record or documentation in the medical record that an advance care plan was discussed but the patient did not wish or was not able to name a surrogate decision maker or provide an advance care plan.
Substantive Change:	Modified collection type: MIPS CQM
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed removing the Medicare Part B Claims collection type as it has reached the end of the rollout-out lifecycle (U2 FR 53640). The average performance rate, 100 percent, and tipped-out status is based on the current MIPS benchmarking data located at https://qpp.cms.gov/benchmarks . However, the benchmarking data continues to show a gap for the MIPS CQM collection type and as such, we proposed retaining this collection type.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: Several commenters raised concerns about the proposal to remove the Medicare Part B Claims collection type from measure Q047, Advance Care Plan. They noted that eliminating the collection type without adequate support could discourage participation, particularly among small or rural practices without registry access, and risk limiting advance care planning for older adults in rural or underserved areas.

One of the commenters recommended CMS:

- **Provide Clear Guidance on Reporting Expectations:** Issue updated documentation and educational resources, especially for practices transitioning away from claims-based reporting.
- **Support Small and Rural Practices:** Explore technical assistance and financial support to help these practices report via MIPS CQMs.
- **Ensure Alignment Across Programs:** Harmonize the Advance Care Plan measure with other federal programs and private payer initiatives to reduce duplication and burden.
- **Monitor Impact and Utility:** Track the measure's utility under MIPS CQMs and update as needed to ensure continued relevance and feasibility.

Another commenter also suggested that measure Q047 should move beyond documentation toward goal-concordant care for older adults with multiple chronic conditions.

Response: We thank the commenters for their feedback. Upon further review we agree that removing the Medicare Part B Claims collection type could adversely affect smaller and rural practices. Therefore, we will defer removal of the Medicare Part B Claims collection type. We will take commenter feedback into consideration during the annual MIPS quality measure revisions cycle. We encourage the commenter who suggested updating the measure and its action to reach out to the measure steward to discuss revisions to move measure Q047 toward a more robust, goal-concordant care assessment for possible implementation in future years.

After consideration of public comments, we are not finalizing the changes to measure Q047 as proposed for the CY 2026 performance period/2028 MIPS payment year and future years and will retain the Medicare Part B Claims collection type to support MIPS reporting for smaller and rural practices.

D.3 Diabetes: Eye Exam

	Description
CBE # / eCQM / BE #:	0055 / N/A
Quality ID:	117
CMS eCQM ID:	CMS131v11
Current Collection Type:	eCQM, MIPS eCQM
Current Measure Description:	Percentage of patients 18-75 years of age with diabetes and an active diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or diabetes with the diagnosis of retinopathy in any part of the measurement period who had a retinal or dilated eye exam by an eye care professional during the measurement period or in the 12 months prior to the measurement period.
Substantive Change:	Modified collection type: eCQM collection type Updated denominator exclusion: For the eCQM collection type: Exclud: Exclude persons who have bilateral absence of eyes at any time during the patient's history through the end of the measurement period. The numerator numerator is revised to read: For the eCQM collection type: Patients with an eye screening for diabetic retinal disease. This includes patients with diabetes who had one of the following: - A diagnosis of retinopathy in any part of the measurement period and a retinal or dilated eye exam by an eye care professional in the measurement period - No diagnosis of retinopathy in any part of the measurement period and a retinal or dilated eye exam by an eye care professional in the measurement period or the year prior to the measurement period - An autonomous eye exam in the measurement period - A retinal exam finding with a retinopathy severity level in any part of the measurement period - A retinal exam finding with a retinopathy severity level in the year prior to the measurement period
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed removing the MIPS eCQM collection type as it has reached the end of the toped-out lifecycle (82 FR 53640). The average performance rate, 94.57 percent, and toped-out status is based on the current MIPS benchmarking data located at https://qpp.cms.gov/benchmarks. However, the benchmarking data continues to show a gap for the eCQM collection type and as such, we proposed retaining that collection type. Additionally, for the eCQM collection type, we proposed excluding patients who are missing both eyes as they will not qualify for an eye exam and revising the numerator to allow for an autonomous eye exam to meet the numerator quality action as this is an acceptable standard of care in diabetic patients and will increase care intent.²⁴

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A commenter strongly supported removing the numerator of measure Q117: Diabetes: Eye Exam to allow an autonomous eye exam to meet the numerator action. They stated this reflects an accepted standard of care for patients with diabetes, addresses a gap of consultation at the point of care, and aligns with the measure steward's technical specifications. Another commenter supported the updated denominator exclusion and agreed that patients missing both eyes should be excluded as they would not qualify for an eye exam. The commenter also supported the numerator revision, as an autonomous eye exam is an acceptable standard of care in diabetic patients.

Response: We thank the commenters for supporting the substantive changes to this measure.

Comment: A commenter strongly opposed removing the MIPS eCQM collection type from measure Q117, stressing its importance to ophthalmologists. They worried that eliminating it would negatively affect small and rural ophthalmic practices that often cannot afford 4-FHRT adoption and therefore cannot report via eCQM. The commenter urged CMS to keep the eCQM option to ensure meaningful measurement for ophthalmologists and subspecialists in these settings.

Response: We acknowledge the commenter's concerns, and upon further review, we agree that removing the MIPS eCQM collection type could have an adverse impact on small and rural ophthalmic practices. Therefore, we will defer removal of the MIPS eCQM collection type. We encourage the commenter to reach out to measure developer stewards to develop new ophthalmology measures, especially with the MIPS eCQM collection type, for submission to the Call for Measures for possible future implementation.

Comment: A commenter was concerned with the revision to allow for an "autonomous eye exam," noting that the language is inaccurate and should clarify that an AI-enabled retinal image is not an eye exam. The commenter emphasized that while AI

²⁴ Wolf, R. M., Chann, R., Lehmann, H. P., Shroff, M. D., & Liu, T. V. A. (2024). Clinical Implementation of Autonomous Artificial Intelligence System for Diabetic Eye Exam. *Considerations for Success: Clinical Diabetes: A Publication of the American Diabetes Association*, 42(1), 142–149. <https://doi.org/10.2337/cd23-0019>

screenings may help identify risk, only a comprehensive eye exam can evaluate, mitigate, and address those risks, and requested clarification to avoid confusion between AI-enabled retinal images and comprehensive eye examinations.

Response: We thank the commenter for their feedback. This revision aligns with previous updates made to the MIPS CQM collection type, bringing them into alignment. Autonomous AI systems have been approved for use by the FDA beginning in 2018 and was added to the American Diabetes Association's *Standards of Medical Care in Diabetes—2019* guidelines.¹⁷¹ As this technology has grown over time, we determined that eye exams interpreted by an AI system have met the criteria to fill care gaps for value-based care. As such, a CPT code was established to allow for billing and reimbursement using autonomous AI technology to screen and interpret diabetic retinal disease.¹⁷² We encourage the comment to reach out to the measure steward to discuss their concern and suggested revisions for possible implementation in future years.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33140), we are finalizing the changes to the denominator exclusion and measure numerator for measure Q113 as proposed for the CY 2026 performance period 2028 MIPS payment year and future years. We are not finalizing the removal of the MIPS CQM collection type to support MIPS reporting for smaller and rural practices.

D.4 Documentation of Current Medications in the Medical Record

	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	130
CMS eCQM ID:	CMS6815
Current Collection Type:	eCQM MIPS eCQM
Current Measure Description:	Percentage of visits for which the eligible clinician tests to documenting a list of current medications using all immediate resources available on the date of the encounter.
Substantive Change:	Updated denominator exception: For the eCQM collection type: Replaced Medical Reason value set and replaced with "Acute Health Crisis" direct reference code (DRU).
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed replacing the medical reason value set with the Acute Health Crisis DRU for the eCQM collection type as this code better represents the intent of the denominator exception.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposed substantive changes to measure Q130: Documentation of Current Medications in the Medical Record.

Response: We thank the commenters for supporting the substantive changes to this measure.

Comment: A commenter emphasized the importance of ensuring that the new "Acute Health Crisis DRU" does not inadvertently exclude valid cases where documentation is clinically inappropriate but not emergent. The commenter recommended the following if CMS chooses to replace the medical reason value set with the Acute Health Crisis DRU: preserve flexibility for clinicians; clarify definitions and coding guidance; and monitor impact on performance rates. The commenter also mentioned that this measure remains burdensome and if it is retained and required, it should be required of all clinicians measuring specialties, not just primary care physicians. The commenter indicated their request to add dental visits to this measure should be considered in future rulemaking.

Response: We thank the commenter for their feedback and acknowledge their concerns. CMS updated this measure to replace the Medical Reason value set with the Acute Health Crisis direct reference code for denominator exceptions to better align with the measure intent, as patients with documented medical reasons such as drug allergy, drug interaction, and drug resistance should be included in the measure. The use of the Acute Health Crisis direct reference code is a more accurate representation of the intent of the exception, as it allows for patients with urgent medical conditions to receive care without medication documentation reconciliation. With respect to concerns about burden, MIPS-eligible clinicians are not required to report this measure, as they have the flexibility to choose measures that are relevant and most meaningful to their practice. This measure is considered cross-cutting and is therefore appropriate and applicable for a broad range of specialties. We appreciate commenter feedback on opportunities to clarify the measure and will consider providing additional guidance in future iterations of the measure as well as the suggestion to add dental codes, which we will consider for future performance years.

Comment: A commenter supported replacing the medical reason value set with the Acute Health Crisis direct reference code to better represent the denominator exception but recommended CMS clearly define "Acute Health Crisis." They emphasized the importance of including patients with cognitive or functional limitations in the denominator, as they are at high risk for fragmented care and inappropriate medications. The commenter also highlighted the need for team-based approaches, multi-source verification, and flexible workflows to support these patients and avoid inappropriate exclusions.

Response: We thank the commenter for their support and feedback for the substantive changes. The denominator exception defines "acute health crisis" as a situation where time is of the essence and delay of treatment would jeopardize the patient's health status. This allows clinicians to use their discretion to determine whether delay of treatment would jeopardize the patient's health status. We recognize that patients with cognitive or functional limits are at higher risk for fragmented care and inappropriate medications. As currently specified, these patients would be included in the measure. We appreciate the commenter's feedback on opportunities to clarify the measure and will consider providing additional guidance in future iterations of the measure.

After consideration of public comments and for the reasons stated above and in the proposed rule (90 FR 32141), we are finalizing the changes to measure Q130 as proposed for the CY 2026 performance period 2025 MIPS payment year and future years.

D.5 Preventive Care and Screening: Screening for Depression and Follow-Up Plan

	Description
CBE # / eCQM CBE #:	N/A / N/A
Quality #:	134
CMS eCQM ID:	CMS2615

	Description
Current Collection Type:	Medicare Part B Clinical Measure – eCQM / Medicare CQM / MIPS CQM
Current Measure Description:	Percentage of patients aged 12 years and older screened for depression on the date of the encounter or up to 14 days prior to the date of the encounter using an age-appropriate validated depression screening tool AND if positive a follow-up plan is documented on the date of or up to two days after the date of the qualifying encounter.
Substantive Change:	Updated guidance: For the eCQM collection type: Revised: Pharmacological interventions (prescribed or active depression medication) Revised: Follow-Up Plan: While there are many validated depression screening tools, they are not necessarily diagnostic tools. Patients with elevated depression screening scores should be followed by a clinician to evaluate whether a depression diagnosis is appropriate, not a medication and/or referral are not always indicated for a positive score. In these cases, a follow-up plan is appropriate. Added: The measure is not prescriptive in the specific screening tool being used and provides no hierarchy for acceptance of one tool over another. In the case where two screenings are documented on the same date/time with different results (one positive and one negative), the measure only assesses the most recent screening. Since both screenings are both considered the most recent, the patient will be captured in the numerator if the positive screening result. Also includes documentation of an intervention following the positive screen. Updated numerator: For the eCQM collection type: Added: On an active depression medication overlaps the date of the qualifying encounter.
Measure Standard:	Centers for Medicare & Medicaid Services
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed revising the guidance and numerator for the eCQM collection type to clarify that pharmacological interventions include prescribed or active depression medications. We proposed updating the guidance for determining the appropriate plan of care in instances where the screening tool does not adequately establish a diagnosis of depression. Additionally, we proposed adding guidance to clarify instances of multiple screenings, which aligns with current measure logic. These clarifications will ensure the numerator action is appropriately and consistently assessed.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses:

Comment: Several commenters supported the proposed substantive changes to measure Q134, Preventive Care and Screening: Screening for Depression and Follow-Up Plan. They emphasized the importance of recognizing that many patients receive care outside of the primary care setting and suggested requiring mental and behavioral health providers to document in EHRs and link visits through Health Information Exchanges to improve care coordination. A commenter supported the clarifications, noting the value of accommodating validated screening tools widely used in behavioral health settings and allowing flexibility in documenting follow-up plans. They encouraged CMS to structure the revisions, so they fit seamlessly into existing behavioral health workflows and avoid adding administrative burden.

Response: We thank the commenters for supporting the substantive changes to this measure.

Comment: A commenter appreciated the revisions to measure Q134, explaining that they ensure clinicians are not penalized when patients screen positive for depression but have alternative causes or triggers, such as thyroid disorders, vitamin deficiencies, unmanaged pain, loneliness, grief, or side effects from medications like beta blockers or glucocorticoids. They emphasized that the follow-up plan for older adults helps ensure these alternative etiologies are properly explored and addressed rather than defaulting to a depression diagnosis. The commenter supported the revised measure for encouraging thorough clinical follow-up and team-based care and urged CMS to provide clear guidance so practices can document when depression screenings are appropriately addressed and accurately report this under the measure.

Response: We thank the commenter for supporting the substantive changes to this measure. The guidance section in the measure specification allows for clinician flexibility and discretion, and provides an example of what would be included in a follow-up plan. However, we will consider further ways to clarify measure guidance in future measure revisions.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33141), we are finalizing the changes to measure Q134 as proposed for the CY 2026 performance period 2028 MIPS payment year and future years.

D.6 Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 20% OR Documentation of a Plan of Care

	Description
CMS's CY 2026 ICD-10:	M55.2, M56
Quality ID:	Q141
CMS's QM ID:	Q14
Current Collection Type:	Measure Part H Claims Measure / MIPS FY 2026
Current Measure Description:	Percentage of patients aged 18 years and older with a diagnosis of primary open-angle glaucoma (POAG) whose glaucoma treatment has not failed (the most recent IOP was reduced by at least 20% from the pre-intervention level) OR if the most recent IOP was not reduced by at least 20% from the pre-intervention level, a plan of care was documented within the 12-month performance period.
Substantive Changes:	Updated numerator definition: For all collection types: Added: timing for documenting the plan of care.
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We proposed updating the numerator definition for all collection types to clarify the timing of when the care plan must be documented in the patient's medical record after the IOP is assessed. This will ensure timely and optimal patient care and consistent assessment across clinicians for measure performance.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposed substantive change to measure Q141: Primary Open-Angle Glaucoma (POAG): Reduction of Intraocular Pressure (IOP) by 20% OR Documentation of a Plan of Care.

Response: We thank the commenters for supporting the substantive change to this measure.

Comment: A few commenters requested clarification on the proposal for this measure, as the proposed substantive change was not stated in the rule. The rule states, "Added: timing for documenting the plan of care." However, timing is currently included in the numerator definition as "within the 12-month performance period." While the commenter was able to discuss the intended proposal with the measure steward and has no objections to the change, for most commenters, without a specified proposal, the commenter believed it is impossible to comment on the proposed change for this measure, and therefore no finalized change can be made.

Response: We thank the commenters for supporting the substantive change to this measure and appreciate their feedback. The timeframe for documenting the plan of care is being updated to "within 7 days after the patient encounter when IOP was assessed." Given that the specifics of the substantive change were not clearly outlined in the proposed rule, we are delaying inclusion of the additional language to the measure by 1 year. The delay in measure implementation will improve clinician and system readiness to report the measure. The timeframe allows for different clinical workflows; however, "Completing and signing off on charts within 24-48 hours is a good risk strategy to avoid unfinished charts slipping through the cracks."¹⁷

After consideration of public comments, we are finalizing the changes to measure Q141 with modification. While we proposed adding timing for documenting the plan of care to the measure for the CY 2026 performance period/2028 ARPS payment year, we are instead finalizing the change with a 1-year delay in implementation. The change will be included in the measure specification for the CY 2027 performance period/2029 MIPS payment year.

¹⁷ Constantine, J. (2021, March 29). *Medical Record Documentation: Time is of the Essence*. The Cooperative of American Physicians. <https://www.coaphysicians.com/medical-record-documentation-in-emergency>

D.7 Oncology: Medical and Radiation – Pain Intensity Quantified

	Description
CBE # / eCQM CBE #:	0384 / 0384e
Quality #:	141
CMS eCQM ID:	CMS157v14
Current Collection Type:	eCQM / MIPS eCQM
Current Measure Description:	Percentage of patient visits, regardless of procedure, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy, in which pain intensity is quantified.
Substantive Changes:	Updated denominator criteria: For the MIPS eCQM collection type: Added: Patient on oral chemotherapy, on or within 30 days before denominator eligible encounter. Updated guidance: For the eCQM collection type: Removed: Telehealth from language.
Measure Standard:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed adding oral chemotherapy to the denominator criteria to align with the eCQM version of the measure that includes SNOMED codes for oral chemotherapy, ensuring that patients on oral chemotherapy are included in the eligible patient population. We proposed removing telehealth from the eCQM guidance to align with coding guidelines for radiation treatment management codes.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (90 FR 33142), we are finalizing the changes to measure 141 as proposed for the CY 2026 performance period, 2028 MIPS payment year and future years.

D.8 Oncology: Medical and Radiation – Plan of Care for Pain

	Description
CBE # / eCQM CBE #:	0351 / N/A
Quality #:	144
CMS eCQM ID:	N/A
Current Collection Type:	MIPS eCQM
Current Measure Description:	Percentage of visits for patients, regardless of age, with a diagnosis of cancer currently receiving chemotherapy or radiation therapy who report having pain with a documented plan of care to address pain.
Substantive Changes:	Updated denominator criteria: Added: Patient on oral chemotherapy during the performance period.
Measure Standard:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed adding oral chemotherapy to the denominator criteria to align with the eCQM version of the measure that includes SNOMED codes for oral chemotherapy, ensuring that patients on oral chemotherapy are included in the eligible patient population.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (90 FR 13142), we are finalizing the changes to measure 144 as proposed for the CY 2026 performance period, 2028 MIPS payment year and future years.

D.9 Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy

CBE #/CY CBE #:	Description
CBE #/CY CBE #:	N/A / N/A
Quality #:	1.5a
CMS eCQM ID:	N/A
Current Collection Type:	MIPS (QID)
Current Measure Description:	If a patient has been newly prescribed a biologic and/or immune response modifier that includes a warning for potential reactivation of a latent infection, then the medical record should indicate TB testing within preceding 12-month period.
Substantive Change:	Updated denominator instructions: Added: new biologics and/or immune response modifiers - Adalimumab-eyx (Simlandic) - Rituximab (Rituxan) - Tocilizumab-aacg (Tyenel) - Tocilizumab-hbcr (Tolidenet) - Ustekinumab (Pylchivir) - Ustekinumab (Selarsali) - Ustekinumab (Kozlana) Revised: The list of biologic and/or immune response modifier therapies are subject to change as new therapies are approved by the FDA. Newly approved biologic and/or immune response modifier therapies requiring TB testing prior to the first course of therapy would be eligible for inclusion within the denominator even if not listed above.
Measure Standard:	American College of Rheumatology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed updating the list of medications used in the measure to identify denominator eligible patients by adding new biologic and/or immune response modifiers to the existing list in the denominator instructions. This expansion will provide an up-to-date list of appropriate biologic and/or immune response modifiers that clinicians may have prescribed for their patients, thereby ensuring that as many of the appropriate patients are identified in the denominator of this measure as possible. Additionally, we proposed revising language within the denominator instructions that will clarify the medication list is not exhaustive and any medication that requires TB testing prior to treatment will be appropriate for inclusion.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A commenter requested clarification on the substantive change for measure Q176: Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy and that CMS specify whether topical medications should be included in the denominator. As topical biologics and immune modifier therapies do not cause the same increased risk for latent TB reactivation, the commenter specifically requested that CMS explicitly exclude topical medications from this measure.

Response: We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years. The measure allows flexibility by only requiring inclusion of therapies that require TB testing prior to initiation.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33142), we are finalizing the changes to measure Q176 as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

D.10 Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery

	Description
CBE.v1.eCQM.CBE.M:	0515 / 05052
Quality ID:	191
CMS.eCQM.ID:	CMS13514
Current Collection Type:	eCQM - MIPS eCQM
Current Measure Description:	Percentage of cataract surgeries for patients aged 18 years and older with a diagnosis of uncomplicated cataract and no significant ocular conditions impacting the visual outcome of surgery and had best-corrected visual acuity of 20/50 or better (distance or near) achieved in the operative eye within 90 days following the cataract surgery.
Substantive Change:	Updated denominator exclusion. For the eCQM collection type: Significant ocular conditions include Swelling, Non-Clouded Cornea and Adhesive Cornea and Secondary Acute Angle Closure, Congenital Infant Nystagmus or Infantile Nystagmus, Posterior Polar Cataract, Central Corneal Scar, Certain Types of Uveitis, Chorioidal Degeneration, Chorioidal Detachment, Chorioidal Hemorrhage and Anomaly, Chronic Corneal Edema, Disorders of Cornea including Corneal Opacity, Degeneration of Cornea and Posterior Pole, Degenerative Disorders of Globe, Diabetic Macular Edema, Diabetic Retinopathy, Disorders of Optic Chiasm, Disorders of Visual Cortex, Disseminated Chorioretinitis and Disseminated Retinochoroiditis, Focal Chorioretinitis and Focal Retinoid Angitis, Glaucoma, Hereditary Dystrophies of Retinal Central Retinal Ischemia, Hypertension of Eye, Injury to Optic Nerve and Pathways, Macular Scar of Posterior Pole, Macular Staphylococcal, Nystagmus and Other Irregular Eye Movements, Open Wound of Eyeball, Optic Nerve, Optic Neuritis, Pathologic Myopia, Posterior Lens Capsule, Post-Penetrating Keratoplasty, Pupillary Ectropion, Retinal Detachment with Retinal Defect, Retinal Vascular Occlusions, Retinoblastoma, Retinitis, Separation of Retinal Layers, Detachment of Vitreous, Vitreous Disorders of Iris and Anterior Chamber.
Measure Steward:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Outcome
Remarks:	We proposed updating the denominator exclusion for the eCQM collection type to include the list of diagnoses that qualify as significant ocular conditions. ¹³⁷ For the purposes of this measure, this classification will ensure appropriate patients are consistently identified as denominator eligible and assessed for the minimum action zones submitting clinicians for measure performance.

We received public comments on the substance that was proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters opposed the update to the denominator exclusion for measure Q191: Cataracts: 20/40 or Better Visual Acuity within 90 Days Following Cataract Surgery to include the list of diagnoses that qualify as significant ocular conditions. While the commenters appreciated the clarification on this measure, they noted that the proposed modification represents a removal of high-exclusionary diagnoses—several of which are related to or specified forms of diagnoses in the current eCQM measure specification.

The commenters urged the maintenance of the following diagnoses in the denominator exclusion: Chronic Endophthalmitis; Glaucoma Associated with Congenital Anomalies and Dystrophies and Systemic Syndromes; Other and Unspecified Forms of Chorioretinitis and Retinochoroiditis; Other Background Retinopathy; and Retinal Vascular Changes; Other Disorders of Optic Nerve; Other Endophthalmitis; Other Proliferative Retinopathy; and Visual Field Defects.

Response: We thank the commenters for their feedback. Please note this update does not change the diagnoses included within the value sets for the denominator exclusion. To clarify, the denominator exclusion narrative was shortened due to a new system character limitation.

After consideration of public comments and for the reasons stated above and in the proposed rule (90 FR 33144), we are finalizing the changes to measure Q191 as proposed for the CY 2026 performance period (2028 MIPS payment year) and future years.

[https://doi.org/10.1066/0061-6428\(94\)01210-3](https://doi.org/10.1066/0061-6428(94)01210-3)

D.11 Dementia: Cognitive Assessment

	Description
CBEA / eCQM CBEA:	N/A - 2022e
Quality ID:	Q281
CMS eCQM ID:	CMS10011
Current Collection Type:	eCQM
Current Measure Description:	Percentage of patients, regardless of age, with a diagnosis of dementia for whom an assessment of cognition is performed and the results reviewed at least once within a 12-month period.
Substantive Changes:	The measure description is revised to read: Percentage of patients, regardless of age, with a diagnosis of dementia, for whom an assessment of cognition is performed and the results reviewed at least once within the 12 months preceding a dementia encounter during the measurement period. Updated guidance: Revised: The measure requires a diagnosis of dementia be present before the routine assessment of cognition is performed once during the measurement period or the 12 months prior. The measure numerator is revised to read: Patients for whom an assessment of cognition is performed and the results reviewed at least once within the 12 months preceding a dementia encounter during the measurement period.
Measure Steward:	American Academy of Neurology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed revising the measure description, guidance, and numerator statement to clarify the timing of the routine assessment of cognition and review of the results to ensure that the patient had a diagnosis of dementia at the time of assessment. This revision better aligns with the intent of the measure and will ensure the denominator's quality score is attributable to the denominator eligible criteria.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposed substantive changes to measure Q281: Dementia: Cognitive Assessment.

Response: We thank the commenters for supporting the substantive changes to this measure.

Comment: A commenter supported the clarification to measure Q281, as it aligns the measure more closely with clinical workflows and ensures that assessments are appropriately targeted to patients with a documented diagnosis. However, the commenter urged CMS to consider the documentation burden this clarification may introduce, particularly for small and rural practices and encourage CMS to provide clear guidance on acceptable documentation formats and workflows to support compliance.

Response: We thank the commenter for their feedback. The intent of the revision is to ensure that a diagnosis of dementia was present at the time of cognitive assessment. MIPS eligible clinicians have the flexibility to determine how they document and review the results. The measure specification includes definitions and guidance for measure implementation. We encourage the commenter to reach out to the measure steward to discuss revisions for possible implementation in future years.

Comment: A commenter requested clarification on the substantive changes proposed for measure Q281. It is unclear whether assessment is routine or annual; annual cognitive testing in diagnosed dementia seems unnecessary. There is uncertainty about whether measure intends to use global staging tools (for example, FAST, CDR) vs. formal cognitive tests (for example, MoCA, SIBMAS).

The commenter supported yearly documentation of dementia stage when appropriate but cautioned against routine annual cognitive testing, which may not change care management. The commenter stated that assessment decisions should be individualized, patient-centered, and guided by clinical judgment; tracking decline should be linked to actionable care planning, caregiver support, and community resources.

Response: We thank the commenter for their feedback and encourage them to reach out to the measure steward to discuss revisions for possible implementation in future years. Cognitive deterioration, defined by continuous decline, has been identified as a major source of morbidity and mortality^{44,45} making it necessary for clinicians to perform ongoing assessments to develop or modify the patient's treatment plan as well as monitor the effects of the treatment. As currently specified, the measure requires a cognitive assessment to be performed at least once within the 12 months preceding a dementia encounter. The measure does not require the use of a specific tool and allows for clinician judgement, and the requirement for five denominator eligible encounters creates patients' clinician relationship.

⁴⁴ Snowden, Kathleen R., Neugebauer, L., Mark, R., & Burgess, J. (2020). The Trajectory of Caregiver Burden and Risk Factors in Dementia Progression: A Systematic Review. *Journal of Alzheimer's Disease*, 75(3), 1107-1115. <https://doi.org/10.3233/JAD-200647>.

⁴⁵ Landolt, K. L., Ford, Hahn-Pedersen, J., Fickinger, C. S., Freeman, C., Clark, A., Farazon, I. R. S., & Cummings, J. (2024). Burden of Illness in People with Alzheimer's Disease: A Systematic Review of Epidemiology, Comorbidity and Mortality. *The Journal of Prevention of Alzheimer's Disease*, 11(1), 97-107. <https://doi.org/10.14283/jpad.2023.01>

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33145), we are finalizing the changes to measure Q281 as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

D.12 Surgical Site Infection (SSI)

Code #/eCQM Code #:	Description
Code #:	N/A / N/A
Question #:	Q281
Code eCQM ID:	N/A
Current Collection Type:	MIPS/OPD
Current Measure Description:	Percentage of patients aged 18 years and older who had a surgical site infection (SSI)
Substantive Changes:	Updated Instructions: Added: All sites of the primary procedure and integral procedures performed during the trip to the operating room should be evaluated as part of this measure for possible wound occurrences. If more than one SSI is observed, assign the SSI to the deepest level (superficial, deep or organ/space) that occurs within a 30-day postoperative timeframe.
Measure Standard:	American College of Surgeons
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We proposed updating the measure instructions to clarify how to handle multiple procedures during a single encounter. By assigning the SSI to the deepest level (superficial, deep, or organ/space) in situations where more than one SSI is observed within a 30-day postoperative timeframe, the most adverse surgical outcome is captured as an indicator of the quality of care provided.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A commenter supported the proposed substantive changes to measure Q357: Surgical Site Infection (SSI).

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33145), we are finalizing the changes to measure Q357 as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

D.13 Closing the Referral Loop: Receipt of Specialist Report

	Description
CBE #/ eCQM CBE #:	N/A/ N/A
Quality ID:	374
CMS eCQM ID:	CMS50r14
Current Collection Type:	eCQM - MIPS eCQM
Current Measure Description:	Percentage of patients with referrals, regardless of age, for which the referring clinician received a report from the clinician to whom the patient was referred.
Substantive Change:	Updated guidance: For the eCQM collection type: Added: A procedural report (such as from a specialist for an exam or procedure conducted (e.g., diabetic eye exam, colonoscopy)) can satisfy the numerator requirement and successfully close the referral loop. A separate consultant note or consultant report is not required to close the referral loop in these circumstances. The measure numerator is revised to read: For the eCQM collection type: Number of patients with a referral made before January 31, for which the referring clinician received a report from the first clinician to whom the patient was referred.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed updating the guidance and numerator for the eCQM collection type to align with current measure logic, which requires a report from the referral. These updates allow for improved electronic implementation of the measure.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A commenter strongly supported CMS' proposed substantive changes to measure #374, Closing the Referral Loop: Receipt of Specialist Report. The commenter appreciated the clarification that procedural reports, such as diabetic eye exams and colonoscopies, meet numerator requirements and close the referral loop. The commenter also highlighted the growing role of AI-supported retinal imaging in primary care and stressed that recognizing these reports reflects clinical practice and reduces burden.

Response: We thank the commenter for supporting the substantive changes to this measure.

Comment: A commenter appreciated CMS' efforts to revise the eCQM's guidance and numerator to align with current measure logic. The commenter continued to have concerns with this measure in general: it inappropriately holds primary care clinicians accountable for patient or subspecialist actions. For example, patients may not pursue referrals or subspecialty clinics may fail to send reports back.

Response: We acknowledge the commenter's concerns. The intent of this measure is to encourage communication between the referring clinician and the clinician to whom the patient is referred to ultimately improve health outcomes for the patient.¹⁷ However, as noted in the measure specification, a report to the referring clinician stating that the patient did not attend the appointment will suffice for performance met. While the measure's quality action does rely on a feedback loop, it is also incumbent upon the referring clinician to ensure adequate care pathways and communication between clinicians, thus ensuring the referring clinician has all the information needed to treat the patient appropriately.

Comment: A few commenters supported the updated guidance for the measure and agreed that, in the case of a procedural exam (for example, diabetic eye exam), a procedural report from the specialist is sufficient to close the referral loop. However, the commenters opposed the numerator revision requiring the referring clinician to receive a report from the first clinician to whom the patient was referred. Patients may choose to see a different clinician within the same specialty (other than the one to whom they were initially referred), or it may be necessary for the patient to see a different specialist or subspecialist altogether. The commenters stated there are numerous reasons why requiring the referring clinician to receive a report from the first clinician would not be practical or appropriate.

Response: The intent of the measure is to ensure that the referral loop is closed; it does not require that a specific clinician complete the report, only that the report received is associated with the denominator eligible referral in the medical record. Patients who receive a referral to a specific specialist may choose to see an alternate clinician/practice. However, it is essential they are still being appropriately assessed for the medical issue they were referred for. The alternate clinician/practice's report would suffice for the numerator, closing the referral feedback loop.

¹⁷ Patel, M. P., Schmitt, P., O'Leary, C. P., Boeworth, H. B., Anderson, J. R., & Shah, K. P. (2018). Closing the Referral Loop: An Analysis of Primary Care Referrals to Specialists in a Large Health System. *Journal of Clinical Internal Medicine*, 22(3), 713-721. <https://doi.org/10.1007/s11096-018-0392-z>

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33146), we are finalizing the changes to measure Q376 as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

D.14 Functional Status Assessment for Total Hip Replacement

Item	Description
CBE #/eCQM CBE #:	N/A / N/A
Question #:	376
CMS eCQM ID:	CMS56614
Current Collection Type:	eCQM
Current Measure Description:	Percentage of patients 19 years of age and older who received an elective primary total hip arthroplasty (THA) and completed a functional status assessment within 90 days prior to the surgery and in the 300–425 days after the surgery.
Substantive Change:	Updated denominator exclusion: Revised: Exclude patients with one or more specific lower body fractures indicating trauma in the 48 hours before or at the start of the total hip arthroplasty.
Measure Standard:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed updating the denominator exclusion regarding one or more specific lower body fractures by increasing the timeframe to 48 hours prior to the start of THA. Trauma occurring in the 48 hours leading up to a total hip replacement can potentially affect the outcome of the surgery, depending on factors such as the severity of the trauma or the need to stabilize and/or adequately assess the condition of the patient. This extended timeframe will ensure patients undergoing THA are prepared for the procedure and not in an emergent situation.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A commenter supported the substantive changes to measure Q376: Functional Status Assessment for Total Hip Replacement to update the denominator exclusion regarding one or more specific lower body fractures indicating trauma.

Response: We thank the commenter for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33146), we are finalizing the changes to measure Q376 as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

D.15 Cataract Surgery: Difference Between Planned and Final Refraction

	Description
CBE and CQM CBEs:	N/A/N/A
Quality ID:	Q89
CMS eCQM ID:	N/A
Current Collection Type:	MIPS eCQM
Current Measure Description:	Percentage of patients aged 18 years and older who had cataract surgery performed and who achieved a final refraction within ± 1.0 diopters of their planned target refraction.
Substantive Change:	Updated numerator denominator: It would be expected that the planned target refraction be achieved and documented within 90 days prior to the denominator eligible procedure.
Measure Standard:	American Academy of Ophthalmology
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We proposed adding a timing denominator to the measure, which will ensure that only those patients with recently obtained planned target refraction are considered for numerator compliance. As refractive error change over time, it is essential that patients undergoing cataract surgery have current and accurate results for appropriate ophthalmic evaluations, which will be used by the ophthalmologist to counsel the patient about target postoperative refractive options and formulation of a care plan that will achieve the documented target refraction. ¹¹

We received public comments on the substantive change proposed for this outcome. The following is a summary of the comments we received and our responses.

Comment: A commenter supported the proposed substantive change to measure Q89: Cataract Surgery: Difference Between Planned and Final Refraction.

Response: We thank the commenter for supporting the substantive change to this measure.

Comment: A few commenters supported the proposed change to this measure with modification and agreed that the measure should only include those patients with recently obtained planned refractions. The commenters requested that clinicians have the option of assessing and documenting the planned refraction on the day of the procedure, not just within 90 days prior to the procedure.

Response: We thank the commenters for supporting the substantive change to this measure and note that the timing does not exclude refractions taken on the day of the procedure, only that it must be completed within 90 days prior to the procedure. The intent is to ensure recent target refractions are being utilized to assess numerator compliance.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 53147), we are finalizing the changes to measure Q89 as proposed for the CY 2026 performance period 2028 MIPS payment year and future years.

¹¹ Miller, K. M., Osting, T. A., Fawcett, J. P., Carter, K., Lee, B. S., Liu, S., Fujita, A. A., Shorstein, M. H., Musch, D. C., & American Academy of Ophthalmology Preferred Practice Pattern Cataract/Anterior Segment Panel (2023). Cataracts in the Adult Eye Preferred Practice Pattern. *Ophthalmology*. (2024) 131–138. <https://doi.org/10.1016/j.ophtha.2023.08.006>.

D.16 Immunizations for Adolescents

	Description
CBE #/et QH CBE #:	N/A - N/A
Quality #:	Q94
CMS eCQM ID:	N/A
Current Collection Type:	MIPS (Q)
Current Measure Description:	The percentage of adolescents 12 years of age who had one dose of meningococcal vaccine (serogroups A, C, W, Y) one tetanus, diphtheria toxoids and acellular pertussis (Tdap) vaccine, and have completed the Human Papillomavirus (HPV) vaccine series by their 13th birthday.
Substantive Change:	The measure description is revised to read: The percentage of adolescents 12 years of age who had one dose of meningococcal vaccine (serogroups A, C, W, Y or A, C, W, Y, B), one tetanus, diphtheria toxoids and acellular pertussis (Tdap) vaccine, and have completed the Human Papillomavirus (HPV) vaccine series by their 13th birthday. The measure numerator is revised to read: For Submission Criteria 1: Adolescents who had one dose of meningococcal vaccine (serogroups A, C, W, Y or A, C, W, Y, B) once between the patient's 10th and 13th birthdays. Updated numerator options: Revised For Submission Criteria 1: Performance Met: Patient had one dose of meningococcal vaccine (serogroups A, C, W, Y or A, C, W, Y, B) once between the patient's 10th and 13th birthdays. Performance Not Met: Patient did not have one dose of meningococcal vaccine (serogroups A, C, W, Y or A, C, W, Y, B) once between the patient's 10th and 13th birthdays.
Measure Standard:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed revising the measure description and numerator to add the pentavalent serogroup meningococcal vaccine as numerator compliant for patients for which it is suggested. This update reflects recommendations of the CDC Advisory Committee on Immunization Practices that children may receive pentavalent vaccine starting at age 10 (https://www.cdc.gov/mmwr/volumes/73/wr/mm7315a4.html).

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A commenter supported the proposal to incorporate the pentavalent meningococcal vaccine into the measure. The commenter encouraged CMS to continue investing in immunization information systems modernization and data exchange infrastructure to support accurate measure reporting.

Response: We thank the commenter for their feedback.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33148), we are finalizing the changes to measure Q94 as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

D.17 Osteoporosis Management in Women Who Had a Fracture

	Description
CMS eCQM ID:	0053-NA
Quality ID:	418
CMS eCQM ID:	NA
Current Collection Type:	Medicare Part B Claims Measure / MIPS eCQM
Current Measure Description:	The percentage of women 50-87 years of age who suffered a fracture and who had either a bone mineral density (BMD) test or prescription for a drug to treat osteoporosis in the 180 days after the fracture.
Substantive Changes:	The negative numerator note is revised to read: For all collection types: For the purposes of submitting this measure, Central Dual Energy X-Ray Absorptiometry (DXA), the most common measurement for measuring bone mineral density (BMD), spinal densitometry X-ray, and Peripheral Dual energy X-ray Absorptiometry (DXA) would meet performance and the intent of the measure. Therefore, 3645b would be submitted in the instances those screening guidelines are utilized.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed revising the list of tests for measuring BMD by removing CT bone density as it and ultrasonography for densitometry are meeting performance. These changes will ensure testing required for measure compliance is better aligned with standards and best practices. ¹¹

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposed revisions to the numerator note to measure Q418: Osteoporosis Management in Women Who Had a Fracture.

Response: We thank the commenters for supporting the substantive changes to this measure.

Comment: Several commenters opposed the proposed change to measure Q418, urging CMS not to restrict access to CT-based bone mineral density (BMD) tests, such as BCT and QCT. They emphasized that these modalities are FDA-cleared, clinically effective, safe, convenient, and in some cases more accessible for patients who have already undergone CT imaging for other reasons, particularly fracture patients who may find it difficult to obtain a new DXA scan. Commenters noted that BCT is at least as safe and effective as DXA, does not require DXA confirmation, and is particularly suitable for patients who recently had hip or spine CTs. They warned that excluding CT-based tests would inexplicably eliminate innovative and validated options, depriving Medicare beneficiaries of convenient and effective care while unfairly penalizing clinicians.

A commenter further highlighted that DXA access is already limited, with reduced numbers, patient fees, fewer available scanners, and some patients waiting up to six months post-fracture for a 20-minute scan. The commenter stressed that QCT and BCT both meet validation requirements for bone density and will likely see increased use with the growth of artificial intelligence technologies. Another commenter underscored that removing CT from measure Q418 would undermine patient care and urged CMS to keep all validated BMD testing modalities included in the measure to ensure broad patient access and preserve clinical flexibility.

Response: We thank the commenters for their feedback. As noted in the rationale, clinical guidelines and best practices, including USPSTF recommendations for osteoporosis screening,¹² have shown that DXA is a more effective tool, in terms of focus and cost, for measuring BMD. Although HCT has its benefits in certain instances, it is well suited for opportunistic use in a patient who is already undergoing a hip or spine-containing CT for other purposes, and not best suited for monitoring a patient's response to treatment,¹³ whereas DXA has lower radiation exposure, is considered to be more accurate for diagnosing osteoporosis and monitoring treatment, and more cost-effective. We also note that the codes for BCT and QCT are not currently covered by Medicare for ongoing treatment monitoring.

After consideration of public comments and for the reasons stated above and in the proposed rule (90 FR 53149), we are finalizing the changes to measure Q418 as proposed for the CY 2026 performance period (2025 MIPS payment year) and future years.

D.18 Varicose Vein Treatment with Sphenous Ablation: Outcome Survey

Code	Description
CBE: J42.001 CBE: J42.002	N/A / N/A
Quality ID:	420
CMS/CQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients treated for varicose veins (ICD-9-CM 86.2-86.24) who are treated with sphenous ablation (with or without adjunctive laboratory treatment) that report an improvement in a disease-specific patient-reported outcome survey instrument after treatment.
Substantive Changes:	The measure denominator is revised to read: All patients who are treated for varicose veins with sphenous ablation (with or without adjunctive laboratory treatment) within 180 days after treatment. The measure numerator is revised to read: Patients whose outcome survey score improved when assessed within 180 days to follow-up treatment. Updated numerator options: Added: Denominator Exception: Documentation of at least two attempts to follow up with patient within 180 days of treatment. Performance Not Met: No documentation of at least two attempts to follow up with patient within 180 days of treatment. Performance Not Met: Cannot follow up more than 180 days after treatment. Revisions: Denominator Exception: Patient survey results not available.
Measure Steward:	Society of Interventional Radiology
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We proposed updating the measure's timeframe for assessing patient outcomes to include within 6 months following the treatment. While the ideal assessment time is 3-6 months following the treatment, trials have shown improvement occurred fairly quickly before slowing and plateauing at about six months¹⁻³. Therefore, it is reasonable a patient may show improved scores earlier than 3 months, and this revision will allow flexibility in assessment while ensuring quality outcomes are achieved. Additionally, we also proposed updating the numerator options to ensure patients were not lost to follow-up within 90 days after treatment by applying the exception for patient survey results not available if we were unable to determine that the patient was actively sought for follow-up.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (90 FR 53150), we are finalizing the changes to measure Q420 as proposed for the CY 2026 performance period 2028 MIPS payment year and future years.

B.19 Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optional Control)	
CBE, B, or QM CBE, P:	N/A / N/A
Quality ID:	441
CMS or QM ID:	441A
Current Collection Type:	MMSC QM
Current Measure Description:	The IVD All-or-None Measure is one outcome measure (optional control). The measure contains four goals. All four goals within a measure must be reached in order to meet the measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optional Control) - Using the IVD denominator optional results include: • Most recent blood pressure (BP) measurement is less than or equal to 140/90 mm Hg -- AND • Most recent tobacco status is Tobacco Free -- AND • Daily Aspirin or Other Antiplatelet Unless Contraindicated -- AND • Statin Use Unless Contraindicated
Substantive Changes:	The measure description is revised to read: The IVD All-or-None Measure is one outcome measure (optional control). The measure contains four goals. All four goals within a measure must be reached in order to meet the measure. The numerator for the all-or-none measure should be collected from the organization's total IVD denominator. All-or-None Outcome Measure (Optional Control) - Using the IVD denominator optional results include: • Most recent blood pressure (BP) measurement is less than or equal to 130/80 mm Hg -- AND • Most recent tobacco status is Tobacco Free -- AND • Daily Aspirin or Other Antiplatelet Unless Contraindicated -- AND • High Intensity Statin Use Unless Contraindicated Updated denominator criteria: Revised coding for a total atherosclerotic atherosclerosis (from CAD Risk Equivalent Conditions). The measure numerator is revised to read: The numerator is revised to read: The number of IVD patients who meet ALL of the following targets: • Most recent BP is less than or equal to 130/80 mm Hg • Most recent tobacco status is Tobacco Free (N/A) If there is No Documentation of Tobacco Status the patient is not compliant for this measure • Daily Aspirin or Other Antiplatelet Unless Contraindicated • High Intensity Statin Use Unless Contraindicated Updated numerator note: Added: For all Submission Criteria Component 4: Valid High Intensity statins include Atorvastatin 40-80 mg and Rosuvastatin 20-40 mg. Updated numerator options: Revised: For all Submission Criteria: • Component 1: require blood pressure to be less than or equal to 130/80 mm Hg • Component 4: require use of high intensity statin therapy
Measure Status:	Wisconsin Collaborative for Healthcare Quality
High Priority Measure:	Yes
Measure Type:	Intermediate Outcome
Rationale:	We proposed updating multiple components of this measure to align with the AHA/AACVPP/ACC/ASNC/AMA/PCNA Guidelines (https://www.ahajournals.org/doi/10.1161/CIR.0000000000001168). We proposed revising normal blood pressure measurement from 140/90 to 130/80 and switch from Statin Use Unless Contraindicated to High Intensity Statin Use Unless Contraindicated. Given that the diagnoses included in the measure represent the highest level of cardiovascular risk, and given current guidelines, the measured population is best served by being held to a lower blood pressure measurement and by being on a high-intensity statin to reduce the risk of a major cardiac event. We also proposed removing coding for a total atherosclerotic atherosclerosis from the CAD Risk Equivalent Conditions denominator criteria as these conditions do not share the same pathophysiology or treatment goals and therefore misalign with the intent of the measure.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments received and our responses.

Comment: A few commenters supported CMS' efforts to align measure (441) Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optional Control) with updated clinical guidelines, including the tighter blood pressure target and use of high intensity statins. However, both expressed concerns that the "all-or-none" structure could disproportionately penalize clinicians for missed documentation, patient non-adherence, or a single missed component, even when most care goals are achieved. They emphasized that this approach could be especially burdensome for small and rural practices or those serving high-risk populations with limited health IT infrastructure. Commenters recommended alternatives such as scoring individual components, simplified composites, or averaging blood pressure over time, and highlighted the need for technical assistance, LHA integration support, and appropriate attribution in multispecialty settings with shared accountability. They urged CMS to monitor for unintended consequences while preserving alignment with evidence-based guidelines.

Response. We thank the commenters for their feedback and encourage them to reach out to the measure steward to discuss revisions for possible implementation in future years. We also acknowledge that due to nuances in clinician specialization, scope of care, or regional location, not all measures within MIPS will be applicable or appropriate to all clinicians within that specialty set umbrella. MIPS provides clinician choice to account for these nuances, while ensuring clinicians can choose measures that are most meaningful to their scope of care and patient outcomes. This measure uses an "all-or-none" analytic as it's important that EVD patients meet all of these standards to drive the best possible outcomes.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33131), we are finalizing the changes to measure Q441 as proposed for the CY 2026 performance period-2028 MIPS payment year and future years.

D.10 Appropriate Treatment for Patients with Stage I (T1c) + III HER2 Positive Breast Cancer

CBE, w/ eCQM CBE, w/	Description
Quality ID:	1853 / N/A
CMS eCQM ID:	N/A
Current Collection Type:	MIPS eCQM
Clinical Measure Description:	Percentage of patients aged 18 to 70 with stage I (T1c) + III HER2 positive breast cancer for whom appropriate treatment is initiated.
Substantive Changes:	Updated denominator criteria: Revised AJCC stage II breast cancer diagnosis = [403 or 49] and [-stage of breast cancer diagnosis = 11c] Updated denominator notes added: The patient must have two encounters during the performance period. This is intended to reflect two separate encounters with the same reporting provider/group during this time frame. There is no specific instruction for the requirement to the two encounters that occur during the performance period. For example, two encounters with the same provider/group could occur in the same week. However, two encounters should not be counted if they occur on the same day. For example, the patient has two encounters and one is with a different provider on the same day.
Measure Standard:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed revising the denominator criteria for Stage breast cancer to ensure patients with T1c, T2, T3 and T4 are not inadvertently included in the denominator eligible population as HER2-targeted therapy is typically not indicated.^{52, 53} We also proposed adding a denominator note to clarify the encounter requirement to require and reflect two separate encounters occurring on different days with the same reporting provider or group.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (90 FR 33122), we are finalizing the changes to measure Q450 as proposed for the FY 2026 performance period, 2026 MIPS payment year and future years.

D.21 RAS (KRAS and NRAS) Gene Mutation Testing Performed for Patients with Metastatic Colorectal Cancer who Receive Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibody Therapy

CDE # / eCQM CDE #:	Description
0451 / N/A	
Quality #:	451
CMS eCQM ID:	N/A
Current Collection Type:	MIPS (QPI)
Current Measure Description:	Percentage of adult patients (aged 18 or over) with metastatic colorectal cancer who receive anti-epidermal growth factor receptor monoclonal antibody therapy for whom RAS (KRAS and NRAS) gene mutation testing was performed.
Substantive Changes:	Updated denominator note: Added: The patient must have two encounters during the performance period. This is intended to reflect two separate encounters with the same reporting provider/group during this timeframe. There is no specific timeframe for the requirement for the two encounters that occur during the performance period. For example, two encounters with the same provider/group could occur in the same week. However, two encounters should not be counted if they occur on the same day. For example, the patient has two encounters, and one is with a different provider on the same day.
Measure Standard:	American Society of Clinical Oncology
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed adding a denominator note to clarify the encounter requirement to require and reflect two separate encounters occurring on different days with the same reporting provider or group.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (90 FR 13153), we are finalizing the changes to measure 0451 as proposed for the CY 2026 performance period, 2028 MIPS payment year and future years.

D.22 Percentage of Patients Who Died from Cancer Receiving Systemic Cancer-Directed Therapy in the Last 14 Days of Life (lower score – better)

CDE # / eCQM CDE #:	Description
0210 / N/A	
Quality #:	451
CMS eCQM ID:	N/A
Current Collection Type:	MIPS (QPI)
Current Measure Description:	Percentage of patients who died from cancer receiving systemic cancer-directed therapy in the last 14 days of life.
Substantive Change:	Updated denominator criteria: Added: coding to allow telehealth as denominator eligible. Updated denominator note: Added: The patient must have two encounters during the performance period. This is intended to reflect two separate encounters with the same reporting provider/group during this timeframe. There is no specific timeframe for the requirement for the two encounters that occur during the performance period. For example, two encounters with the same provider/group could occur in the same week. However, two encounters should not be counted if they occur on the same day. For example, the patient has two encounters, and one is with a different provider on the same day.
Measure Standard:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed adding telehealth coding as denominator eligible for this measure as it is appropriate for patients seen via telehealth to be included in the denominator for assessment of performance. We also proposed adding a denominator note to clarify implementation of the denominator over a encounter requirement, which will ensure the denominator eligible patient population is appropriately identified and consistent across claim submissions.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (90 FR 33153), we are finalizing the changes to measure 0210 as proposed for the CY 2026 performance period, 2028 MIPS payment year and future years.

D.2J Percentage of Patients Who Died from Cancer Admitted to Hospice for Less than 3 days (lower score – better)

	Description
CBE #/eCQM CBE #:	0216/N/A
Quality #:	45*
CMS eCQM ID:	N/A
Current Collection Type:	MIPS (Q4)
Current Measure Description:	Percentage of patients who died from cancer, and admitted to hospice and spent less than 3 days there.
Substantive Changes:	Updated denominator criteria: Added- coding to allow telehealth as denominator eligible. Updated denominator note: Added: The patient must have two encounters during the performance period. This is intended to reflect two separate encounters with the same reporting provider/group during this timeframe. There is no specific timeframe for the requirement for the two encounters that occur during the performance period. For example, two encounters with the same provider/group could occur in the same week. However, two encounters should not be counted if they occur on the same day. For example, the patient has two encounters, and one is with a different provider on the same day.
Measure Standard:	American Society of Clinical Oncology
High Priority Measure:	Yes
Measure Type:	Process
Rationale:	We proposed adding telehealth coding as denominator eligible for this measure as it is appropriate for patients seen via telehealth to be included in the denominator for assessment of performance. We also proposed adding a denominator note to clarify implementation of the denominator encounter requirement, which will ensure the denominator eligible patient population is appropriately identified and consistent across clinician submissions.

We received no public comments on the substantive changes proposed for this measure. For the reasons stated above and in the proposed rule (80 FR 33154), we are finalizing the changes to measure 12457 as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

D.24 Risk-standardized complication rate (RSCR) following elective primary total hip arthroplasty (THA) and/or total knee arthroplasty (TKA) for Merit-based Incentive Payment System (MIPS)

	Description
CBE #/etQOL CBE #:	3493 / N/A
Quality #:	480
CMS etQOL ID:	N/A
Current Collection Type:	Administrative Claims
Current Measure Description:	This measure is a re-specified version of the measure: Hospital-level Risk-standardized Complication rate (RSCR) following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) (National Quality Forum (NQF) which was developed for patients 65 years and older using Medicare claims. This re-specified measure attributes outcomes to Merit-based Incentive Payment System participating clinicians and/or clinician groups ("provider") and assesses each provider's complication rate, defined as any one of the specified complications occurring from the date of index admission to up to 90 days post date of the index procedure.
Substantive Change:	Updated denominator exclusion. Removed 43,031/2 exclusion.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We proposed excluding admissions with either a principal or secondary diagnosis of COVID-19 present on admission from the measure denominator due to the ease of the public health emergency (PHE). This change aligns this measure with language finalized under the Medicare Program, Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals (IPPS) and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year (FY) 2026 Rates Changes to the FY 2025 IPPS Rates Final Court Decision, Requirements for Quality Programs, and Other Policy Changes, Health Data, Technology, and Interoperability, Electronic Prescribing, Real-time Prescription Benefit and Electronic Prior Authorization final rule (90 FR 16948 through 16950).

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments received and our responses.

Comment: A commenter did not support the substantive changes to measure Q480: Risk-standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) for Merit-based Incentive Payment System (MIPS) to remove the denominator exclusion for patients with either a principal or secondary diagnosis of COVID-19 present on admission.

Response: We thank the commenter for their feedback. Given the end of the federal COVID-19 PHE on May 11, 2022, it is important to provide physicians and beneficiaries with a complete picture of the care quality provided for all patients. Because this measure includes elective procedures, surgeons would opt to operate on relatively healthy patients and would not (or should not) select patients with active COVID-19. While hospitals and other types of health care facilities may face continuing challenges due to the long-term effects of the COVID-19 PHE, we do not agree these challenges represent such a significant threat to health care operations that patients with a principal or secondary COVID-19 diagnosis should be excluded from the MIPS THA/TKA Complication measure cohort. Additionally, in testing data, less than five hundredths of a percent (0.04%) of patients were excluded from the measure due to having a COVID-19 diagnosis, also showing a decline in the number of patients excluded from the measure cohort. Removing the exclusion of COVID-19 patients is intended to ensure that the measure continues to account for outcomes as intended and to meet the goals of MIPS.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33154), we are finalizing the changes to measure Q480 as proposed for the FY 2026 performance period/2028 MIPS payment year and future years.

D.25 Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (MCC)

	Description
ICD-10-CM Code:	ICD-10-CM
Quality ID:	182
CMS ID (MID):	55A
Current Collection Type:	Administrative Claims
Current Measure Description:	The measure is a risk-standardized rate of acute unplanned hospital admissions for the Merit-based Incentive Payment System (MIPS) category Medicare Fee-for-Service (FFS) patients aged 65 years and older with multiple chronic conditions (MCC), i.e., two or more of nine qualifying chronic conditions. The measure is adjusted for age, chronic condition categories, and other clinical and safety risk factors present at the start of the 12-month measurement period, as well as social risk factors. The measure attributes admissions to MIPS participating clinicians and/or clinician groups, as identified by their National Provider Identifier (NPI) and/or Taxpayer Identification Number (TIN), and assesses each clinician's or clinician group's admission rate.
Substantive Change:	Update denominator exclusion: Remove Patients assigned to clinician who selects Qualifying Advanced Alternative Payment Model Participant (QAP) status and therefore do not participate in MIPS.
Measure Steward:	Centers for Medicare & Medicaid Services
High Priority Measure:	Yes
Measure Type:	Outcome
Rationale:	We proposed revising the denominator eligible patient population by removing the denominator exclusion regarding QP status. When the MIPS MCC measure was proposed in the CY 2022 PFS proposal (the LR 59250 through 59271) and finalized in the final rule (LR 65264 through 65283), there was a parallel proposal to remove the ACO HCC measure from the Medicare Shared Savings Program (SSP) APM Performance Pathway (APM-PP) model and replace it with the MIPS MCC measure. With a MIPS measure now in place and consistent with the original intent, we proposed removing this exclusion to broaden the scope of the measure and account for all MIPS participants, particularly those in APM settings who may have QP status.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposed substantive changes to measure Q434: Clinician and Clinician Group Risk-standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (MCC).

Response: We thank the commenters for supporting the substantive changes to this measure.

Comment: A few commenters had concerns about this measure and did not support the proposed change to the measure specifications to remove the exclusion for anyone with a QP status from the measure. One of the commenters recommended that CMS retain the QP exclusion for this measure, warning that its removal could distort benchmarking and unfairly hold MIPS clinicians accountable for patients managed under different care models. They raised concerns about duplicative accountability for clinicians participating in both APMs and MIPS subgroups and emphasized the need for refined attribution that reflects shared care between primary and specialty clinicians. The commenters also urged CMS to also address preventable and non-preventable admissions and ensure transparent risk adjustment, particularly for cardiologists treating complex patients. They concluded that the QP exclusion should remain until a comparable attribution approach is developed for QPs.

The commenters noted that the attribution methodology varies significantly across important MIPS and APM quality measures, such as measure Q479: Hospital-wide 30-Day All-cause Unplanned Readmission (HWR) Measure for the Merit-based Incentive Payment System (MIPS) groups and measure Q484: 1-Year variation in methodology (for example, plurality of charges vs plurality of visits) can result in different physicians being accountable for different, but related measures. Commenters believed the lack of a cohesive approach to attribution within MIPS is not sustainable and must be addressed to create a system that promotes and facilitates meaningful and actionable feedback to physicians. One of the commenters stated that consistent, accessible, and actionable feedback provided in a timely manner will ultimately help CMS achieve its primary goal of achieving better care for its beneficiaries.

Response: We thank the commenters for their feedback. QPs are exempt from MIPS based on eligibility assessments during snapshot periods. Additionally, reporting pathways are different between MIPS and APM performance pathways and each individual pathway has published benchmarks. As such, we will continue to monitor performance and areas where benchmarking is potentially penalizing any specific group. Ultimately, the shared goal across payment pathways is to provide and incentivize high quality care. It is also important to note that other measures included in the MIPS programs do not currently exclude QPs and hence the removal of this exclusion brings this measure into alignment with the MIPS program as a whole. As noted in the proposed rule, the original reason for the exclusion was to account for the ACO HCC measure which is now being replaced by this measure. CMS also recognizes the importance of comprehensive and transparent risk adjustment, and the current measure already includes adjustments for patient complexity to address differences in patients seen by cardiologists including specific adjusters for pulmonary heart disease and heart rhythm disorders along with numerous other clinical and social risk factors. The removal of the QP status exclusion will not change this.

We appreciate the concern for consistency across measures in the MIPS program and will continue to consider refinements to specifications to address concerns about alignment. The differences in attribution between this measure and Q479 are based on

considerations specific to this measure and especially on the units of attribution being patients as opposed to hospital stays, with the goal in this measure being to identify the clinician most responsible for a patient's care over the course of a long performance period. These measures capture different aspects of patient care and are not duplicative for providers who may be scored on both measures.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33155), we are finalizing the changes to measure Q184 as prepared for the CY 2026 performance period/2028 MIPS payment year and future years.

D.26 Kidney Health Evaluation

	Description
CBE #/eCQM/CBE #:	NA/NA
Quality #:	488
CMS eCQM ID:	QM595141
Current Collection Type:	eCQM + MIPS eQIM
Current Measure Description:	Percentage of patients aged 18+ years with a diagnosis of diabetes who received a kidney health evaluation defined by an eGFR AND Urine Albumin/Creatinine Ratio (uACR) within the performance period.
Substantive Change:	Updated guidance: For the eCQM collection type: Add/del: The Urine Albumin/Creatinine Ratio (uACR) requirement can be met with a documented Urine Albumin and Urine Creatinine less than or equal to four days apart. A calculation of uACR is not required to meet this measure, but it is intended to for the uACR to be calculated for the purposes of kidney health evaluation. If the Urine Albumin and Urine Creatinine tests have different units of measure, they should be converted to the same unit of measure for the purposes of calculating uACR. The Urine Albumin/Creatinine Ratio Test requirement can be met if the lab results are referred to as a quantitative value or as an undetectable result. Undetectable results can be coded using values in the "Undetectable Lab Result Value" value set. The measure numerator is revised to read: For the eCQM collection type: Patients who received a kidney health evaluation during the measurement period. Kidney health evaluation is defined by an eGFR AND uACR within the measurement period OR an eGFR and a Urine Albumin and Urine Creatinine result documented less than or equal to four days apart.
Measure Steward:	National Kidney Foundation
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed updating the guidance and the numerator for the eCQM collection type to clarify how the uACR requirement may be met in instances where the lab results are non-quantitative, that is, undetectable or the Urine Albumin and Urine Creatinine tests are run separately. This will ensure the measure logic is appropriately assessing clinicians as numerator compliant when the intent of the measure has been met.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses:

Comment: For measure Q488: Kidney Health Evaluation, a commenter urged CMS to address the technical issue regarding the undetectable uACR values to remove the suppression from future performance years starting in FY 2026 and offered support in this effort if CMS chooses to address the issue. Another commenter supported the proposed changes for this measure.

Response: We thank the commenters for supporting the substantive changes to this measure. The guidance proposed to be added is clarifying information on how the uACR requirement may be met in instances where the lab results are non-quantitative or undetectable. This will allow proper and consistent implementation of the measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33156), we are finalizing the changes to measure Q488 as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

D.27 Adult Immunization Status

	Description
CHE #/eCQI CHE #:	3620- N/A
Quality #:	493
CMS eCQI ID:	N/A
Current Collection Type:	NHPS (CJ6)
Current Measure Description:	Percentage of patients 19 years of age and older who are up-to-date on recommended routine vaccines for influenza, tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap); zoster, and pneumococcal.
Substantive Change:	The measure description is revised to read: Percentage of patients 19 years of age and older who are up-to-date on recommended routine vaccines for influenza, tetanus and diphtheria (Td) or tetanus, diphtheria and acellular pertussis (Tdap), zoster, pneumococcal, and hepatitis B. Updated instructions: Added: Performance Item 5 for reporting of hepatitis B vaccine series. Revised: Percentage of patients 19 years of age and older on the date of the encounter who received 2 doses of the herpes zoster recombinant vaccine any time on or after the patients' 19th birthday. Updated denominator: Added; Submission Criteria 5: Patients 19 years of age or older on the date of the encounter with a visit during the measurement period. Updated denominator criteria: Added; Submission Criteria 5: Patients age 19 and older on the date of the encounter AND Patient encounter during the performance period AND NOT In hospice or using hospice services during the measurement period Updated numerator: Revised; Submission Criteria 3: Patients in Denominator 3 who received 2 doses of the herpes zoster recombinant vaccine on October 20, 2017, through the end of the measurement period. Added; Submission Criteria 5: Patients in Denominator 5 who were administered a hepatitis B vaccine series on or after their 19th birthday and before the end of the measurement period. Updated numerator instructions: Added; Submission Criteria 5: In order to meet criteria for this numerator patients must have one of the following: 1) at least three doses of the childhood hepatitis B vaccine with different dates of service on or before their 19th birthday; 2) at least two doses of the recommended two-dose adult hepatitis B vaccine administered at least 28 days apart; 3) at least three doses of any other recommended adult hepatitis B vaccine administered on different dates of service; and 4) received a hepatitis B surface antigen, hepatitis B surface antibody, or total antibody to hepatitis B core antigen test with a positive result. Updated numerator note: Added; Submission Criteria 5: Patient reported vaccine receipt, when recorded in the medical record, is acceptable for meeting the numerator. Updated numerator options: Revised; Submission Criteria 5: Performance Met: Patient received at least two doses of the herpes zoster recombinant vaccine at least 28 days apart on October 20, 2017, through the end of the measurement period. Performance Not Met: Patient did not receive two doses of the herpes zoster recombinant vaccine at least 28 days apart on October 20, 2017, through the end of the measurement period. Added; Submission Criteria 5: Performance Met: Patient received recommended doses of hepatitis B vaccination based on age. Denominator Exception: Patient has a history of hepatitis B illness or received a hepatitis B surface antigen, hepatitis B surface antibody, or total antibody to hepatitis B core antigen test with a positive result any time before or during the measurement period. Denominator Exception: Documentation of medical reasons for not administering hepatitis B vaccine (e.g., prior anaphylaxis due to the hepatitis B vaccine). Denominator Exception: Documentation that patient is a Medicare fee-for-service beneficiary and without additional supplementary insurance coverage for whom Her B vaccination is not reimbursable under current Medicare Part B coverage rules. Performance Not Met: Patient did not receive recommended doses of hepatitis B vaccination based on age.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process

	Description
Rationale:	We proposed revising the measure to include the Hepatitis B vaccine in the list of routine vaccinations of adults aged 19 years and older based on updated recommendations of the Advisory Committee on Immunization Practices. The literature shows that approximately 50 percent of acute hepatitis B cases reported in 2010 occurred among persons aged 70–79 years due to low Hep B vaccination coverage among adults aged greater than or equal to 19 years. Furthermore, an estimated 2 percent to 6 percent of acute hepatitis B viral infections have been found to lead to chronic hepatitis B among adults. https://www.cdc.gov/mmwr/volumes/71/wr/mm7113a1.html In the event the proposed substantive changes were finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.

We note that under the substantive changes now for the **Updated numerator: Revised: Submission Criteria 3**, the date has been revised from October 1, 2017 (90 FR 33157) to October 20, 2017, to align with the measure specifications and ACIP approval date.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses:

Comment: A few commenters supported the proposed substantive changes to measure Q493, Adult Immunization Status. One of the commenters requested that if the proposed changes to measure Q493 are finalized and a new benchmark is created, that CMS apply the 7-point scoring floor used for first-year MIPS measures.

Response: We thank the commenters for supporting the substantive changes to this measure. There are policies in place that address when a 7-point score floor is applied, which does not include benchmark removal due to substantive changes. However, we will take the recommendation under advisement. While the measure data is not directly comparable, implementation of the measure in MIPS has been established. Therefore, the measure does not meet the intent of the “new measure” scoring policy, which is to prevent size adoption of new MIPS measures.

Comment: A commenter did not support the proposed substantive changes to include the Hepatitis B vaccine for adults aged 19 and older in measure Q493. The commenter noted that many adults were vaccinated in childhood, but records are often unavailable, and immunization registries remain fragmented and inconsistent. They questioned whether clinicians would be required to order costly serologic titers or retrieve decades-old records, warning this could create financial and workflow burdens—particularly harming underserved populations. The commenter recommended CMS delay implementation until interoperability and registry functionality improve, ensure full coverage of titers if required for compliance, provide clear guidance on acceptable documentation sources and workflow, and monitor for unintended consequences, including over-testing or unnecessary repeat vaccinations.

Response: We thank the commenter for their feedback. As noted above, “Patient reported vaccine receipt, when recorded in the medical record, is acceptable for meeting the numerator.” In addition, there are denominator exceptions for the Hepatitis B vaccine that address certain scenarios for not receiving a given vaccine.

Comment: A commenter appreciated CMS’ proposal to add the Hepatitis B vaccine to the list of routine vaccinations in measure Q493, noting its relevance for certain at-risk older adults. However, they expressed concern about financial barriers for hepatitis, diphtheria, pertussis, and zoster vaccines, which are often not covered for Medicare beneficiaries. They emphasized that the high cost, especially for the zoster vaccine, leads many older adults to forgo vaccination. The commenter recommended that CMS ensure immunizations are affordable for all Medicare beneficiaries and that providers receive appropriate payment.

Response: We acknowledge that there are sometimes system reasons for not completing a quality action and account for those as appropriate; however, patients who choose not to receive a vaccine would be distributed across clinicians, affecting all reporting this measure. We allow clinician choice in measures to report, ensuring clinicians can choose measures that are most meaningful to their scope of care and patient care mix.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33157 through 33158), we are finalizing the changes to measure Q493 as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

D.28 Acute Posterior Vitreous Detachment Appropriate Examination and Follow-up

	Description
CBE and CQM CBEs:	N/A; N/A
Quality ID:	5181
CMS eCQM ID:	N/A
Current Collection Type:	MIPS CQM
Current Measure Description:	Percentage of patients with a diagnosis of acute posterior vitreous detachment (PVD) in either eye who were appropriately evaluated during the initial exam and were re-evaluated no later than 3 weeks.
Substantive Changes:	Updated Instructions: Revised. This measure is to be submitted once per performance period for acute PVP in either eye. For the purpose of submitting this measure, only unique occurrences with an onset of acute PVP diagnosed within the current performance period will be denominator eligible, with the most recent occurrence (if there is more than one occurrence) being used for performance calculation.
Measure Steward:	American Society of Retina Specialists
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed updating the measure submission frequency to once per performance period as simultaneous or very close-to-simultaneous bilateral PVDs are rare. ¹¹⁷ In the event the proposed substantive changes were finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A commenter supported the proposed substantive changes to measure Q506: Acute Posterior Vitreous Detachment Appropriate Examination and Follow-up. The commenter recommended CMS finalize the proposed changes to clarify the measure should be reported once per performance period. The commenter appreciated the assistance and input from CMS throughout the development of this measure.

Response: We thank the commenter for supporting the substantive changes to this measure.

Comment: A few commenters requested that if the proposed changes to measures Q508 and Q509: Acute Posterior Vitreous Detachment and Acute Vitreous Hemorrhage Appropriate Examination and Follow-up are finalized, and new benchmarks are created then CMS apply the 7-point scoring floor used for first-year MIPS measures. This would be appropriate for these measures, given the substantive changes resulting in no direct comparisons to previous benchmarks. The commenter stated it is also important to avoid discontinuing the reporting of two important measures, which would fundamentally reduce the already limited pool of measures available to ophthalmologists.

Response: We thank the commenters for their feedback. There are policies in place that address when a 7-point score floor is applied, which does not include benchmark removal due to substantive changes. However, we will take the recommendation under consideration. While the measure data is not directly comparable, implementation of the measure in MIPS has been established and therefore does not meet the intent of the “new measure” scoring policy, which is to incentivize adoption of new MIPS measures.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33159), we are finalizing the changes to measure Q506 as proposed for the CY 2026 performance period (2026 MIPS payment year and future years).

¹¹⁷ Retina Specialist (2021) Five Evidence-based Answers for PVD: Retinal Breaks. <https://www.retinu-specialist.com/articles/five-evidence-based-answers-for-pvd-retinal-breaks>.

D.29 Acute Posterior Vitreous Detachment and Acute Vitreous Hemorrhage Appropriate Examination and Follow-up

	Description
CBE, w/ eCQM CBE, w/	N/A / N/A
Quality ID:	511
CMS eCQM ID:	N/A
Current Collection Type:	MIPS eCQM
Current Measure Description:	Percentage of patients with a diagnosis of acute posterior vitreous detachment (PVD) and acute vitreous hemorrhage in either eye who were appropriately evaluated during the initial exam and were re-evaluated no later than 2 weeks.
Substantive Changes:	Updated Instructions: Revised: This measure is to be submitted once per performance period for acute PVD and acute vitreous hemorrhage in either eye, but the purpose of submitting this measure only include occurrences with onset of acute PVD and acute vitreous hemorrhage diagnosed within the current performance period will be denominator eligible with the most recent occurrence (if there is more than one occurrence) being used for performance calculation.
Measure Standard:	American Society of Retina Specialists
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed updating the measure submission frequency to once per performance period as submission is very close to time bilateral PVLs are run. ¹⁴¹ In the event the proposed substantive changes were finalized, the substantive changes will not allow for a direct comparison of performance data from prior years to performance data submitted after the implementation of these substantive changes. As such, if the performance data submitted meets the criteria for creation of a performance period benchmark, a new benchmark will be used for scoring.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposed substantive changes to measure Q501: Acute Posterior Vitreous Detachment and Acute Vitreous Hemorrhage Appropriate Examination and Follow-up. The commenters recommended CMS finalize the proposed changes to clarify the measure should be reported once per performance period. The commenters appreciated the assistance and input from CMS throughout the development of this measure. As indicated under Table D.28 of this Appendix, the commenters requested that CMS apply the 7-point scoring floor for this measure.

Response: We thank the commenters for supporting the substantive changes to this measure. The care policies in place that address when a 7-point score floor is applied, which does not include benchmark removal due to substantive changes. However, we will take the recommendation under advisement. While the measure data is not directly comparable, implementation of the measure if MIPS has been established and therefore does not meet the intent of the 'new measure' scoring policy, which is to encourage adoption of new MIPS measures.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33160), we are finalizing the changes to measure Q501 as proposed for the CY 2026 performance period 2028 MIPS payment year and future years.

¹⁴¹ See *Notice of Retina Specialists*, 2024.

D-30 Gains in Patient Activation Measure (PAM®) Scores at 12 Months

	Description
CHE #/et CQM CHE#:	2443 - N/A
Quality #:	503
CMS eCQM ID:	N/A
Current Collection Type:	MIPS (QPI)
Current Measure Description:	The Patient Activation Measure® (PAM®) is a 10- or 13-item questionnaire that assesses an individual's knowledge, skills and confidence for managing their health and health care. The measure assesses individuals on a 0-100 scale that converts to one of four levels of activation, from low (1) to high (4). The PAM® performance measure (PAM®-PM) is the change in score on the PAM® from baseline to follow-up measurement.
Substantive Changes:	Updated denominator: Removed: Submission Criteria 4 and Performance Rate 3. Updated denominator exclusions: Added: For all submission criteria: Diagnosis of Delirium and Psychoactive substance abuse. Updated denominator: Removed: Submission Criteria 4. Updated numerator: Removed: Submission Criteria 4.
Measure Sponsor:	Insignia Health, LLC, a wholly owned subsidiary of Phreesia
High Priority Measure:	Yes
Measure Type:	Patient-Reported Outcome-Based Performance Measure
Rationale:	We proposed removing Performance Rate 3 that measures the average change between baseline PAM® score and the percentage of patients 14 years and older who achieved a net increase of 6 points in a 12-month period as it is not technologically feasible to calculate using the existing submission JavaScript Object Notation (JSON) structure. As a result, the submission of data for the Submission Criteria 4 will not be required when reporting this measure. We also proposed excluding patients with a diagnosis of delirium and/or psychoactive substance abuse from the denominator of submission criteria 1, 2, and 3. This exclusion will ensure appropriate patients will be included in the denominator of the measure.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A few commenters supported the proposed substantive changes to measure Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months.

Response: We thank the commenters for supporting the substantive changes to this measure.

After consideration of public comments, and for the reasons stated above and in the proposed rule (90 FR 33161), we are finalizing the changes to measure Q503 as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

Table Group DD: Finalized Substantive Changes to Previously Finalized MIPS Quality Measures Available Only for Use in Relevant MYPs for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years

As finalized for the CY 2024 performance period/2026 MIPS payment year and future years, the following three MIPS quality measures were retained for utilization in MYPs only while removed from traditional MIPS: Q112: Breast Cancer Screening, Q113: Colorectal Cancer Screening, and Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (88 FR 79897 through 79902). We note that some MIPS quality measures available only in MYPs are adopted by the Medicare Shared Savings Program for utilization in the Alternative Payment Model (APM) Performance Pathway (APP) and in APP Plus as finalized in the 2025 PFS final rule (89 FR 98363 through 98371). For such measures, the collection type applicable for purposes of the APP and/or APP Plus (Medicare CQM for Accountable Care Organizations Participating in the Medicare Shared Savings Program (Medicare CQM)) is also specified as a collection type available for such measures described in Table Group DD.

Table Group DD within this final rule provides substantive changes finalized for the CY 2026 performance period/2028 MIPS payment year for MIPS quality measures available only in a relevant MYP. Two of the aforementioned MIPS quality measures, Q112 and Q113, had substantive changes proposed under Table Group DD. The changes that are made to the denominator codes sets are generalizations of the revisions communicated from the measure stewards to CMS. Additionally, International Classification of Diseases Tenth Edition (ICD-10) and Current Procedural Terminology (CPT) codes that are identified as invalid for CY 2026 may not be identified within this final rule due to the availability of these changes to the public. If coding revisions to the denominator are impacted due to the timing of 2026 CPT and ICD-10 updates and assessment of these codes' inclusion by the Measure Steward, these changes may be postponed until CY 2027. The 2026 Quality Measure Release Notes provide a comprehensive, detailed reference of exact codes changes to the denominators of the quality measures. The Quality Measure Release Notes are available for each of the collection types in the Quality Payment Program website at <https://qpp.cms.gov>.

Electronic clinical quality measures (eCQMs) that are endorsed by a CBE are shown in Table DD of this Appendix as follows: CBE # : eCQM CBE #.

In addition to the finalized substantive changes, there may be changes to the coding utilized within the denominator that are not considered substantive in nature, but it is important to communicate to interested parties. These changes align with the scope of the current coding; however, though not substantive in nature, these changes will expand or contract the measure's current eligible patient population. Therefore, please refer to the current year measure specifications and the 2026 Quality Measure Release Notes in the eCQM Technical Release Notes once posted to review all coding changes to ensure correct implementation.

The eCQM Technical Release Notes should also be carefully reviewed for revisions within the logic portion of the measure. In addition to the proposed substantive changes, there may be revisions within the logic that are not considered substantive in nature; however, it is important to review to ensure proper implementation of the measure. As not all systems and clinical workflows are the same, it is important to review these changes in the context of a specific system and/or clinical workflow.

We requested comments on these substantive changes.

DD.I. Breast Cancer Screening

	Description
CBE and CQM CBEs:	2372 / N/A
Quality ID:	112
CMS eCQM ID:	CMS125v14
Current Collection Type:	Medicare Part B Claims Measure, eCQM / Medicare CQM, MIPS eCQM
Current Measure Description:	Percentage of women 40–74 years of age who had a mammogram to screen for breast cancer in the 24 months prior to the end of the measurement period.
Substantive Changes:	Updated description: For the eCQM collection type: Revised women 40–74 years of age. Updated stratifications: For the eCQM collection type: Added: Report a total rate and each of the following age strata: Stratum 1: Patients age 42–51 by the end of the measurement period Stratum 2: Patients age 52–74 by the end of the measurement period Updated definition: For the MIPS eCQM, Medicare Part B Claims Measure, and Medicare CQM collection types: Added: Reviewed – to meet the quality, when there must be documentation in the medical record that the clinician reviewed the mammography report and discussed the findings with the patient. The mammography report may also be provided by the patient for the clinician's review, discussion during the visit and should be documented in the medical record.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed adding these changes to align with the latest clinical guidelines. We proposed adding a new rate to the measure to ensure continued benchmarking for the previously existing rate and to ensure continuous, undisturbed measurement of performance across the specified age bands. Additionally, we proposed adding a definition for "reviewed" to the MIPS eCQM, Medicare Part B Claims Measure, and Medicare CQM collection types to clarify the requirement for meeting the quality action. This will ensure the intent of the measure was met and consistent compliance is consistently assessed across all subtractions.

We received public comment on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A commenter supported the proposed substantive changes to measure Q112: Breast Cancer Screening. A few commenters specifically supported the expanded age range for the eCQM specification aligning with the MIPS eCQM.

Response: We thank the commenters for supporting the substantive changes to this measure.

Comment: Many commenters opposed the proposed changes to measure Q112 to the MIPS eCQM and Medicare CQM collection types. Adding "reviewed" definition expands the measure's intent, increases documentation burden, and adds no value to patients or clinicians. Specifications should remain aligned across reporting options; eCQM does not include this requirement and it should not be added. The change would make it harder for ACOs to minimize data collection burden using EHRs. There is risk of overuse: repeat screenings may be ordered unnecessarily if prior documentation is not accessible. Physicians may feel compelled to discuss old results, causing confusion and unnecessary alarm. The commenters opposed any change to a measure that could encourage overuse of services, particularly a revision that is not directly tied to improving patient care. One of the commenters recommended CMS continue to allow "patient reported" results of the screening tests and add an additional "Performance Met" notification option in order to allow for monitoring and appropriate segmentation of self-reported screenings.

Response: We disagree that by clarifying the definition of "reviewed" as required to meet the measurement action expands the measure's intent, increases documentation burden, and adds no value to patients or clinicians. According to the American Cancer Society, breast cancer is the second most common cancer to afflict women in the U.S. and the second leading cause of cancer death in women.¹⁴² The lapse of time between having a breast cancer screening performed and obtaining test results can be nerve-racking and could potentially lead to worse health outcomes if cancer is present. There are a multitude of benefits for both the patient and provider in having a clinician review, discuss, and document the results/findings and discussion, including but not limited to supporting shared decision-making¹⁴³ and ensuring continuity of care.¹⁴⁴ Although it is standard practice in healthcare to document care provided to a patient, including documenting a discussion upon the review of results/findings of a medical test or exam, the measure specification does not dictate the format or structure of such documentation. Clinicians may use their own discretion to decide how to document the review and discussion with their patients. Furthermore, there is no

¹⁴² American Cancer Society. (2023). *Breast Cancer Facts & Figures 2023–2024*. American Cancer Society. <https://www.cancer.org/research/cancer-facts-statistics/breast-cancer-facts-figures.html>

¹⁴³ Selinger S. J., Phillips G., & Burns J. E. (2017). A Simple Approach to Shared Decision Making in Cancer Screening. *Family Practice Management*, 24(3), 1–10. <https://pubmed.ncbi.nlm.nih.gov/articles/PMID/28977071/>

¹⁴⁴ National Comprehensive Cancer Network. (2023). *NCCN Guidelines for clinicians: Breast Cancer Screening and Diagnosis, Version 2.2023*. https://www.nccn.org/patientguidance/pdf/BBQ_guidelinescreeningpatient.pdf

indication that reviewing, discussing, and documenting a patient's mammography results or report would encourage an increase of services; however, studies have shown positive results such as shared decision-making and improved health outcomes.⁴⁵ However, we acknowledge the concerns raised and consider the most critical piece of this revision is ensuring clinician review of all reports. We also acknowledge that patient outreach for negative findings can add to clinician burden and potentially alarm patients. Therefore, we will not finalize the revision as proposed and will revise the requirement for patient discussion at this time.

Comment: A few commenters requested that CMS align the specifications of the Breast Cancer Screening and Colorectal Cancer Screening measures Q112 and Q113 across measure types to ensure feasible reporting. A commenter stated the substantive change should be modified to include age group stratifications of 40–49 and 50–74 years of age to ensure proper alignment with current measure specifications and USPSTF recommendations.⁴⁶ Many commenters also recommended that CMS consider including patient refusal as an exception across the specifications for all reporting options in the future.

Response: We thank the commenters for their feedback. The age range for the eCQM collection type was different due to the earlier timeline for annual updates. To ensure the age is correctly analyzed, the stratification for the eCQM collection type measure reflects age 42–51 for stratum 1, which accounts for the 27-month lookback period. This allows for capturing patients from the age of 40 years. We encourage the commenters to reach out to the measure steward to discuss revisions for possible implementation in future years.

After consideration of public comments, we are finalizing the changes to measure Q112 with modification for the CY 2026 performance period 2026 MIPS payment year and future years. We will remove the requirement for patient discussion from the definition of “reviewed” for the MIPS eCQM Measure For Breast Cancer Screening and Medicare eCQM collection types. The new definition will read: Reviewed.—To meet the quality action, there must be documentation in the medical record that the clinician reviewed the mammography report. The mammography report may also be provided by the patient for the clinician's review during the visit and should be documented in the medical record.

In addition to revising the requirements for “reviewed” for measure Q112, we will add the following clarifying language to the numerator note: While reviewing the results with the patient is not required for the purposes of reporting this measure, it is nonetheless best practice.

DD.2. Colorectal Cancer Screening

	Description
Collection of QM Elements:	0011/15A
Quality ID:	113
CMS+QMJID:	CMS109.13
Current Collection Type:	Medicare Part B Claims Measure for QM1, Medicare CQM, MIPS CQM
Current Measure Description:	Percentage of patients 45-75 years of age who had appropriate screening for colorectal cancer
Substantive Changes:	Updated definition: For the MIPS CQM, Medicare Part B Claims Measure, and Medicare CQM collection types: Added: Reviewed: To meet the quality action there must be documentation in the medical record that the clinician reviewed the colorectal screening report and discussed the findings with the patient. The colorectal screening report may also be provided to the patient for the clinician's review/d discussion during the visit and should be documented in the medical record.
Measure Steward:	National Committee for Quality Assurance
High Priority Measure:	No
Measure Type:	Process
Rationale:	We proposed adding a definition for "reviewed" to the MIPS CQM, Medicare Part B Claims Measure, and Medicare CQM collection types to clarify the requirement for meeting the quality action. This will ensure the intent of measure was met and numerator compliance is consistently measured across all submissions.

We note that under the substantive changes row that references to "mammography" in the proposed rule (40 CFR 3J.62) were corrected to "colonoscopy" in the Medicare and Medicaid Programs, CY 2026 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Reimbursement, and Medicare Prescription Drug Inflation Relief Provisions, Correction (90 FR 19160). We further update the terminology in this final rule to "colorectal screening" to align with the measure specifications.

We received public comments on the substantive changes proposed for this measure. The following is a summary of the comments we received and our responses.

Comment: A commenter supported the proposed substantive changes to measure Q13, Colorectal Cancer Screening.

Response: We thank the commenter for supporting the substantive changes to this measure.

Comment: A commenter supported requiring clinicians to review colorectal cancer screening results and discuss findings with patients but raised concerns that the proposed language to measure Q13 only applied to colonoscopy regions. The commenter urged CMS to revise the requirement to include all colorectal cancer screening methods, noting that Medicare covers multiple options, including non-invasive tests that are critical for expanding access. They emphasized that abnormal non-invasive test results require a follow-up colonoscopy to complete screening, and evidence shows patients who do not receive this follow-up face twice the risk of death from colorectal cancer. The commenter stressed that poor communication of abnormal results is a major reason patients fail to complete needed colonoscopies.

Response: We thank the commenter for supporting the substantive changes to this measure and encourage them to reach out to the measure steward to discuss revisions for possible implementation in future years.

Comment: Same as their comments on table DD.1 of this Appendix, a few commenters did not support the proposed substantive changes to measure Q13 for the MIPS CQM and Medicare CQM collection types, specifically the addition of a definition for "reviewed" to qualify as meeting the quality action. The commenters believed this change is an expansion beyond the original intent of the measure and adds unnecessary documentation burden for clinicians without delivering meaningful improvements in patient care or outcomes. The commenters believed this change could lead to a negative unintended consequence of avoidance of this procedure. The commenters opposed any change in a measure that could encourage avoidance of services, particularly a revision that is not directly tied to improving patient care. One of the commenters recommended CMS continue to allow "patient reported" results of the screening tests and add an additional "Performance Alert" numerator option in order to allow for monitoring and appropriate segmentation of well-scheduled screenings. A commenter requested that CMS work with NCCQA to ensure that the colorectal cancer quality measures utilized across CMS programs incorporate all FDA-authorized, Medicare-covered screening tests.

Response: We disagree that by clarifying the definition of "reviewed" as required to meet the numerator action expands the measure's intent, increases documentation burden and adds no value to patients or clinicians. Colorectal cancer is the third leading cause of cancer-related deaths in men and the fourth leading cause in women, but it's the second most common cause of cancer deaths when numbers for men and women are combined in the United States.⁴² The lapse of time between having cancer screening performed and obtaining test results can be nerve-racking. There are a multitude of benefits for both the patient and

⁴² American Cancer Society, 2024 Key Statistics for Colorectal Cancer: <https://www.cancer.org/cancer/types/colorectal-cancer/about-key-statistics.html>

provider in having a clinician review, discuss, and document the results/findings and discussion, including but not limited to, supporting shared decision-making⁴⁴¹ and ensuring continuity of care.⁴⁴² Although it is standard practice in healthcare to document care provided to a patient, including documenting a discussion upon the review of results/findings of a medical test or exam, the measure specification does not dictate the format or structure of such documentation. Clinicians may use their own discretion to decide how to document the review and discussion with their patients. Furthermore, there is no indication that reviewing, discussing, and documenting a patient's mammography results or report would encourage an overuse of services. However, studies have shown positive results such as shared decision-making and improved health outcomes.⁴⁴³ However, we acknowledge the concerns raised and consider the most critical piece of this revision is ensuring clinician review of all reports. Therefore, we will not finalize the revision as proposed and will remove the requirement for patient discussion at this time.

After consideration of public comments, we are finalizing the changes to measure Q113 with modification for the CY 2026 performance period/2028 MIPS payment year and future years. We acknowledge that patient outreach for negative findings can add to clinician burden and clinicians should focus their time on improving communication around abnormal findings; therefore, we will remove the requirement for patient discussion from the definition of "reviewed" for the MIPS/QAL Medicare Part B Claims Measure and Medicare QCM collection types. The new definition will read: Reviewed – to meet the quality action, there must be documentation in the medical record that the clinician reviewed the colorectal screening report. The colorectal screening report may also be provided by the patient for the clinician's review during the visit and should be documented in the medical record.

In addition to revising the requirements for "reviewed" for measure Q113, we will add the following clarifying language to the numerator rule: While reviewing the results with the patient is not required for the purposes of reporting this measure, it is nonetheless best practice.

⁴⁴³ See footnote Schollhammer et al., 2023.

APPENDIX 2: IMPROVEMENT ACTIVITIES

In the CY 2026 PFS proposed rule (90 FR 32724), we proposed, beginning with the CY 2026 performance period/2028 MIPS payment year, to add three new improvement activities (as specified in Table F-B1), modify seven previously finalized improvement activities (as specified in Table F-B2), and remove eight previously finalized improvement activities (as specified in Table F-B3). We are also proposed to add a new activity subcategory and remove a subcategory. These proposals are discussed in section IV.A.4.d of this final rule and in more detail below. We solicited comments on our proposals.

Except as otherwise noted in this final rule, previously finalized improvement activities will continue to apply for the CY 2026 performance period/2028 MIPS payment year and future years.

TABLE F-B1: New Improvement Activities
Adoption Beginning with the CY 2026 Performance Period/2028 MIPS Payment Year

New Improvement Activity	
Activity ID:	IA_PM_XX
Subcategory:	Population Management
Activity Title:	Improving Detection of Cognitive Impairment in Primary Care
Activity Description:	To increase the detection rate of cognitive impairment, particularly in early stages, the MIPS eligible primary care clinician must perform the following activities: • Determine his/her baseline detection rates for mild cognitive impairment (MCI), dementia, and cognitive impairment at either stage using the tool provided for this Improvement Activity • If any of the three rates are below 10: ++Increase the uptake of the Annual Wellness Visit ++Ensure that each Annual Wellness Visit contains a structured cognitive assessment ++Include a question about subjective memory concerns to the collection of vital signs during intake for patients 65+, and conduct a structured cognitive assessment in those with concerns • Re-measure detection rates for MCI, dementia, and cognitive impairment at either stage quarterly This Improvement Activity should only focus on Medicare patients aged 65 and older given the strong correlation of cognitive impairment with age
Rationale	Recent publications of phase three trial results reported that two amyloid-targeting drugs were able to significantly reduce the speed of cognitive decline in patients with early-stage Alzheimer's disease, the most common cause of dementia. One drug, lecanemab, is now FDA-approved for treatment of mild cognitive impairment (MCI) and mild dementia due to Alzheimer's disease, and the other drug, donanemab, is awaiting the FDA's decision. These drugs are only indicated in early disease stages, lending renewed urgency to the problem of delayed and missed diagnosis of cognitive decline while, today, cognitive decline is usually detected in advanced stages.¹ For example, Thomas et al. found that about 79 percent of randomly selected patients, who were newly diagnosed at a memory clinic, had moderate or severe dementia.² Such delayed diagnoses have long taken away from patients and families the opportunity to adopt lifestyle changes to reduce the speed of decline,³ start symptomatic medication treatment, and consider measures to increase physical and financial safety and security.⁴ But now failing to detect early-stage Alzheimer's disease will deprive patients of the prospect to alter the course of this devastating illness. Unfortunately, limited data exist for the degree of missed diagnoses of MCI, the stage at which Alzheimer's disease would ideally be treated.⁵ White et al. used data from the Health and Retirement Study (HRS) to determine that 11.4 percent of subjects with incident MCI reported receiving a timely diagnosis,⁶ and Savva et al. analyzed neuropsychiatric testing data from the Aging, Demographics and Memory Study (ADAMS) data to conclude that 15 percent of participants with a Clinical Dementia Rating

	of U.S. a score reflective of MCI, were aware of a diagnosis of cognitive impairment.⁴ Only nine percent of expected MCI cases are diagnosed in the U.S. Medicare population.⁵ More research has been conducted on dementia detection rates. One study linked Medicare claims data to information on 417 patients with a clinical diagnosis of Alzheimer's disease in the Consortium to Establish a Registry for Alzheimer's Disease (CERAD) data and reported that only around 75 percent of patients had a corresponding diagnosis in claims data in the period from 1991 to 1999,¹⁰ a number similar to the 85 percent reported by Lee et al. for the 2007 to 2012 period of the same data.¹¹ Zhu et al. published a dementia prevalence of 12.9 percent based on cognitive tests and of 17.4 percent based on diagnosis codes in the 20 percent Medicare sample in 2012.¹² Jutkowitz et al. found considerably lower dementia diagnosis rates of 5.6 percent and 6.5 percent in 2014 and 2016, respectively, in a convenience sample of three Medicare Advantage Plans.¹³ Our own data suggest a slightly higher rate of dementia diagnoses than expected, although some of that could be miscoding of MCI as dementia, and the overall detection rate of cognitive impairment remains far lower than expected, especially for minority and low SES patients.¹⁴ In summary, there is substantial evidence that cognitive impairment remains underdiagnosed, particularly in early stages. Measuring diagnosis rates in primary care and comparing those to expected rates given the demographic composition of a clinician's panel can identify gaps in diagnosis and point primary care clinicians towards efforts to proactively inquire about cognitive concerns and follow up on subjective memory complaints, particularly in high-risk and disadvantaged populations. The Medicare Annual Wellness Visit provides an opportunity to do so, but this benefit remains underutilized. A 2020 study found that only one-half of beneficiaries took advantage of it, and fewer than one-third reported having a structured cognitive assessment.⁹ A recent expert group recommended several steps to routinely incorporate brief cognitive assessment into primary care workflows.¹⁵ Thus, steps can be taken at both the individual clinician and the organizational level to detect cognitive impairment more frequently and earlier so that patients can potentially benefit from disease-modifying treatments.
New Improvement Activity	
Activity ID:	IA_PM_XX
Subcategory:	Population Management
Activity Title:	Integrating Oral Health Care in Primary Care
Activity Description:	MIPS eligible clinicians that practice primary care will include an oral health risk assessment and intraoral screening as part of a patient's primary care management. The MIPS eligible clinician will provide education and counseling to the patient to include the importance of oral health and the impact of oral health on systemic diseases. For patients without a dental home and/or those with oral health needs, a dental referral will be provided. To receive credit for this activity, a MIPS eligible clinician must complete two Smiles for Life (https://www.smilesforlifefororalhealth.org) trainings: ("The Oral Examination" and "Geriatric Oral Health"). These are one-time, free, online training 60-minute certification courses. Smiles for Life oral health education has been adopted by Medicaid in several states to improve oral health access, outcomes, and referrals for children through educating medical providers. The MIPS eligible clinician must include one or more of the following activities in addition to completing the training: ➤ Create a dental referral network list by specialty and accepted insurances. ➤ Include applicable oral health screening questions in the patient health intake forms (dentist of record, date of the last dental exam, and personal oral hygiene routine). ➤ Identify an applicable caries risk assessment tool to be used.

	- o Include intraoral health screening and referral to dental provider as part of a patient's primary care management. - o Provide education and counseling to patients about the importance of oral health and impact on systemic disease. - o Refer patients without a dental home and/or those who have untreated dental disease indicated by health history, caries risk assessment, intraoral health screening, medications and/or concerns reported by patient. - o Include a description of the findings found in all dental referrals. ++ Documents with appropriate procedure and diagnostic codes to track services provided and referrals to validate performance of the improvement activity.
Rationale:	Oral health is closely related to overall health. According to the Centers for Disease Control and Prevention (CDC), approximately 35 percent of American adults did not see a dentist in the past year.¹⁷ The Kaiser Family Foundation (KFF) identified nearly half of all people on Medicare have no dental coverage, and the CDC identified one out of six adults 65 or older are completely edentulous (have lost all their teeth), which can greatly impact nutrition.^{18,19} Moreover, a significant portion of the Medicare population has or is at risk for chronic health conditions, which can be further complicated by poor oral health. Dental issues can be early indicators of systemic diseases, such as Alzheimer's, and may also lead to severe health complications such as diabetes and cardiovascular disease, all of which have a significant impact on the Medicare population. For example, researchers have concluded that periodontal disease "might be a modifiable risk factor" for Alzheimer's disease. Moreover, Medicare spends \$620 million annually on dental-related emergency department. If these issues were caught and managed early, many of these expenditures could be avoided. With nearly two-thirds of the older adult population in the United States experiencing periodontitis, the WHO has suggested that integrating age-appropriate oral health concerns into general medicine may lead to improvements in older adults' oral health conditions and improve quality of life.²⁰ As patients visit their primary care office for medical treatment, there is an opportunity for primary care providers to address oral health by assessing oral health risk and reinforcing at-home care messaging, creating an access point for patients who might not otherwise seek dental care. By including quick oral evaluations during routine medical exams, medical providers can ensure comprehensive patient care and early interventions for potential health issues. There is growing evidence that health outcomes improve when dental assessments by medical professionals are integrated into care.²¹ This medical-dental integration (MDI) activity can positively address the oral health needs of a high-risk and medically complex population by increasing access and promoting comprehensive, continuous patient care. Oral health assessment activities do not require extensive time, training, or resources to complete. An oral health assessment can be done in five minutes. Training through the Smiles for Life curriculum offers a course on oral health assessments (titled, "The Oral Examination") and is a one-time, free, online certification. Smiles for Life oral health education has been adopted by Medicaid programs in several states to improve oral health access, outcomes, and referrals for children through educating medical providers. Billable and diagnostic codes exist along with an American Dental Association (ADA) risk assessment form readily available for adoption. Reporting is minimal and involves documentation of the codes indicated below and pulling a report or those codes from the EHR. Additional research about HEENT (head, eyes, ears, nose, and throat) assessment expanded to HEEENT (head, ears, eyes, nose, oral, and throat) through integration of an interprofessional educational (IPE) activity developed for University of Colorado NP and dental students has been published.²² Creating a referral network of dental providers and completing referrals to these providers will ensure that oral health assessments result in patients getting the additional

	care they need. To complete this activity, medical providers will be required to implement a process, contact local providers, and assess their capacity.
	New Improvement Activity
Activity ID:	1A_PSPA_XX
Subcategory:	Patient Safety and Practice Assessment
Activity Title:	Patient Safety in Use of Artificial Intelligence (AI)
Activity Description:	Develop a new data-collection field within patient safety reporting systems for AI-attributable events, which would include both actual harm as well as near misses. When an event is identified, a process to identify the cause and plan for future mitigation is documented. AI-attributable events are defined broadly to include not only automated or semi-automated devices, but any electronic tool that is being used to support clinical decision making.
Rationale:	AI is transforming healthcare and comes with it the promise of faster and potentially more accurate diagnoses and improved health outcomes, but also potential issues that could put individuals' safety at risk. Misdiagnosis and/or failure to properly treat illness as a result of AI errors may jeopardize the health and safety of patients. With broadly collected data on adverse patient outcomes (and near-misses) attributable to AI, MIPS eligible clinicians will be better equipped to identify patterns that can inform decisions to modify use of specific AI tools to optimize care for individual patient populations. This proposed new activity—with a focus on both data-collection and processes to identify causes of adverse events and near-misses to plan for future safety improvement—has a high potential to improve patient care. Defining AI-attributable events broadly to include not only automated or semi-automated devices, but any electronic tool that is being used to support clinical decision making, will likely lead to widely applicable improvements in patient safety, both in patients' experience of care and outcomes. We received public comments on the new improvement activities proposals. The following is a summary of the comments we received and our responses: Comment: We received several public comments in support of the proposed new activities. We also received comments regarding how to make the proposed new AI activity as robust as possible. Response: We appreciate the public's support of these proposed new activities. We will take this input into account, particularly when drafting the subregulatory guidance for the proposed new AI activity. After consultation of public comments, we are finalizing these new improvement activities as proposed.

In the CY 2026 PFS proposed rule (90 FR 32724 through 32725), we proposed modifications to seven previously finalized improvement activities beginning with the CY 2026 performance period/2028 MIPS payment year as specified in Table F-B2.

Specifically, we proposed to reassign five previously finalized improvement activities currently specified for the Achieving Health Equity subcategory to other subcategories that better fit their intended purpose. We also proposed to reassign one previously finalized improvement activity to the proposed new subcategory Advancing Health and Wellness. Finally, we proposed several modifications to one previously finalized improvement activity, IA_BMH_1.

We refer readers to our discussion in section IV.A.4.d.(3)(b)(vii) of this final rule and in more detail below.

TABLE F-B2: Changes to Previously Finalized Improvement Activities for the CY 2026 Performance Period/2028 MIPS Payment Year and for Future Years

Current Improvement Activity	
Current Activity ID:	IA_BMH_1
Current Subcategory:	Behavioral and Mental Health
Current Activity Title:	Diabetes screening
Current Activity Description:	Diabetes screening for people with schizophrenia or bipolar disease who are using antipsychotic medication.
Change and rationale:	We proposed to modify this activity to broaden the relevant patient population by requiring a comprehensive physical health screening on all patients taking antipsychotic medications. This proposed modification would encompass a broader range of health conditions that may be impacted by antipsychotic medications, beyond just diabetes. To better reflect the substantive modifications we proposed for this activity, we also proposed to modify this activity's current title, "Diabetes screening," to change it to "Antipsychotic-Medication-Associated Physical Health Condition Assessment and Monitoring." Antipsychotic medications are an important tool for treating a wide range of mental health disorders including schizophrenia, bipolar disease, major depressive disorder, post-traumatic stress disorder, and for agitation associated with dementia due to Alzheimer's disease. In the U.S., approximately 3.8 million citizens reported taking antipsychotics in a 2013-2018 National Health and Nutrition Examination Survey (NHANES).⁸ Antipsychotic use is increasing – the Agency for Healthcare Research and Quality (AHRQ) found that 6.1 million people obtained at least one prescription for antipsychotics in 2018, a 22.5 percent increase from 2013.⁹ A large percentage of this growth may be due to the substantial increase in the use of these medications for off-label conditions. Inappropriate use of antipsychotics in nursing homes and long-term care facilities is a public health concern. CMS' National Partnership to Improve Dementia Care in Nursing Homes recent antipsychotic medication use data report indicates 14.5 percent of residents who are not diagnosed with schizophrenia, Huntington's Disease, or Tourette's Syndrome were prescribed antipsychotics in 2021 Q4.¹⁰ These patients should also be considered for routine monitoring and assessment for antipsychotic-associated physical health conditions. Antipsychotic medications are effective in managing symptoms of psychiatric conditions, however, adverse health effects such as obesity, diabetes, metabolic syndrome, cardiovascular disease, and medication-induced movement disorders such as tardive dyskinesia (TD) may be induced or exacerbated by their use. Physical health conditions associated with antipsychotic medications may substantially impact

healthcare system costs, and effective assessment and monitoring is important for achieving improved beneficiary health outcomes. Metabolic adverse conditions can significantly influence risk for morbidity and mortality with long-term use. TD diagnoses diminish physical wellness and social functioning, and adversely affect patients' health-related quality of life.⁴ Cost analysis of treatment by the U.S. Department of Veterans Affairs (VA) for patients with schizophrenia who developed diabetes showed an average marginal cost of \$3,100. An evaluation of children and adolescents treated with antipsychotic medications through Medicaid showed that patients who experienced cardiometabolic adverse events incurred 24 percent higher total care costs over time. A Medicaid claims analysis for adults with schizophrenia found mean total care costs for patients with incident cardiometabolic conditions were about \$1,249 higher than costs incurred by those without these conditions.⁵ A retrospective analysis demonstrated that patients with TD had more inpatient admissions (55.5 percent vs. 26.1 percent), emergency room visits (61.5 percent vs. 50.6 percent), and total healthcare costs (\$51,636 vs. \$28,777) than patients treated for schizophrenia, bipolar disorder, major depressive disorder, or other psychiatric disorders without a diagnosis of TD.⁶

The American Psychiatric Association, American Diabetes Association, American Association of Clinical Endocrinologists, and North American Association for the Study of Obesity have developed clinical guidelines recommending laboratory tests and physical examinations for initial evaluations and subsequent monitoring during treatment.^{7,8,9}

Routine components of antipsychotic assessment and monitoring include:

- + Personal and family history of obesity, diabetes, dyslipidemia, hypertension, or cardiovascular disease.
- +Body Mass Index (BMI);
- +Waist circumference
- +Blood pressure;
- +Fasting plasma glucose;
- +Fasting lipid profile; and
- +Clinical assessment of abnormal movements, such as through the Abnormal Involuntary Movement Scale (AIMS).

While clinical examination and testing for physical health conditions associated with antipsychotic medications are recommended for baseline assessment and routine monitoring is critical to reduce morbidity, mortality, and costs associated with these conditions, evidence demonstrates clinical gaps in care:

- In a quality improvement study, a random sample of 30 patient records of adult patients on antipsychotic medications from a psychiatry outpatient clinic between October 2016 and September 2017 found only one patient had documentation of an AIMS examination.¹⁰
- In a quality improvement study, analysis found only one (2.9 percent) study subject met standards for compliance with TD assessments.¹¹
- A retrospective study of patients prescribed second generation antipsychotics in a Federally Qualified Health Center found baseline glucose and lipid monitoring rates of 40 percent and 23 percent, respectively, three month monitoring rates of 37 percent and 26 percent, respectively, and annual rates of 71 percent and 40 percent, respectively.¹²
- A survey-based study found metabolic monitoring rates for patients prescribed atypical antipsychotic medications was nine percent for youth in their first year of medication use and 58.9 percent in subsequent years on medication.¹³
- A study of 32 Veterans Affairs facilities found low rates of metabolic monitoring at baseline and follow up (6.3 percent versus 49 percent for weight, 40 percent versus 27 percent for glucose or hemoglobin A1c, and 32 percent versus 16 percent for LDL).¹⁴
- A retrospective cohort including over 23,000 patients on second-generation antipsychotics reported baseline lipid testing rates of 10.5 percent and glucose testing rates of 21.8 percent after the 2004 ADA consensus statement was issued.¹⁵
- Studies have shown less than 20 percent of patients receiving baseline glucose testing

and less than 10 percent receiving baseline lipid testing.¹⁶ Several quality improvement studies have demonstrated real-world implementation of interventions that go beyond common clinical practice. Specifically, evidence from these studies demonstrates that the implementation of quality improvement interventions described in this improvement activity have contributed to improvements in beneficiary care and health outcomes:

- Quality improvement projects focused on the use of collaborative practice agreements or enhanced movement disorder screening services increased ATMS screening.¹⁷ In addition, projects focused on improving metabolic monitoring through collaborative agreements improved compliance with monitoring¹⁸ and improved HbA1c.¹⁹ Studies have also demonstrated pharmacist-physician collaborative care models for other clinical areas, such as hypertension, have resulted in lower downstream medical expenditures compared to standard of care.²⁰

- Implementation of EHR-integrated alerts demonstrated increased rates of cardiometabolic monitoring and documentation.^{21–23}

- Standardized data collection protocols increased cardiometabolic monitoring²⁴ and ATMS screening rates.¹²

This improvement activity can be linked to existing and related MIPS measures across Performance Categories:

- MIPS Quality measures:

- o Q001 Diabetes: HbA1c Poor Control ($\geq 9\%$)

- o Q317 Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented

- o Q583 Adherence to Antipsychotic Medications for Individuals with Schizophrenia

- o Q502 Improvement or Maintenance of Functioning for Individuals with a Mental and/or Substance Use Disorder

- MIPS Cost measures:

- o Psychoses and Related Conditions

- o Movement Disorders (currently under development)

- MIPS Value Pathways

- o Quality Care in Mental Health

- o Substance Use Disorders

Regarding CMS' optional Improvement Activity acceptance criteria, as listed in the CY 2024 Call for Improvement Activities:

<https://www.cms.gov/resources/document/c1857665>²⁵ this Improvement Activity aligns in multiple areas.

Support for the patient's family or personal caregiver. This Improvement Activity supports patients' families and caregivers. Caregivers for patients with schizophrenia have noted significant strains²⁶ and the need to fulfill a mediator role between the patient and the provider; improved assessment and monitoring could contribute to reductions in stress pertaining to the impact of physical health conditions associated with antipsychotic medications and burden of obesity, diabetes, and movement disorders.

Responds to a Public Health Emergency as determined by the Secretary. While this Improvement Activity does not respond to a current public health emergency, we believe improving assessment and monitoring of physical health conditions associated with antipsychotic medications aligns with Centers for Medicare & Medicaid Services strategies to mitigate impacts of inappropriate antipsychotic use in nursing home settings and among patients with dementia. Patients exposed to long-term use of inappropriate antipsychotics are at risk for cardiometabolic conditions and movement disorders and improved assessment and monitoring can mitigate the impact of these conditions on beneficiaries' overall health.²⁷

Addresses improvements in practice to reduce health care disparities. This Improvement Activity focuses on areas of healthcare inequity, and its implementation can support reduction of health disparities. African Americans are more often prescribed older medications that increase risk for TD and extrapyramidal physical health conditions.^{28–29} Further, Medicaid members are disproportionately impacted by

	TD, and nearly one in eight Medicaid members receiving antipsychotics developed TD within a year of treatment.” <i>Focus on meaningful actions from the patient and family's point of view:</i> Improving assessments and monitoring for antipsychotic medication use is a meaningful person- and family-centered activity. Medication-induced movement disorders such as TD have a significant impact on patient wellbeing. Studies have demonstrated that 50 percent to 60 percent of TD patients believed self-conscious or embarrassed by their condition, with moderate to severe movements being intolerable, painful, physically disabling, and in some scenarios evenuating in depression and suicide. TD is further associated with poorer quality of life, stigma, increased mortality, and medication non-adherence “.” <i>Representative of activities that multiple individual MIPS eligible clinicians or groups could perform:</i> This Improvement Activity is relevant to and can be performed by a variety of MIPS eligible clinician specialty types, including: • Primary care physicians, including nurse practitioners, medical assistants, and physician assistants treating patients prescribed antipsychotic medications • Psychiatrists and advanced practice providers (for example, nurse practitioners, medical assistants, and physician assistants) treating patients with a wide range of mental health conditions from schizophrenia, to depression, to PTSD and more, who are prescribed antipsychotic medications • Neurologists and advanced practice providers (for example, nurse practitioners, medical assistants, and physician assistants) responsible for monitoring patients on antipsychotic medications who are at-risk for medication-induced movement disorders.
Revised Activity Title Revised Activity Description	Antipsychotic-Medication-Associated Physical Health Condition Assessment and Monitoring MIPS eligible clinicians must implement at least one process improvement during treatment of patients taking antipsychotic medication related to one or more component(s) of appropriate antipsychotic medication assessment and monitoring. Components include: • Personal and family history of obesity, diabetes, dyslipidemia, hypertension, or cardiovascular disease. • Body Mass Index (BMI); • Waist circumference; • Blood pressure; • Fasting plasma glucose; • Fasting lipid profile; • Clinical assessment of abnormal movements, such as through the Abnormal Involuntary Movement Scale (AIMS). Process improvements must include at least one of the following types of activities: • Establishing and disseminating educational materials (for example, online or in-person training sessions) to educate clinical teams about physical health monitoring and protocols for monitoring (for example, AIMS assessment for medication-induced movement disorders); • Creating and implementing monitoring templates and protocols (for example, EHR-integrated flags) to standardize collection and documentation of one or more components of physical health monitoring; or • Establishing collaborative service agreements with an enhanced monitoring service, (for example, pharmacist-led monitoring clinic) to monitor for antipsychotic associated physical health condition and either adjust medications (for example, diabetes medications) based on laboratory results or refer patients for further assessments (for example, AIMS)."
In the CY 2026 PFS proposed rule (90 FR 32724), we proposed modifying the following improvement activities by reassigning in which subcategory they are beginning with the CY 2026 performance period 2028 MIPS payment year. We proposed to reassign the following five improvement activities to new subcategories: IA_AHE_1, Enhance Engagement of Medicaid and Other Underserved Populations; IA_AHE_3, Promote use of Patient-Reported Outcome Tools; IA_AHE_6, Provide Education Opportunities for New Clinicians; IA_AHE_7, Comprehensive	

Eye Exams; and IA_AHE_10. Adopt Certified Health Information Technology for Security Tags for Electronic Health Record Data.

Specifically, we proposed to reassign IA_AHE_1 and IA_AHE_6 to the Expanded Practice Access subcategory, thereby more specifically highlighting these activities' aim to increase access to health care services and providers; IA_AHE_3 and IA_AHE_7 to the Beneficiary Engagement subcategory, thus focusing more on these activities' action to increase beneficiary engagement; and IA_AHE_10 to the Patient Safety and Practice Assessment subcategory, since this activity particularly relates to patient safety improvement.

We also proposed to reassign the IA_PM_13, Chronic Care and Preventative Care Management for Empowered Patients, to the proposed new subcategory, Advancing Health and Wellness, better reflecting this activity's primary focus on population health and wellness.

These activities are being proposed for reassignment to designated subcategories based on the description and rationale for each as well as based on which subcategory best fits the individual activity's purpose. We received public comments on these proposals. The following is a summary of the comments we received and our responses.

Comment: We received a few comments expressing support for reassigning these existing activities as proposed. Additionally, we received several public comments in support of the modification to IA_BMH_1, we also received some suggestions regarding how to make this proposed modification as robust as possible.

Response: We appreciate the supportive comments. For the modification of IA_BMH_1 we will take into consideration the suggestions for making the modifications robust. We appreciate the public's support of our proposed activity modifications/reassignments. We will take the public's input into account, particularly when drafting the validation criteria for these proposed reassigned activities, as well as in future rulemaking.

Comment: Most commenters opposed the removal of the Achieving Health Equity subcategory, expressing concern that its elimination would diminish efforts to address disparities in healthcare access, quality, affordability, and outcomes. Some commenters believe the replacement of the Achieving Health Equity subcategory with a wellness-based subcategory is too limited in scope to meaningfully address health disparities, whereas the Achieving Health Equity directly targets systemic inequities and social determinants of health through focused, equity-driven improvement activities. Many commenters expressed support for the addition of the Advancing Health and Wellness subcategory. However, a commenter also recommended that we clearly define and establish how "well-being" will be measured before it is adopted as a formal requirement. Additionally, commenters recommended developing improvement activities that still focus on upstream drivers of health.

Response: The removal of the Achieving Health Equity subcategory does not lessen the focus on improving access to care, enhancing patient well-being, or supporting preventative measures that influence health outcomes. Instead, replacing it with a wellness-based subcategory broadens the perspective to emphasize prevention, holistic care, mental and behavioral health, and lifestyle approaches that promote well-being for all individuals. This expanded framing encourages a more inclusive and proactive approach that supports better health across diverse populations. By highlighting wellness and comprehensive care, the new structure helps clinicians and organizations focus on practical strategies that strengthen overall patient outcomes and community health.

After consideration of public comments, we are finalizing these activity modifications as proposed.

In the CY 2026 PFS proposed rule (90 FR 32725), we proposed to remove eight previously finalized improvement activities beginning with the CY 2026 performance period/2028 MIPS payment year. These changes are discussed in section IV.A.4.d.(3)(b)(viii) of this final rule and in more detail below. Specifically, we proposed to remove each of these eight improvement activities in accordance with the policy at § 414.1355(d), specifically under Factor 7 (Activity is obsolete) (§ 414.1355(d)(7)).

**TABLE F-B3: Improvement Activities Being Removed
for the CY 2026 Performance Period/2028 MIPS Payment Year and for Future Years**

Current Improvement Activity	
Current Activity ID:	IA_AHE_5
Current Subcategory:	Achieving Health Equity
Current Activity Title:	MIPS Eligible Clinician Leadership in Clinical Trials or CBPR
Current Activity Description:	Lead clinical trials, research alliances, or community-based participatory research (CBPR) that identify tools, research, or processes that focus on minimizing disparities in healthcare access, care quality, affordability, or outcomes. Research could include addressing health-related social needs like food insecurity, housing insecurity, transportation barriers, utility needs, and interpersonal safety.
Removal Rationale:	We proposed the removal of this activity in the context of our regular review of the Improvement Activities Inventory. We are evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being.
Current Improvement Activity	
Current Activity ID:	IA_AHE_8
Current Subcategory:	Achieving Health Equity
Current Activity Title:	Create and Implement an Anti-Racism Plan
Current Activity Description:	Create and implement an anti-racism plan using the CMS Disparities Impact Statement or other anti-racism planning tools. The plan should include a clinic-wide review of existing tools and policies, such as value statements or clinical practice guidelines, to ensure that they include and are aligned with a commitment to anti-racism and an understanding of race as a political and social construct, not a physiological one. The plan should also identify ways in which issues and gaps identified in the review can be addressed and should include target goals and milestones for addressing prioritized issues and gaps. This may also include an assessment and drafting of an organization's plan to prevent and address racism and/or improve language access and accessibility to ensure services are accessible and understandable for those seeking care. The MIPS eligible clinician or practice can also consider including in their plan ongoing training on anti-racism and/or other processes to support identifying explicit and implicit biases in patient care and addressing historic health inequities experienced by people of color. More information about elements of the CMS Disparities Impact Statement is detailed in the template and action plan document at https://www.cms.gov/About-CMS/Agency-Information/OMH/Downloads/Disparities-Impact-Statement-508-rev102018.pdf.
Removal Rationale:	We proposed the removal of this activity in the context of our regular review of the Improvement Activities Inventory. We are evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to

	this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being.
Current Improvement Activity	
Current Activity ID:	IA_AHE_9
Current Subcategory:	Achieving Health Equity
Current Activity Title:	Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols
Current Activity Description:	Create or improve, and then implement, protocols for identifying and providing appropriate support for (a) patients with or at risk for food insecurity, and (b) patients with or at risk for poor nutritional status. (Poor nutritional status is sometimes referred to as clinical malnutrition or undernutrition and applies to people who are overweight and underweight.) Actions to implement this improvement activity may include, but are not limited to, the following: • Use Malnutrition Quality Improvement Initiative (MQII) or other quality improvement resources and standardized screening tools to assess and improve current food insecurity and nutritional screening and care practices. • Update and use clinical decision support tools within the MIPS eligible clinician's electronic medical record to align with the new food insecurity and nutrition risk protocols. • Update and apply requirements for staff training on food security and nutrition. • Update and provide resources and referral lists and/or engage with community partners to facilitate referrals for patients who are identified as at risk for food insecurity or poor nutritional status during screening. Activities must be focused on patients at greatest risk for food insecurity and/or malnutrition—for example patients with low income who live in areas with limited access to affordable fresh food, or who are isolated or have limited mobility.
Removal Rationale:	We proposed the removal of this activity in the context of our regular review of the Improvement Activities Inventory. We are evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being.
Current Improvement Activity	
Current Activity ID:	IA_AHE_11
Current Subcategory:	Achieving Health Equity
Current Activity Title:	Create and Implement a Plan to Improve Care for Lesbian, Gay, Bisexual, Transgender, and Queer Patients
Current Activity Description:	Create and implement a plan to improve care for lesbian, gay, bisexual, transgender, and queer (LGBTQ+) patients by understanding and addressing health disparities for this population. The plan may include an analysis of sexual orientation and gender identity (SOGI) data to identify disparities in care for LGBTQ+ patients. Actions to implement this activity may also include identifying focused goals for addressing disparities in care, collecting and using patients' pronouns and chosen names, training clinicians and staff on SOGI terminology (including as supported by certified health IT and the Office of the National Coordinator for Health Information Technology US Core Data for Interoperability [USCDI]), identifying risk factors or behaviors specific to LGBTQ+ individuals, communicating SOGI data security and privacy practices with patients, and/or utilizing anatomical inventories when documenting patient health histories.
Removal Rationale:	We proposed the removal of this activity in the context of our regular review of the Improvement Activities Inventory. CMS is evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to

	this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being.
Current Improvement Activity	
Current Activity ID:	IA_AHE_12
Current Subcategory:	Achieving Health Equity
Current Activity Title:	Practice Improvements that Engage Community Resources to Address Drivers of Health
Current Activity Description:	Select and screen for drivers of health that are relevant for the eligible clinician's population using evidence-based tools. If possible, use a screening tool that is health IT-enabled and includes standards-based, coded question fields for the capture of data. After screening, address identified drivers of health through at least one of the following: • Develop and maintain formal relationships with community-based organizations to strengthen the community service referral process, implementing closed-loop referrals where feasible; or • Work with community partners to provide and/or update a community resource guide for patients who are found to have and/or be at risk in one or more areas of drivers of health; or • Record findings of screening and follow up within the electronic health record (EHR); identify screened patients with one or more needs associated with drivers of health and implement approaches to better serve their holistic needs through meaningful linkages to community resources. Drivers of health (also referred to as social determinants of health [SDOH] or health-related social needs [HSRN]) prioritized by the practice might include, but are not limited to, the following: food security; housing stability; transportation accessibility; interpersonal safety; legal challenges; and environmental exposures.
Removal Rationale:	We proposed the removal of this activity in the context of our regular review of the Improvement Activities Inventory. We are evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being.
Current Improvement Activity	
Current Activity ID:	IA_PM_26
Current Subcategory:	Population Management
Current Activity Title:	Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B
Current Activity Description:	Demonstrate that the MIPS eligible clinician's practice has achieved and/or maintained a vaccination rate of 60 percent of clinical practice staff for COVID-19, and 80 percent for influenza. Demonstrate vaccination, immunity, or non-responder status to hepatitis B for 95 percent of clinical practice staff. Vaccination recommendations are from Centers for Disease Control and Prevention; staff with contraindications to the vaccinations, as determined by the CDC, are excluded from the requirements. Vaccines and Immunizations CDC
Removal Rationale:	We proposed the removal of this activity in the context of our regular review of the Improvement Activities Inventory. We are evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being. Additionally, we are proposing to remove this activity to align with recent FDA and CDC guidance, updating vaccination recommendations since the expiration of the COVID-19 Public

	Health Emergency (PHE). This updated guidance generally recommends vaccination for fewer people. ^{1,2}
Current Improvement Activity	
Current Activity ID:	IA_PM_6
Current Subcategory:	Population Management
Current Activity Title:	Use of Toolsets or Other Resources to Close Health and Health Care Inequities Across Communities
Current Activity Description:	Address inequities in health outcomes by using population health data analysis tools to identify health inequities in the community and practice and assess options for effective and relevant interventions such as Population Health Toolkit or other resources identified by the clinician, practice, or by CMS. Based on this information, create, refine, and implement an action plan to address and close inequities in health outcomes and/or health care access, quality, and safety.
Removal Rationale:	We proposed the removal of this activity in the context of our regular review of the Improvement Activities Inventory. We are evolving the improvement activities inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being.
Current Improvement Activity	
Current Activity ID:	IA_ERP_3
Current Subcategory:	Emergency Response and Preparedness
Current Activity Title:	COVID-19 Clinical Data Reporting with or without Clinical Trial
Current Activity Description:	To receive credit for this improvement activity, a MIPS eligible clinician or group must: (1) participate in a COVID-19 clinical trial utilizing a drug or biological product to treat a patient with a COVID-19 infection and report their findings through a clinical data repository or clinical data registry for the duration of their study; or (2) participate in the care of patients diagnosed with COVID-19 and simultaneously submit relevant clinical data to a clinical data registry for ongoing or future COVID-19 research. Data would be submitted to the extent permitted by applicable privacy and security laws. Examples of COVID-19 clinical trials may be found on the U.S. National Library of Medicine website at https://clinicaltrials.gov/ct2/results?cond=COVID-19. In addition, examples of COVID-19 clinical data registries may be found on the National Institute of Health website at https://search.nih.gov/search?utf8=%E2%9C%93&affiliate=nih&query=COVID19-registries&current=Search. For purposes of this improvement activity, clinical data registries must meet the following requirements: (1) the receiving entity must declare that they are ready to accept data as a clinical registry; and (2) be using the data to improve population health outcomes. Most public health agencies and clinical data registries declare readiness to accept data from clinicians via a public online posting. Clinical data registries should make publicly available specific information on what data the registry gathers, technical requirements or specifications for how the registry can receive the data, and how the registry may use, re-use, or disclose individually identifiable data it receives. For purposes of credit toward this improvement activity, any data should be sent to the clinical data registry in a structured format, which the registry is capable of receiving. A MIPS-eligible clinician may submit the data using any standard or format that is supported by the clinician's health IT systems, including but not limited to, certified functions within those systems. Such methods may include, but are not limited to, a secure upload function on a web portal, or submission via an intermediary, such as a health information exchange. To ensure interoperability and versatility of the data submitted, any electronic data should be submitted to the clinical data registry using appropriate vocabulary standards for the specific data elements, such as those identified in the United States Core Data for Interoperability (USCDI) standard adopted in 45 CFR 170.213.

Removal Rationale:	We proposed the removal of this activity in the context of our regular review of the Improvement Activities Inventory. We are evolving the improvement activities Inventory to emphasize activities that demonstrably improve patient health outcomes while also encouraging the most efficient use of healthcare resources. Removal Criteria Factor 7, Activity is Obsolete, pertains to this activity removal proposal, as this activity does not reflect CMS' current high prioritization of measurable clinical outcomes as well as the topics of prevention, nutrition, and well-being. Additionally, we proposed to remove this activity to align with recent FDA and CDC guidance, updating vaccination recommendations since the expiration of the COVID-19 Public Health Emergency (PHE).^{1,2} This updated guidance generally recommends vaccination for fewer people. We received public comments on these proposals. The following is a summary of the comments we received and our responses. Comment: Most commenters opposed the removal of eight improvement activities, stating that doing so could weaken progress toward inclusive, equitable care. A few commenters who opposed the proposal to remove the Achieving Health Equity subcategory stated that the removal of eight activities from the subcategory does not meet removal criteria under the "obsolete" designation, as they reflect current clinical best practices and were intentionally adopted to support improved patient health outcomes and advance whole-population health. Another commenter suggested meeting with interested parties to make changes as needed to retain certain improvement activities. A few commenters suggested maintaining or reclassifying IA_AHE_9, the only nutrition-focused activity, to ensure continued attention to food insecurity and nutrition risk. Response: We appreciate the public's input. Although we acknowledge the commenters' responses, we determined that these eight improvement activities met the criteria for removal under the "obsolete" removal criterion. These activities no longer align with the goals of other MIPS program components, such as the Quality performance category. Other available improvement activities better reflect current program priorities and initiatives, particularly those focused on prevention, nutrition, and well-being. Regarding IA_AHE_9, while we acknowledge the importance of nutrition, this specific improvement activity is not fully aligned with the shift in priorities to health, wellness, and prevention, although we do take note of this improvement activity's elements that can be integrated into the new health and wellness framework. As part of ongoing efforts to align all improvement activities with CMS's broader strategic priorities, we are refining the Inventory to focus on activities that promote whole-population health. This approach emphasizes prevention, wellness, and outcomes that benefit all patients across care settings, rather than initiatives targeted toward specific subpopulations. We thank the commenters for their suggestions, as indeed proper nutrition is fundamental to maintaining health, preventing chronic disease, and supporting resilience. We will consider how we can elevate nutrition as part of a broader wellness agenda to include in possible nutrition-oriented improvement activity development in future rulemaking. After consideration of public comments, we are finalizing the removal of the eight improvement activities as proposed.

APPENDIX 3: MVP INVENTORY

MVP Development: Background

In the CY 2021 PFS final rule (85 FR 84849 through 84854), the CY 2022 PFS final rule (86 FR 65998 through 66031), and the CY 2023 PFS final rule (87 FR 70210 through 70211) we finalized a set of criteria to use in the development of MVPs, including MVP reporting requirements, MVP maintenance, and the selection of measures and activities within an MVP.

This appendix contains three groups of MVP tables: Table 1: MVP Foundational Layer, Group A, which includes six new MVPs, and Group B, which includes modifications to 21 previously finalized MVPs. We received comments on Table 1, all Group A MVP tables, and 17 Group B MVP tables. Comment summaries and responses are included below Table 1 and after each set of applicable MVP table. We did not receive comments on the following previously finalized MVPs: B.6 Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes, B.8 Focusing on Women's Health, B.10 Improving Care for Lower Extremity Joint Repair, B.16 Quality Care for Patients with Neurological Conditions, or B.18 Quality Care in Mental Health and Substance Use Disorders. Comments not specific to the proposals to Group A or Group B MVPs are considered out of scope and are not addressed in this Appendix.

Each MVP includes measures and activities from the quality performance category, improvement activities performance category, and the cost performance category relevant to the clinical specialty of the MVP. In addition, each MVP includes a foundational layer comprised of population health measures and Promoting Interoperability performance category objectives and measures. The foundational layer is the same for all MVPs.

We inadvertently omitted the Promoting Interoperability performance category optional ONC-ACB Surveillance Attestation from the MVP foundational layer in previous PFS final rule tables in Appendix 3. The ONC-ACB Surveillance Attestation has been an optional attestation for the Promoting Interoperability performance category since the first MIPS performance period in CY 2017 (81 FR 77019 through 77028). In the CY 2021 PFS final rule (85 FR 84849 through 84850), as a part of the MVP development criteria, we finalized that MVPs must include the full set of Promoting Interoperability performance category measures. In the CY 2022 PFS final rule (86 FR 65413), we stated that we do not intend to establish different reporting requirements for Promoting Interoperability measures in MVPs from what is established under traditional MIPS. As described at § 414.1365(c)(4)(i), an MVP Participant is required to meet the Promoting Interoperability performance category reporting requirements described under § 414.1375(b). For these reasons, we have added the optional ONC-ACB Surveillance Attestation described under § 414.1375(b)(3) to the foundational layer for all MVPs.

MVP Development: Performance Category Sources

The MVP tables contain a set of MIPS quality measures, QCDR measures (as applicable), improvement activities, cost measures, and foundational measures based on clinical topics. For further reference, the sources of the measures and activities included in the MVP tables are located on the Quality Payment Program website and are as follows:

- Existing MIPS quality measures are in the 2025 MIPS Quality Measures List.⁵⁰¹ See Appendix 1: MIPS Quality Measures of this final rule for any additions (Table Group A).

⁵⁰¹ See the 2025 MIPS Quality Measures List: https://qpp.cms.gov/prod/content/3/ama/ama-usa.com/uploads/2025_MIPS_Quality_Measures_List.xlsx.

removals (Table Group C), or modifications to existing quality measures (Table Groups D and DD).

- Existing QCDR measures are based on the most recent publication of the 2025 QCDR Measure Specification file.⁶⁵² We plan to modify the list of 2026 QCDR measures around December 2025.

- Existing improvement activities are in the 2025 Improvement Activities Inventory and the 2025 MIPS Data Validation Criteria.⁶⁵³ See Appendix 2: Improvement Activities of this final rule for any additions (Table Group A), modifications to existing improvement activities (Table Group B), or removals (Table Group C).

- Existing cost measures are in the 2025 Cost Measures Inventory.⁶⁵⁴ See Appendix 4: MIPS Cost Measures of this final rule for any modifications to existing cost measures (Group A).

- Existing Promoting Interoperability measures adopted in prior rulemaking and included in the foundational layer are located on the Quality Payment Program website.⁶⁵⁵ See section IV A.4 d.(4) of this final rule for any new measures or modifications to existing Promoting Interoperability measures.

- For further details on the population health measures (attributed to the quality performance category) included in the foundational layer, see the CY 2022 PFS final rule (86 FR 65408 through 65409).

MVP Development: Measure and Improvement Activities Updates and MVP Format Update

- We reformatted the MVP tables to stratify quality measures by clinical conditions and/or episodes of care for each MVP identified as “Clinical Groupings.” When applicable, an “Advancing Health and Wellness” and/or “Experience of Care” clinical grouping is included for cross-cutting quality measures. This new stratified format offers a streamlined set of quality measures to aid clinicians in selecting the most clinically relevant measures applicable to their clinical area and identifies when quality and cost measures are linked.

- See Appendix 1: MIPS Quality Measures (Table Group C) of this final rule for removals of MIPS quality measures. The following MIPS quality measures were included in previously finalized MVPs and were proposed for removal from MIPS: Q185: Colonoscopy Interval for Patients with a History of Adenomatous Polyps – Avoidance of Inappropriate Use, Q264: Sentinel Lymph Node Biopsy for Invasive Breast Cancer, Q290: Assessment of Mood Disorders and Psychosis for Patients with Parkinson’s Disease, Q322: Cardiac Stress Imaging Not Meeting Appropriate Use Criteria: Preoperative Evaluation in Low-Risk Surgery Patients, Q419: Overuse of Imaging for the Evaluation of Primary Headache, Q424: Perioperative Temperature Management, Q443: Non-Recommended Cervical Cancer Screening in Adolescent Females, Q487: Screening for Social Drivers of Health, Q498: Connection to Community Service Provider, and Q508: Adult COVID-19 Vaccination Status.

- See Appendix 2: Improvement Activities (Table Group C) of this final rule for removals of improvement activities. The following improvement activities were included in

⁶⁵² See the 2025 QCDR Measure Specification file: <https://qpp.cms-prod-content.s3.amazonaws.com/uploads/3108/2025-QCDR-Measure-Specifications-PL-Build-for-QCDR-measures>.

⁶⁵³ See the 2025 Improvement Activities Inventory: <https://qpp.cms-prod-content.s3.amazonaws.com/uploads/3131/updates-2025-improvement-activities-build-out.zip> and 2025 MIPS Data Validation Criteria: <https://qpp.cms-prod-content.s3.amazonaws.com/uploads/3203/2025-MIPS-Data-Validation-Criteria.zip>, for improvement activity details.

⁶⁵⁴ See the 2025 Cost Measures Inventory: <https://qpp.cms.gov/qpp/explorer-measures?tab=costMeasures&py=2025>.

⁶⁵⁵ See the 2025 Promoting Interoperability Measure Specifications: <https://qpp.cms-prod-content.s3.amazonaws.com/uploads/3132/2025-MIPS-Promoting-Interoperability-Measure-Specifications.zip> for Promoting Interoperability measure details.

previously finalized MVPs and were proposed for removal from MIPS: IA_AHE_5: MIPS Eligible Clinician Leadership in Clinical Trials or CBPR, IA_AHE_8: Create and Implement an Anti-Racism Plan, IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, IA_AHE_11: Create and Implement a Plan to Improve Care for Lesbian, Gay, Bisexual, Transgender, and Queer Patients, IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health, IA_ERP_3: COVID-19 Clinical Data Reporting with or without Clinical Trial, IA_PM_6: Use of Toolsets or Other Resources to Close Health and Health Care Inequities Across Communities (Use of toolset or other resources to close healthcare disparities across communities), and IA_PM_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

- The following improvement activities are being removed from previously finalized MVPs as finalized in the CY 2025 PFS rule (89 FR 98411) beginning with the CY 2026 performance period/2028 MIPS payment year: IA_BMH_8: Electronic Health Record Enhancements for RH data capture, IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop, IA_CC_2: Implementation of improvements that contribute to more timely communication of test results, and IA_PM_12: Population engagement.

- Beginning with the CY 2026 performance period/2028 MIPS payment year, improvement activity IA_BE_4: Engagement of Patients through Implementation of New Patient Portal was modified as finalized in the CY 2025 PFS rule (89 FR 98411).

- The Achieving Health Equity (AHE) improvement activities subcategory was proposed for removal from MIPS. See Appendix 2: Improvement Activities (Table Groups B and C) of this final rule for any finalized modifications or removals to existing AHE subcategorized improvement activities.

- We proposed to no longer list IA_PCMH: Electronic submission of Patient Centered Medical Home Accreditation in each newly proposed or previously finalized MVP table. However, in accordance with § 414.1380(b)(3)(ii), MIPS eligible clinicians in a practice that are certified or recognized as a patient-centered medical home or comparable specialty practice, as determined by the Secretary, may attest to this activity and receive an improvement activities performance category score of 100 percent (81 FR 77179 through 77180).

- We updated this appendix to include QCDR measures undergoing modifications planned by the QCDR measure stewards. When applicable and substantive in nature, we provided a brief overview of the planned modifications within applicable MVPs. Since QCDR measures are exempt from public notice and comment, this overview allowed for transparency with interested parties and an opportunity to comment on all aspects of each MVP prior to finalization. Final decisions to modify QCDR measure specifications are determined by QCDR measure stewards, separate from rulemaking, but may impact decisions as finalized in the final rule.

MVP Symbol Information and Definitions

Please note the following symbols and definitions used within the MVP tables (Group A and Group B) below:

- Quality measures, improvement activities, cost measures, and Promoting Interoperability measures finalized for addition to a previously finalized MVP are identified with a plus sign (+) within the Group B MVP tables in this appendix.

- New MIPS quality and Promoting Interoperability measures finalized for inclusion in an MVP beginning with the CY 2026 performance period/2028 MIPS payment year and future years are identified with a caret symbol (^). See Appendix 1: MIPS Quality Measures: Table Group A of this final rule for further information regarding new MIPS quality measures. See section IV.A.4.d.(4) of this final rule for further information regarding new MIPS Promoting Interoperability performance category measures.

- Existing measures and improvement activities with finalized revisions are identified with a single asterisk (*). See Appendix 1: MIPS Quality Measures: Tables Group D and DD of this final rule for further information regarding finalized revisions to MIPS quality measures. See Appendix 2: Improvement Activities: Table Group B of this final rule for further information regarding finalized revisions to improvement activities. See Appendix 4: MIPS Cost Measures: Group A of this final rule for further information regarding finalized revisions to cost measures. See section IV.A.4.d.(4) of this final rule for further information regarding finalized revisions to Promoting Interoperability measures. We intend to include existing measures or activities with proposed revisions in MVPs (as applicable) regardless of whether the proposed revisions were finalized beginning with the CY 2026 performance period/2028 MIPS payment year, unless changes were required to continue to meet programmatic standards for inclusion.

- Quality measures and improvement activities identified with a double asterisk (**) can only be submitted when included in an MVP.

- Improvement activities that include an advancing health and wellness component are identified with an exclamation point (!) preceding the improvement activity ID.

- Quality measures considered high priority and/or outcome measures (as defined in § 414.1305) are identified in the Quality section of the new MVP table format. Further details of these types of measures are in the CMS Measures Management System Hub.⁶⁶ See section IV.A.4.d.(1)(b) of this final rule for further information regarding finalized revisions to the definition of a high priority measure.

- Quality measure collection types are identified in parentheses after each quality measure title.

Foundational Layer

Each MVP contains a foundational layer, which includes the entire set of Promoting Interoperability measures and two population health measures. The two population health measures are considered outcome measures as identified with a double exclamation mark (!!). The foundational layer is the same for all MVPs as listed in Table 1.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Caret symbol (^): new MIPS quality and Promoting Interoperability measures.

Plus sign (+) quality measures, improvement activities, cost measures, and Promoting Interoperability measures finalized for addition to a previously finalized MVP.

Table 1: MVP Foundational Layer

Population Health Measures	Promoting Interoperability
(1) QM19: Hospital-Wide, 30-Day, All-Cause Unplanned Readmission (HWR) Rate for the Merit-Based Incentive Payment System (MIPS) Groups (Collection Type: Administrative Claims) (*) (+) Q434: Clinician and Clinician Group Risk-Standardized Hospital Admission Rates for Patients with Multiple Chronic Conditions (Collection Type: Administrative Claims)	(*) PI_PPHI_1: Security Risk Analysis (*) PI_PPHI_2: High Priority Practices Safety Assurance Factors for EHR Resilience (SAFER) Guide PI_EP_1: e-Prescribing PI_EP_2: Query of Prescription Drug Monitoring Program (PDMP) PI_PEA_1: Provide Patients Electronic Access to Their Health Information PI_HIE_1: Support Electronic Referral Loops By Sending Health Information AND PI_HIE_4: Support Electronic Referral Loops By Receiving and Reconciling Health Information OR PI_HIE_5: Health Information Exchange (HIE) Bi-Directional Exchange OR PI_HIE_6: Enabling Exchange Using the Trusted Exchange Framework and Common Agreement (TEFCA) PI_PHCDRR_1: Immunization Registry Reporting PI_PHCDRR_2: Syndromic Surveillance Reporting (Optional) PI_PHCDRR_3: Electronic Case Reporting PI_PHCDRR_4: Public Health Registry Reporting (Optional) PI_PHCDRR_5: Clinical Data Registry Reporting (Optional) (*) (+) PI_PHCDRR_6: Public Health Reporting Using TEFCA (Optional) PI_ONCACC_1: ONC-ACC Surveillance Attestation (Optional) PI_INFRLQ_1: Actions to Limit or Restrict Compatibility or Interoperability of CEHRT Attestation PI_ONCDIR_1: ONC Direct Review Attestation

The following is a summary of the comments we received and our responses:

Comment: A couple of commenters requested the removal of the population health measures as a foundational requirement as they believe these measures fail to accurately capture quality.

Response: The population health measures are part of the foundational layer included in all MVPs because they capture outcomes important to patients and provide meaningful information to clinicians so they can improve their practice. Although administrative claims measures use outcomes that are not directly reported by patients, they measure clinical outcomes that are central to patient well-being because avoidance of acute hospitalization is an important goal of care. Population health measurement is meant to be broadly applied to communities or populations and provide more uniformity in how the program measures population health, reduce clinician reporting burden, and focus on important public health priorities. To this end, these measures generate important feedback to help clinicians improve their practice and overall patient care. For further details on the population health measures included in the foundational layer, see CY 2022 PFS final rule (86 FR 63408 through 63409). We may consider updates through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Group A: New MVPs Proposed for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years

A.1 Diagnostic Radiology MVP

In the CY 2026 PFS proposed rule (90 FR 32352), we proposed and solicited comments on the Diagnostic Radiology MVP. The proposed Diagnostic Radiology MVP assesses meaningful outcomes in diagnostic radiology. This MVP would be most applicable to clinicians who treat patients within the practice of diagnostic radiology. The summary of the public comments received and our responses for this MVP are included immediately after Table A.1 and the list of improvement activities.

Quality Measures

We proposed to include six MIPS quality measures and three OADR measures within the quality performance category of this MVP, which are specific to the clinical topic of diagnostic radiology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in diagnostic radiology:

- **Q145: Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy:** This MIPS quality measure focuses on increasing clinician awareness of patient exposure to radiation in an effort to reduce potential harmful effects by requiring radiation exposure indices to be documented in all final reports.
- **Q360: Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed Tomography (CT) and Cardiac Nuclear Medicine Studies:** This MIPS quality measure focuses on reducing the rate of unnecessary or repeat imaging studies by requiring clinicians to review and document a count of known CT and cardiac nuclear medicine studies the patient received within a 12-month period prior to the current study.
- **Q364: Optimizing Patient Exposure to Ionizing Radiation: Appropriateness: Follow-up CT Imaging for Incidentally Detected Pulmonary Nodules According to Recommended Guidelines:** This MIPS quality measure ensures appropriate follow-up recommendations are documented for patients who have incidental pulmonary nodules found during CT imaging to either avoid unnecessary follow-up scans or identify early malignancies.
- **Q405: Appropriate Follow-up Imaging for Incidental Abdominal Lesions:** This MIPS quality measure ensures appropriate follow-up recommendations are documented for patients for whom incidental abdominal lesions are found during imaging studies to avoid unnecessary and costly follow-up procedures.
- **Q406: Appropriate Follow-up Imaging for Incidental Thyroid Nodules in Patients:** This MIPS quality measure ensures appropriate follow-up recommendations are documented for patients for whom incidental thyroid nodules are found during imaging studies to avoid unnecessary and costly follow-up procedures.
- **Q494: Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level):** This MIPS quality measure provides a method for monitoring and assessing appropriate radiation dose thresholds encouraging overall reductions in radiation dosage, an intermediate outcome directly and proportionally related to cancer prevention.

- **QMM17: Appropriate Follow-up Recommendations for Ovarian-Adnexal Lesions using the Ovarian-Adnexal Reporting and Data System (O-RADS):** This QCDR measure assesses for the use of standardized reporting of findings leading to more consistent treatment recommendations, while also decreasing cost and inappropriate resource consumption.
- **QMM18: Use of Breast Cancer Risk Score on Mammography:** This QCDR measure ensures final reports for screening mammograms accurately include the breast cancer risk score and appropriate follow-up recommendations. This can be utilized to guide subsequent testing and treatment recommendations improving overall health outcomes.
- **QMM26: Screening Abdominal Aortic Aneurysm Reporting with Recommendations:** This QCDR measure ensures appropriate follow-up for an abdominal aortic aneurysm is documented in the final report by requiring radiologists to report recommendations consistently and in accordance with current guidelines, with direct communication as required. This QCDR measure has planned modifications including updates to the Society of Vascular Surgery guidelines referenced in the specification and modifications to denominator exceptions to address when screening is negative for abdominal aortic aneurysm (AAA), however, significant risk factors are present warranting future screening.

Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 11 improvement activities that reflect actions and processes undertaken by clinicians who specialize in diagnostic radiology, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities were proposed for inclusion in this MVP:

- **IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings**
- **IA_BMH_12: Promoting Clinician Well-Being**
- **IA_CC_7: Regular training in care coordination**
- **IA_CC_8: Implementation of documentation improvements for practice/process improvements**
- **IA_CC_12: Care coordination agreements that promote improvements in patient tracking across settings**
- **IA_CC_19: Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes**
- **IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways**
- **IA_PSPA_1: Participation in an AHRQ-listed patient safety organization**
- **IA_PSPA_2: Participation in MOC Part IV**
- **IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements**
- **IA_PSPA_12: Participation in private payer CMA**

Cost Measures

We proposed to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of diagnostic radiology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measure

provides a meaningful assessment of the clinical care for clinicians who specialize in diagnostic radiology and aligns with other measures and activities within this MVP:

- **MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician:** This MIPS cost measure applies to clinicians providing diagnostic radiology care in inpatient hospitals.

Table A.1, followed by the list of improvement activities, represents the measures and activities finalized within the Diagnostic Radiology MVP.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

Table A.1: Diagnostic Radiology MVP Clinical Groupings

Diagnostic Radiology MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
General Diagnostic Radiology	Q145: Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy (Collection Type: MIPS CQM, Medicare Part B Claims)	No	Yes	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician
	Q360: Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: Computed Tomography (CT) and Cardiac Nuclear Medicine Studies (Collection Type: MIPS CQM)	No	Yes	
	Q194: Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Clinician Level) (Collection Type: eCQM)	No	No	
Body Imaging (Thoracic/Abdominal)	Q304: Optimizing Patient Exposure to Ionizing Radiation: Appropriateness: Follow-up CT Imaging for Incidentally Detected Pulmonary Nodules According to Recommended Guidelines (Collection Type: MIPS CQM)	No	Yes	N/A
	Q405: Appropriate Follow-up Imaging for Incidental Abdominal Lesions (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	
	Q406: Appropriate Follow-up Imaging for Incidental Thyroid Nodules in Patients (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	
	QMM11: Appropriate Follow-up Recommendations for Ovarian-Adnexal Lesions using the Ovarian-Adnexal Reporting and Data System (O-RADS) (Collection Type: QCDR)	No	Yes	
Advancing Health and Wellness	QMM18: Use of Breast Cancer Risk Score on Mammography (Collection Type: QCDR)	No	Yes	N/A
	(*) QMM26: Screening Abdominal Aortic Aneurysm Reporting with Recommendations (Collection Type: QCDR)	No	Yes	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician

Diagnostic Radiology Improvement Activities

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(?) IA_RM12:** Promoting Clinician Well-Being
- **IA_CC_7:** Regular training in care coordination
- **IA_CC_8:** Implementation of documentation improvements for practice/process improvements
- **IA_CC_12:** Care coordination agreements that promote improvements in patient tracking across settings

- **IA_CC_19.** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **(*) IA_MVP.** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PSPA_1.** Participation in an AHRQ-listed patient safety organization
- **IA_PSPA_2.** Participation in MOC Part IV
- **IA_PSPA_7.** Use of QCDR data for ongoing practice assessment and improvements
- **IA_PSPA_12.** Participation in private payer CQA

The following is a summary of the comments we received and our responses.

Comment: Several commenters noted support for this MVP. A commenter believes this MVP offers a more targeted and relevant approach to quality reporting and that by aligning measures with clinical practice, it has the potential to reduce administrative burden and improve the accuracy of performance assessment. A commenter agreed with the improvement activities included in the MVP. Some commenters expressed concern with the limited number of applicable quality measures which may not provide enough participation opportunities, especially for small practices. A commenter recommended ACRad34: Multi-strata weighted average for 3 CT Exam Types, ACRad41: Use of Quantitative Criteria for Oncologic FDG PET Imaging, QMM17: Appropriate Follow-up Recommendations for Ovarian-Adrenal Lesions using O-Rads, and QMM18: Use of Breast Cancer Risk Score on Mammography be added to the MVP. Another commenter recommended MSN13: Screening Coronary Calcium Scoring for Cardiovascular Risk Assessment, including Coronary Artery Calcification Regional Distribution Scoring, MSN15: Use of Thyroid Imaging Reporting & Data System (TI-RADS) in Final Report to Stratify Thyroid Nodule Risk, QMM19: DEXA/DXA and Fracture Risk Assessment for Patients with Osteopenia, QMM23: Low-Dose Cancer Screening Recommendation for CT and CTA of the Chest with Diagnosis of Emphysema, and QMM28: Reporting Breast Arterial Calcification (BAC) on Screening Mammography be included in this MVP. The commenter believes these measures focus on improving population health, preventative care, and chronic disease management.

Response: We thank the commenters for their support. We review and consider all feedback received during the development process, while factoring in program constraints and the goal to maintain stability within MVPs, which may contribute to the decision not to include a specific quality measure. We appreciate the suggestions for additional measures and may consider the inclusion of additional measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. We understand that not all measures are applicable to all clinicians who would choose to report this MVP; however, reporting MVPs is voluntary at this time. Additionally, we encourage the development of new measures and submission to the Call for Measures for potential inclusion in future years.

Comment: A commenter requested MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician be removed from this MVP. Another commenter seeks guidance on how the proposed MSPB cost measure would apply to them, noting many radiologists practice in outpatient imaging centers and other non-inpatient settings. The commenter believes that with the MSPB cost measure radiologists could be assigned cost information inadvertently from attribution methodologies based on billing clinician and volume of services rendered.

Response: We believe that the MSPB Clinician cost measure is appropriate for use in this MVP and is the most applicable MIPS cost measure for individual diagnostic radiologists or their groups. Care provided by diagnostic radiologists can contribute to overall cost performance for inpatient hospitalizations, which is assessed by the MSPB Clinician measure. We note that MSPB Clinician is the most applicable MIPS cost measure for diagnostic radiologists.

Comment: A commenter expressed concern with the clinical groupings in this MVP and the alignment of performance measures with each specialty. The commenter's concern is this could result in a siloed approach and hinder collaboration among clinicians treating complex patients. The commenter recommended designing MVPs that encourage cross-specialty coordination to maintain quality and continuity of care.

Response: We appreciate the feedback regarding the clinical groupings. The purpose of the clinical groupings is to streamline measure selection; however, these clinical groupings do not represent requirements and may not align with every clinician's scope of care. We encourage cross-specialty collaboration as any reporting clinician, sub-group, or group may report whichever four quality measures are most meaningful to their practice, regardless of clinical grouping. While the clinical groupings do not align with a requirement, they do help to visualize the full intent of the

MVP by showing the internal structure, thereby also highlighting gaps in measures that can be added to the needs and priorities list.

Comment: A commenter expressed concerns with the inclusion of several radiation-related quality measures in MVPs. They believe Q145: Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy is impractical and burdensome for groups with limited resources, Q360: Optimizing Patient Exposure to Ionizing Radiation: Count of Potential High Dose Radiation Imaging Studies: CT and Cardiac Nuclear Medicine Studies is difficult to implement and track across sites with little clinical value, and Q494: Excessive Radiation Dose or Inadequate Image Quality for Diagnostic CT in Adults (Clinician Level) is faced with enterprise-wide technical barriers such as data access and unclear responsibility for reporting. A commenter expressed concern that Q494: Excessive Radiation Dose or Inadequate Image Quality for Diagnostic CT was included instead of ACRad34. Per the commenter, the National Quality Forum's Measure Applications Partnership report for 2023 rulemaking cycle identified Q494 and ACRad34 as complementary and not competing. The commenter believes ACRad34 will ensure broader participation, measure choice, and sustain progress in radiation dose optimization.

Response: We acknowledge the commenters' concerns and encourage the development of new measures and submission to the Call for Measures for potential inclusion in future years. We understand that not all measures are applicable to all clinicians who would choose to report in a MVP; however, reporting MVPs is voluntary at this time. This MVP reflects all applicable MIPS quality measures with additional QCDR measures that have been selected after our review and consideration of all feedback received during the development process, while factoring in program constraints and the goal to maintain stability within MVPs. We may consider the inclusion of additional measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Diagnostic Radiology MVP* as proposed for the CY 2026 performance period: 2028 MIPS payment year and future years.

A.2 Interventional Radiology MVP

In the CY 2026 PFS proposed rule (90 FR 32352), we proposed and solicited comments on the Interventional Radiology MVP. The proposed Interventional Radiology MVP assesses meaningful outcomes in interventional radiology. This MVP would be most applicable to clinicians who treat patients within the practice of interventional radiology. The summary of the public comments received and our responses for this MVP are included immediately after Table A.2 and the list of improvement activities.

Quality Measures

We proposed to include six MIPS quality measures and four QCDR measures within the quality performance category of this MVP, which are specific to the clinical topic of interventional radiology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in interventional radiology:

- **Q145: Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy:** This MIPS quality measure focuses on increasing clinician awareness of patient exposure to radiation in an effort to reduce potential harmful effects by requiring radiation exposure indices to be documented in all final reports.
- **Q374: Closing the Referral Loop: Receipt of Specialist Report:** This MIPS quality measure is attributable to the clinician referring the patient and ensures report receipt from the referred clinician, closing the communication loop.

- **Q413: Door to Puncture Time for Endovascular Stroke Treatment:** This MIPS quality measure assesses for timely endovascular stroke treatment in ischemic stroke patients. Ensuring a door to puncture time of 90 minutes or less, gives stroke patients the best chance at functional recovery and improved health outcomes.
- **Q420: Varicose Vein Treatment with Saphenous Ablation: Outcome Survey:** This MIPS quality measure motivates clinicians to objectively quantify changes in quality of life after an ablation, the ultimate way to assess success of saphenous ablation for varicose veins.
- **Q421: Appropriate Assessment of Retrievable Inferior Vena Cava (IVC) Filters for Removal:** This MIPS quality measure focuses on clinicians providing timely follow-up for patients with retrievable IVC filters to increase awareness of the potential harms of inappropriate continued inferior vena cava filtration in patients with retrievable filters.
- **Q465: Uterine Artery Embolization Technique: Documentation of Angiographic Endpoints and Interrogation of Ovarian Arteries:** This MIPS quality measure promotes successful treatment by ensuring documentation of delineation of all uterine arterial supply with embolization where possible, and appropriate embolization endpoints achieved which are indications of treatment efficacy.
- **RCOIR12: Tunneled Hemodialysis Catheter Clinical Success Rate:** This QCDR measure evaluates whether a tunneled central venous catheter has been successfully placed (or replaced) and ready for use within 72 hours after placement. This would ensure the catheter is operational and functional as quickly as possible and is tunneled to reduce complications.
- **RCOIR13: Percutaneous Arteriovenous Fistula for Dialysis - Clinical Success Rate:** This QCDR measure evaluates success of percutaneous fistula creation for patients on maintenance hemodialysis, promoting the use of new technology with the potential to yield positive results such as fewer procedural complications.
- **RPAQIR14: Arteriovenous Graft Thrombectomy Clinical Success Rate:** This QCDR measure assesses clinical success of arteriovenous graft thrombectomy. Successful removal of a thrombosis supports continued use of the arteriovenous graft, reducing the need for additional vascular access procedures and allowing adequate dialysis to be performed.
- **RPAQIR15: Arteriovenous Fistulae Thrombectomy Clinical Success Rate:** This QCDR measure assesses clinical success of arteriovenous fistula thrombectomy. Arteriovenous fistulas can provide rapid extracorporeal blood flow that is necessary for hemodialysis and when feasible, are the preferred type of vascular access for chronic hemodialysis.

Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 19 improvement activities that reflect actions and processes undertaken by clinicians who specialize in interventional radiology, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities were proposed for inclusion in this MVP:

- **IA_BE_1:** Use of certified EHR to capture patient reported outcomes
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_12:** Use evidence-based decision aids to support shared decision-making

- **IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **IA_BMH_12:** Promoting Clinician Well-Being
- **IA_CC_7:** Regular training in care coordination
- **IA_CC_8:** Implementation of documentation improvements for practice/process improvements
- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **IA_CC_15:** PSH Care Coordination
- **IA_CC_17:** Patient Navigator Program
- **IA_CC_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **IA_EPA_3:** Collection and use of patient experience and satisfaction data on access
- **IA_EPA_8:** Provide Education Opportunities for New Clinicians
- **IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_17:** Participation in Population Health Research
- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization.
- **IA_PSPA_18:** Measurement and improvement at the practice and panel level
- **IA_PSPA_25:** Cost Display for Laboratory and Radiographic Orders

Cost Measures

We are proposing to include three MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of interventional radiology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in interventional radiology and aligns with other measures and activities within this MVP:

- **MSPB_I:** Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing interventional radiology care in inpatient hospitals.
- **COST_HAC_I:** Hemodialysis Access Creation: This MIPS episode-based cost measure assesses costs associated with the creation of graft or fistula access for long-term hemodialysis.
- **COST_IHCL_1:** Intracranial Hemorrhage or Cerebral Infarction: This MIPS episode-based cost measure assesses costs associated with the inpatient treatment for cerebral infarction or intracranial hemorrhage.

Table A.2, followed by the list of improvement activities, represents the measures and activities finalized within the Interventional Radiology MVP.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

Table A.2: Interventional Radiology MVP Clinical Groupings

Interventional Radiology MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Vascular	(*) Q420: Varicose Vein Treatment with Saphenous Ablation: Outcome Survey (Collection Type: MIPS CQM)	Yes	Yes	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician
	Q421: Appropriate Assessment of Retrievable Inferior Vena Cava (IVC) Filters for Removal (Collection Type: MIPS CQM)	No	No	
	Q465: Uterine Artery Embolization Technique, Documentation of Angiographic Endpoints and Intenuation of Ovarian Arteries (Collection Type: MIPS CQM)	No	Yes	
Dialysis-Related	RCOIR12: Tunneled Hemodialysis Catheter Clinical Success Rate (Collection Type: QCDR)	Yes	Yes	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician
	RCOIR13: Percutaneous Arteriovenous Fistula for Dialysis - Clinical Success Rate (Collection Type: QCDR)	Yes	Yes	
	RPAQIR14: Arteriovenous Graft Thrombectomy Clinical Success Rate (Collection Type: QCDR)	Yes	Yes	COST_HAC_1: Hemodialysis Access Creation
	RPAQIR15: Arteriovenous Fistula Thrombectomy Clinical Success Rate (Collection Type: QCDR)	Yes	Yes	
Neurological Intervention	Q413: Door-to-Puncture Time for Endovascular Stroke Treatment (Collection Type: MIPS CQM)	No	Yes	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician COST_IHCL_1: Intracranial Hemorrhage or Cerebral Infarction
General Interventional Radiology	Q145: Radiology: Exposure Dose Indices Reported for Procedures Using Fluoroscopy (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician COST_HAC_1: Hemodialysis Access Creation
	(*) Q374: Closing the Referral Loop: Receipt of Specialist Report (Collection Type: eCQM, MIPS CQM)	No	No	

Interventional Radiology Improvement Activities

- **IA_BE_1:** Use of certified EHR to capture patient reported outcomes
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- (*)/2) **IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- (*) **IA_DMU_12:** Promoting Clinician Well-Being
- **IA_CC_7:** Regular training in care coordination
- **IA_CC_8:** Implementation of documentation improvements for practice/process improvements

- **(*) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_17:** Participation in Population Health Research
- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization
- **IA_PSPA_18:** Measurement and improvement at the practice and panel level
- **IA_PSPA_25:** Cost Display for Laboratory and Radiographic Orders

The following is a summary of the comments we received and our responses.

Comment: Several commenters noted support for this MVP. A commenter noted support for the Dialysis/Transplant clinical grouping in this MVP. A commenter appreciated the revised table format. A few commenters expressed concern with this MVP as they believe the current measure set only includes three broadly applicable quality measures, with the remainder focused on subspecialized areas such as stroke, dialysis access, and women's health. This narrow scope risks excluding many interventional radiologists from meaningful participation and may impose undue burden. The commenter requested the measure set be expanded to better reflect the diversity of interventional radiology practice and to reconsider the cost measures included, which may not fairly represent interventional radiology contributions. A commenter supported the inclusion of RPAQIR14: Arteriovenous Graft Thrombectomy Clinical Success Rate and RPAQIR15: Arteriovenous Fistulae Thrombectomy Clinical Success Rate. A commenter noted support for the improvement activities included in the MVP. A commenter recommended the addition of several quality measures including Q024: Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older, Q043: Advance Care Plan, Q130: Documentation of Current Medications in the Medical Record, Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation: Intervention, Q335: Unplanned Reoperation within the 30-Day Postoperative Period, Q336: Unplanned Hospital Readmission within 30 Days of Principal Procedure, Q357: Surgical Site Infection (SSI), Q358: Patient-Centered Surgical Risk Assessment and Communication, Q404: Anesthesiology Smoking Abstinence, and Q418: Osteoporosis Management in Women Who Had a Fracture. The commenter also recommended the addition of IA_PSPA_19: Implementation of formal quality improvement methods, practice changes, or other practice improvement processes.

Response: We thank the commenters for their support. Currently, reporting of MVPs is voluntary to allow for the flexibility of reporting via traditional MIPS in the instance an MVP does not fit a clinician's scope of care. However, we appreciate the suggestions for additional measures and would encourage the submission of meaningful new measures to the Annual Call for Measures for potential inclusion in future rulemaking. We may consider the inclusion of additional measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter expressed concern with the clinical groupings in this MVP and the alignment of performance measures with each specialty. The commenter's concern is this could result in a siloed approach and hinder collaboration among clinicians treating complex patients. The commenter recommended designing MVPs that encourage cross-specialty coordination to maintain quality and continuity of care. A commenter requested clarity on the formation of the clinical groupings, specifically their role in practices' participation, and plans for expanding the list of measures in each grouping.

Response: We appreciate the feedback regarding the clinical groupings. The purpose of the clinical groupings is to streamline measure selection; however, these clinical groupings do not represent requirements and may not align with every clinician's scope of care. We encourage cross-specialty collaboration as any reporting clinician, sub-group, or group may report whichever four quality measures are most meaningful to their practice, regardless of clinical grouping. While the clinical groupings do not align with a requirement, they do help to visualize the full intent of the MVP by showing the internal structure, thereby also highlighting gaps in measures that can be added to the needs and priorities list. Using the MVP Maintenance Process, we encourage interested parties to submit recommended changes, including revisions to the clinical groupings.

Comment: A few commenters questioned the validity of including the MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician cost measure as they do not believe interventional radiologists typically meet the intent of the measure as they are not generally the primary providers managing the patients' care. Another commenter is concerned with the inclusion of COST_HAC_1: Hemodialysis Access Creation and COST_IHC_1: Intracranial Hemorrhage or

Cerebral Infarction. The commenter believes COST_HAC_1 and COST_IHCL_1 are based on care episodes where interventional radiologists are frequently part of a multi-specialty care team and have limited control of the management of the care episode.

Response: We believe that the Hemodialysis Access Creation, Intracranial Hemorrhage or Cerebral Infarction, and Medicare Spending Per Beneficiary (MSPB) Clinician cost measures are appropriate for use in this MVP, as these measures may be attributed to individual interventional radiologists or their groups. Care provided by interventional radiologists can contribute to overall cost performance for inpatient hospitalizations, hemodialysis access creation, or treatment of intracranial hemorrhage or cerebral infarction, which are assessed by the measures in this MVP.

After consideration of public comments, we are finalizing the *Interventional Radiology MVP* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

A.3 Neuropsychology MVP

In the CY 2026 PFS proposed rule (90 FR 32352), we proposed and solicited comments on the Neuropsychology MVP. The proposed Neuropsychology MVP focuses on the clinical specialty of providing treatment and management of neuropsychological care. This MVP would be most applicable to clinicians who treat patients within the practice of neuropsychology, including nonphysician practitioners (NPPs) such as nurse practitioners and physician assistants. The summary of the public comments received and our responses for this MVP are included immediately after Table A.3 and the list of improvement activities.

Quality Measures

We proposed to include six MIPS quality measures and three QCDR measures within the quality performance category of this MVP, which are specific to the clinical topic of neuropsychology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in neuropsychology:

- **Q282: Dementia: Functional Status Assessment:** This MIPS quality measure evaluates for the performance of a functional status assessment for patients diagnosed with dementia.
- **Q286: Dementia: Safety Concern Screening and Follow-Up for Patients with Dementia:** This MIPS quality measure assesses for the discussion of safety concerns with either the patients diagnosed with dementia or their caregivers. There are two domains of safety that should be addressed to meet performance of the measure which include dangerousness to self or others and environmental risks. If a risk is discovered, it is anticipated that the clinician would document mitigation recommendations to promote safety outcomes for these patients.
- **Q288: Dementia: Education and Support of Caregivers for Patients with Dementia:** This MIPS quality measure ensures clinician communication of education on dementia disease management and health behavior with the added support of referrals to additional support resources for patients diagnosed with dementia and their caregivers.
- **MBHRI3: Social Role Functioning Assessment utilizing PROMIS Adult Ability to Participate in Social Roles and Activities:** This QCDR measure ensures patients who report concerns related to their psychosocial function are assessed, and a follow-up plan is documented for those patients who may have difficulty with social role function and their ability to effectively participate in one's usual role.

- **MBHR15: Consideration of Cultural-Linguistic and Demographic Factors in Cognitive Assessment:** This QCDR measure ensures patients are referred for evaluation due to concerns for cognitive changes or difficulties receive a standardized valid assessment of cognition with results documented, including documentation of provider's consideration of relevant cultural-linguistic and demographic factors that may have affected assessment and resulting assessment.
- **MBHR18: Provision of Feedback Following a Cognitive or Mental Status Assessment with Documentation of Understanding of Test Results and Subsequent Healthcare Plan with Timely Transmission of Results:** This QCDR measure ensures patients who receive a standardized cognitive or mental status assessment engage in a post-evaluation feedback session(s) so they may better understand their medical condition and prognosis. This drives improved health outcomes through improved patient participation in treatment planning and assists them with making necessary lifestyle adjustments.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in neuropsychology. The quality measures below assess for age-specific screenings and follow-up actions for select measures:

- **Q130: Documentation of Current Medications in the Medical Record:** This MIPS quality measure bases performance on clinicians documenting the list of current medications using all immediate resources for capture of this important clinical topic.
- **Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan:** This MIPS quality measure ensures all patients are screened for depression with a follow-up plan documented for those patients who screen positive.
- **Q181: Elder Maltreatment Screen and Follow-up Plan:** This MIPS quality measure ensures routine screening for potential elder maltreatment and is an essential strategy for guarding older adults from abuse and neglect

Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 10 improvement activities that reflect actions and processes undertaken by clinicians who specialize in neuropsychology, as well as activities that promote advancing health and wellness, engagement and patient-centeredness, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities were proposed for inclusion in this MVP:

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_14:** Engage Patients and Families to Guide Improvement in the System of Care
- **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- **IA_BE_16:** Promote Self-management in Usual Care
- **IA_BE_22:** Improved Practices that Engage Patients Pre-Visit
- **IA_BMH_7:** Implementation of Integrated Patient Centered Behavioral Health Model
- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **IA_EPA_7:** Enhance Engagement of Medicaid and Other Underserved Populations
- **IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_21:** Advance Care Planning

Cost Measures

We proposed to include two MIPS cost measures within the cost performance category of this MVP, which apply to the clinical topic of neuropsychology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in neuropsychology, including:

- **MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing care in neuropsychology care in inpatient hospitals.
- **TPCC_1:** Total Per Capita Cost (TPCC): This MIPS cost measure assesses the overall cost of care delivered to a Medicare patient with a focus on the primary care the patient receives from their providers. Neuropsychologists are included in attribution for the TPCC measure as they may provide broad, ongoing care to their patients, which is in line with the intent of the TPCC measure.

Table A-3, followed by the list of improvement activities, represents the measures and activities finalized within the Neuropsychology MVP.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

Table A.3: Neuropsychology MVP Clinical Groupings

Neuropsychology MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Neurodegenerative Disorders	Q282: Dementia Functional Status Assessment (Collection Type: MIPS CQM)	No	No	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician (*) TPCC_1: Total Per Capita Cost
	Q286: Dementia Safety Concern Screening and Follow-Up for Patients with Dementia (Collection Type: MIPS CQM)	No	Yes	
	Q288: Dementia Education and Support of Caregivers for Patients with Dementia (Collection Type: MIPS CQM)	No	Yes	
Advancing Health and Wellness	(*) Q130: Documentation of Current Medications in the Medical Record (Collection Type: eCQM, MIPS CQM)	No	Yes	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician (*) TPCC_1: Total Per Capita Cost
	(*) Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	No	No	
	Q181: Elder Maltreatment Screen and Follow-up Plan (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	

Neuropsychology Improvement Activities

- **IA_DE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_14:** Engage Patients and Families to Guide Improvement in the System of Care
- **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- **(*) IA_BE_16:** Promote Self-management in Usual Care
- **IA_BE_22:** Improved Practices that Engage Patients Pre-Visit
- **IA_BMH_7:** Implementation of Integrated Patient-Centered Behavioral Health Model
- **(*) IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **(*) IA_EPA_7:** Enhance Engagement of Medicaid and Other Underserved Populations
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_21:** Advance Care Planning

The following is a summary of the comments we received and our responses:

Comment: Several commenters noted support for this MVP. A commenter appreciated the revised table format. A commenter supported the inclusion of Q282, Q286, and Q288 as they believe it encourages functional assessment, safety concern and screening, and education and support of caregivers which are appropriate to ensure meaningful and comprehensive assessment of patients living with dementia. The commenter also supported the inclusion of MBHR13, MBHR15, and MBHR18, which they believe are critical to ensuring accurate assessment, decreasing health disparities and encouraging timely follow-up to improve outcomes of individuals living with dementia. Several commenters recommended adding MBHR11 and MBHR16, noting that neuropsychologists serve diverse populations across the lifespan and these measures are critical for capturing quality of care beyond dementia. A commenter recommended adding Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood to this MVP.

Response: We thank the commenters for their support. We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter noted disappointment with what they perceived as a lack of transparency and collaboration in developing this MVP.

Response: We post MVP candidates to the Quality Payment Program website for public feedback for up to a 45-day window to further engage with interested parties on MVP candidates prior to rulemaking. In addition, interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. We will also continue to monitor this MVP and make revisions as appropriate based upon interested party feedback and MIPS quality measure inventory changes.

Comment: A commenter expressed concern with the clinical groupings in this MVP and the alignment of performance measures with each specialty. The commenter's concern is this could result in a siloed approach and hinder collaboration among clinicians treating complex patients. The commenter recommended designing MVPs that encourage cross-specialty coordination to maintain quality and continuity of care.

Response: We appreciate the feedback regarding the clinical groupings. The purpose of the clinical groupings is to streamline measure selection; however, these clinical groupings do not represent requirements and may not align with every clinician's scope of care. We encourage cross-specialty collaboration as any reporting clinician, subgroup, or group may report whichever four quality measures are most meaningful to their practice, regardless of clinical grouping. While the clinical groupings do not align with a requirement, they do help to visualize the full intent of the MVP by showing the internal structure, thereby also highlighting gaps in measures that can be added to the needs and priorities list. Using the MVP Maintenance Process, we encourage interested parties to submit recommended changes, including revisions to the clinical groupings.

After consideration of public comments, we are finalizing the *Neuropsychology MVP* with modifications in Table A.3 for the CY 2026 performance period/2028 MIPS payment year and future years. However, we are not finalizing the inclusion of MBHR13: Social Role Functioning Assessment utilizing PROMIS Adult Ability to Participate in Social Roles and Activities as it did not meet the fully developed and tested criteria due to a lack of data, which resulted in no empirical validity. In addition, we are not finalizing the inclusion of MBHR15: Consideration of Cultural-Linguistic and Demographic Factors in Cognitive Assessment as this is a process-based measure and does not align with our goal of prioritizing outcome measures and reducing the number of process-based quality measures in MIPS. Additionally, this measure concept represents a single aspect of cognitive assessments. We would encourage the combining of similar measure concepts into a single more robust measure. Lastly, we are not finalizing MBHR18: Provision of Feedback Following a Cognitive or Mental Status Assessment with Documentation of Understanding of Test Results and Subsequent Healthcare Plan with Timely Transmission of Results as the measure did not meet the criteria for inclusion in MIPS as there was no evidence of a gap in care, outlined within the CY 2021 Medicare PFS Final Rule [8414.1400(b)(4)(iv)(G)].

A.4 Pathology MVP

In the CY 2026 PFS proposed rule (90 FR 32352), we proposed and solicited comments on the Pathology MVP. The proposed Pathology MVP focuses on assessing meaningful outcomes in pathology. This MVP would be most applicable to pathology clinicians. The summary of the public comments received and our responses for this MVP are included immediately after Table A.4 and the list of improvement activities.

Quality Measures

We proposed to include seven MIPS quality measures and seven QCDR measures within the quality performance category of this MVP, which are specific to the clinical topic of pathology. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in pathology:

- **Q249: Barrett's Esophagus:** This MIPS quality measure assesses appropriate and complete final report documentation to ensure accurate diagnoses.
- **Q250: Radical Prostatectomy Pathology Reporting:** This MIPS quality measure ensures that pathology reports include all appropriate information as having a complete set of pathology descriptors is crucial for staging and subsequent therapeutic decisions.
- **Q395: Lung Cancer Reporting (Biopsy/Cytology Specimens):** This MIPS quality measure encourages pathologists to further classify tumors into a more specific histologic subtype thereby reducing the use of the term non-small-cell lung cancer not otherwise specified (NSCLC-NOS) and furnishing uniform terminology and diagnostic criteria based on an integrated multidisciplinary platform.
- **Q396: Lung Cancer Reporting (Resection Specimens):** This MIPS quality measure assesses for standardized final reports for lung biopsy and cytology specimens with a diagnosis of primary non-small cell lung cancer allowing for classification to be based on an integrated multidisciplinary platform.
- **Q397: Melanoma Reporting:** This MIPS quality measure assesses final reports to ensure alignment with guidelines and inclusion of all appropriate tumor characteristics for more precise staging, improving treatment outcomes.
- **Q440: Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician:** This MIPS quality measure ensures timely reporting of pathology results to mitigate delays in treatment.
- **Q491: Mismatch Repair (MMR) or Microsatellite Instability (MSI) Biomarker Testing Status:** This MIPS quality measure assesses for guideline recommended MMR/MSI testing for patients considering checkpoint inhibitor therapy, which aims to improve health outcomes by making care more targeted.
- **CAP30: Urinary Bladder Cancer: Complete Analysis and Timely Reporting.** This QCDR measure assesses all pathology cancer reports to ensure they are complete, contain all necessary data elements and are returned within a maximum of two business days. By mandating a thorough report in a timely fashion, this measure encourages appropriate and quick treatment.
- **CAP34: Molecular Assessment: Biomarkers in Non-Small Cell Lung Cancer:** This QCDR measure ensures pathology reports for non-small cell lung cancer (NSCLC) contain impression or recommendation for biomarker mutation testing. Accurate reporting allows patients to receive matched targeted therapy.
- **CAP40: Squamous Cell Skin Cancer: Complete Reporting:** This QCDR measure assesses pathology reports for completeness of histologic findings, including margin status degree of differentiation/histologic grade, depth or level of invasion, presence of perineural invasion, tumor diameter, and presence of lymphovascular invasion which are vital in creating treatment and follow-up plans.
- **QMM21: Incorporating results of concurrent studies into Final Reports for Bone Marrow Aspirate of patients with Leukemia, Myelodysplastic syndrome, or Chronic Anemia:** This QCDR measure ensures that all final bone marrow reports contain results of concurrent studies performed as well as an interpretation of those results, thereby improving patient outcomes and continuity of care.
- **QMM25: Use of Structured Reporting for Urine Cytology Specimens:** This QCDR measure ensures uniformity and reproducibility in the reporting of urine cytology through standardization by requiring use of The Paris System.

- **QMM29: Use of Appropriate Classification System for Lymphoma Specimen:** This QCDR measure encourages precise classification of lymphoma by ensuring results are accurately and effectively interpreted by the treating clinician.
- **QMM30: Appropriate Use of Bethesda System for Reporting Thyroid Cytopathology on Fine Needle Aspirations (FNA) of Thyroid Nodules:** This QCDR measure encourages results from FNA of thyroid nodules are properly and uniformly categorized by using the Bethesda System for Reporting Thyroid Cytopathology.

Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 13 improvement activities that reflect actions and processes undertaken by clinicians who specialize in pathology, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities were proposed for inclusion in this MVP:

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- **IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **IA_BMH_12:** Promoting Clinician Well-Being
- **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **IA_CC_12:** Care coordination agreements that promote improvements in patient tracking across settings
- **IA_CC_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization
- **IA_PSPA_2:** Participation in MOC Part IV
- **IA_PSPA_12:** Participation in private payer CPIA
- **IA_PSPA_13:** Participation in Joint Commission Evaluation Initiative
- **IA_PSPA_35:** Adopt Certified Health Information Technology for Security Tags for Electronic Health Record Data

Cost Measures

We proposed to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of pathology. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in pathology and align with other measures and activities within this MVP:

- **MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician:** This MIPS cost measure applies to clinicians providing pathology care in inpatient hospitals.

Table A.4, followed by the list of improvement activities, represents the measures and activities finalized within the Pathology MVP.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component

Table A.4: Pathology MVP Clinical Groupings

Pathology MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Pathology	Q249: Barrett's Esophagus (Collection Type: Medicare Part B Claims, MIPS CQM)	No	No	N/A
	Q250: Radical Prostatectomy Pathology Reporting (Collection Type: Medicare Part B Claims, MIPS CQM)	No	No	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician
	Q395: Lung Cancer Reporting (Biopsy/Cytology Specimens) (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	N/A
	Q396: Lung Cancer Reporting (Resection Specimens) (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician
	Q397: Melanoma Reporting (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	N/A
	Q440: Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician (Collection Type: MIPS CQM)	No	Yes	
	Q491: Mismatch Repair (MMR) or Microsatellite Instability (MSI) Biomarker Testing Status (Collection Type: MIPS CQM)	No	Yes	
	CAP30: Urinary Bladder Cancer Complete Analysis and Timely Reporting (Collection Type: QCDR)	No	Yes	
	CAP34: Molecular Assessment: Biomarkers in Non-Small Cell Lung Cancer (Collection Type: QCDR)	No	Yes	
	CAP40: Squamous Cell Skin Cancer, Complete Reporting (Collection Type: QCDR)	No	Yes	
	QNM21: Incorporating results of concurrent studies into Final Reports for Bone Marrow Aspirate of patients with Leukemia, Myelodysplastic syndrome, or Chronic Anemia (Collection Type: QCDR)	No	Yes	

Pathology MVP			
Clinical Grouping	Quality		
	Measure	Outcome	High Priority
	QMM28: Use of Structured Reporting for Urine Cytology Specimens (Collection Type: QCDR)	No	Yes
	QMM29: Use of Appropriate Classification System for Lymphoma Specimens (Collection Type: QCDR)	No	Yes
	QMM30: Appropriate Use of Bethesda System for Reporting Thyroid Cytopathology on Fine Needle Aspirations (FNA) of Thyroid Nodule(s) (Collection Type: QCDR)	No	Yes

Pathology Improvement Activities

- IA_BE_6: Regularly Assesses Patient Experience of Care and Follow Up on Findings
- IA_BE_18: Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- (*) IA_BE_26: Promote Use of Patient-Reported Outcome Tools
- (1) IA_BMH_12: Promoting Clinician Well-Being
- (1) IA_CC_9: Implementation of practices/processes for developing regular individual care plans
- IA_CC_12: Care coordination agreements that promote improvements in patient tracking across settings
- IA_CC_19: Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- (**) IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PSPA_1: Participation in an AHRQ-listed patient safety organization
- IA_PSPA_2: Participation in MDX Part IV
- IA_PSPA_12: Participation in private payer CPIA
- IA_PSPA_13: Participation in Joint Commission Evaluation Initiative
- (*) IA_PSPA_35: Adopt Certified Health Information Technology for Security Tags for Electronic Health Record Data

The following is a summary of the comments we received and our responses.

Comment: Several commenters noted support for this MVP. A commenter appreciated the revised table format. A commenter recommended the addition of CAP41: Basal Cell Skin Cancer: Complete Reporting; CAP22: Basopy Reporting Time to Clinician and CAP38: Prostate Cancer Reporting: Complete Analysis.

Response: We thank the commenters for their support. We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter expressed concern with the clinical groupings in this MVP and the alignment of performance measures with each specialty. The commenter's concern is this could result in a siloed approach and hinder collaboration among clinicians treating complex patients. The commenter recommended designing MVPs that encourage cross-specialty coordination to maintain quality and continuity of care.

Response: We appreciate the feedback regarding the clinical groupings. The purpose of the clinical groupings is to streamline measure selection; however, these clinical groupings do not represent requirements and may not align with every clinician's scope of care. We encourage cross-specialty collaboration as any reporting clinician, sub-group, or group may report whichever four quality measures are most meaningful to their practice, regardless of clinical grouping. While the clinical groupings do not align with a requirement, they do help to visualize the full intent of the

MVP by showing the internal structure, thereby also highlighting gaps in measures that can be added to the needs and priorities list. Using the MVP Maintenance Process, we encourage interested parties to submit recommended changes including revisions to the clinical groupings.

Comment: A commenter is concerned that this MVP covers a broad specialty area and there may be physicians with narrower subspecialties that are unable to report this MVP.

Response: Currently, reporting of MVPs is voluntary to allow for the flexibility of reporting via traditional MIPS in the instance an MVP does not fit a clinician's scope of care. However, we would encourage the submission of meaningful new measures to the Annual Call for Measures for potential inclusion in future rulemaking. We may consider the inclusion of additional measures and improvement activities through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Programs website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Pathology MVP* as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

A.5 Podiatry MVP

In the CY 2026 PFS proposed rule (90 FR 32352), we proposed and solicited comments on the Podiatry MVP. The proposed Podiatry MVP focuses on assessing meaningful outcomes in foot and ankle care for patients with chronic conditions, wound/ulcers, and general care for the podiatry patient. This MVP would be most applicable to podiatry clinicians, including NPPs such as nurse practitioners and physician assistants. The summary of the public comments received and our responses for this MVP are included immediately after Table A.5 and the list of improvement activities.

Quality Measures

We proposed to include 7 MIPS quality measures and 10 QCDR measures within the quality performance category of this MVP, which are specific to the clinical topic of podiatry. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care for clinicians who specialize in podiatry:

- **Q126: Diabetes Mellitus; Diabetic Foot and Ankle Care, Peripheral Neuropathy – Neurological Evaluation.** This MIPS quality measure ensures patients diagnosed with diabetes mellitus have a lower extremity neurological exam performed at least once every 12 months.
- **Q127: Diabetes Mellitus; Diabetic Foot and Ankle Care, Ulcer Prevention – Evaluation of Footwear.** This MIPS quality measure ensures patients diagnosed with diabetes mellitus are evaluated for proper footwear and sizing at least once every 12 months.
- **Q374: Closing the Referral Loop: Receipt of Specialist Report.** This MIPS quality measure is attributable to the clinician referring the patient and ensures report receipt from the referred to clinician, closing the communication loop.
- **REGCLRS: Offloading with Remote Monitoring.** This QCDR measure evaluates patient compliance with prescribed off-loading via remote monitoring and compliance being demonstrated as complete healing of the ulcer within 10 weeks. The monitoring of patient adherence enables the clinician to intervene when a patient is non-adherent.

- **REGCLR8: Monitor and Improve Treatment Outcomes in Chronic Wound Healing:** This QCDR measure ensures patients with chronic non-healing wounds are re-assessed and experience an improved healing rate after a change in treatment plan based upon information learned from the re-assessment. Improved wound healing rates may reduce spending on advanced treatments.
- **USWR22: Nutritional Assessment and Intervention Plan in patients with Wounds and Ulcers.** This QCDR measure ensures patients with wounds and/or ulcers complete a validated nutritional assessment and receive an appropriate intervention plan based on the results. Evidence suggests that oral nutritional supplements, particularly with high protein content, can reduce the risk of developing pressure ulcers.
- **USWR32: Adequate Compression at each visit for Patients with Venous Leg Ulcers (VLU's) appropriate to arterial supply:** This QCDR measure assesses for adequate compression at each visit for treating patients with venous leg ulcers. This measure establishes the requirement of safe, effective, and consistent compression treatment of VLUs.
- **USWR33: Diabetic Foot Ulcer (DFU) Healing or Closure:** This QCDR measure evaluates achieved healing or closure of diabetic foot ulcers within 6 months stratified by the Wound Healing Index (WHI). Reporting of healing rates stratified by the WHI makes it possible to see individual variations in quality between clinicians and compare performance based on similar wound severity.
- **USWR34: Venous Leg Ulcer (VLU) Healing or Closure:** This QCDR measure evaluates achieved healing or closure of venous leg ulcers (VLU) within 12 months stratified by the Wound Healing Index (WHI). Reporting VLU healing stratified by the WHI enables honest reporting of VLU healing rates and fair comparison of clinician performance.
- **USWR35: Adequate Off-loading of Diabetic Foot Ulcers performed at each visit, appropriate to location of ulcer:** This QCDR measure assesses for adequate off-loading for diabetic foot ulcers during patient visits. Adequate off-loading increases the likelihood of DFU healing.

The following broadly applicable MIPS quality measures are relevant to clinicians who specialize in podiatry care. The measures assess for age-specific screenings and follow-up actions for select measures:

- **Q155: Falls: Plan of Care:** This MIPS quality measure ensures adult patients, with a history of falls, have a plan of care for falls.
- **Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:** This MIPS quality measure screens patients for tobacco use. Any patients that are found to be tobacco users should receive tobacco cessation intervention.
- **Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented:** This MIPS quality measure ensures all adult patients are screened for high blood pressure and have a recommended follow-up plan if blood pressure is elevated or hypertensive.
- **Q358: Patient-Centered Surgical Risk Assessment and Communication:** This MIPS quality measure ensures patients receive a personalized surgical risk assessment completed using a validated risk calculator or multi-institutional clinical data prior to the surgery with discussion of the identified risks with the surgeon.
- **MEX5: Hammer Toe Outcome:** This QCDR measure addresses pain caused by toe deformity and ensures appropriate intervention for pain reduction. Lesser toe deformities are common and can have a significant impact on the function of the foot and quality of

life. Appropriate intervention can result in improvements in activities of daily living and quality of life.

- **REGCLR1: Heel Pain Treatment Outcomes for Adults:** This QCDR measure addresses heel pain and ensures appropriate intervention for pain reduction. Clinical practice guideline suggests that treatment needs to be properly tailored to the patient based upon the cause of the pain.
- **REGCLR3: Bunion Outcome - Adult and Adolescent:** This QCDR measure addresses bunion pain and ensures appropriate intervention for pain reduction. Alleviation of bunion pain can result in improvement in activities of daily living and quality of life.

Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 10 improvement activities that reflect actions and processes undertaken by clinicians who specialize in podiatry care, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities were proposed for inclusion in this MVP:

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BMH_12:** Promoting Clinician Well-Being
- **IA_CC_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **IA_EPA_7:** Enhance Engagement of Medicaid and Other Underserved Populations
- **IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_14:** Implementation of methodologies for improvements in longitudinal care management for high risk patients
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **IA_PSPA_18:** Measurement and improvement at the practice and panel level
- **IA_PSPA_22:** CDC Training on CDC's Guideline for Prescribing Opioids for Chronic Pain
- **IA_PSPA_23:** Completion of CDC Training on Antibiotic Stewardship

Cost Measures

We proposed to include one MIPS cost measure within the cost performance category of this MVP, which applies to the clinical topic of podiatry care. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measure provides a meaningful assessment of the clinical care for clinicians who specialize in podiatry and align with other measures and activities within this MVP:

- **MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician:** This MIPS cost measure applies to clinicians providing podiatry care in inpatient hospitals.

Table A-5, followed by the list of improvement activities, represents the measures and activities finalized within the Podiatry MVP.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

Table A.5: Podiatry MVP Clinical Groupings

Podiatry MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Chronic Conditions	Q126: Diabetes Mellitus: Diabetic Foot and Ankle Care: Peripheral Neuropathy – Neurological Evaluation (Collection Type: MIPS QOM)	No	No	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician
	Q127: Diabetes Mellitus: Diabetic Foot and Ankle Care: Ulcer Prevention – Evaluation of Footwear (Collection Type: MIPS QOM)	No	No	
Wound/Ulcer	REGCLR5: Offloading with Remote Monitoring (Collection Type: QCDR)	Yes	Yes	N/A
	REGCLR8: Monitor and Improve Treatment Outcomes in Chronic Wound Healing (Collection Type: QCDR)	Yes	Yes	
	USWR32: Adequate Compression at each visit for Patients with Venous Leg Ulcers (VLUs) appropriate to arterial supply (Collection Type: QCDR)	Yes	Yes	
	USWR33: Diabetic Foot Ulcer (DFU) Healing or Closure (Collection Type: QCDR)	Yes	Yes	
	USWR34: Venous Leg Ulcer (VLU) Healing or Closure (Collection Type: QCDR)	Yes	Yes	
	USWR35: Adequate Off-loading of Diabetic Foot Ulcers performed at each visit, appropriate to location of ulcer (Collection Type: QCDR)	No	No	
General Podiatry	(*) Q374: Closing the Referral Loop: Receipt of Specialist Report (Collection Type: MIPS QOM, eCOM)	No	Yes	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician
Advancing Health and Wellness	Q155: Falls: Plan of Care (Collection Type: MIPS QOM)	No	Yes	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician
	Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Collection Type: Medicare Part B Claims, eCOM, MIPS QOM)	No	No	
	Q317: Preventive Care and Screening: Screening for High Blood Pressure and Follow-Up Documented (Collection Type: Medicare Part B Claims, eCOM, MIPS QOM)	No	No	
	Q358: Patient-Centered Surgical Risk Assessment and Communication	No	Yes	

Podiatry MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
	(Collection Type: MIPS/COM)			
	NFK5: Hammer Toe Outcome (Collection Type: QCDR)	Yes	Yes	N/A
	REGCLR1: Heel Pain Treatment Outcomes for Adults (Collection Type: QCDR)	Yes	Yes	
REGCLR3: Bunion Outcome - Adult and Adolescent (Collection Type: QCDR)	Yes	Yes		

Podiatry Improvement Activities

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **(*) IA_BMH_12:** Promoting Clinician Well-Being
- **IA_CC_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **(*) IA_EPA_7:** Enhance Engagement of Medicaid and Other Underserved Populations
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_14:** Implementation of methodologies for improvements in longitudinal care management for high risk patients
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **IA_PSPA_18:** Measurement and improvement at the practice and panel level
- **IA_PSPA_22:** CDC Training on CDC's Guideline for Prescribing Opioids for Chronic Pain
- **IA_PSPA_23:** Completion of CDC Training on Antibiotic Stewardship

The following is a summary of the comments we received and our responses:

Comment: Several commenters noted support for this MVP. A commenter appreciated the revised table format. A couple of commenters supported the inclusion of USWR22: Nutrition Assessment and Intervention Plan for patients with wounds and ulcers.

Response: We thank the commenters for their support.

Comment: A commenter expressed concern with the clinical groupings in this MVP and the alignment of performance measures with each specialty. The commenter's concern is this could result in a siloed approach and hinder collaboration among clinicians treating complex patients. The commenter recommended designing MVPs that encourage cross-specialty coordination to maintain quality and continuity of care.

Response: We appreciate the feedback regarding the clinical groupings. The purpose of the clinical groupings is to streamline measure selection; however, these clinical groupings do not represent requirements and may not align with every clinician's scope of care. We encourage cross-specialty collaboration as any reporting clinician, sub-group, or group may report whichever four quality measures are most meaningful to their practice, regardless of clinical grouping. While the clinical groupings do not align with a requirement, they do help to visualize the full intent of the MVP by showing the internal structure, thereby also highlighting gaps in measures that can be added to the needs and priorities list. Using the MVP Maintenance Process, we encourage interested parties to submit recommended changes, including revisions to the clinical groupings.

Comment: A couple of commenters expressed concern that many of the measures included in this MVP are topped out, making it very difficult for podiatrists to perform well under this model. Another commenter expressed concern with the limited number of quality measures available in this MVP.

Response: We acknowledge the commenters' concerns and encourage the development of new measures and submission to the CMI for Measures for potential inclusion in future years. While we endeavor to include measures that allow for maximum points, we want to ensure important aspects of care within the MVP clinical topic are represented.

After consideration of public comments, we are finalizing the *Patient A/P* with modifications in Table A.5 for the CY 2026 performance period/2028 MIPS payment year and future years. We are not finalizing the inclusion of USWR22: Nutritional Assessment and Intervention Plan in patients with Wounds and Ulcers as CMS has rejected this QCDR measure for the 2026 MIPS performance period because the QCDR measure doesn't meet the case minimum and reporting volumes required for benchmarking after being in the program for 2 consecutive years [§42 CFR 414.1400(b)(1)(v)(3)].

A.6 Vascular Surgery MVP

In the CY 2026 PFS proposed rule (90 FR 32352), we proposed and solicited comments on the Vascular Surgery MVP. The proposed Vascular Surgery MVP focuses on the clinical specialty of surgery. This MVP would be most applicable to clinicians who treat patients within the surgical settings of vascular surgery, including NPPs such as nurse practitioners, and physician assistants. The summary of the public comments received and our responses for this MVP are included immediately after Table A.6 and the list of improvement activities.

Quality Measures

We proposed to include 13 MIPS quality measures and 4 QCDR measures within the quality performance category of this MVP, which are specific to the clinical specialty of surgery. We reviewed the MIPS quality measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine which quality measures best represent the clinical topic of this MVP.

The following quality measures provide a meaningful and comprehensive assessment of the clinical care provided by clinicians who specialize in surgery:

- **Q259: Rate of Endovascular Aneurysm Repair (EVAR) of Small or Moderate Non-Ruptured Infrarenal Abdominal Aortic Aneurysms (AAA) without Major Complications (Discharged to Home by Post-Operative Day #2):** This MIPS quality measure ensures patients are selected appropriately for these procedures to limit experience of major complications, evidenced by discharge home no later than post-operative day number 2.
- **Q344: Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2):** This MIPS quality measure ensures patients are selected appropriately for these procedures to limit experience of major complications, evidenced by discharge home no later than post-operative day number 2.
- **Q355: Unplanned Reoperation within the 30-Day Postoperative Period:** This MIPS quality measure evaluates for an unplanned reoperation within 30 days of a denominator eligible procedure.
- **Q356: Unplanned Hospital Readmission within 30 Days of Principal Procedure:** This MIPS quality measure ensures evaluation of any unexpected surgical complications or adverse outcomes evidenced by unplanned hospital re-admission within 30 days of the principal surgical procedure.
- **Q357: Surgical Site Infection (SSI):** This MIPS quality measure evaluates for SSI within 30 days of a denominator eligible procedure.
- **Q374: Closing the Referral Loop: Receipt of Specialist Report:** This MIPS quality measure is attributable to the clinician referring the patient and ensures report receipt from the referred to clinician, closing the communication loop.
- **RCOIR12: Tunneled Hemodialysis Catheter Clinical Success Rate:** This QCDR measure ensures patients with tunneled central venous access catheter insertions or replacements

for ESRD on maintenance dialysis receive full dialysis treatment as prescribed within 72 hours of catheter placement or exchange.

- **RCQIR13: Percutaneous Arteriovenous Fistula for Dialysis - Clinical Success Rate:** This QCDR measure ensures percutaneous created arteriovenous fistulas for patients on dialysis are deemed ready for use with at least 2 16-gauge needles for 3 consecutive dialysis treatments at prescribed blood flow rates.
- **RPAQIR14: Arteriovenous Graft Thrombectomy Clinical Success Rate:** This QCDR measure ensures clinical success of arteriovenous graft (AVG) thrombectomies for patients on maintenance dialysis evidenced by successful first dialysis treatment following the thrombectomy with needles using that access.
- **RPAQIR15: Arteriovenous Fistulae Thrombectomy Clinical Success Rate:** This QCDR measure ensures clinical success of arteriovenous fistulae (AVF) thrombectomies for patients on maintenance dialysis evidenced by successful first dialysis treatment following the thrombectomy with needles using that access.

The following broadly applicable MIPS quality measures are relevant to clinicians who treat patients in surgical settings. The measures assess for age-specific screenings and follow-up actions for select measures:

- **Q001: Diabetes: Glycemic Status Assessment Greater Than 9%:** This inverse outcome MIPS quality measure assesses diabetic patients for poor control of their HbA1c.
- **Q047: Advance Care Plan:** This MIPS quality measure assesses for medical record documentation of an advance care plan or surrogate decisions maker.
- **Q130: Documentation of Current Medications in the Medical Record:** This MIPS quality measure bases performance on clinicians documenting the list of current medications using all immediate resources for capture of this important clinical topic.
- **Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention:** This MIPS quality measure screens patients for tobacco use. Any patients that are found to be tobacco users should receive tobacco cessation intervention.
- **Q321: CAHPS for MIPS Clinician/Group Survey:** This survey would provide direct input from patients and their experience regarding timely care, effective communication, shared decision making, care coordination, promotion of health and education, completion of health status/functionality, and courtesy of office staff.
- **Q358: Patient-Centered Surgical Risk Assessment and Communication:** This MIPS quality measure ensures patients receive a personalized surgical risk assessment completed using a validated risk calculator or multi-institutional clinical data prior to the surgery with discussion of the identified risks with the surgeon.
- **Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease:** This MIPS quality measure identifies patients at high risk of cardiovascular events and ensures they are prescribed or currently on a statin therapy.

Improvement Activities

We reviewed the improvement activities inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of improvement activities to include in this MVP. We proposed to include 16 improvement activities that reflect actions and processes undertaken by surgical care clinicians, as well as activities that promote advancing health and wellness, patient engagement and patient-centeredness, shared decision making, and care coordination. These improvement activities provide opportunities for clinicians, in collaboration with patients, to drive outcomes and improve quality of care. The following improvement activities were proposed for inclusion in this MVP:

- **IA_BE_1:** Use of certified EHR to capture patient reported outcomes
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_12:** Use evidence-based decision aids to support shared decision-making.
- **IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **IA_CC_15:** PSH Care Coordination
- **IA_EPA_2:** Use of telehealth services that expand practice access
- **IA_EPA_3:** Collection and use of patient experience and satisfaction data on access
- **IA_EPA_8:** Provide Education Opportunities for New Clinicians
- **IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_2:** Anticoagulant Management Improvements
- **IA_PM_5:** Engagement of community for health status improvement
- **IA_PM_11:** Regular Review Practices in Place on Targeted Patient Population Needs
- **IA_PM_15:** Implementation of episodic care management practice improvements
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PM_21:** Advance Care Planning
- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization.

Cost Measures

We proposed to include three MIPS cost measures within the cost performance category of this MVP, which apply to the clinical specialty of surgical care. We reviewed the MIPS cost measure inventory and considered feedback received during the 2025 MVP candidate feedback period to determine the set of cost measures to include in this MVP. The following cost measures provide a meaningful assessment of the clinical care for clinicians who specialize in surgical care and align with other measures and activities within this MVP:

- **COST_CCLJ_1:** Revascularization For Lower Extremity Chronic Critical Limb Ischemia. This MIPS episode-based cost measure assesses costs associated with elective revascularization surgery for lower extremity chronic critical limb ischemia.
- **COST_HAC_1:** Hemodialysis Access Creation: This MIPS episode-based cost measure assesses costs associated with the creation of graft or fistula access for long-term hemodialysis.
- **MSPB_1:** Medicare Spending Per Beneficiary (MSPB) Clinician: This MIPS cost measure applies to clinicians providing care in inpatient hospitals, including those who treat patients within vascular surgery.

Table A.6, followed by the list of improvement activities, represents the measures and activities finalized within the Vascular Surgery MVP.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Single exclamation point (!): improvement activities with an advancing health and wellness component.

Table A.6: Vascular Surgery MVP Clinical Groupings

Vascular Surgery MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Interventional	Q259: Rate of Endovascular Aneurysm Repair (EVAR) of Small or Moderate Non-Ruptured Infra renal Abdominal Aortic Aneurysms (AAA) without Major Complications (Discharged to Home by Post-Operative Day #2) (Collection Type: MIPS CQM)	Yes	Yes	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician
	Q344: Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day #2) (Collection Type: MIPS CQM)	Yes	Yes	
Surgical	Q355: Unplanned Reoperation within the 30-Day Postoperative Period (Collection Type: MIPS CQM)	Yes	Yes	COST_HAC_1: Hemodialysis Access Creation MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician

	(*) Q357: Surgical Site Infection (SSI) (Collection Type: MIPS CQM)	Yes	Yes	COST_HAC_1: Hemodialysis Access Creation MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician
Dialysis-Related	RCOIR12: Timneled Hemodialysis Catheter Clinical Success Rate (Collection Type: QCDR)	Yes	Yes	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician COST_HAC_1: Hemodialysis Access Creation
	RCOIR13: Percutaneous Arteriovenous Fistula for Dialysis - Clinical Success Rate (Collection Type: QCDR)	Yes	Yes	
	RPAQIR14: Arteriovenous Graft Thrombectomy Clinical Success Rate (Collection Type: QCDR)	Yes	Yes	
	RPAQIR15: Arteriovenous Fistulae Thrombectomy Clinical Success Rate (Collection Type: QCDR)	Yes	Yes	
General Vascular Surgery	(*) Q374: Closing the Referral Loop: Receipt of Specialist Report (Collection Type: eCQM, MIPS CQM)	No	Yes	COST_CCLI_1: Revascularization For Lower Extremity Chronic Critical Limb Ischemia COST_HAC_1: Hemodialysis Access Creation MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician
	Q001: Diabetes: Glycemic Status Assessment Greater Than 9%	Yes	Yes	COST_CCLI_1: Revascularization For Lower

Vascular Surgery MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Advancing Health and Wellness	(Collection Type: Medicare Part B Claims, eCQM, MIPS QOM)			Extremity Chronic Critical Limb Ischemia
	(*) Q130: Documentation of Current Medications in the Medical Record (Collection Type: eCQM, MIPS QOM)	No	Yes	COST_HAC_1: Hemodialysis Access Creation
	Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Collection Type: Medicare Part B Claims, eCQM, MIPS QOM)	No	No	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician
	Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease (Collection Type: eCQM, MIPS QOM)	No	No	
Experience of Care	Q047: Advance Care Plan (Collection Type: Medicare Part B Claims, MIPS QOM)	No	Yes	COST_CCU_1: Revascularization For Lower Extremity Chronic Critical Limb Ischemia
	Q321: CAHPS for MIPS Clinician/Group Survey (Collection Type: CSV)	No	Yes	COST_HAC_1: Hemodialysis Access Creation
	Q358: Patient-Centered Surgical Risk Assessment and Communication (Collection Type: MIPS QOM)	No	Yes	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician

Vascular Surgery Improvement Activities

- IA_BE_1: Use of certified EHR to capture patient reported outcomes
- IA_BE_4: Engagement of Patients through Implementation of New Patient Portal
- IA_BE_12: Use evidence-based decision aids to support shared decision-making
- (*) IA_BE_26: Promote Use of Patient-Reported Outcome Tools
- IA_CC_15: PSH Care Coordination
- IA_EPA_2: Use of telehealth services that expand practice access
- IA_EPA_3: Collection and use of patient experience and satisfaction data on access
- (*) IA_EPA_8: Provide Education Opportunities for New Clinicians
- (*) IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PM_2: Anticoagulant Management Improvements
- (C) IA_PM_5: Engagement of community for health status improvement
- IA_PM_11: Regular Review Practices in Place on Targeted Patient Population Needs
- IA_PM_15: Implementation of episodic care management practice improvements
- IA_PM_16: Implementation of medication management practice improvements
- IA_PM_21: Advance Care Planning
- IA_PSPA_1: Participation in an AHRQ-listed patient safety organization

The following is a summary of the comments we received and our responses:

Comment: Several commenters noted support for this MVP. A commenter noted support for the Dialysis/Transplant clinical grouping in this MVP. A commenter appreciated the revised table format. A commenter supported the inclusion of RPAQIR14: Arteriovenous Graft Thrombectomy Clinical Success Rate and RPAQIR15: Arteriovenous Fistula Thrombectomy Clinical Success Rate. Another commenter supported the inclusion of Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention. A commenter recommended the addition of Q495: Ambulatory Patientive Care Patients' Experience of Feeling Heard and Understood to this MVP. Another commenter requested the addition of Q145: Radiology: Exposure Dose Indices for Procedures Using Fluoroscopy, Q120: Varicose Vein Treatment with Saphenous Ablation: Outcome Survey, Q421: Appropriate Assessment of Removable Inferior Vena Cava (IVC) Filters for Removal, and Q463: Uterine Artery Embolization Technique: Documentation of

Angiographic Endpoints and Interrogation of Ovarian Arteries. The commenter believes these measures are relevant to independent vascular surgeons and focus on patient outcomes and safety without creating excessive data reporting burden.

Response: We thank the commenters for their support. We may consider the inclusion of additional quality measures or the removal of quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter expressed concern with the clinical groupings in this MVP and the alignment of performance measures with each specialty. The commenter's concern is this could result in a siloed approach and hinder collaboration among clinicians treating complex patients. The commenter recommended designing MVPs that encourage cross-specialty coordination to maintain quality and continuity of care.

Response: We appreciate the feedback regarding the clinical groupings. The purpose of the clinical groupings is to streamline measure selection; however, these clinical groupings do not represent requirements and may not align with every clinician's scope of care. We encourage cross-specialty collaboration as any reporting clinician, sub-group, or group may report whichever four quality measures are most meaningful to their practice, regardless of clinical grouping. While the clinical groupings do not align with a requirement, they do help to visualize the full intent of the MVP by showing the internal structure, thereby also highlighting gaps in measures that can be added to the needs and priorities list. Using the MVP Maintenance Process, we encourage interested parties to submit recommended changes, including revisions to the clinical groupings.

After consideration of public comments, we are finalizing the *Vascular Surgery MVP* as proposed for the CY 2026 performance period/2026 MIPS payment year and future years.

Group B: Modifications to Previously Finalized MVPs for the CY 2026 Performance Period/2028 MIPS Payment Year and Future Years

B.1: Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP

The B.1 table, followed by a list of improvement activities, represents the measures and activities finalized within the Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP (89 FR 99006 through 99009) with modifications for the CY 2026 performance period/2028 MIPS payment year and future years. The Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP focuses on important assessors of the care emergency clinicians provide to patients. By focusing on these specific measures and activities, emergency clinicians can reduce clinical variability, improve the quality of emergency care and potentially lower costs. This MVP would be most applicable to clinicians who treat patients within the practice of emergency medicine, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.1 and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix⁴³⁷, we proposed removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

Modifications are being considered for the following QCDR measure⁴³⁸:

- **HCPR24: Appropriate Utilization of Vancomycin for Cellulitis:** This QCDR measure is undergoing modifications to clarify the numerator and add definitions for patients with known Methicillin-resistant *Staphylococcus aureus* (MRSA) infection or risks for MRSA infection.

Improvement Activities

For the reasons stated in the introduction of this appendix⁴³⁹, we removed three improvement activities from this MVP: **IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health**, **IA_CC_2: Implementation of improvements that contribute to more timely communication of test results**, and **IA_PM_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B**.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component

TABLE B.1: Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP Clinical Groupings

Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Infectious Disease/ Antibiotic Stewardship	Q065: Appropriate Treatment for Upper Respiratory Infection (URI) (Collection Type: eQOM, MIPS QOM)	No	Yes	COST_EDV_1: Emergency Medicine
	Q116: Avoidance of Antibiotic Treatment for Acute Bronchitis/Bronchiolitis (Collection Type: MIPS QOM)	No	Yes	
	Q331: Adult Sinusitis: Antibiotic Prescribed for Acute Viral Sinusitis (Overuse) (Collection Type: MIPS QOM)	No	Yes	
	(*) HCPR24: Appropriate Utilization of Vancomycin for Cellulitis (Collection Type: QCDR)	No	Yes	
Trauma	Q415: Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 18 Years and Older (Collection Type: MIPS QOM)	No	Yes	COST_EDV_1: Emergency Medicine
	Q416: Emergency Medicine: Emergency Department Utilization of CT for Minor Blunt Head Trauma for Patients Aged 2 Through 17 Years (Collection Type: MIPS QOM)	No	Yes	
Orthopedic Emergencies	ACEP52: Appropriate Emergency Department Utilization of Lumbar Spine Imaging for Acute Atraumatic Low Back Pain (Collection Type: QCDR)	No	Yes	COST_EDV_1: Emergency Medicine
	ECPR46: Avoidance of Opiates for Low Back Pain or Migraines (Collection Type: QCDR)	No	Yes	
Experience of Care	Q321: CAHPS for MIPS Clinician Group Survey (Collection Type: CAHPS Survey Vendor)	No	Yes	COST_EDV_1: Emergency Medicine
	ACEP50: ED Median Time from ED arrival to ED departure for all Adult Patients (Collection Type: QCDR)	Yes	Yes	

Adopting Best Practices and Promoting Patient Safety within Emergency Medicine Improvement Activities

- IA_BE_4: Engagement of Patients through Implementation of New Patient Portal
- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- (S) IA_BMH_12: Promoting Clinician Wellbeing
- (**) IA_MVP: Practice-Wide Quality Improvement in the MIPS Value Pathways Program
- IA_PSPA_1: Participation in an AHRQ-listed patient safety organization
- IA_PSPA_5: Use of QCDR data for ongoing practice assessment and improvements
- (S) IA_PSPA_15: Implementation of an ASP

The following is a summary of the comments we received and our responses:

Comment: A commenter noted support for the proposed maintenance updates to this MVP. A commenter requested the addition of Q066: Appropriate Testing for Pharyngitis, Q187: Stroke and Stroke Rehabilitation: Thrombolytic Therapy, and Q332: Adult Sinusitis: Appropriate Choice of Antibiotic: Amoxicillin With or Without Clavulanate Prescribed for Patients with Acute Bacterial Sinusitis to this MVP. These measures are included in the MIPS

Emergency Medicine Specialty Set and are relevant to emergency medicine. Together, these measures target the critical goal of ensuring appropriate use of antibiotics. The commenter believes the addition of these measures would ensure this MVP more accurately reflects the practice of emergency clinicians and would help to incentivize participation in this MVP.

Response: We thank the commenter for their support. We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Adopting Best Practices and Promoting Patient Safety within Emergency Medicine MVP* with modifications as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

B.2: Advancing Cancer Care MVP

The B.2 table, followed by a list of improvement activities, represents the measures and activities finalized within the Advancing Cancer Care MVP (§9 FR 99009 through 99015) with modifications for the CY 2026 performance period/2028 MIPS payment year and future years. The Advancing Cancer Care MVP focuses on the clinical specialty of providing fundamental treatment and management of cancer care. This MVP would be most applicable to clinicians who treat patients within the practice of oncology and hematology, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.2 and the list of improvement activities.

Quality Measures

We proposed adding two QCDR measures:

- **PIMSIL15: Antiemetic Therapy for Low- and Minimal-Emetic-Risk Antineoplastic Agents in the Infusion Center - Avoidance of Overuse (Lower Score = Better).** This QCDR measure is an inverse measure (lower score is better) that ensures clinicians follow clinical guidelines for patients treated with low- or minimal-emetic-risk antineoplastic agents by assessing for inappropriate pre-treatment antiemetic therapy.
- **PIMSIL16: Appropriate Antiemetic Therapy for High- and Moderate-Emetic-Risk Antineoplastic Agents in the Infusion Center:** This QCDR measure ensures clinicians follow clinical guidelines for patients treated with high- or moderate-emetic-risk antineoplastic agents by assessing for appropriate pre-treatment antiemetic therapy, which could result in improved control of nausea and vomiting in patients.

For the reasons stated in the introduction of this appendix⁶⁴⁰, we proposed removing one MIPS quality measure: **Q487: Screening for Social Drivers of Health**.

Modifications are being considered for the following QCDR measure⁶⁴¹:

- **PIMSIL13: Oncology: Mutation Testing for Stage IV Lung Cancer Completed Prior to the Start of Targeted Therapy:** This QCDR measure is undergoing modifications to add a denominator note to clarify the appropriate timeframe for the denominator eligible diagnosis ensuring consistent denominator eligible identification.

⁶⁴⁰ See MVP Development, Quality Measure and Improvement Activities Updates and MVP Format Listing.

⁶⁴¹ Ibid.

Improvement Activities

For the reasons stated in the introduction of this appendix⁹⁰², we removed three improvement activities from this MVP: **IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols**, **IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop**, and **IA_PM_26: Vaccine Achievement for Practice Staff COVID-19, Influenza, and Hepatitis B**.

Symbol Key:

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures finalized for addition to a previously finalized MVP.

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

TABLE B.2: Advancing Cancer Care MVP Clinical Groupings

Advancing Cancer Care MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Medical Oncology	(*) Q450: Appropriate Treatment for Patients with Stage I (I1c) – III HER2 Positive Breast Cancer (Collection Type: MIPS CQM)	No	Yes	(*) TPCC_I: Total Per Capita Cost
	(*) Q451: RAS (KRAS and NRAS) Gene Mutation Testing Performed for Patients with Metastatic Colorectal Cancer who receive Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibody Therapy (Collection Type: MIPS CQM)	No	No	
	Q462: Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy (Collection Type: eCQM)	No	No	COST_PC_I: Prostate Cancer
	Q490: Appropriate Intervention of Immune-related Diarrhea and/or Colitis in Patients Treated with Immune Checkpoint Inhibitors (Collection Type: MIPS CQM)	No	No	(*) TPCC_I: Total Per Capita Cost
	Q506: Positive PD-L1 Biomarker Expression Test Result Prior to First-Line Immune Checkpoint Inhibitor Therapy (Collection Type: MIPS CQM)	No	Yes	(*) TPCC_I: Total Per Capita Cost
	Q507: Appropriate Germline Testing for Ovarian Cancer Patients (Collection Type: MIPS CQM)	No	No	
	(*) PIMSH13: Oncology: Mutation Testing for Stage IV Lung Cancer Completed Prior to the start of Targeted Therapy (Collection Type: QCDR)	No	Yes	

⁹⁰² Ibid.

Advancing Cancer Care MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
	PIMSH17: Oncology: Utilization of Prophylactic G-CSF for Cancer Patients Receiving Low-Risk Chemotherapy (five se measure) (Collection Type: QCDR)	No	Yes	(*) TPCC_1: Total Per Capita Cost
Radiation Oncology	Q102: Prostate Cancer: Avoidance of Overuse of Bone Scan for Staging Low Risk Prostate Cancer Patients (Collection Type: eCQM, MIPS QCM)	No	Yes	COST_PC_1: Prostate Cancer (*) TPCC_1: Total Per Capita Cost
	(*) Q143: Oncology - Medical and Radiation - Pain Intensity Quantified (Collection Type: eCQM, MIPS QCM)	No	Yes	
	(*) Q144: Oncology: Medical and Radiation - Plan of Care for Pain (Collection Type: MIPS QCM)	No	Yes	
Advancing Health and Wellness	(*) Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan (Collection Type: Medicare Part B Claims, eCQM, MIPS QCM)	No	No	COST_PC_1: Prostate Cancer (*) TPCC_1: Total Per Capita Cost
Experience of Care	Q047: Advance Care Plan (Collection Type: Medicare Part B Claims, MIPS QCM)	No	Yes	COST_PC_1: Prostate Cancer (*) TPCC_1: Total Per Capita Cost
	Q321: CAHPS for MIPS Clinician/Group Survey (Collection Type: CAHPS Survey Vendor)	No	Yes	
	(*) Q453: Percentage of Patients Who Died from Cancer Receiving Systemic Cancer-Directed Therapy in the Last 14 Days of Life (lower score = better) (Collection Type: MIPS QCM)	No	Yes	
	(*) Q457: Percentage of Patients Who Died from Cancer Admitted to Hospice for Less than 3 days (lower score = better) (Collection Type: MIPS QCM)	Yes	Yes	
	Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood (Collection Type: MIPS QCM)	Yes	Yes	
	(*) Q503: Gains in Patient Activation Measure (PAMM) Scores at 12 Months (Collection Type: MIPS QCM)	Yes	Yes	

Advancing Cancer Care Improvement Activities

- **IA_BE_4: Engagement of Patients through Implementation of New Patient Portal**
- **IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings**
- **IA_BE_16: Engagement of Patients, Family, and Caregivers in Developing a Plan of Care**
- **IA_BE_24: Financial Navigation Program**
- **(*) IA_BMH_12: Promoting Clinician Well-Being**
- **IA_EC_13: Practice Improvements to Align with OpenNotes Principles**
- **IA_CC_17: Patient Navigator Program**
- **IA_EPA_2: Use of telehealth services that expand practice access**
- **(**) IA_MVP: Practice-Wide Quality Improvement in the MIPS Value Pathways Program**

- **IA_PM_14:** Implementation of methodologies for improvements in longitudinal care management for high-risk patients
- **IA_PM_15:** Implementation of episodic care management practice improvements
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PM_21:** Advance Care Planning
- **IA_PSPA_13:** Participation in Joint Commission Evaluation Initiative
- **IA_PSPA_16:** Use of decision support — ideally platform-agnostic, interoperable clinical decision support (CDS) tools — and standardized treatment protocols to manage workflow on the care team to meet patient needs
- **IA_PSPA_28:** Completion of an Accredited Safety or Quality Improvement Program

The following is a summary of the comments we received and our responses.

Comment: A few commenters noted support for the proposed addition of PMSH15: Antiemetic Therapy for Low- and Minimal-Emetic-Risk Antineoplastic Agents — Avoidance of Overuse and PMSH16: Appropriate Antiemetic Therapy for High- and Moderate-Emetic-Risk Antineoplastic Agents, to this MVP. Another commenter expressed continued support for the inclusion of Q450: Appropriate Treatment for Patients with Stage I (T1c) – III HER2 Positive Breast Cancer, Q451: RAS (KRAS and NRAS) Gene Mutation Testing Performed for Patients with Metastatic Colorectal Cancer who receive Anti-epidermal Growth Factor Receptor (EGFR) Monoclonal Antibody Therapy, Q506: Positive PD-L1 Biomarker Expression Test Result Prior to First-Line Immune Checkpoint Inhibitor Therapy, Q507: Appropriate Germline Testing for Ovarian Cancer Patients, and PMSH13: Oncology: Mutation Testing for Stage IV Lung Cancer Completed Prior to the Start of Targeted Therapy.

Response: We thank the commenters for their support.

After consideration of public comments, we are finalizing the *Advancing Cancer Care MVP* with modifications to Table B.3, for the CY 2026 performance period/2028 MIPS payment year and future years. Based on planned QCDR measure changes, we are not finalizing the addition of PMSH15: Antiemetic Therapy for Low- and Minimal-Emetic-Risk Antineoplastic Agents in the Infusion Center – Avoidance of Overuse (Lower Score – Better) or PMSH16: Appropriate Antiemetic Therapy for High- and Moderate-Emetic-Risk Antineoplastic Agents in the Infusion Center. Upon completion of the measure changes, we may consider the addition of these measures in future rulemaking.

B.3: Advancing Care for Heart Disease MVP

The B.3 table, followed by a list of improvement activities, represents the measures and activities finalized within the Advancing Care for Heart Disease MVP (89 FR 99015 through 99019) with modifications for the CY 2026 performance period/2028 MIPS payment year and future years. The Advancing Care for Heart Disease MVP focuses on the clinical theme of providing fundamental treatment and management of costly clinical conditions that contribute to, or may result from, heart disease. This MVP would be most applicable to clinicians who treat patients within the practice cardiology, internal medicine and family medicine, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.3 and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix⁶⁶³, we proposed removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

Improvement Activities

⁶⁶³ See MVP Development, Quality Measure and Improvement Activities, Updates and MVP Format Update.

For the reasons stated in the introduction of this appendix⁶⁴, we removed three improvement activities from this MVP: **IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols**, **IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health**, and **IA_PM_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B**.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component

⁶⁴ *Ibid*

TABLE B.3: Advancing Care for Heart Disease MVP Clinical Groupings

Advancing Care for Heart Disease MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Congestive Heart Failure	Q005: Heart Failure (HF): Angiotensin-Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) or Angiotensin Receptor-Natriuretic Inhibitor (ARNI) Therapy for Left Ventricular Systolic Dysfunction (LVSD) (Collection Type: eCQM, MIPS CQM)	No	No	COST_HF_1: Heart Failure (*) TPCC_1: Total Per Capita Cost
	Q008: Heart Failure (HF): Beta-Blocker Therapy for Left Ventricular Systolic Dysfunction (LVSD) (Collection Type: eCQM, MIPS CQM)	No	No	
	Q377: Functional Status Assessments for Heart Failure (Collection Type: eCQM)	No	Yes	
	Q492: Risk-Standardized Acute Unplanned Cardiovascular-Related Admission Rates for Patients with Heart Failure for the Merit-based Incentive Payment System (Collection Type: Administrative Claims)	Yes	Yes

	Q493: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood (Collection Type: MIPS QOM)	Yes	Yes	COST_STEMI_I: Inpatient (IP) Percutaneous Coronary Intervention (PCI)
	(*) Q503: Gains in Patient Activation Measure (PAM-8) Scores at 12 Months (Collection Type: MIPS QOM)	Yes	Yes	(*) TPCC_I: Total Per Capita Cost MSPB_I: Medicare Spending Per Beneficiary (MSPB) Clinician

Advancing Care for Heart Disease Improvement Activities

- (**) **IA_AHW_1:** Chronic Care and Preventative Care Management for Enpaneled Patients
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **IA_BE_15:** Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- **IA_BE_24:** Financial Navigation Program
- **IA_BE_25:** Drug Cost Transparency
- (*) **IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- (**) **IA_MVP:** Practice-Wide Quality Improvement in the MIPS Value Pathways Program
- **IA_PM_14:** Implementation of methodologies for improvements in longitudinal care management for high risk patients
- **IA_PSPA_4:** Administration of the AHRQ Survey of Patient Safety Culture
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements

The following is a summary of the comments we received and our responses.

Comment: A commenter supported updates to this MVP but urged additional improvements. The commenter raised concerns about the potential of double-counting performance on related services, called for inclusion of stronger outcome measures in the Electrophysiology and General Cardiology clinical groupings, and suggested modernizing measure sets to reflect current treatment strategies. The commenter advised limiting broad preventive measures in the Health and Wellness clinical grouping for broader MVPs or as optional measures if retained in this MVP. In addition, the commenter believes key gaps remain in this MVP, including measures for hypertension, peripheral artery disease, valvular heart disease, and cardiomyopathies.

Response: We thank the commenter for their support. The new clinical grouping format offers a streamlined set of quality measures to aid clinicians in selecting the most clinically relevant measures applicable to their clinical area and identifies when quality and cost measures are linked but is not intended to represent requirements and may not align with every clinician's scope of care. Currently, reporting of MVPs is voluntary to allow for the flexibility of reporting via traditional MIPS in the instance an MVP does not fit a clinician's scope of care. However, we would encourage the submission of meaningful new measures to the Annual Call for Measures for potential inclusion in future rulemaking. We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Advancing Care for Heart Disease MVP* with modifications as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

B.4: Advancing Rheumatology Patient Care MVP

The B.4 table, followed by a list of improvement activities, represents the measures and activities finalized within the Advancing Rheumatology Patient Care MVP (89 FR 99019 through 99023) with modifications for the CY 2026 performance period/2028 MIPS payment year and future years. The Advancing Rheumatology Patient Care MVP focuses on the clinical theme of providing fundamental treatment and management of rheumatological conditions. This MVP would be most applicable to clinicians who treat patients within the practice rheumatology, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.4 and the list of improvement activities.

Quality Measures

We proposed adding two QCDR measures.

- **ACR10: Hepatitis B Safety Screening:** This QCDR measure improves patient safety by ensuring that a hepatitis B screening is documented in the medical record for all patients newly initiating a biologic or new synthetic immunosuppressive drug.
- **ACR16: Rheumatoid Arthritis Patients with Low Disease Activity or Remission:** This QCDR measure assesses clinician performance based on the risk-adjusted proportion of patients with rheumatoid arthritis who have low disease activity or are in remission based on the last recorded disease activity score as assessed using an ACR-preferred tool.

For the reasons stated in the introduction of this appendix⁶⁶⁵, we proposed removing **Q487: Screening for Social Drivers of Health**. We also proposed removing one QCDR measure as this measure was proposed for removal from MIPS.

- **UREQ42: Ankylosing Spondylitis: Appropriate Pharmacologic Therapy**

Modifications are being considered for the following QCDR measure⁶⁶⁶:

- **ACR12: Disease Activity Measurement for Patients with PsA:** This QCDR measure is undergoing modifications to modify the denominator adding telehealth as denominator eligible

Improvement Activities

For the reasons stated in the introduction of this appendix⁶⁶⁷, we removed one improvement activity from this MVP: **IA_PM_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B**

Symbol Key:

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures finalized for addition to a previously finalized MVP.

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

TABLE B.4: Advancing Rheumatology Patient Care MVP Clinical Groupings

Advancing Rheumatology Patient Care MVP

Advancing Rheumatology Improvement Activities

- IA_BE_1: Use of certified EHR to capture patient reported outcomes
- IA_BE_4: Engagement of Patients through Implementation of New Patient Portal
- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA_BE_15: Engagement of Patients, Family, and Caregivers in Developing a Plan of Care
- IA_BE_24: Financial Navigation Program
- IA_BE_25: Drug Cost Transparency
- (*) IA_BE_26: Promote Use of Patient-Reported Outcome Tools
- (P) IA_BMH_2: Tobacco use

- **IA_EPA_2:** Use of telehealth services that expand practice access
- **(***) IA_MVP:** Practice-Wide Quality Improvement in the MIPS Value Pathways Program
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PSPA_28:** Completion of an Accredited Safety or Quality Improvement Program

The following is a summary of the comments we received and our responses.

Comment: A commenter opposed the inclusion of **COST_RA_1: Rheumatoid Arthritis** in this MVP. The commenter believes this cost measure penalizes physicians for drug costs outside their control and offers little value for improving care. They stated that barriers such as step therapy, the SADI Exclusion List, restrictive formularies, non-medical switching, and inadequate biosimilar reimbursement must be addressed.

Response: We may consider the removal of cost measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Advancing Rheumatology MVP* with modifications in Table B.4 for the CY 2026 performance period/2028 MIPS payment year and future years. We are not finalizing the addition of **RA_Rb: Rheumatoid Arthritis Patients with Low Disease Activity or Remission** as the measure didn't meet the criteria for inclusion in MIPS as there was no evidence of a gap in care outlined within the CY 2021 Medicare PFS Final Rule [§ 414.148(b)(4)(iv)(f)-(g)].

B.5 Complete Ophthalmologic Care MVP

The B.5 table, followed by a list of improvement activities, represents the measures and activities finalized within the Complete Ophthalmologic Core MVP (89 FR 98974 through 98979) with modifications for the CY 2026 performance period/2028 MIPS payment year and future years. This MVP would be most applicable to clinicians who treat patients within the practice of ophthalmology and optometry, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.5 and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix^{***}, we proposed removing one MIPS quality measure: **Q487: Screening for Social Drivers of Health**.

Modifications are being considered for the following QCDR measures^{***}:

- **IRIS2: Glaucoma – Intraocular Pressure Reduction:** This QCDR measure is undergoing modifications to revise the denominator by removing the requirement for “documentation of the severity of their glaucoma” to determine denominator eligibility.
- **IRIS13: Diabetic Macular Edema – Loss of Visual Acuity:** This QCDR measure is undergoing modifications to revise the denominator by removing the requirement for “2 visual acuity values with at least one on or after date of treatment” to determine denominator eligibility.

Improvement Activities

^{***} See *MVP Development, Quality Measure and Improvement Activities Update* and *MVP Course Update*.

^{****} *Id.*

For the reasons stated in the introduction of this appendix⁶⁷⁰, we removed two improvement activities from this MVP: **IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols** and **IA_PM_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B**.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component

TABLE B.5: Complete Ophthalmologic Care MVP Clinical Groupings

Complete Ophthalmologic Care MVP				
Clinical Grouping	Quality			Cost

- **(**)IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_16:** Implementation of medication management practice improvements
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements

The following is a summary of the comments we received and our responses.

Comment: A commenter appreciated the inclusion of clinical subgroupings in this MVP, but believes other subspecialties were omitted, limiting participation. The commenter recommended the inclusion of IRIS1: Endothelial Keratoplasty - Post-operative improvement in best corrected visual acuity to 20/40 or better, IRIS17: Acute Anterior Uveitis - Post-treatment Grade 0 anterior chamber cells, IRIS23: Refractive Surgery - Patients with a postoperative improvement in uncorrected visual acuity (UCVA) of 20/20 or better within 30 days, IRIS35: Improvement of Macular Edema in Patients with Uveitis, IRIS38: Endothelial Keratoplasty - Dislocation Requiring Surgical Intervention, IRIS50: Amblyopia - Interocular visual acuity, IRIS59: Regaining Vision After Cataract Surgery, and IRIS63: Exudative Age-Related Macular Degeneration - Gain of Visual Acuity. The commenter believes that including these additional QCDR measures would enable more ophthalmologists to report outcomes-based measures that better reflect their patients and care quality, allowing for meaningful participation from subspecialties like cornea and uveitis. The measures have been fully developed, tested, and are supported by an adoption plan, which the commenter believes would enhance subspecialist participation. The commenter also recommended the removal of Q303: Cataracts - Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery and Q304: Cataracts - Patient Satisfaction within 90 Days Following Cataract Surgery. The commenter believes that reporting on 75 percent of eligible patients is impractical, especially for high-volume procedures like cataract surgery, due to the burden of administering surveys. They recommend using QCDR measures like IRIS59: Regaining Vision After Cataract Surgery to better capture meaningful and achievable outcomes.

Response: We thank the commenter for their support of the addition of clinical groupings. We may consider the inclusion of additional quality measures as well as the removal of quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. Please note that both measures Q303 and Q304 include denominator exceptions, as we acknowledge the difficulty in receiving completed surveys, therefore, patients that fall into the denominator exception would be counted towards the 75 percent threshold for data completeness.

Comment: A few commenters continue to have concerns with this MVP. The commenters believe the MVP provides inadequate subspecialty representation and as a single, all encompassing MVP it does not meet the varied needs of the profession. The commenters are also concerned that the single cost measure included in the MVP only applies to cataract surgeons which they believe creates inequity among subspecialists. The commenters do not believe this MVP is functional or fair for ophthalmology and recommend creation of subspecialty-specific MVPs, like a Cataract MVP or include meaningful and equitable measures for all ophthalmic subspecialists. Furthermore, the cost performance category will be reweighted if there is no applicable cost measure. As of the 2024 performance period, the cost scoring policies were updated so that more clinicians are scored at or above the equivalent to the MIPS performance threshold (that is, 7.5 or more achievement points out of 10).

Response: We appreciate the commenters' concerns. The MVPs are intentionally broad to allow for comprehensive reporting within the MVP topic and contain measures that represent different aspects of care. Development of subspecialty MVPs is based upon several factors, including program goals, measure structure and feasibility, inventory, and interested party feedback. We understand that not all measures are applicable to all clinicians who would choose to report this MVP; however, reporting MVPs is voluntary at this time.

After consideration of public comments, we are finalizing the *Complete Ophthalmologic Care MVP* with modifications as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

B.6: Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP

The B.6 table, followed by a list of improvement activities, represents the measures and activities finalized within the Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP (89 FR 99023 through 99025) with modifications for the CY 2025 performance period/2027 MIPS payment year and future years. The Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP focuses on the clinical theme of providing fundamental prevention and treatment of those patients at risk for or that have had a stroke. This MVP would be most applicable to clinicians who treat patients within the practice of neurology, neurosurgical, and vascular surgery, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.6 and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix⁶⁷¹, we proposed removing one MIPS quality measure: **Q487: Screening for Social Drivers of Health**.

Improvement Activities

For the reasons stated in the introduction of this appendix⁶⁷², we removed three improvement activities from this MVP: **IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols**, **IA_CC_2: Implementation of improvements that contribute to more timely communication of test results**, and **IA_PM_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B**.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

⁶⁷¹ See MVP Development, Quality Measures and Improvement Activities Updates and MVP Format Update.

⁶⁷² *Ibid*.

TABLE B.6: Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP Clinical Groupings

Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Stroke Prevention	Q236: Controlling High Blood Pressure (Collection Type: Medicare Part B Claims, eCOM, MIPS COM)	Yes	Yes	COST_IHCL_1: Intracranial Hemorrhage or Cerebral Infarction
	Q326: Atrial Fibrillation and Atrial Flutter: Chronic Anticoagulation Therapy (Collection Type: MIPS COM)	No	No	
	Q344: Rate of Carotid Artery Stenting (CAS) for Asymptomatic Patients, Without Major Complications (Discharged to Home by Post-Operative Day 52) (Collection Type: MIPS COM)	Yes	No	
	Q438: Statin Therapy for the Prevention and Treatment of Cardiovascular Disease (Collection Type: eCOM, MIPS COM)	No	No	
	(*) Q441: Ischemic Vascular Disease (IVD) All or None Outcome Measure (Optimal Control) (Collection Type: MIPS COM)	Yes	Yes	
Stroke Care	Q187: Stroke and Stroke Rehabilitation: Thrombolytic Therapy (Collection Type: MIPS COM)	No	No	COST_IHCL_1: Intracranial Hemorrhage or Cerebral Infarction
	Q413: Door to Puncture Time for Endovascular Stroke Treatment (Collection Type: MIPS COM)	Yes	Yes	
Experience of Care	Q047: Advance Care Plan (Collection Type: Medicare Part B Claims, MIPS COM)	No	Yes	COST_IHCL_1: Intracranial Hemorrhage or Cerebral Infarction
	Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood (Collection Type: MIPS COM)	Yes	Yes	

Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes Improvement Activities

- **(*) IA_AHW_1:** Chronic Care and Preventative Care Management for Enfranchised Patients
- **IA_BE_1:** Use of certified EHR to capture patient reported outcomes
- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_24:** Financial Navigation Program
- **IA_BMH_15:** Behavioral/Mental Health and Substance Use Screening and Referral for Older Adults
- **IA_CC_13:** Practice improvements to align with OpenNotes principles
- **IA_CC_17:** Patient Navigator Program
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_16:** Implementation of episodic care management practice improvements

There were no comments received about the proposed modifications to this MVP. We are finalizing the *Coordinating Stroke Care to Promote Prevention and Cultivate Positive Outcomes MVP* with modifications as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

B.7: Dermatological Care MVP

The B.7 table, followed by a list of improvement activities, represents the measures and activities finalized within the Dermatological MVP (89 FR 98979 through 98984) with modifications for the CY 2026 performance period/2028 MIPS payment year and future years. The Dermatological Care MVP focuses on the clinical theme of providing treatment and management of dermatologic care. This MVP would be most applicable to clinicians who treat patients within the practice of dermatology, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.7 and the list of improvement activities.

Quality Measures

We proposed adding two MIPS quality measures:

- ♦ **Q047: Advance Care Plan:** This MIPS quality measure provides a meaningful assessment for patients undergoing dermatological care.
- ♦ **Q238: Use of High-Risk Medications in Older Adults:** This MIPS quality measure supports patient safety by assessing for the use of high-risk medications.

For the reasons stated in the introduction of this appendix⁶⁷³, we proposed removing **Q487: Screening for Social Drivers of Health**. We also proposed removing one MIPS quality measure and two QCDR measures:

- ♦ **Q130: Documentation of Current Medications in the Medical Record.**
- ♦ **AAD17: Continuation of Anticoagulation Therapy in the Office-based Setting for Closure and Reconstruction After Skin Cancer Resection Procedures.**
- ♦ **AAD18: Avoidance of Opioid Prescriptions for Closure and Reconstruction After Skin Cancer Resection.**

Improvement Activities

For the reasons stated in the introduction of this appendix⁶⁷⁴, we removed one improvement activity from this MVP; **IA_PM_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.**

Symbol Key:

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures finalized for addition to a previously finalized MVP.

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

⁶⁷⁴ Ibid.

Dermatological Care MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Skin Cancer	Q397: Melanoma Reporting (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	COST_MR_1: Melanoma Resection
	Q440: Skin Cancer: Biopsy Reporting Time – Pathologist to Clinician (Collection Type: MIPS CQM)	No	Yes	
	Q509: Melanoma: Tracking and Evaluation of Recurrence (Collection Type: MIPS CQM)	No	No	
	A406: Skin Cancer: Biopsy Reporting Time – Clinician to Patient (Collection Type: QCDR)	No	Yes	
	A412: Melanoma – Appropriate Surgical Margins (Collection Type: QCDR)	Yes	Yes	
	A416: Avoidance of Post-operative Systemic Antibiotics for Office-based Closures and Reconstruction After Skin Cancer Procedures (Collection Type: QCDR)	No	Yes	
Inflammatory Conditions	(*) Q176: Tuberculosis Screening Prior to First Course of Biologic and/or Immune Response Modifier Therapy (Collection Type: MIPS CQM)	No	Yes	N/A
	Q486: Dermatitis – Improvement in Patient-Reported Itch Severity (Collection Type: MIPS CQM)	Yes	Yes	
	Q410: Psoriasis: Clinical Response to Systemic Medications (Collection Type: MIPS CQM)	Yes	Yes	
	Q485: Psoriasis – Improvement in Patient-Reported Itch Severity (Collection Type: MIPS CQM)	Yes	Yes	COST_MR_1: Melanoma Resection
	Q226: Preventive Care and Screening: Tobacco Use: Screening and Cessation Intervention (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	No	No	
Experience of Care	(+) Q047: Advance Care Plan (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	COST_MR_1: Melanoma Resection
	(*) Q503: Gains in Patient Activation Measure (PAM9) Scores at 12 Months (Collection Type: MIPS CQM)	Yes	Yes	
	A408: Chronic Skin Conditions: Patient Reported Quality-of-Life (Collection Type: QCDR)	No	Yes	N/A
Advancing Health and Wellness	(+) Q238: Use of High-Risk Medications in Older Adults (Collection Type: eCQM, MIPS CQM)	No	Yes	N/A

Dermatological Care Improvement Activities

- EA_BE_4: Engagement of Patients through Implementation of New Patient Portal
- EA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- EA_BE_15: Engagement of Patients, Family and Caregivers in Developing a Plan of Care

- **1A_EPA_2:** Use of telehealth services that expand practice access
- **(*) 1A_EPA_7:** Enhance Engagement of Medicaid and Other Underserved Populations
- **(*) 1A_EPA_8:** Provide Education Opportunities for New Clinicians
- **(*) 1A_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **1A_PM_16:** Implementation of medication management practice improvements
- **1A_PSPA_8:** Use of Patient Safety Tools

The following is a summary of the comments we received and our responses:

Comment: A commenter noted support for the clinical groupings in this MVP. A couple commenters supported the inclusion of Q47: Advance Care Plan and Q338: Use of High-Risk Medications in Older Adults in this MVP, with a commenter believing these additions would address the lack of measures for general dermatologists and provide greater flexibility for participation regardless of EHR or MIPS registry. A commenter recommended including all measures from the dermatology specialty set to reduce confusion and expand reporting options, specifically the addition of Q374: Closing the Referral Loop: Receipt of Specialist Report and Q317: Screening for High Blood Pressure. The commenter felt their exclusion was arbitrary and raised concerns about the consistency of the measure selection process. A commenter noted support for the clinical groupings in this MVP. The commenter raised concerns about the MVP's separation of cost and quality measures across different conditions, stating it undermines value-based care. They believe cost and quality should be assessed together for the same condition. Specifically, they stated that only clinicians reporting on melanoma quality measures (for example, Q397) should be evaluated on the Melanoma Resection cost measure. Conversely, those reporting on unrelated conditions like inflammatory diseases (for example, A486) should not be held accountable for melanoma-related costs, especially when no associated cost measure exists for their reported quality measures. Another commenter opposed removing Q130: Documentation of Current Medications in the Medical Record, AAD17: Continuation of Anticoagulation Therapy in the Office-Based Setting for Closure and Reconstruction After Skin Cancer Resection Procedures, and AAD18: Avoidance of Opioid Prescriptions for Closure and Reconstruction After Skin Cancer Resection because they believe these measures are vital for patient safety and safe prescribing practices, particularly in dermatologic surgery.

Response: We thank the commenters for their support. We appreciate the feedback regarding the clinical groupings and will work to ensure that the purpose is understood. The addition of clinical groupings was at the request of multiple interested parties to further streamline measure selection; however, these clinical groupings do not represent requirements and may not align with every clinician's scope of care. We may consider the inclusion of additional quality measures or the removal of quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

While we agree the concepts are important to quality care, the removal of Q130: Documentation of Current Medications in the Medical Record, AAD17: Continuation of Anticoagulation Therapy in the Office-Based Setting for Closure and Reconstruction After Skin Cancer Resection Procedures, and AAD18: Avoidance of Opioid Prescriptions for Closure and Reconstruction After Skin Cancer Resection does not preclude the quality actions from continuing. Additionally, QCDR measures must meet the inclusion criteria to be finalized within MIPS and within an MVP. Based upon review of AAD17 and AAD18, they no longer meet that inclusion criteria.

Comment: A commenter believes this MVP is poorly designed, that many measures apply to dermatopathologists rather than dermatologists, and half are only available through a QCDR. The commenter opposed the removal of Q487: Screening for Social Drivers of Health and believed its inclusion would ensure clinical dermatology providers have at least one measure to report. Another commenter urged CMS to not remove any quality measures from this MVP as they believe the MVP already has a limited number of measures and insufficient measures for dermatological subspecialties. They believe if MVPs become the only reporting option available in the future, these clinicians are likely to face penalties through no fault of their own.

Response: We appreciate the commenter's concerns. The MVPs are intentionally broad to allow for comprehensive reporting within the MVP topic and contain measures that represent different aspects of care, such as dermatopathology. We understand that not all measures are applicable to all clinicians who would choose to report this MVP; however, reporting MVPs is voluntary at this time. While four of the quality measures are QCDR measures, there remain nine dermatology-related MIPS quality measures, four of which are broadly applicable. We would also note that we are adding measure Q487 to the MVP, which is a cross-cutting quality measure.

After consideration of public comments, we are finalizing the *Dermatological Care MVP* with modifications as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

B.8: Focusing on Women’s Health MVP

The B.8 table, followed by a list of improvement activities, represents the measures and activities finalized within the Women’s Health MVP (89 FR 99025 through 99029) with modifications for the CY 2026 performance period/2028 MIPS payment year and future years. The Focusing on Women’s Health MVP focuses on the clinical specialty of providing treatment and management of women’s health. This MVP would be most applicable to clinicians who treat patients within the practice of gynecology, obstetrics, and gynecology, including nonphysician practitioners (NPPs) such as certified nurse-midwives, nurse practitioners, and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.8 and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix⁶⁷⁷, we proposed removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

Improvement Activities

For the reasons stated in the introduction of this appendix⁶⁷⁸, we removed four improvement activities from this MVP: IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health, IA_PM_6: Use of toolsets or other resources to close healthcare disparities across communities, and IA_PM_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

Symbol Key:

- Single asterisk (*): existing measures and improvement activities with finalized revisions.
- Double asterisk (**): measures and improvement activities only available when included in an MVP.
- Single exclamation point (!): improvement activities with an advancing health and wellness component.

Focusing on Women's Health Improvement Activities

- 1A_BE_4: Engagement of Patients through Implementation of New Patient Portal
- (!) 1A_BE_16: Promote Self-management in Usual Care
- (!*) 1A_BE_26: Promote Use of Patient-Reported Outcome Tools
- 1A_BMH_11: Implementation of a Trauma-Informed Care (TIC) Approach to Clinical Practice
- (!) 1A_BMH_14: Behavioral Mental Health and Substance Use Screening and Referral for Pregnant and Postpartum Women
- (!) 1A_CC_9: Implementation of practices/processes for developing regular individual care plans
- 1A_EPA_2: Use of telehealth services that expand practice access
- (!*) 1A_EPA_7: Enhance Engagement of Medicaid and Other Underserved Populations
- (!*) 1A_MVP: Practice-Wide Quality Improvement in the MIPS Value Pathways Program
- (!) 1A_PM_23: Use of Computable Guidelines and Clinical Decision Support to Improve Adherence for Cervical Cancer Screening and Management Guidelines

There were no comments received about the proposed modifications to this MVP. We are finalizing the *Focusing on Women's Health MVP* with modifications as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

B.9: Gastroenterology Care MVP

The B.9 table, followed by a list of improvement activities, represents the measures and activities finalized within the Gastroenterology Care MVP (89 FR 98984 through 98989) with modifications for the CY 2026 performance period/2028 MIPS payment year and future years. The Gastroenterology Care MVP focuses on the clinical theme of providing treatment and management of the digestive system and the liver. This MVP would be most applicable to clinicians who treat patients within the practice of gastroenterology, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality and cost measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.9 and the list of improvement activities.

Quality Measures

We proposed adding one new MIPS quality measure:

- **Q516: Hepatitis C Virus (HCV): Sustained Virological Response (SVR):** This proposed MIPS quality measure captures an important outcome for this patient population. For the reasons stated in the introduction of this appendix⁶⁷⁷, we proposed removing two MIPS quality measures: **Q185: Colonoscopy Interval for Patients with a History of Adenomatous Polyps - Avoidance of Inappropriate Use** and **Q487: Screening for Social Drivers of Health**. Modifications are being considered for the following QCDR measures⁶⁷⁸:
 - **GIQIC26: Screening Colonoscopy Adenoma Detection Rate:** This QCDR measure is undergoing modifications to update the denominator exclusions to reflect any non-colonoscopy colorectal cancer screening test.
 - **NHCR4: Repeat screening or surveillance colonoscopy recommended within one year due to inadequate bowel preparation:** This QCDR measure is undergoing modifications to update the numerator to reflect numerator compliance for the clinical scenario of a patient referred for polyp or mass removal.

Improvement Activities

For the reasons stated in the introduction of this appendix⁶⁷⁹, we removed two improvement activities from this MVP: **IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols** and **IA_PM_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B**.

Cost Measures

We proposed adding one MIPS cost measure:

- **COST_LGH_1: Lower Gastrointestinal Hemorrhage:** This MIPS episode-based cost measure assesses costs associated with inpatient non-surgical treatment for acute bleeding in the lower gastrointestinal tract.

Symbol Key:

Caret symbol (^): new MIPS quality and Promoting Interoperability measures.

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures finalized for addition to a previously finalized MVP.

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

TABLE B.9: Gastroenterology MVP Clinical Groupings

Gastroenterology Care Improvement Activities

- IA_BE_4: Engagement of Patients through Implementation of New Patient Portal
- (*) IA_BE_26: Promote Use of Patient-Reported Outcome Tools
- IA_CC_7: Regular training in care coordination
- (*) IA_CC_9: Implementation of practices/processes for developing regular individual care plans
- IA_CC_10: Care transition documentation practice improvements
- IA_CC_13: Practice improvements to align with OpenNotes principles
- (*) IA_EPA_8: Provide Education Opportunities for New Clinicians
- (*) IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways

The following is a summary of the comments we received and our responses.

Comment: A commenter questioned the correlation between the cost and quality measures in some of the clinical groupings in this MVP. For example, the commenter would like to understand why COST_SSC_1: Screening/Surveillance Colonoscopy and COST_LGH_1: Lower Gastrointestinal Hemorrhage are included in both the General Gastroenterology and the Advancing Health and Wellness grouping. In addition, the commenter would like to understand why TPCC_1: Total Per Capita Cost is included in the Interventional Endoscopy grouping when there are two relevant GI cost measures already included in that grouping.

Response: We believe that the Lower Gastrointestinal Hemorrhage cost measure is appropriate to add to this MVP. The Lower Gastrointestinal cost measure assesses costs associated with inpatient non-surgical treatment for acute bleeding in the lower gastrointestinal tract and is often attributed to gastroenterologists. We continue to believe that the Screening/Surveillance Colonoscopy and Total Per Capita Cost (TPCC) cost measures are appropriate for use in this MVP for the reasons noted in the CY 2025 PFS final rule (89 FR 98986 through 98989). While the TPCC cost measure can capture cost savings associated with appropriate use of colonoscopies, we agree that the TPCC cost measure may not be as applicable to interventional endoscopy gastroenterology and will consider removing it from that clinical grouping. The purpose of the clinical groupings is to streamline quality measure selection and identify links between cost and quality measures; however, these clinical groupings do not represent requirements and may not align with every clinician's scope of care. Clinicians and groups who choose to report the Gastroenterology MVP may be scored on the TPCC cost measure if they meet the established case minimum. Clinicians and groups who do not meet the established case minimum will not be scored on the cost measure.

Comment: A commenter appreciated the more user-friendly format but believes the clinical groupings in this MVP highlight the gaps in the availability of meaningful quality measures specific and important to gastroenterologists. The commenter believes that quality measures added to this MVP are more applicable to primary care providers and are not meaningful to gastroenterologists.

Response: We acknowledge the commenters' concerns and encourage the development of new measures and submission to the Call for Measures for potential inclusion in future years. We understand that not all measures are applicable to all clinicians who would choose to report this MVP; however, reporting MVPs is voluntary at this time.

We encourage the development of new measures and submission to the Call for Measures for potential inclusion in future years.

After consideration of public comments, we are finalizing the *Gastroenterology Care MVP* with modifications as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

B.10: Improving Care for Lower Extremity Joint Repair MVP

The B.10 table, followed by a list of improvement activities, represents the measures and activities finalized within the Improving Care for Lower Extremity Joint Repair MVP (89 FR 49029 through 49031) with modifications for the CY 2026 performance period/2028 MIPS payment year and future years. The Improving Care for Lower Extremity Joint Repair MVP focuses on the clinical theme of providing fundamental treatment and management of patients with osteoarthritis and lower extremity surgical repair, such as fracture and total joint replacement, to ensure appropriate care and reduce costs. This MVP would be most applicable to clinicians who treat patients within the practice of orthopedic surgery, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.10 and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix⁸⁰⁰, we proposed removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

Improvement Activities

For the reasons stated in the introduction of this appendix⁸⁰¹, we removed two improvement activities from this MVP: IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols and IA_PM_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

⁸⁰⁰ See *MVP Description, Quality Measure and Improvement Activities Updates and MVP Format Update*.

⁸⁰¹ *Ibid*.

TABLE B.10: Improving Care for Lower Extremity Joint Repair MVP Clinical Groupings

Improving Care for Lower Extremity Joint Repair MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Non-Surgical	Q024: Communication with the Physician or Other Clinician Managing On-Going Care Post-Fracture for Men and Women Aged 50 Years and Older (Collection Type: Medicare Part B Claims, MIPS eCQM)	No	Yes	COST_PHA_1: Elective Primary Hip Arthroplasty COST_KA_1: Knee Arthroplasty
	Q350: Total Knee or Hip Replacement: Shared Decision-Making: Trial of Conservative (Non-surgical) Therapy (Collection Type: MIPS eCQM)	No	Yes	COST_PHA_1: Elective Primary Hip Arthroplasty
Surgical	Q351: Total Knee or Hip Replacement: Venous Thromboembolic and Cardiovascular Risk Evaluation (Collection Type: MIPS eCQM)	No	Yes	COST_KA_1: Knee Arthroplasty
	(*) Q376: Functional Status Assessment for Total Hip Replacement (Collection Type: eCQM)	No	Yes	COST_PHA_1: Elective Primary Hip Arthroplasty
	Q470: Functional Status After Primary Total Knee Replacement (Collection Type: MIPS eCQM)	Yes	Yes	COST_KA_1: Knee Arthroplasty
	(*) Q480: Risk-standardized complication rate (RSCR) following elective primary total hip arthroplasty (THA) and/or total knee arthroplasty (TKA) for Merit-based Incentive Payment System (MIPS) (Collection Type: Administrative Claims)	Yes	Yes	COST_PHA_1: Elective Primary Hip Arthroplasty COST_KA_1: Knee Arthroplasty
	(**) Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (Collection Type: Medicare Part B Claims, eCQM, MIPS eCQM)	No	No	COST_PHA_1: Elective Primary Hip Arthroplasty COST_KA_1: Knee Arthroplasty

Improving Care for Lower Extremity Joint Repair Improvement Activities

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **(*) (C) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **IA_CC_7:** Regular training in care coordination
- **(C) IA_CC_9:** Implementation of practices/processes for developing regular individual care plans
- **IA_CC_13:** Practice Improvements to Align with OpenNotes Principles
- **IA_CC_15:** PSI Care Coordination
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **IA_PSPA_18:** Measurement and improvement at the practice and panel level

There were no comments received about the proposed modifications to this MVP. We are finalizing the *Improving Care for Lower Extremity Joint Repair MVP* with modifications as proposed for the CY 2026 performance period 2028 MIPS payment year and future years.

B.11: Optimal Care for Kidney Health MVP

The B.11 table, followed by a list of improvement activities, represents the measures and activities finalized within the Optimal Care for Kidney Health MVP (89 FR 99031) through

99033) with modifications for the CY 2025 performance period/2027 MIPS payment year and future years. The Optimal Care for Kidney Health MVP focuses on the clinical specialty of providing fundamental treatment and management of costly clinical conditions that contribute to, or may result from, kidney disease. This MVP would be most applicable to clinicians who treat patients within the practice of nephrology. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.11 and the list of improvement activities

Quality Measures

We proposed adding one new MIPS quality measure:

- **Q512: Prevalent Standardized Kidney Transplant Waitlist Ratio (PSWR):** This proposed MIPS quality measure captures an additional population of patients on transplant list beyond their first year of dialysis.

For the reasons stated in the introduction of this appendix⁶², we proposed removing one MIPS quality measure: **Q487: Screening for Social Drivers of Health.**

Improvement Activities

For the reasons stated in the introduction of this appendix⁶³, we removed three improvement activities from this MVP: **IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols**, **IA_CC_2: Implementation of improvements that contribute to more timely communication of test results**, and **IA_PM_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.**

Symbol Key:

Caret symbol (^): new MIPS quality and Promoting Interoperability measures.

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures finalized for addition to a previously finalized MVP.

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

TABLE B.11: Optimal Care for Kidney Health MVP Clinical Groupings

Optimal Care for Kidney Health MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
General Nephrology	Q001: Diabetes, Glycemic Status Assessment Greater Than 9% (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	Yes	Yes	COST_AKID_3: Acute Kidney Injury Requiring New Inpatient Dialysis
	Q236: Controlling High Blood Pressure	Yes	Yes	COST_CKD_1:

⁶² See MVP Development, Quality Measure and Improvement Activities Updates and MVP Formal Update.

⁶³ *Ibid.*

Optimal Care for Kidney Health MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
	(Collection: Type: Medicare Part B Claims, eCQM, MIPS CQM)			Chronic Kidney Disease (CKD) COST_ESRD_1: End-Stage Renal Disease COST_KTM_1: Kidney Transplant Management (*) TPCC_1: Total Per Capita Cost
	(*) Q488: Kidney Health Evaluation (Collection: Type: eCQM, MIPS CQM)	No	No	(*) TPCC_1: Total Per Capita Cost
	Q489: Adult Kidney Disease: Angiotensin Converting Enzyme (ACE) Inhibitor or Angiotensin Receptor Blocker (ARB) Therapy (Collection: Type: MIPS CQM)	No	No	COST_CKD_1: Chronic Kidney Disease (CKD) COST_ESRD_1: End-Stage Renal Disease (*) TPCC_1: Total Per Capita Cost
Dialysis/Transplant	Q482: Hemodialysis Vascular Access: Practitioner Level Long-term Catheter Rate (Collection: Type: MIPS CQM)	Yes	Yes	COST_CKD_1: Chronic Kidney Disease (CKD) COST_ESRD_1: End-Stage Renal Disease (*) TPCC_1: Total Per Capita Cost
	Q510: First Year Standardized Waitlist Ratio (FYSWR) (Collection: Type: MIPS CQM)	Yes	No	COST_ESRD_1: End-Stage Renal Disease (*) TPCC_1: Total Per Capita Cost
	Q511: Percentage of Prevalent Patients Waitlisted (PPPW) and Percentage of Prevalent Patients Waitlisted in Active Status (aPPPW) (Collection: Type: MIPS CQM)	Yes	No	
	(*) Q512: Prevalent Standardized Kidney Transplant Waitlist Ratio (PSWR) (Collection: Type: MIPS CQM)	No	No	
Advancing Health and Wellness	(*) Q130: Documentation of Current Medications in the Medical Record (Collection: Type: eCQM, MIPS CQM)	No	Yes	COST_AKID_1: Acute Kidney Injury Requiring New Inpatient Dialysis
	(*) Q493: Adult Immunization Status (Collection: Type: MIPS CQM)	No	No	COST_CKD_1: Chronic Kidney Disease (CKD) COST_ESRD_1: End-Stage Renal Disease

Optimal Care for Kidney Health MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
				COST_KTM_1: Kidney Transplant Management (*) TPCC_1: Total Per Capita Cost
Experience of care	Q047: Advance Care Plan (Collection Type: Medicare Part B Claims, MIPS QOM)	No	Yes	COST_AKID_1: Acute Kidney Injury Requiring New Inpatient Dialysis
	Q495: Ambulatory Palliative Care Patients Experience of Feeling Heard and Understood (Collection Type: MIPS QOM)	Yes	Yes	COST_CKD_1: Chronic Kidney Disease (CKD)
		Yes	Yes	COST_ESRD_1: End-Stage Renal Disease
	(*) Q503: Gains in Patient Activation Measure (PAM®) Scores at 12 Months (Collection Type: MIPS QOM)			COST_KTM_1: Kidney Transplant Management (*) TPCC_1: Total Per Capita Cost

Optimal Care for Kidney Health Improvement Activities

- (*) IA_AHW_1: Chronic Care and Preventative Care Management for Empowered Patients
- IA_BE_4: Engagement of Patients through Implementation of New Patient Portal
- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA_BE_14: Engage Patients and Families to Guide Improvement in the System of Care
- IA_BE_15: Engagement of Patients, Family and Caregivers in Developing a Plan of Care
- (*) IA_BE_16: Promote Self-management in Usual Care
- (*) IA_BE_26: Promote Use of Patient-Reported Outcome Tools
- IA_CC_13: Practice Improvements to Align with OpenNotes Principles
- (**) IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PM_11: Regular Review Practices in Place on Targeted Patient Population Needs
- IA_PM_16: Implementation of medication management practice improvements
- IA_PSPA_16: Use of decision support—ideally platform-agnostic, interoperable clinical decision support (CDSS) tools—and standardized treatment protocols to manage workflow on the care team to meet patient needs

The following is a summary of the comments we received and our responses.

Comment: A commenter noted support for the Dialysis Transplant clinical grouping in this MVP.

Response: We thank the commenter for their support.

After consideration of public comments, we are finalizing the *Optimal Care for Kidney Health MVP* with modifications as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

B.12: Optimal Care for Patients with Urologic Conditions MVP

The B.12 table, followed by a list of improvement activities, represents the measures and activities finalized within the Optimal Care for Urologic Conditions MVP (\$9 FR 98989 through 98994) with modifications for the CY 2025 performance period/2027 MIPS payment year and

future years. The Optimal Care for Patients with Urologic Conditions MVP focuses on assessing optimal care for patients treated for a broad range of urologic conditions, including kidney stones, urinary incontinence, bladder cancer, and prostate cancer. This MVP would be most applicable to clinicians who treat patients within the practices of urology, general urologists, urology oncologists, and urology care for women, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.12 and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix⁴⁴, we proposed removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

Improvement Activities

For the reasons stated in the introduction of this appendix⁴⁵, we removed three improvement activities from this MVP: IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health, IA_PM_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B, and IA_PSPA_19: Implementation of formal quality improvement methods, practice changes, or other practice improvement processes.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

TABLE B.12: Optimal Care for Patients with Urologic Conditions MVP Clinical Groupings

Optimal Care for Patients with Urologic Conditions MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Urological Cancer	Q462: Bone Density Evaluation for Patients with Prostate Cancer and Receiving Androgen Deprivation Therapy (Collection Type: eCQM)	No	No	COST_PC_1: Private Cancer
	Q476: Urinary Symptom Score Change 6-12 Months After Diagnosis of Benign Prostatic Hyperplasia (Collection Type: eCQM)	Yes	Yes	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician
	Q481: Intravesical Bacillus-Calmette-Guérin for Non-muscle Invasive Bladder Cancer (Collection Type: eCQM)	No	Yes	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician

⁴⁴ See MVP Development: Quality Measure and Improvement Activities Updates and MVP Format Update.

⁴⁵ Ibid.

Optimal Care for Patients with Urologic Conditions MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority

General Urology	AQUA15: Stones: Urinalysis or Urine Culture Performed Before Surgical Stone Procedures (Collection Type: QCDR)	No	Yes	
Advancing Health and Wellness	Q318: Falls: Screening for Future Fall Risk (Collection Type: eCQM)	No	Yes	COST_PC_1: Prostate Cancer COST_RUSST_1: Renal or Ureteral Stone Surgical Treatment MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician
Experience of Care	Q321: CAHPS for MIPS Clinician/Group Survey (Collection Type: CAHPS Survey Vendor)	No	Yes	COST_PC_1: Prostate Cancer
	Q358: Patient-Centered Surgical Risk Assessment and Communication (Collection Type: MIPS QOM)	No	Yes	COST_RUSST_1: Renal or Ureteral Stone Surgical Treatment
	(*) Q503: Gains in Patient Activation Measure (PAM9) Scores at 12 Months (Collection Type: MIPS QOM)	Yes	Yes	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician

Optimal Care for Patients with Urologic Conditions Improvement Activities

- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- IA_BE_15: Engagement of Patients, Family and Caregivers in Developing a Plan of Care
- (*) IA_BE_26: Promote Use of Patient-Reported Outcome Tools
- IA_CC_7: Regular training in care coordination
- IA_CC_13: Practice improvements to align with OpenNotes principles
- IA_CC_17: Patient Navigator Program
- IA_EPA_2: Use of telehealth services that expand practice access
- (**) IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways

- **IA_PM_17:** Participation in Population Health Research
- **IA_PM_21:** Advance Care Planning
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **IA_PSPA_12:** Participation in private payer CPTA
- **IA_PSPA_21:** Implementation of fall screening and assessment programs

The following is a summary of the comments we received and our responses:

Comment: A commenter agreed with the removal of **IA_PM_26:** Vaccine Achievement for Practice Staff, COVID-19, Influenza, and Hepatitis B from this MVP.

Response: We thank the commenter for their support.

Comment: A commenter believes this MVP is mainly suited for large organizations that can integrate with systems like the AQUA registry. The commenter noted the MVP lacks claims-based measures and eQIMs, tools widely supported by EHRs and crucial for enabling smaller practices to participate. The commenter recommended relevant claims-based options be added to make this MVP more accessible to a broader range of practices.

Response: We encourage the development of eQIMs as part of our overall strategy towards digital quality measures (dQMs); however, this is not currently a requirement, and not all measures are submitted to the Annual Call for Quality Measures with an option for the eQIM collection type. We strive to include measures from different collection types to allow flexibility in reporting but are limited to the collection types developed and submitted by the measure steward. We encourage the commenter to reach out to the measure steward of current measures not available as eQIMs or claims-based to discuss revisions for possible implementation in future years.

Comment: A commenter disagreed with the removal of **IA_PSPA_19:** Implementation of formal quality improvement methods, practice changes, or other practice improvement processes. The commenter believes this improvement activity is warranted as it allows for significant flexibility in the focus area of the quality improvement completed.

Response: We appreciate commenter's feedback. **IA_PSPA_19** has been removed from all MVPs as **IA MVP: Practice-Wide Quality Improvement in MIPS Value Pathways** is substantially similar.

After consideration of public comments, we are finalizing the *Optimal Care for Patients with Urologic Conditions* AWP with modifications as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

B.13: Patient Safety and Support of Positive Experiences with Anesthesia MVP

The B.13 table, followed by a list of improvement activities, represents the measures and activities finalized within the Patient Safety and Support of Positive Experiences with Anesthesia MVP (89 FR 99035 through 99037) with modifications for the CY 2025 performance period/2027 MIPS payment year and future years. The Patient Safety and Support of Positive Experiences with Anesthesia MVP focuses on increasing the quality of anesthesia care, improving postoperative outcomes, promoting patient safety, and enhancing satisfaction for patients receiving anesthesia. The measures are used for a variety of surgical procedures that anesthesiologists deliver care for, and are broadly applicable to anesthesiologists practicing within ambulatory, outpatient, and inpatient hospital settings, including NPPs such as certified registered nurse anesthetists (CRNAs) and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.13 and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix^{68*}, we proposed removing two MIPS quality measures: **Q424: Perioperative Temperature Management** and **Q487: Screening for Social Drivers of Health**.

Improvement Activities

For the reasons stated in the introduction of this appendix^{68*}, we removed two improvement activities from this MVP: **IA_CC_2: Implementation of improvements that contribute to more timely communication of test results** and **IA_PM_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B**.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

^{68*} See MVP Development, Quality Measure, and Improvement Activities Updates and MVP Forum Update.

Patient Safety and Support of Positive Experiences with Anesthesia Improvement Activities

- **IA_BE_6:** Regularly Assess Patient Experience of Care and Follow Up on Findings
- **IA_BE_22:** Improved practices that engage patients pre-visit
- **(*) IA_BMH_2:** Tobacco use
- **IA_CC_15:** PSH Care Coordination
- **IA_CC_19:** Tracking of clinician's relationship to and responsibility for a patient by reporting MACRA patient relationship codes
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PSPA_1:** Participation in an AHRQ-listed patient safety organization
- **IA_PSPA_7:** Use of QCDR data for ongoing practice assessment and improvements
- **IA_PSPA_16:** Use decision support—ideally platform-agnostic, interoperable clinical decision support (CDS) tools—and standardized treatment protocols to manage workflow on the care team to meet patient needs

The following is a summary of the comments we received and our responses.

Comment: A couple of commenters recommended adding EPREOP30: Ultrasound Guidance for Peripheral Nerve Block with Patient Experience and including more general measures such as Q130: Documentation of Current Medications in the Medical Record to this MVP to increase relevance for all anesthesia providers.

Response: We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

Comment: A commenter noted appreciation for efforts to improve this MVP but urges the replacement of the roped-out Q434: Perioperative Temperature Management measure with another relevant process or outcome

measure. The commenter noted that the current anesthesia measure set is limited, which may hinder providers, especially in multispecialty groups, from demonstrating quality improvement. The commenter recommended adding patient-centered measures, such as postoperative pain levels or the Baker Patient Satisfaction Questionnaire, to enhance the MVP's value and better capture patient experience and outcomes. A couple of commenters opposed the removal of Q424: Perioperative Temperature Management from this MVP as they believe this measure is an essential anesthesiologist measure, representing a critical clinical workflow preserving patient safety and the prevention of adverse events such as postoperative infections.

Response: We thank the commenter for their support. We acknowledge the commenter's concern regarding removing measures without replacements; however, we also endeavor to balance meaningful reporting with burden. While topped-out measures represent an important aspect of care, the quality action is considered a standard of care with limited opportunity to improve clinical outcomes. Removal allows eligible clinicians to maximize their potential quality performance score as these measures topped out status would likely limit the score awarded. We encourage the development of new measures and submission to the Call for Measures for potential inclusion in future years. Additionally, we would encourage the commenter to reach out to the measure stewards of patient-centered measures to ensure these measures are appropriate and applicable to anesthesiologists, that is, the denominator criteria including the coding is representative of this specialty, for potential inclusion in future years. We appreciate the commenters' feedback on Q424: Perioperative Temperature Management. This measure has been finalized to be removed from the program and therefore will be removed from this MVP. For the full rationale for the removal of Q424, please review Appendix . MIPS Quality Measures of this final rule, Table Group C.

After consideration of public comments, we are finalizing the *Patient Safety and Support of Positive Experiences with Anesthesia MVP* with modifications as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

B.14: Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP

The B.14 table, followed by a list of improvement activities, represents the measures and activities finalized within the Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP (89 FR 99038 through 99040) with modifications for the CY 2025 performance period/2027 MIPS payment year and future years. The Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP focuses on the clinical specialty of promoting quality care for patients suffering from infectious disorders. This MVP would be most applicable to clinicians who treat patients within the practices of infectious disease and immunology, including NPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality and cost measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.14 and the list of improvement activities.

Quality Measures

We proposed adding one new MIPS quality measure:

- **Q516: Hepatitis C Virus (HCV): Sustained Virological Response (SVR):** This proposed MIPS quality measure that captures important outcome for this patient population.

For the reasons stated in the introduction of this appendix⁴⁸⁸, we proposed removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

Improvement Activities

⁴⁸⁸ See MVP Development, Quality Measure and Improvement Activities Updates and MVP Format Update

For the reasons stated in the introduction of this appendix⁶⁶⁹, we removed four improvement activities from this MVP: **IA_AHE_5: MIPS Eligible Clinician Leadership in Clinical Trials or CBPR**, **IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health**, **IA_PM_6: Use of toolsets or other resources to close healthcare disparities across communities**, and **IA_PM_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis**.

Cost Measures

We proposed adding three additional MIPS cost measures:

- **COST_RIH_1: Respiratory Infection Hospitalization**. This MIPS episode-based cost measure assesses costs associated with inpatient treatment for a respiratory infection.
- **COST_S_1: Sepsis**. This MIPS episode-based cost measure assesses costs associated with inpatient medical treatment for sepsis.
- **MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician**. This MIPS cost measure applies to clinicians providing care for acute infections in inpatient hospitals.

Symbol Key:

Caret symbol (^): new MIPS quality and Promoting Interoperability measures

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures finalized for addition to a previously finalized MVP.

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

TABLE B.14: Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP Clinical Groupings

Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Chronic: Hep C, HIV/AIDS	Q105: Sexually Transmitted Infection (STI) Testing for People with HIV (Collection Type: eCOM, MIPS CQM)	No	No	(*) TPCC_1: Total Per Capita Cost
	Q338: HIV Viral Suppression (Collection Type: eCOM, MIPS CQM)	Yes	Yes	
	Q340: HIV Medical Visit Frequency (Collection Type: MIPS CQM)	No	Yes	
	Q387: Annual Hepatitis C Virus (HCV) Screening for Patients who are Active Injection Drug Users (Collection Type: MIPS CQM)	No	No

Prevention and Treatment of Infectious Disorders Including Hepatitis C and HIV Improvement Activities

- **IA_BE_4:** Engagement of Patients through Implementation of New Patient Portal
- **IA_BE_15:** Engagement of patients, family and caregivers in developing a plan of care
- **(*) IA_EPA_7:** Enhanced Engagement of Medicaid and Other Underserved Populations
- **(**) IA_MVP:** Practice Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_11:** Regular review practices in place on targeted patient population needs
- **IA_PM_14:** Implementation of methodologies for improvements in longitudinal care management for high risk patients

- (1) **IA_PM_22:** Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services
- **IA_PSPA_23:** Completion of CDC Training on Antibiotic Stewardship
- (1) **IA_PSPA_32:** Use of CDC Guideline for Clinical Decision Support to Prescribe Opioids for Chronic Pain via Clinical Decision Support

The following is a summary of the comments we received and our responses.

Comment: A commenter supported the inclusion of Q516: Hepatitis C Virus (HCV), Sustained Virological Response (SVR). The commenter believes the use of this measure in performance measurement will incentivize best practices and improved patient outcomes. The commenter also supported the addition of COST_RIH_1: Respiratory Infection Hospitalization, COST_S_1: Sepsis, and MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician.

Response: We thank the commenter for their support.

After consideration of public comments, we are finalizing the *Prevention and Treatment of Infectious Disorders including Hepatitis C and HIV* AHP with modifications as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

B.15: Pulmonology Care MVP

The B.15 table, followed by a list of improvement activities, represents the measures and activities finalized within the Pulmonology Care MVP (89 FR 98904 through 98908) with modifications for the CY 2025 performance period/2027 MIPS payment year and future years. The Pulmonology Care MVP focuses on assessing optimal care for patients treated for a broad range of pulmonology conditions including COPD, asthma, sleep apnea, and general pulmonology. This MVP would be most applicable to clinicians who specialize in pulmonology and sleep medicine, including NPPs such as nurse practitioners and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.15 and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix⁶⁹², we proposed removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

Improvement Activities

For the reasons stated in the introduction of this appendix⁶⁹³, we removed three improvement activities from this MVP: **IA_AHE_9:** Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, **IA_AHE_12:** Practice Improvements that Engage Community Resources to Address Drivers of Health, and **IA_PM_26:** Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

⁶⁹² See MVP Development, Quality Measure and Improvement Activities Updates and MVP Trust Update.

⁶⁹³ *Ibid*.

	Q226: Preventive Care and Screening Tobacco Use: Screening and Cessation Intervention (Collection Type: Medicare Part B Claims, eCQM, MIPS CQM)	No	No	COST_COPDE_1: Inpatient Chronic Obstructive Pulmonary Disease (COPD) Exacerbation
Experience of Care	Q047: Advance Care Plan (Collection Type: Medicare Part B Claims, MIPS CQM)	No	Yes	COST_ACOPD_1: Asthma/ Chronic Obstructive Pulmonary Disease (COPD)
	(*) Q503: Gains in Patient Activation Measure (PAM16) Scores at 12 Months (Collection Type: MIPS CQM)	Yes	Yes	COST_COPDE_1: Inpatient Chronic Obstructive Pulmonary Disease (COPD) Exacerbation

Pulmonology Care Improvement Activities

- (*) IA_AHW_1: Chronic Care and Preventative Care Management for Enpaneled Patients
- IA_BE_23: Integration of patient coaching practices between visits
- (*) IA_BE_26: Promote Use of Patient-Reported Outcome Tools
- (I) IA_CC_9: Implementation of practices/processes for developing regular individual care plans
- IA_EPA_2: Use of telehealth services that expand practice access
- (**) IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PM_16: Implementation of medication management practice improvements

The following is a summary of the comments we received and our responses:

Comment: A commenter recommended adding Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood to this MVP.

Response: We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Painmanagement Care MVP* with modifications as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

B.16: Quality Care for Patients with Neurological Conditions MVP

The B.16 table, followed by a list of improvement activities, represents the measures and activities finalized within the Quality Care for Patients with Neurological Conditions MVP (89 FR 99040 through 99044) with modifications for the CY 2025 performance period/2027 MIPS payment year and future years. The Quality Care for Patients with Neurological Conditions MVP focuses on the clinical theme of promoting quality care for patients suffering from neurological conditions. This MVP would be most applicable to clinicians who specialize in neurology care, including NPPs such as nurse practitioners and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.16 and the list of improvement activities.

Quality Measures

We proposed adding one new MIPS quality measure:

- **Q513: Patient reported falls and plan of care:** This proposed MIPS quality measure captures falls assessment and care plan specific to patients with neurological conditions.

For the reasons stated in the introduction of this appendix⁶⁶², we proposed removing **Q487: Screening for Social Drivers of Health**. We also proposed removing three additional MIPS quality measures:

- **Q155: Falls: Plan of Care**
- **Q290: Assessment of Mood Disorders and Psychosis for Patients with Parkinson's Disease**
- **Q419: Overuse of Imaging for the Evaluation of Primary Headache**

Improvement Activities

For the reasons stated in the introduction of this appendix⁶⁶³, we removed three improvement activities from this MVP: **IA_BMH_8: Electronic Health Record Enhancements for BH data capture**, **IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop**, and **IA_PM_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B**.

Symbol Key:

Caret symbol (^): new MIPS quality and Promoting Interoperability measures.

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures finalized for addition to a previously finalized MVP.

Single asterisk (*): existing measures and improvement activities with finalized revisions.

⁶⁶² See *MVP Development, Quality Measure and Improvement Activities Updates and MVP Format Update*.

⁶⁶³ *Ibid*.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

TABLE B.16: Quality Care for Patients with Neurological Conditions MVP Clinical Groupings

Quality Care for Patients with Neurological Conditions MVP				
Clinical Grouping	Quality			Cost
	Measure	Outcome	High Priority	
Brain Conditions	Q268: Epilepsy: Counseling for Women of Childbearing Potential with Epilepsy (Collection Type: MIPS CQM)	No	No	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician
Dementia	(*) Q281: Dementia: Cognitive Assessment (Collection Type: eCQM)	No	No	MSPB_1: Medicare Spending Per Beneficiary (MSPB) Clinician

	(*) Q503: Gains in Patient Activation Measure (PAM2) Scores at 12 Months (Collection Type: MIPS CQM)	Yes	Yes	

Quality Care for Patients with Neurological Conditions Improvement Activities

- IA_BE_4: Engagement of Patients through Implementation of New Patient Portal
- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings
- (S) IA_BE_16: Promote Self-management in Usual Care
- IA_BE_24: Financial Navigation Program
- (*) (S) IA_BE_26: Promote Use of Patient-Reported Outcome Tools
- (S) IA_BMH_4: Depression screening
- IA_EPA_2: Use of telehealth services that expand practice access
- (**) IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PM_11: Regular review practices in place on targeted patient population needs
- IA_PM_16: Implementation of medication management practice improvements
- IA_PM_21: Advance Care Planning
- IA_PSPA_21: Implementation of fall screening and assessment programs

There were no comments received about the proposed modifications to this MVP. We are finalizing the Quality Care for Patients with Neurological Conditions MVP with modifications as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

B.17: Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP

The B.17 table, followed by a list of improvement activities, represents the measures and activities finalized within the Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP (89 FR 99044 through 99047) with modifications for the CY 2025 performance period/2027 MIPS payment year and future years. The Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP focuses on the clinical specialty of providing care for patients experiencing some of the most common otolaryngology conditions such as, but not limited to: otologic conditions, chronic rhinosinusitis (CRS), age-related hearing loss (ARHL) and otitis media. This MVP would be most applicable to clinicians who treat patients within the practice of otolaryngology, including NPPs such as audiologists, nurse practitioners, and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.17 and the list of improvement activities.

Quality Measures

We proposed adding one additional QCDR measure:

- **AA016: Age-Related Hearing Loss: Audiometric Evaluation:** This QCDR measure ensures patients who failed a hearing screening and/or who report suspected hearing loss receive, are ordered, or are referred for a comprehensive audiometric evaluation in a timely fashion.

For the reasons stated in the introduction of this appendix⁶⁹¹, we proposed removing one MIPS quality measure: **Q487: Screening for Social Drivers of Health**.

Improvement Activities

For the reasons stated in the introduction of this appendix⁶⁹², we removed three improvement activities from this MVP: **IA_AHE_3: MIPS Eligible Clinician Leadership in Clinical Trials or CBPR**, **IA_CC_1: Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop**, and **IA_PM_26: Vaccine Achievement for Practice Staff**, COVID-19, Influenza, and Hepatitis B.

Symbol Key:

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Single exclamation point (!): improvement activities with an advancing health and wellness component.

TABLE B.17: Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP Clinical Groupings

- 1A_BE_15: Engagement of Patients, Family and Caregivers in Developing a Plan of Care
- (*) 1A_BE_26: Promote Use of Patients-Reported Outcome Tools
- 1A_CC_13: Practice improvements to align with OpenNotes principles
- (***) 1A_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- 1A_PM_16: Implementation of medication management practice improvements
- 1A_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements

The following is a summary of the comments we received and our responses.

Comment: A commenter agreed with the reinstatement of AAO16: Age-Related Hearing Loss Audiometric Evaluation and questioned its removal from the MVP. The commenter urges a more collaborative and transparent approach when refining MVPs.

Response: We thank the commenter for their support. We acknowledge the commenter's feedback and will continue to refine workflows as needed to create a collaborative approach for MVP maintenance.

After consideration of public comments, we are finalizing the *Quality Care for the Treatment of Ear, Nose, and Throat Disorders MVP* with modifications as proposed for the CY 2026 performance period: 2028 MIPS payment year and future years.

B.18: Quality Care in Mental Health and Substance Use Disorders MVP

The B.18 table, followed by a list of improvement activities, represents the measures and activities finalized within the Quality Care in Mental Health and Substance Use Disorders MVP (89 FR 99047 through 99049) with modifications for the CY 2025 performance period/2027 MIPS payment year and future years. The Quality Care in Mental Health and Substance Use Disorders MVP focuses on the clinical specialty of promoting prevention of and quality care in behavioral health, including mental health and substance use disorders (SUD). This MVP would be most applicable to clinicians who treat patients with mental health and substance use disorders within the practices of mental/behavioral health and psychiatry, including NPPs such as clinical social workers, nurse practitioners, and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.18 and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix^{xxx}, we proposed removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

Improvement Activities

For the reasons stated in the introduction of this appendix^{xxx}, we removed five improvement activities from this MVP: IA_AHE_5: MIPS Eligible Clinician Leadership in Clinical Trials or CBPR, IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, IA_AHE_12: Practice Improvements that Engage Community Resources to Address Drivers of Health, IA_PM_6: Use of toolsets or other resources to close healthcare disparities across communities, and IA_PM_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

Mental Health and Substance Use Disorders Improvement Activities

- 1A BE 12: Use evidence-based decision aids to support shared decision-making

- (1) IA_BE_16: Promote Self-management in Usual Care
- IA_BE_23: Integration of patient coaching practices between visits
- (*) (1) IA_BE_26: Promote Use of Patient-Reported Outcome Tools
- (1) IA_BMH_2: Tobacco use
- (1) IA_BMH_5: MDD prevention and treatment interventions
- IA_BMH_7: Implementation of Integrated Patient-Centered Behavioral Health Model
- (1) IA_BMH_14: Behavioral/Mental Health and Substance Use Screening and Referral for Pregnant and Postpartum Women
- (1) IA_BMH_15: Behavioral/Mental Health and Substance Use Screening and Referral for Older Adults
- IA_EPA_2: Use of telehealth services that expand practice access
- (*) IA_EPA_7: Enhance Engagement of Medicaid and Other Underserved Populations
- (**) IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- (1) IA_PSPA_32: Use of CDC Guideline for Clinical Decision Support to Prescribe Opioids for Chronic Pain via Clinical Decision Support

There were no comments received about the proposed modifications to this MVP. We are finalizing the *Mental Health and Substance Use Disorder MVP* with modifications as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

B.19: Rehabilitative Support for Musculoskeletal Care MVP

The B.19 table, followed by a list of improvement activities, represents the measures and activities finalized within the Rehabilitative Support for Musculoskeletal Care MVP (89 FR 99049 through 99054) with modifications for the CY 2025 performance period/2027 MIPS payment year and future years. The Rehabilitative Support for Musculoskeletal Care MVP focuses on the clinical specialty of promoting quality care for patients. This MVP would be most applicable to clinicians and NPPs who specialize in providing rehabilitative support for musculoskeletal care such as chiropractic, physiatry, physical therapy and occupational therapy, as well as nurse practitioners and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.19 and the list of improvement activities.

Quality Measures

We proposed adding two additional MIPS quality measures based on maintenance requests and providing meaningful and comprehensive assessment of the clinical care for clinicians providing musculoskeletal care to patients:

- **Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan**
- **Q182: Functional Outcome Assessment**

For the reasons stated in the introduction of this appendix⁶⁹⁸, we proposed removing one MIPS quality measure: **Q487: Screening for Social Drivers of Health**.

Modifications are being considered for the following QCDR measures⁶⁹⁹:

- **MSK6: Patients Suffering From a Neck Injury who Improve Pain:** This QCDR measure is undergoing modifications to update the denominator exclusions for this QCDR measure to remove "patients that are non-English speaking and translation services are unavailable."
- **MSK7: Patients Suffering From an Upper Extremity Injury who Improve Pain:** This QCDR measure is undergoing modifications to update the denominator exclusions for this QCDR measure to remove "patients that are non-English speaking and translation services are unavailable."
- **MSK8: Patients Suffering From a Back Injury who Improve Pain:** This QCDR measure is undergoing modifications to update the denominator exclusions for this QCDR measure to remove "patients that are non-English speaking and translation services are unavailable."
- **MSK9: Patients Suffering From a Lower Extremity Injury who Improve Pain:** This QCDR measure is undergoing modifications to update the denominator exclusions for this QCDR measure to remove "patients that are non-English speaking and translation services are unavailable."

Improvement Activities

We proposed adding three additional improvement activities that address maintenance requests from the public, as well as address the priority area of advancing health and wellness:

- **IA_BE_15: Engagement of Patients, Family and Caregivers in Developing a Plan of Care**

⁶⁹⁸ See [MVP Development, Quality Measure and Improvement Activities Updates and MVP Format Update](#).

⁶⁹⁹ [Id.](#)

- **IA_BE_16:** Evidence-based techniques to promote self-management into usual care
- **IA_AHW_1:** Chronic Care and Preventative Care Management for Empowered Patients

For the reasons stated in the introduction of this appendix⁷⁰⁰, we removed four improvement activities from this MVP: **IA_AHE_9:** Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, **IA_AHE_12:** Practice Improvements that Engage Community Resources to Address Drivers of Health, **IA_CC_1:** Implementation of Use of Specialist Reports Back to Referring Clinician or Group to Close Referral Loop, and **IA_PM_26:** Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B.

Symbol Key:

Plus sign (+): quality measures, improvement activities, cost measures, and Promoting Interoperability measures finalized for addition to a previously finalized MVP.
Single asterisk (*): existing measures and improvement activities with finalized revisions.
Double asterisk (**): measures and improvement activities only available when included in an MVP.
Single exclamation point (!): improvement activities with an advancing health and wellness component

- IA_PSPA_21: Implementation of fall screening and assessment programs

The following is a summary of the comments we received and our responses.

Comment: A couple of commenters agreed with the addition of the clinical groupings in this MVP. A commenter believes the groupings will help clinicians select measures relevant to their practice and patient population. A

commenter noted support for the proposed quality measure and improvement activity additions to this MVP. The commenter also believes the PROMIS measure set should be reconsidered for inclusion in future iterations of this MVP and recommended the addition of IA_PM_12 and IA_CC_9 as they believe these activities are relevant options for physical therapists. A commenter noted support for the noted modifications to MSK6: Patients Suffering From a Neck Injury who Improve Pain, MSK7: Patients Suffering From an Upper Extremity Injury who Improve Pain, MSK8: Patients Suffering From a Back Injury who Improve Pain, and MSK9: Patients Suffering From a Lower Extremity Injury who Improve Pain. A few commenters recommended the addition of MSK1: Patients Suffering From a Neck Injury who Improve Physical Function, MSK2: Patients Suffering From an Upper Extremity Injury who Improve Physical Function, MSK3: Patients Suffering From a Back Injury who Improve Physical Function, MSK4: Patients Suffering From a Lower Extremity Injury who Improve Physical Function, MSK5: Patients Suffering From a Knee Injury who Improve Physical Function, and MSK10: Patients Suffering From a Knee Injury who Improve Pain. The commenters believe the addition of these measures would allow providers the use of a full suite of patient-reported measures of functional status and pain. In addition, they believe these measures offer components that are interoperable and accessible to health information technology systems. In contrast, the commenters believe the following measures are only available with a subscription or via a highly burdensome public access site and should be removed from the MVP: Q217: Functional Status Change for Patients with Knee Impairments, Q218: Functional Status Change for Patients with Hip Impairments, Q219: Functional Status Change with Lower Leg, Foot or Ankle Impairments, Q220: Functional Status Change for Patients with Low Back Impairments, Q221: Functional Status Change for Patients with Shoulder Impairments, Q222: Functional Status Change for Patients with Elbow, Wrist or Hand Impairments, and Q478: Functional Status Change for Patients with Neck Impairments. In addition, the commenters requested alignment of the process measures in this MVP with the proposed Ambulatory Specialty Model (ASM). The commenters believe this will create a logical and less burdensome future for clinicians. A couple of commenters supported the addition of Q134: Preventive Care and Screening: Screening for Depression and Follow-Up Plan, A commenter agreed with maintaining Q128: Preventive Care and Screening: Body Mass Index (BMI) Screening and Follow-Up Plan (BMI). A commenter recommended the removal of Q155: Falls: Plan of Care and does not support the addition of Q182: Functional Outcome Assessment as the measures are topped-out. The commenter also suggested replacing Q050: Urinary Incontinence: Plan of Care for Urinary Incontinence in Women Aged 65 Years and Older with Q238: Use of High-Risk Medications in Older Adults. A commenter agreed with the inclusion of Q182: Functional Outcome Assessment. A commenter recommended the addition of Q236: Controlling High Blood Pressure to this MVP.

Response: We thank the commenters for their support. We may consider the inclusion of additional quality measures or the removal of quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP. We acknowledge the inclusion of a topped-out measure is not ideal; however, Q182 was added to ensure this important clinical concept is captured in the instance an alternative measure is required as opposed to the more specific functional outcome measures. In addition, including Q182 in this MVP could result in increased reporting of the measure which may impact the benchmark.

Comment: A couple of commenters opposed the removal of IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols and IA_AHE_12: Practice Improvements to Engage Community Resources to Address Drivers of Health, stating that patients with musculoskeletal conditions often face non-medical barriers such as food insecurity, transportation challenges, and housing instability. These barriers affect their ability to benefit from rehabilitative care, impacting treatment adherence, functional recovery, and long-term health outcomes. The commenter believes that activities promoting screening for these barriers and rewarding providers for engaging with community resources ensure more personalized and effective care. Research indicates that addressing these upstream drivers improves patient engagement, reduces avoidable healthcare utilization, and enhances functional outcomes, especially for older adults and those with complex needs. Removing these activities could overlook significant influences on patient recovery, potentially leading to poorer outcomes, higher costs, and reduced incentives for whole-person care.

Response: We thank the commenters for their feedback. While we acknowledge the importance of practice improvements to engage community resources and focus on nutrition, these specific improvement activities are not fully aligned with the shift in priorities to health, wellness, and prevention. As proper screening and nutrition are fundamental to maintaining health, preventing chronic disease, and supporting resilience, we will consider how we can elevate these topics as part of a broader wellness agenda for possible inclusion in new or current improvement activities in future rulemaking. After consideration of public comments, we are finalizing the removal of the eight improvement activities as proposed.

After consideration of public comments, we are finalizing the *Rehabilitative Support for Musculoskeletal Care MVP* with modifications as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

B.20: Surgical Care MVP

The B.20 table, followed by a list of improvement activities, represents the measures and activities finalized within the Surgical Care MVP (89 FR 98498 through 99005) with modifications for the CY 2025 performance period/2027 MIPS payment year and future years. The Surgical Care MVP focuses on the clinical theme of surgery. This MVP would be most applicable to clinicians who specialize in general surgery, neurosurgery, and cardiothoracic surgery, including NPPs such as nurse practitioners and physician assistants. We reviewed the improvement activities inventory and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.20 and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix⁷⁹¹, we proposed removing two MIPS quality measures: **Q264: Sentinel Lymph Node Biopsy for Invasive Breast Cancer** and **Q487: Screening for Social Drivers of Health**.

Improvement Activities

For the reasons stated in the introduction of this appendix⁷⁹², we removed two improvement activities from this MVP: **IA_AHE_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols** and **IA_PM_26: Vaccine Achievement for Practice Staff: COVID-19, Influenza, and Hepatitis B**.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!): improvement activities with an advancing health and wellness component.

B.20: Surgical Care MVP

Surgical Care Improvement Activities

- IA_BE_12: Use evidence-based decision aids to support shared decision-making
- (N) IA_BE_26: Promote Use of Patient-Reported Outcome Tools
- IA_CC_15: PSH Care Coordination
- IA_CC_17: Patient Navigator Program
- IA_CC_18: Relationship-Centered Communication
- (N) IA_MVP: Practice-Wide Quality Improvement in MIPS Value Pathways
- IA_PM_11: Regular review practices in place on targeted patient population needs
- IA_PSPA_7: Use of QCDR data for ongoing practice assessment and improvements

- **IA_PSPA_8: Use of Patient Safety Took**

The following is a summary of the comments we received and our responses.

Comment: A couple commenters expressed concerns about the arbitrary construction of this MVP and even stronger concerns with classifying three spine measures as “neurosurgical,” noting that neurosurgery is far broader than spine surgery, and subspecialties like cerebrovascular, brain tumor, functional, neurotrauma, and pediatric care are not reflected in these measures. A commenter believes there is a lack of consistency between the quality and cost measures labeled as “neurosurgical.” The commenter believes these disparities will result in inaccurate assessments of value and lead to unfair outcomes. Furthermore, the commenter believes this will create an incentive to delay care, such as physical therapy, until after the acute cost measurement episode has ended. A commenter is concerned with the inclusion of Q355: Unplanned Reoperation and Q357: Surgical Site Infection. The commenter believes these measures are focused almost entirely on general surgery and are not applicable across surgical specialties.

Response: While we acknowledge the commenter’s concern, our current measure inventory limits available options, which does not allow for the creation of individual robust, meaningful MVPs for each surgical specialty, or to ensure that all subspecialties are able to meaningfully participate. Clinicians who choose to report this MVP would still report data based upon the measures that are most applicable to their scope of care, allowing for an alternate option to traditional MIPS especially when choosing subgroup reporting with MVPs. We encourage the development of new measures and submission to the Call for Measures for potential inclusion in future years.

Comment: A commenter supported retaining the Lumpectomy, Partial Mastectomy, Simple Mastectomy episode-based cost measure in this MVP, noting it reflects breast surgeons’ care and may encourage greater MVP participation.

Response: We thank the comment for their support.

After consideration of public comments, we are finalizing the *Surgical Care AHP* with modifications as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

B.21: Value in Primary Care MVP

The B.21 table, followed by a list of improvement activities, represents the measures and activities finalized within the Value in Primary Care MVP (89 FR 99054 through 99057) with modifications for the CY 2025 performance period/2027 MIPS payment year and future years. The Value in Primary Care MVP focuses on the clinical theme of promoting quality care for patients to reduce the risk of diseases, disabilities, and death. This MVP would be most applicable to clinicians who specialize in preventive medicine, internal medicine, family medicine and geriatrics, including NPPs such as nurse practitioners and physician assistants. We reviewed the MIPS quality measure and improvement activities inventories and considered feedback received during the 2026 MVP maintenance period to determine which measures and activities to include in this MVP. The summary of the public comments received and our responses for this MVP are included immediately after Table B.21 and the list of improvement activities.

Quality Measures

For the reasons stated in the introduction of this appendix¹⁰³, we proposed removing one MIPS quality measure: Q487: Screening for Social Drivers of Health.

Improvement Activities

For the reasons stated in the introduction of this appendix¹⁰⁴, we removed four improvement activities from this MVP: IA_AHF_9: Implement Food Insecurity and Nutrition Risk Identification and Treatment Protocols, IA_AHF_12: Practice Improvements that Engage Community Resources to Address Drivers of Health, IA_CC_2: Implementation of improvements that contribute to more timely communication of test results, and IA_PM_26: Vaccine Achievement for Practices Staff: COVID-19, Influenza, and Hepatitis B.

Symbol Key:

Single asterisk (*): existing measures and improvement activities with finalized revisions.

Double asterisk (**): measures and improvement activities only available when included in an MVP.

Single exclamation point (!) improvement activities with advancing health and wellness component.

Value in Primary Care Improvement Activities

- (*) IA_AHW_1: Chronic Care and Preventative Care Management for Engaged Patients
- IA_BE_4: Engagement of Patients through Implementation of New Patient Portal
- IA_BE_6: Regularly Assess Patient Experience of Care and Follow Up on Findings

- **IA_BE_12:** Use evidence-based decision aids to support shared decision-making
- **(*) IA_BE_26:** Promote Use of Patient-Reported Outcome Tools
- **IA_CC_13:** Practice improvements to align with OpenNotes principles
- **(**) IA_MVP:** Practice-Wide Quality Improvement in MIPS Value Pathways
- **IA_PM_11:** Regular review practices in place on targeted patient population needs
- **IA_PM_16:** Implementation of medication management practice improvements
- **(E) IA_PM_22:** Improving Practice Capacity for Human Immunodeficiency Virus (HIV) Prevention Services
- **(F) IA_PM_23:** Use of Computable Guidelines and Clinical Decision Support to Improve Adherence for Cervical Cancer Screening and Management Guidelines
- **(D) IA_PM_25:** Save a Million Hearts: Standardization of Approach to Screening and Treatment for Cardiovascular Disease Risk

The following is a summary of the comments we received and our responses.

Comment: A commenter recommended adding Q495: Ambulatory Palliative Care Patients' Experience of Feeling Heard and Understood to this MVP.

Response: We may consider the inclusion of additional quality measures through the MVP Maintenance Process and future rulemaking. Interested parties are welcome to submit recommended changes to an MVP on an ongoing basis. Guidance on how to submit recommended changes to an MVP can be found on the Quality Payment Program website. We will evaluate the recommendations received and determine if they are appropriate and align with the broader vision for the MVP.

After consideration of public comments, we are finalizing the *Value in Primary Care MVP* with modifications as proposed for the CY 2026 performance period/2028 MIPS payment year and future years.

APPENDIX 4: MEASURES FOR MIPS COST PERFORMANCE CATEGORY

We refer readers to section X of this final rule for more information regarding the statutory authority for and existing policies pertaining to the specification of measures for the cost performance category.

Except as otherwise noted in this final rule, previously finalized cost measures will continue to apply for the CY 2026 performance period/2028 MIPS payment year and future years. Previously finalized measures and specialty sets are set forth in Table 75 in the CY 2025 PFS final rule (89 FR 98406)

The Group A Table(s) within this final rule set forth our proposals to modify one or more measures specified for the MIPS cost performance category beginning with the CY 2026 performance period/2028 MIPS payment year.

In the CY 2026 PFS proposed rule (90 FR 33258 through 33261) we proposed modification(s) to the cost measure(s) set forth in the Group A Table(s) consistent with the criteria we established in the CY 2022 PFS final rule for determining whether a proposed change to a cost measure would be substantive (86 FR 65459 and 65460).

**Group A: Modify MIPS Cost Measures Beginning with the CY 2026 Performance Period/
2028 MIPS Payment Year**

A.1. Total Per Capita Cost (TPCC)

Category	Description
CBE # :	3575
MIPS # :	TPCC_1
Current Measure Description:	TPCC assesses the overall cost of care delivered to a patient with a focus on the primary care they receive from their provider(s). The measure is payment-standardized, risk-adjusted, and specialty-adjusted
Measure Case Minimum	20 beneficiaries as set forth in § 414.1350(c)(1)
Measure Steward:	Centers for Medicare & Medicaid Services (CMS)
Measure Type:	Population-based cost measure

Substantive Change(s):	Initiating a candidate event would be modified as follows: • <u>Modifications to Measure Specifications for Triggering a Candidate Event:</u> ++ A candidate event will be initiated by two claims for outpatient evaluation and management (E/M) services indicative of primary care. The second service used to initiate a candidate event would have to be another L/M primary care service or another general primary care service from the same clinician group (TIN) within 90 days. ++ Both the first and second service will have to be provided by a clinician (TIN-NPI) that has not been excluded from the measure based on specialty exclusion criteria. • <u>How Modifications Will Substantively Change Current Measure Specifications:</u> ++ The current methodology requires that, in addition to the initial outpatient E/M service, at least one of the following services should be billed to confirm the candidate event: (1) another primary care service from any clinician group within 3 days, or (2) a second E/M primary care service OR another primary care service from the same clinician group within 90 days. The modification revised the current methodology to remove the option for the second candidate event service to be provided by a different clinician group. ++ The current methodology only requires the first service to be provided by a clinician that has not been excluded attribution based on the specialty exclusion criteria. The proposed modification revised the current methodology to require both the first and second service to be provided by a clinician that is not excluded by the specialty exclusion criteria. Criteria for removing a clinician and their candidate events from attribution would be modified as follows: • <u>Modification for Exclusion:</u> We proposed to remove clinicians and their candidate events from attribution for the TPCC measure if a clinician is: (1) an advanced care practitioner (that is, Nurse Practitioner, Physician Assistant, Certified Clinical Nurse Specialist), and (2) part of a clinician group where all other non-advanced care practitioners are excluded based on specialty criteria. • <u>How Modifications Will Substantively Change Current Measure Specifications:</u> The current methodology only excludes clinicians and their candidate events if a clinician meets service category thresholds for billing certain services (that is, global surgery, anesthesia, therapeutic radiation, or chemotherapy services) or if the specialty code on a clinician's Medicare Part B claims is one of the specialties excluded from TPCC attribution. The current methodology does not exclude advanced care practitioners from attribution based on their specialty, which is identified by the specialty code on their Medicare Part B claims. This proposed modification would exclude advanced care practitioners from attribution if all other non-advanced care practitioners in their TIN are excluded based on the specialty exclusion criteria.

Category	Description
	Except as noted herein, we proposed to retain all remaining specifications for the TPCC measure without modification. These proposed modifications are also available for review in the revised TPCC measure specifications available for download here: https://www.cms.gov/medicare/quality/value-based-programs/cost-measures.

Rationale	The TPOC measure assesses the overall cost of care provided to a Medicare beneficiary, focusing on MIPS eligible clinicians, subgroups, and clinician groups who provide primary care-type services. Given its broad scope, it includes all Medicare Parts A and B costs that occur during the time period attributed to the clinician or clinician group within the performance period. The measure assesses primary care, internal medicine, and other physicians, who frequently manage patients with chronic or ongoing care needs, and non-physician clinicians (such as Physician Assistants, Nurse Practitioners, and Certified Clinician Nurse Specialists) who provide primary care and related services. We proposed to modify the TPOC measure's candidate event logic to require that both services in a candidate event are provided by the same clinician group and by a clinician with a specialty included in measure attribution. This modification would result in MIPS eligible clinicians only being attributed the costs of care for beneficiaries that have had at least two qualifying services from their clinician group, and where both services were provided by a clinician that would not be excluded from measure attribution due to the specialty exclusion. The proposed modification would more strongly demonstrate that there is an ongoing care relationship. With this proposed modification, a MIPS eligible clinician would only be attributed beneficiaries that they or their clinician group have seen at least twice, and when both candidate event services are provided by clinicians who are not excluded from TPOC based on the specialty exclusion criteria. We also proposed to modify the TPOC measure's specifications to exclude certain clinicians and clinician groups from attribution. Currently, the measure does not exclude advanced care practitioners (that is, Physician Assistants, Nurse Practitioners, and Certified Clinician Nurse Specialists) from measure attribution based on their specialty. Advanced care practitioners often provide primary care and ongoing care management services. However, some advanced care practitioners participate in MIPS through clinician groups that provide specialty care that would otherwise be excluded from the measure. In these instances, an advanced care practitioner may bill services (such as office visits) to support specialized care that are unlikely to be indicative of primary care or ongoing care management relationships. Since specialty codes on Medicare Part B claims do not include information about sub-specialization for advanced care practitioners, we would use information about their clinician group to exclude certain advanced care practitioners in specialty settings (that is, clinician groups where all physicians are excluded based on the specialty exclusion criteria). This proposed modification would limit instances in which the TPOC measure would be used to assess or evaluate costs potentially associated with highly specialized clinician groups solely due to the billing patterns of advanced care practitioners within the clinician group.

Additionally, we did not propose any modifications to the TPCC case minimum of 20 beneficiaries, as set forth at § 414.1350(c)(1). This case minimum was originally established in the CY 2017 QPP final rule (81 FR 77170) and maintained in the CY 2020 PFS final rule (84 FR 62078). We based this case minimum on our interest to ensure that the majority of TINs and TIN-NPIs that were measured met a threshold of 0.4 reliability and to balance our interest in ensuring moderate reliability without limiting participation. The relationship between reliability thresholds and case minimums was further discussed in the CY 2022 PFS final rule (86 FR 65453 through 65455), establishing again that a mean reliability of 0.4 for the majority of TIN and TIN-NPIs would be used as a sufficient threshold to ensure a measure is performing as intended. We tested the reliability of the TPCC measure with the proposed modifications applied. Our testing demonstrated that mean reliability would remain high at approximately 0.9 for TINs and TIN-NPIs at the 20 beneficiary case minimum. Additionally, 100 percent of TINs and TIN-NPIs would exceed the 0.4 mean reliability threshold. Therefore, we will maintain the existing case minimum of 20 cases as set forth at § 414.1350(c)(1).

Prior to proposing modifications to a cost measure through the notice-and-comment rulemaking process, we have historically subjected existing cost measures for which we are considering substantive changes to the pre-rulemaking process outlined by section 1890A of the Act. Section 1848(r)(10) of the Act provides that the pre-rulemaking requirements in 1890A of the Act are not required to apply to the selection of MIPS cost measures; however, we have found that the pre-rulemaking process provides a comprehensive review of measures from multi-interested parties workgroups and have accordingly elected for such measures to be reviewed utilizing this process, as detailed in the Measures Management System (MMS) Blueprint:

<https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/overview>. For TPCC, we comprehensively reevaluated the measure in use in MIPS in accordance with the process outlined in the MMS Blueprint: <https://mmshub.cms.gov/measure-lifecycle/measure-use/maintenance/comprehensive-reevaluation>. During this process, we held two public comment periods and convened a Technical Expert Panel (TEP) twice to discuss modifications. We have received robust feedback from the public about the potential modifications during this comprehensive reevaluation process and through other cost measure public comment opportunities, such as the CY 2025 PFS rule. Following the completion of the comprehensive reevaluation process, we opted not to subject the TPCC measure with these proposed modifications to the pre-rulemaking process. We considered (i) the high volume of feedback received to date on the modifications; (ii) that the scope of the

Category	Description
	modifications does not impact the intent of the measure or negatively impact measure testing results; and (ii) that there is a tradeoff in delaying updates by a year to submit the measure to the pre-rulemaking process. Based on these considerations, we proposed modifications to the TPCC measure through notice-and-comment rulemaking without having subjected the measure to the pre-rulemaking process. More information about the feedback we received from interested parties and technical expert panel(s) on the TPCC measure, and analyses that contributed to identifying the TPCC modifications, is available in the Cost measure comprehensive reevaluation (2023–2024) section of the QPP Cost Measures Information Page: https://www.cms.gov/medicare/quality/value-based-programs/cost-measures/crcrm.

<EXTRACT>

We received public comments on this proposal. The following is a summary of the comments we received and our responses.

Comment: Many commenters were supportive of CMS' efforts to modify the criteria for removing a clinician and their candidate events from attribution of the TPCC measure. Several commenters stated that the exclusion of advanced care practitioners in specialist-only groups will prevent inappropriate attribution to clinicians providing specialty care and that this modification addresses concerns that they have raised about the attribution methodology.

Response: We thank the commenters for their support and for their confirmation that the modification to the candidate event exclusion criteria addresses concerns with the TPCC measure's attribution methodology. We agree that these modifications limit the possibility that the measure would be attributed to a highly specialized clinician groups due to the billing practices of advanced care practitioners.

Comment: Several commenters requested further modifications related to TPCC attribution and advanced care practitioners in multi-specialty groups. In some instances, commenters requested specific modifications, such as excluding all multi-specialty practices that

are attributed based on advanced care practitioners. Another commenter requested that CMS account for potential instances where a multi-specialty group is attributed the TPCC measure based on advanced care practitioners providing specialty care because there are other non-advanced care practitioners in the group that do not meet the specialty exclusion criteria.

Response: Multi-specialty groups often provide primary care and related services to Medicare beneficiaries and may be assessed on the TPCC measure. It is expected and appropriate that MIPS eligible clinicians across various specialties in multi-specialty groups may be assessed on the TPCC measure at the group level.

To further clarify the attribution methodology, once candidate events are identified, MIPS eligible clinicians can be attributed based on their involvement in the candidate event. The MIPS eligible clinician responsible for the candidate event is found on the initial E/M "primary care" service claim of the candidate event. Certain MIPS eligible clinicians who meet specialty or service category exclusion criteria will have their candidate events removed from attribution at the individual clinician and group level. The attribution methodology and exclusion criteria are discussed in greater detail in the TPCC Measure Information Form, available here:

<https://www.cms.gov/files.zip/2026-total-capita-cost-tpcc-measure-specifications-zip.zip>.

We do believe there are instances where it is appropriate to attribute multi-specialty groups the TPCC measure based on the billing of advanced care practitioners. Advanced care practitioners, including those in multi-specialty groups, would only be attributed the TPCC measure if they provide sufficient qualifying E/M services that indicate primary care and are not otherwise excluded from the measure. If the advanced care practitioners provided sufficient excluded services (that is, 10-day or 90-day global surgery services, anesthesia services, therapeutic radiation services, or chemotherapy services) indicative of specialty care at or above a certain threshold, the advanced care practitioners and their candidate events are removed from attribution based on the service-category exclusion criteria. This is also true for any other

clinicians that are not excluded based on the specialty exclusion criteria.

Comment: Several commenters requested that CMS further adjust the TPCC measure attribution methodology to ensure that it only captures primary care providers and that it assesses costs of care within their direct control. Some commenters raised concerns about the TPCC attribution methodology for specialists, such as concerns that certain specialties would continue to be inappropriately attributed the TPCC measure, including cardiologists, surgeons, radiologists, and hospitalists. A commenter requested greater transparency in the attribution methodology in cases where specialists are attributed the TPCC measure. Another commenter raised a concern that the measure does not account for when a primary care relationship has ended between a clinician and patient. Additionally, several commenters recommended alternative methods to identify primary care relationships in an effort to increase the precision of the attribution methodology. Commenters suggested that CMS incorporate Patient Relationship Category (PRC) codes in the TPCC measure attribution methodology to further ensure accurate attribution to primary care providers. One of the commenters also recommended that CMS create more flexibilities in assigning specialty designations for advanced care practitioners, such as assigning the specialty designation of the MVP in which they are participating or establishing more specific designations in the enrollment data to identify their specialty practice area.

Response: We thank the commenters for their considerations. The TPCC measure intends to capture primary care clinicians and other clinicians who provide ongoing care. Based on the current specifications, the TPCC measure excludes a list of specialties from attribution including surgical specialties, radiologists, and hospitalists, interventional cardiology, cardiac electrophysiology, and cardiac surgery. Cardiologists and advanced heart failure and transplant cardiology specialties are included, as they provide primary care and related services. However, if they provide highly-specialized care that meets the service exclusion criteria they will be excluded. To further ensure that specialists are not inappropriately attributed candidate events for

TPCC, we are finalizing the modification that excluded specialists that can no longer contribute towards the second candidate event service, as outlined in Table A.1. As a result of this modification, excluded specialties will not contribute to group attribution. The detailed measure specifications, including a list of all excluded specialties and service-category exclusions is available on the QPP Cost Measures Information Page at

<https://www.cms.gov/medicare/quality/collaborated-programs/cost-measures/about>. Clinicians can review the TPCC measure specifications to anticipate whether they fall within the exclusion criteria and gather information on the likelihood of their attribution. We will also post the measure specifications on the QPP Measures & Activities Page for clinicians' reference (<https://app.cms.gov/apps/quality/activities/about/cost-measures>) prior to the start of the performance period to promote transparency in the attribution methodology.

Additionally, the measure construction does incorporate indicators for the end of a primary care relationship. Primary care is ongoing and may span a long period, so TPCC measures clinicians for 1 year following an attribution event where evidence of a primary care relationship is identified. A longer attribution window allows the cost measure to capture the long-term benefits of ongoing primary care management that might not be fully realized within a short period. For example, preventive care services contribute costs to the measure when initially provided but should lower costs when measured over a sufficiently long time as they might avoid downstream costs that usually result from lack of preventive care. The clinician may continue to be attributed in a subsequent performance period if they bill new services that constitute a candidate event during an already open period of responsibility. However, if they do not bill additional services that constitute a candidate event, this will indicate the end of the primary care relationship and they will not be attributed further performance periods.

Finally, we thank the commenters for their suggestions to increase the precision of the attribution methodology. We are continuing to assess PRCs for potential future use in MIPS cost

measure attribution methodology. We will also consider further updates to the attribution methodology if additional specialty designations become available for advanced care practitioners.

As a result, we believe that the TPCC measure methodology does not require additional modifications.

Comment: A few commenters requested additional information on whether reliability and attribution improved after implementing these modifications.

Response: As stated in Table A.1 in Appendix 4, we tested the reliability of the TPCC measure with the proposed modifications applied. Our testing demonstrated that mean reliability would remain high at approximately 0.9 for TINs and TIN-NPIs at the 20-beneficiary case minimum. During comprehensive reevaluation, we also conducted preliminary testing to assess the impact of these modifications, which were considered by a TEP in March 2024. A summary of this testing and subsequent discussion is in the March 2024 PCMP TEP Summary Report, available here: <https://www.hhs.gov/sites/default/files/2024-pcmp-tep-summary.pdf>. We will continue to monitor measure implementation and consider additional testing that we can make available.

Comment: Many commenters supported the modifications to the candidate event logic for the TPCC measure. A commenter stated that the modification to the triggering candidate event logic will better identify ongoing care relationships.

Response: We thank the commenters for their support and we agree that the updates to the candidate event logic will more strongly demonstrate an ongoing care relationship.

Comment: A commenter opposed the updates to the candidate event logic. The commenter raised concerns for MIPS eligible clinicians in oncology because not all oncology practices bill to a single clinical group (TIN), despite operating as a single practice. Furthermore, they stated that some oncology practices may refer patients to other practices for certain

treatments or services, while maintaining the patient and physician relationship, which further complicates attribution.

Response: We continue to believe that this modification is appropriate. While there may be some instances where a candidate event is no longer captured by the measure if a practice bills to multiple TINs, we did not observe a substantial drop in episodes, beneficiaries, or MIPS eligible clinicians captured by TPCC when applying this modification in preliminary analyses, available for review in Table 3 of the March 2024 PCMP TEP Summary Report available at <https://cms.hhs.gov/sites/default/files/2024-pcmp-tep-summary.pdf>.

Comment: Several commenters requested that CMS also apply the modifications to the candidate event logic and attribution methodology beginning in the CY 2025 performance period/2027 MIPS payment year.

Response: We thank the commenters for their request. The TPCC measure finalized for use in the CY 2025 performance period has been specified and implemented appropriately, in accordance with the CY 2020 PFS final rule (84 FR 62969 through 62975) and the measure specifications available at <https://www.cms.gov/medicare/coverage/specifications/2025-06-pfs/2025-mip-tpcc.pdf>. Therefore, we will apply these changes to the TPCC measure beginning in CY 2026 performance period/2028 MIPS payment year and onwards.

Comment: A commenter stated that the proposed modifications to TPCC should be benchmarked after 2 years of program experience, to align with the approach used for newly introduced quality measures and ensure that there are no unintended consequences from adjustments to the specifications.

Response: We understand this comment to be referring to measures of the Medicare CQM collection type, which use flat benchmarks for their first 2 years in MIPS starting with the CY 2025 performance period/2027 MIPS payment year, in accordance with § 414.1380(b)(1)(ii)(F). MIPS cost measures are administrative claims measures, and we align with the policy used to

score administrative claims quality measures instead of Medicare CQM measures. Beginning with the CY 2023 performance period/2025 MIPS payment year, CMS calculates a benchmark for an administrative claims quality measure using the performance on the measures during the current performance period, and not on a 2-year benchmark period, in accordance with § 414.1380(b)(1)(ii)(D). Similarly, cost measures are calculated based on the current performance year data in accordance with § 414.1380(b)(2)(ii). The goal is to compare clinician's cost performance to their peers' cost performance in a given performance period. CMS will continue to monitor TPCC and the potential for any unintended consequences based on the modifications to the TPCC measure specifications.

Comment: A few commenters raised concerns that TPCC may double count costs for clinicians assessed on multiple measures and requested that the measure is excluded in instances where there is another applicable measure.

Response: We do not have concerns regarding double counting costs between TPCC and other cost measures. Each measure reflects MIPS eligible clinician performance within the context of the individual measure. For example, TPCC assesses overall cost of care while episode-based measures assess costs of care for a specific procedure or condition. Having multiple cost measures available for a clinician can provide a more complete assessment of the types of care that a clinician provides. Further information about how claims data is shared within and across cost measures in a way that avoids double counting concerns is available in the "Shared Data Across Cost Measurements" document available at

<https://www.cms.gov/files/document/shared-data-across-cost-measurements-3-13-20.pdf>

Comment: Several commenters requested the removal of TPCC from MIPS, stating that TPCC holds clinicians and groups accountable for care outside of their control, assesses clinicians that do not provide primary care, and that they prefer episode-based measures.

Response: We continue to believe that it is appropriate to maintain the TPCC measure in

Traditional MIPS and MVPs, as we have outlined in in the CY 2020 PFS final rule (84 FR 62969 through 62975). The TPCC measure is an important measure of cost performance in Traditional MIPS and MVPs. The measure's intent to capture broad, overall care plays a significant role in complementing the more granular information captured by episode-based measures. For example, TPCC is a key element of assessing value in the Value in Primary Care MVP. This MVP is most applicable for preventative medicine, internal medicine, family medicine, and geriatric specialties. While the measure includes Asthma/Chronic Obstructive Pulmonary Disease (COPD), Diabetes, Depression, and Heart Failure episode-based measures to assess more specific facets of ongoing and chronic care management, TPCC is an essential piece of capturing overall primary care within the MVP.

As a broadly applicable cost measure, the TPCC measure encourages clinicians to coordinate with other clinicians while treating a patient to improve overall cost performance. This promotes shared responsibility for a patient's cost of care across providers performing ongoing care management, aligning with CMS and HHS priorities to protect federal tax dollars and help patients achieve their health goals, as outlined in the CMS Innovation Center 2025 Strategy available at <https://www.cms.gov/priorities/innovation/about/cms-innovation-center-strategy-make-america-healthy-again>.

While the episode-based measure inventory has increased since the introduction of MIPS in 2016, there remains a large portion of Medicare spending that is not assessed by the episode-based measures. Coverage estimates of the episode-based measures and TPCC are outlined in the 2024 MIPS Summary of Cost Measures, available at <https://www.cms.gov/files/document/2024-mips-standards-costs-to-the-u-s.pdf>.

Comment: Several commenters provided feedback on aspects of the TPCC measure that have not been modified, such as concerns related to the effectiveness and precision of the risk adjustment and service assignment methodology.

Response: We appreciate the commenters' feedback. We continue to believe that the TPCC measure is specified appropriately, as finalized in the CY 2020 PFS final rule (84 FR 62969 through 62975). We will consider this feedback during future maintenance and comprehensive evaluation efforts for the TPCC measure in accordance with the maintenance processes outlined by the CMS Measures Management System (MMS) (<https://mmshub.cms.gov/measure-lifecycle/measure-use/maintenance-overview>).

Comment: A commenter recommended that CMS submit the revised TPCC measure for review and endorsement by the Consensus-Based Entity (CBE) to ensure it does not inadvertently create disincentives for taking on patients with more complex medical needs.

Response: We thank the commenter for their recommendation. The TPCC measure was endorsed by a CBE in 2020, which is detailed in the National Quality Forum Cost and Efficiency Spring 2020 Cycle Technical Report, available at <https://digitalassets.nfqcommission.org/api/public/content/926365c68be14417913401300030ac4d62c-39c48ca7>. We will discuss with the CBE to determine the appropriate next steps for the TPCC measure. Although we may pursue endorsement by the CBE, contracted in accordance with section 1890 of the Act, we are not required to use only CBE endorsed measures in MIPS as discussed in the CY 2025 PFS final rule (89 FR 98391).

After consideration of the public comments, we are finalizing the TPCC measure with modifications in Table A.1 as proposed for the CY 2026 performance period/2028 MIPS payment period and future years.
