### Vision Services

**File name:** Vision Services

**Origination:** 12/1992

**Last Review:** 01/2011

**Next Review:** 07/2012

**Effective Date:** 08/2011

### Description

An eye exam is not a covered medical benefit for common vision conditions, such as myopia, presbyopia, hyperopia, and astigmatism. An eye exam performed by an ophthalmologist or optometrist is a covered benefit when a specific ophthalmic disease, medical condition or infective process is being monitored or treated such as glaucoma, diabetic retinopathy, cataracts, macular degeneration, keratoconus, strabismus and amblyopia. Routine eye exams/care may be covered under the members benefit for vision services should the member have that benefit in their contract.

### Policy

Benefits are subject to all terms, limitations and conditions of the subscriber contract.

Prior approval may be required subject to all terms, limitations and conditions of the subscriber contract

Federal Employee Program (FEP) members may have different benefits that apply. For further information please contact FEP customer service.

### When service or procedure is covered

Routine eye exams (CPT 92002-92014) are covered under the medical benefit *only* when a disease condition of the eye is found or reasonably suspected. A list of covered diagnoses is attached. (Attachment I)

A screening test for defective vision **in conjunction with a preventive medicine evaluation and management service when done in accordance with current American Academy of Pediatrics, American Academy of Family Practice, and/or Bright Futures guidelines** by a physician, physician assistant, or advanced practice nurse clinician.

Visual examination **without refraction (CPT 92002 - 92014)** is a covered medical benefit when a disease state of the eye or known to affect the eye is present or reasonably suspected (Attachment I) or when an individual is undergoing long term treatment (greater than 30 days) with a high risk medication. The medical record must clearly document the specific condition or the high risk medication.

Visual examination **with refraction** (CPT 92015) is considered medically necessary and a covered medical benefit only in the treatment of Aphakia 379.31 and Keratoconus 371.60 – 371.62 and for specific eye injuries 871.0 – 871.9, 921.0 – 921.9, 940.0 – 940.9, 950.0 – 950.9.

Analysis of the retinal nerve fiber layer in the diagnosis and evaluation of patients with glaucoma is a covered medical benefit (see Attachment IV for a list of covered diagnoses).

92133-Scanning computerized ophthalmic diagnostic imaging, posterior segment, unilateral or bilateral; optic nerve

92134-Scanning computerized ophthalmic diagnostic imaging, posterior segment, unilateral or bilateral; retina

Scanning computerized ophthalmic diagnostic imaging (SCODI) may be accomplished by various devices, among them Optical Coherence Tomography (OCT).

When used in diagnosing and monitoring glaucoma, nerve fiber layer, and optic nerve conditions, OCT testing may be allowed every year. If the testing is done more frequently than every year, the testing may be subject to review for medical necessity.

Retinal nerve fiber analysis is considered *investigational* as a screening tool for glaucoma in individuals who are not at high risk for glaucoma and for all other diagnoses not listed in Attachment IV. Techniques used in the analysis of the retinal nerve fiber layer include:

- Scanning Laser Ophthalmoscopy (SLO)
- Scanning Laser Polarimetry, and
- Optical Coherence Tomography (OCT)

Optical coherence tomography (OCT) is a high resolution method of imaging the ocular structures. OCT for the anterior eye segment is being evaluated as a rapid and non-invasive diagnostic and screening tool for the detection of angle closure glaucoma. The Plan will not provide coverage for scanning computerized ophthalmic (e.g. OCT) imaging of the anterior eye segment because it is considered **investigational**. (92132)

Non-computer-assisted corneal topography is considered part of the evaluation/and management services of general ophthalmological services (CPT codes 92002–92014) and reimbursement for Plan contracted providers is set accordingly. Separate reimbursement is not appropriate for this procedure.

Computer-assisted corneal topography (CPT 92025) is considered **not medically necessary** to detect or monitor diseases of the cornea.

Prescription glasses and contact lenses are covered only with (and subject to the limitations of) a vision materials rider except for Aphakia or Keratoconus.

Fundus photography (CPT 92250) is covered.

Therapeutic keratotomy (66999, S0812) is a covered medical benefit for recurrent erosion of the cornea (371.42) and anterior corneal dystrophies (371.52).

## When service or procedure may not be covered

Routine eye exams are not covered for any condition not listed on the covered diagnosis list (Attachment I), including for confirmation of defective vision identified on a covered screening examination, unless the member's contract specifies they have the vision care benefit.

Any routine eye examinations or corrective eye wear required by an employer as a condition of employment is not covered.

Visual, training, eye exercises, orthoptics or plano (nonprescription) lenses are not covered. (CPT 92065)

Refraction (CPT 92015) is not covered unless the diagnosis is (Aphakia) 379.31 or (Keratoconus) 371.60 – 371.62, or (eye injuries) 871.0 – 871.9, 921.0 – 921.9, 940.0 – 940.9, 950.0 – 950.9.

Contact lenses and eyeglasses are not covered unless the member has a vision materials rider or to treat 379.31 (Aphakia) and 371.60-371.62 (Keratoconus). For Aphakia and Keratoconus, benefits for one set of eyeglasses or contact lenses for the original evaluation and one set for each *new* prescription will be provided when the diagnosis is 379.31 or 371.60-371.62.

Glaucoma Pressure Tests (CPT codes 92100, 92120, 92130, 92140, 92136) are not covered unless billed with a diagnosis from Attachment I.

A screening test for defective vision in conjunction with an evaluation and management service **other than with a preventive medicine service done in accordance with current American Academy of Pediatrics, American Academy of Family Practice, and/or Bright Futures guidelines** by a physician, physician assistant, or advanced practice nurse clinician is considered inclusive to the office visit or preventive medicine service, and separate reimbursement is not authorized.

The measurement of pulsatile ocular blood flow or blood flow velocity with Doppler ultrasonography is considered **investigational** in the diagnosis and follow-up of patients with glaucoma, and is therefore not covered.

New technology intraocular lenses are considered investigational as long term safety and efficacy is unproven and not medically necessary as standard lenses are available to provide normal vision.

Refractive Keratoplasty is a generic term, which includes all surgical procedures on the cornea to improve vision by changing the refractive index of the corneal surface.

Refractive keratoplasty procedures (CPT codes 65760, 65765, 65767, and 65771) are excluded under all certificates.

- Radial Keratotomy (RK)
- Photorefractive Keratectomy (PRK)
- Automated Lamellar Keratoplasty (ALK)
- Minimally Invasive Radial Keratotomy (mini-RK)
- Hexagonal Keratotomy
- Keratomileusis
- Keratophakia
- Epikeratophakia (lamellar Keratoplasty)
